The Turks have no commissariat, no ambulances, not even an hospital at Balaclava. "It is one of the most heart-rending sights," says our Correspondent, "to see these unfortunate fellows carried on the shoulders of their poor comrades, who have sometimes to pay dear for their sympathy. I have seen many of them breaking down on the road, so that in cases where three or four have been required to carry (each for himself) a sick man, when they arrived at Balaclava one or two of the fatigue party were so knocked up that they never got back to the Camp again."

It is hardly possible to fancy a more depressing scene than the one which our Artist has depicted. The desolate landscape, the vestiges of mortality on every side, and the sad task in which the men are engaged, all conspire to exercise a most depressing influence upon the mind. It would be wrong, however, to conclude that the Turks must feel their case to be as hard a one as it seems to an English spectator. Partly owing to their fatalism, partly from a greater bluntness of feeling, as compared with the French and English, they either do not suffer so much as our men do, or they conceal their feelings so well as to appear insensible to suffering. Whatever may be said in disparagement of the Turkish character, no one will deny that they rise far superior to more civilised nations in their powers of endurance. Those philosophers who talk of the doctrine of compensation, may find in this feature of the Turkish character an illustration of their favourite theory.

THE ENTRANCE TO BALACLAVA.

The piles of planks for the soldiers' huts, standing there on the 17th of February—the date of the above Sketch—do not say much for the way in which matters have been managed in Balaclava. Later accounts would lead us to believe that an improvement is gradually taking place. A recent letter from that interesting locality says:—

The harbour of Balaclava is now crammed to the full with vessels that arrive faster than they can be unloaded. We have very evident proof here of the anxiety of the authorities at home to supply every want, and of the solicitude of the public to administer to our luxuries. And there is now an unexpected degree of attention to the means of availing ourselves of the good things sent out to us. The harbour arrangements are better under the superintendence of Admiral Boxer than they have ever been before. He displays a very remarkable degree of activity, and keeps all those who are under him equally on the alert. He has established a little order on the wharves, to which he has added extent by dint of pile-driving and filling up with stones; and he is now engaged in adding to the space for landing by forming a causeway along the base of the cliff, which will render available a new beach, equal to a sixth of the shores of the harbour, which has been hitherto a kind of timber and farm-yard, appropriated by one of the men-of-war.

When these improvements have been completed, and the railway carried up to the Camp, the soldiers will be able to attend to their military duties without distraction. By the end of this month, it is said, that the railway will be finished to that extent, so that we shall be able to send up shells and powder as fast as the gunners can fire.

ENTRANCE TO BALACLAVA.

MOUNTED POLICEMAN FOR THE CRIMEA.—SOLDIERS DRAGGING STORES TO THE CAMP.—(SEE NEXT PAGE)

MOUNTED POLICEMAN FOR THE CRIMEA. SOLDIERS DRAGGING STORES TO THE CAMP.

THE mounted policeman in the foreground has evidently the advantage of the soldiers in front of him, who are forced to do the work of beasts of burden, owing to the improvidence of those entrusted with the management of the Commissariat department. Now that the weather has improved considerably as regards temperature and dryness, this degrading work will not be quite so harassing as it has been, but it is still far too severe for human beings, and especially for men who have to sustain their share of camp duty.

We are glad to see that arrangements are making for the complete organisation of a Land Transport Corps, which will be attached exclusively to the Quartermaster-General's department. The train will consist of 7000 drivers, and be officered in a similar manner to the old Waggon Train; viz. the corps will be under the command of a lieutenant-colonel, and divided into ten troops of 100 men each, under the command of a captain and two lieutenants. The Commissariat corps of waggoners, as the name denotes, will be under the orders of the Commissary General commanding, and will also consist of 1000 drivers, superintended by an Assistant-Commissary-General, with the local rank of lieutenant-colonel. The corps will be divided into ten troops of 100 men each, officered by a captain, two lieutenants, two inspectors, and a quartermaster. Two troops, or a squadron, will be attached to each division of the army. The drivers of each corps will be armed with a cavalry carbine, a sabre, and revolver; and the uniform is to be a short blue tunic, without lace or ornament, with the exception of the officers, who will wear the epaulettes of their respective ranks. Each troop will, however, be distinguishable by different-coloured facings, as the blue troop, red troop, green troop, &c. Each driver will have the charge of two horses or mules. 4000 animals will be required for the service. A large portion of the force has already proceeded to the seat of war; and as a sufficiency of men cannot be obtained from the police, recruiting parties have been sent into the agricultural districts to enlist them. A dépôt for instructing recruits is to be formed at Croydon, which was formerly the head-quarters of the Waggon Train

A SNOW SCENE AT BALACLAVA.

THE Commissariat mules and bat horses having broken down or died off, under the heavy work they had to go through upon half rations, the few remaining horses of the Dragoons were employed for a short time to carry, or rather drag, the planks from Balaclava to the Camp; and here we find two of them, as seen by our Artist on the 7th of last month, making the best of their way through the snow. The foremost horse seems to have become rather restive under its very awkward load, as was natural enough, for what beast of spirit would ever submit willingly to so painful and vulgar a task? The soldiers are fortunately well fortified against the inclemency of a Crimean winter. In their fur caps, pilot coats, and rough leggings, they do not bear much resemblance to any regiment in her Majesty's service, but they are well prepared to withstand the rigour of the bitter climate in which they have their work to perform, and that is a point of much more importance. The poor animals employed in dragging the planks along are in a much worse predicament. They have no extra clothing, although quite as susceptible of cold as their masters. No wonder, therefore, that the mortality among the Cavalry horses in the Crimea should have been still greater than that which has taken place among the soldiers.

DRAGOONS CARRYING PLANKS FROM BALACLAVA TO THE CAMP.

LITERATURE

CHRONICLES OF WOOLFORT'S ROOST, AND OTHER PAPERS. By WASHINGTON IRVING. Constable and Co., Edinburgh.

To say that a work is one of Washington Irving's is to recommend it for a very considerable number of readers. We do not regard any one of his many productions as a failure; the majority of them are excellent in matter and manner, and we have from his pen one or two of surpassing merit—books which will be read with interest in all future time. Washington Irving is, upon the whole, the most charming writer whom the United States till his own day had produced. During the age we have specified there is no other of equal abilities who has established a reputation in both light and serious literature. Some of the rest are novelists and story-tellers only, some historians only, some essayists only, but Washington Irving has succeeded eminently in all these capacities, and is in all of them better known and more admired than are several of the other writers even in those special fields to which they have confined, and on which they have concentrated, their whole exertions. This claims for him a very noticeable and superior rank, and bespeaks the uncommon gifts for which he was indebted to the partiality of nature, as well as the instinctive industry with which he was careful to cherish and cultivate such endowments. We should, even in a more restricted, more special, more technical sphere, than literature—in the far less noble and less intellectual study, for instance, of human codes, and their arbitrary secrets—be immediately struck, if we found a man who exhibited this comprehensive proficiency. We could not, for instance, refuse the proper degree of admiration to him who constantly showed himself the best conductor of a case at the Old Bailey; we should admit his peculiar talents, imagine that we quite understood the nature of them, and respect them in their order; but our appreciation of his qualities in this "place," so far from diminishing, would greatly increase, our wonder, if we were informed that this very individual was also not only one of the best forensic orators in the higher courts, but one of the best chamber counsel at home. We should reconsider our opinion of him, admit that we had not estimated his rightly, and that such a union of powers marked a capacity of a very different class from that which we had assigned to our police-case practitioner.

So in the far more genuine proofs of genius and of mind required by Literature from her votaries. Literature, whose business is not to become adroitly learned in the enactments of men, and whose subject-matter is not casual, artificial, capricious, conflicting the wisdom, in fact, or the folly of human legislators—but real and primordial, every aspect of nature, every form of truth, every element of usefulness and beauty. It is necessary, in short, when we wish to gauge the due rank of any author, to inquire whether he figured in only one line, or succeeded in several. We all know perfectly well that for ordinary people—that is, for the immense majority of mankind—it is a rule of primary importance that they should make some one definite object or subject their exclusive business, if they wish to effect any results. The truth of this has been embodied in a maxim, and the maxim is old. We all know perfectly well, likewise, the startling effect too wide a range has been the ruin of a vast number of small intellects, and the absolute universality capacity has been the lot of no human mind. But the scope of the intellectual competency is various, and its limits are more or less restricted in different persons. The most comprehensive author, for example, whom this country, or perhaps any other, can boast of the present day is Bulwer Lytton, if we calculate the number of very dissimilar departments of literature in which he has toiled with honour and success.

In a far more bounded proportion, Washington Irving has vindicated the versatility of his powers, and may stand in comparison three or four different kinds of composition with American writers who have respectively made each kind an exclusive occupation.

We have not under our examination at this moment any of his loftier performances. The "Chronicles of Woolfort's Roost" are not, like "The History of Columbus," or "The Conquest of Granada," a work of high purpose and pretension. "Woolfort's Roost," indeed, is by our well-known friend Geoffrey Crayon, Gentleman, to whom most of us feel very much indebted for the pleasantest Sketch-book in our possession. It is leisure-hour reading, yet the leisure hour which we give to such reading is not an hour of idleness. Almost invariably if not, indeed, always without exception—Washington Irving's sketches are based upon facts; we do not mean distinct isolated events of an historical kind (though these are frequently his subjects, and have suggested some of the papers in the present collection), but facts as discriminated from the gratuitous and capricious fabrication of scenes and manners such as never really existed. We say, therefore, that in reading the tales and sketches of this writer we do not waste our time; we learn a good deal, and obtain a lively conception of states of social life which he has either witnessed, or by peculiar and fond study made his own, or perhaps reads vividly by the light of early-communicated traditions in his childhood. Of the first kind is the chapter called the "Bermuda," in the volume before us: of the second are all his sketches of Southern Spain, and of its ancient moresque or ancient national life; of the third are his views of the Dutch settlers in America and of the Dutch at home, which are, in truth, miniatures, matchless in every little stroke. These are but instances. But, besides this scarcely-perceptible but large and varied fund of available information, derived from that basis of reality on which, as on a fertile site, Washington Irving's lighter works are constructed, there is much to be learnt from his style, which is, no doubt, less than perfect, but warped by great excellences. It is clear and elegant, with occasionally, an astonishing happiness in the expression. It has both humour and pathos, evinces close observation of men and manners—nay, of physical nature—is never affected, can be grand and dignified without bombast, and pleasant, facetious, familiar, without vulgarity. Add to this that he is, so far as his kindly heart can make him, one of the most unprejudiced of writers; he shows neither the rabid animosity with which some American authors have so frequently permitted themselves to speak of the institutions of all countries not Republican, nor the servility with which others have flattered even the worst tyrants; he belongs rather to the noble band of their best writers, and is part of the glory of the United States.

In "Woolfort's Roost" there are about thirty different stories and sketches, some of them positively historical—all instructive, entertaining, and delightful. His sketches of Parisian life are particularly good, and essentially in his own best manner. We could easily enlarge on this head, but Washington Irving is well known, even to the worst-read of readers, and we have had only to recal—not certainly to introduce or announce—the thousand fascinations of this highly endowed and genial author. We could understand how one who never purchased another work not by an English hand, in Constable's Miscellany, should ask for this volume, for, while it is classic in many respects, a child might find pleasure in its perusal

THE PRINCIPLES OF COLOURING IN PAINTING. By CHARLES MARTEL. Winsor and Newton.

This little book derives its "principles" from the scientific deductions made by M. Chevreul, establishing the physiological laws which govern the phenomena of harmony and contrast of colours. That those laws, and their application to arts and manufactures, have been more tastefully exhibited by the French is well known; and they are doubtless greatly indebted to the teaching of M. Chevreul, while Superintendent of the Dyeing Department of the Gobelins, and the Arachne tapestry manufactory, for the lectures of this eminent chemist at Lyons. His great work—describing his discoveries, and detailing the immense number of careful experiments which established them—has been ably translated by the author of the present manual. But this little book is deserving of special recommendation as an effort to reduce the results of these researches to the comprehension of the young artist or artisan, and place the knowledge of them within his means. That we only want a scientific system, and not the faculty for feeling the fascinations of *Manufacture des Gobelins* at home, is the unmistakeable superiority of English over French artists as colourists

Although these principles are not limited to painting, as may be inferred from our remarks, still, their special application to the art by our author will be of great value to the young artist. They will not simply and alone make him a painter; for, of course, to be one requires not only tasteful selection of what is merely imitated, but often the power of *inventing* combinations of colour, and a delicate perception of the relations of different gradations of tint and hue as affected by chiaroscuro, which nothing but what is termed "an eye for colour" will afford. Still, a knowledge of these principles will save him much time, spare him many a useless experiment, and give him an unerring guide for the groundwork and general effect of his picture. In the course of manipulation, also, while looking at individual colours, he will be able to appreciate the influences at work which cause those colours to appear different from what they really are—thus giving him, as it were, constantly a "fresh eye."

The next merit of Chevreul's discoveries is, that they are established with all the precision and certainty of scientific laws. Hitherto no subject has been treated more vaguely or empirically than that of colouring. We have had pretended applications of Newton's analysis of the spectrum; and fanciful analogies between sound and colour (which the Germans have so delighted in making); or else merely a description of *material* colours. In this little book, however, are principles perfectly trustworthy. That they may be recognised and applied in England as they have been already on the Continent and in America, we earnestly hope, and welcome every effort to advance this result

PHYSIOLOGY AS A BRANCH OF EDUCATION.

At a meeting of the Governors of Heriot's Hospital, Edinburgh, a special committee appointed at last meeting, on the motion of Dr. Lee, "to consider the propriety and practicability of instructing all the pupils connected with the institution in the elements of physiology and the laws of health," gave in the following report.

Treasurer's Chambers, 22nd Feb., 1855

The committee appointed at last meeting of governors met, and having maturely considered the subject remitted to them, report as follows

1. They are decidedly and unanimously of opinion that it is most desirable that a knowledge of physiology and the laws of health should be communicated to all the elder scholars, of both sexes, attending the Heriot Schools and also to the elder boys in the Hospital.

2. The committee are satisfied from numerous facts, that, by using proper drawings, illustrations, &c., which are easily accessible, this kind of knowledge can be successfully imparted to even very young persons, and that it seldom fails to prove interesting and attractive to them.

3. Having conversed on the subject with Dr. Bedford, the house governor, the committee find that he warmly sympathises in the proposal laid before the last meeting; and, having paid considerable attention to these subjects, he will hold himself prepared, within a reasonable time, to commence a course of lectures on physiology and the laws of health.

4. As it is important that the teachers in the Heriot Schools should have their attention directed to these important branches of knowledge, the committee have to suggest that two lessons should be delivered by a competent person weekly, till the principal subjects have been gone over. The committee have they will have little difficulty in arranging the time and place for the lessons, if the Governors shall [illegible] to resolved

5. The [illegible] to which the first course of lessons shall be addressed, shall, in the opinion of the committee, consist of from sixty to eighty of the more advanced and intelligent pupils, selected by the teachers from the several Heriot Schools—the teachers, or as many of them as may be found convenient, being also present to hear the lessons and examinations

6. [illegible] recommend that Dr Hodgson be invited to give the first course of lessons. They believe the gentleman to be well qualified for this duty, from his powers of illustration and simplification, as also from his experience in the same kind of instruction. His course of lessons extends to twenty five, and they suggest that Dr. H., if employed, should be allowed £25 for his trouble.

7. The [illegible] apparatus, diagrams, &c., will be necessary; but the committee do not recommend that any considerable sum of money should be expended in procuring these at present; the sum of £10 at most—if the Governors shall sanction it—applied will, they think, be amply sufficient. R. LEE, Convener.

Dr. Lee moved the approval of the report, which was seconded by Dr. [illegible]. After some discussion,

Dr. [illegible] said, he was gratified with the motion which his motion did not with on the whole, and he augured the happiest results both to the children connected with this institution and far beyond its limits, from the experiment about to be made, if it should prove successful, of which he had no doubt. He thought it honourable to the intelligence and candour of the Governors of George Heriot's Hospital that they should adopt this motion unanimously, and thus express their desire that so important a proposal should at least have a fair trial. He hoped other—many other—bodies entrusted with the education of youth would feel called upon to follow their example, and not yield to those narrow prejudices which arose either from ignorance or a miserably contracted and mistaken notion of the true sphere and objects of education. There existed, he was delighted to perceive, a wide-spread dissatisfaction with education as now carried on, and a lively sympathy with feasible schemes for enlarging and improving it. He had had most pleasing proofs of this interest in numerous communications he had received, since the last general meeting, from persons in very different stations in society, all expressing high approbation of the plan then proposed, and all sanguine of its success. Even Fears of the realm did not think it beneath them to join in this sentiment, showing an interest in the improvement of the humbler classes which he could not but think was very graceful and very honourable in them. Several objections had, indeed, been expressed by different Governors, but he might be permitted to say that besides being so inconsistent as mutually to refute each other, they were very trifling, and many of them proceeded on misapprehension. Thus one reverend friend of his had expressed his repugnance to "smatterings in science," and another hon. gentleman (Bailie Brown Douglas) objected that so extensive a course of lessons should be proposed, and was of opinion that six lessons on physiology would be sufficient. Thus, to the first objector twenty-five lessons were only "a smattering," while to the other objector a half-a-dozen lessons "were full and sufficient instruction." He (Dr. Lee) objected to the magistrate's notion, because within that compass the subject could not be treated so as to suit the capacities of young persons, and would be a smattering, the labour would be thrown away. If the subject is to be taught, it must be so taught that it may be comprehended, so that it may interest and may [illegible] all memory; for nothing will be well or long understood, and if not understood it will not be remembered. For securing these important objects, the committee proposed so extensive and complete a course of lessons. And he replied to Dr. Hunter's objection that the teaching which would be given would not be a smattering, but within its own range, and for the purposes in view, would be a substantial and sufficient instruction. Another reverend friend (Dr. Clark) had made this objection, that the Governors might as well teach the children agriculture or horsemanship. He (Dr. Lee), however, rather differed with his reverend friend on that point. It was not likely that many of the boys, and it was certain that none of the girls, would become farmers or tillers of the ground; and if they did, they would learn this in due time. Neither was it very probable that many of these boys or girls would in after life practise the profession of a horse-[illegible] rise to the dignity of fox hunter; so that he thought, with submission, that agriculture and horsemanship might be without absurdity, omitted from their programme of studies. But each of those boys and girls had a body, which must exist in health or disease, and to either of which persons their own bodies—nothing else to any thing like the same extent—must, since health was one of the greatest blessings, and sickness one of the greatest calamities, which could befall any one, and to a greater extent than any human being could be aware of, be of the greatest importance. Another reverend friend feared that this might interfere with the acquisition of other parts of education. He should be sorry if it did; but there was no reason why it should. But even if it did, he (Dr. Lee) was prepared to maintain it was, relatively to religious knowledge itself, the most important of all. Millions of people perished for the duties of their station with very few demands upon their arithmetical powers—with very little knowledge of writing—with even a low degree of reading; but nobody could do anything important or enjoy anything without health. This was everybody's concern—rich and poor, young and old, master and servant. Were not many more ignorant of how should not remain ignorant of themselves—they should be compelling not only of their minds but of their bodies; and it would be understood more clearly than it is now, how much not only the comfort and peace but the virtue of the mind depends upon the health of the house it dwells in—and how close is the connection in numerous cases between diseases and vices. It had also been objected that the introduction of these lessons would increase the hours of study, and so make heavier that burden which was already so great. He admitted there was much reason in this objection But the governors would remember that the remedy was easy, and was in their own hands. He had always protested against the long hours with which children and youth were oppressed at schools. He was astonished such a system should be submitted to. A child naturally delighted in things; he was interested in objects; and we, reversing the process of nature, [illegible] mind inward [illegible] and loosing him to study, but [illegible] Language, as the key of knowledge, and so make learning or study at a later period, when the age of reflection has arrived; but in childhood and early youth to hold it a thing to be taught, sometimes, to be a perplexed and [illegible] process. He was against the study of the human mind, the same in kind as logic or metaphysics. He thought this *word-study* might advantageously be reduced in quantity, and a little more room made for the substances with which the mind

NEW MUSIC, &c.

DALBERT'S NEW MUSIC FOR THE SEASON.
DALBERT'S LILLIAN and RUSTIC POLKAS. Each 2s. Postage free. The latest compositions of this popular composer.—CHAPPELL, 50, New Bond-street.

NEW BOOKS, &c.

In Weekly Numbers, price 1d.; Monthly Parts, 5d.,

THE SUNDAY AT HOME; a beautifully Illustrated Family Magazine, adapted for Reading on the Sabbath. Religious Tract Society, 56, Paternoster-row.

THE WAR.

This day, 6d.; by post 8d.,

SUSPENSE: a Sermon for the Times. By RICHARD HARVEY, M.A., Rector of Hornsey, and Chaplain in Ordinary to the Queen.

GROOMBRIDGE and SONS, 5, Paternoster-row.

This day is published, Fine Paper Edition, rubricated and bound in cloth, price 2s. 6d.; or, common paper, bound in limp cloth, price 1s.,

THE COMMUNION SERVICE, from the Book of Common Prayer; with SELECT READINGS from the WRITINGS of the Rev. F. D. MAURICE, M.A. Edited by the Right Rev. JOHN WILLIAM COLENSO, D.D., Lord Bishop of Natal. Cambridge: MACMILLAN and Co. London: Ball and Daldy, 186, Fleet-street.

NEW BOOK.—Price 1s., or 1s. 6d. postage free,

THE BRIDE of the WILDERNESS.

"This is a highly interesting novel, by Mr Bennett, and which cannot fail to please."—*Bell's Life.*

PUTTE and Co, Paternoster-row, or Jullien and Co., 214, Regent-street.

STANDARD JUVENILE WORK.

PLEASANT PAGES for YOUNG PEOPLE.—The 19th Thousand of Vol. I. is now ready, price 3s. 6d.—London: HOULSTON and STONEMAN; and all Booksellers.

NEW WORK BY WASHINGTON IRVING.

Author's Edition.

Cloth, price 3s. 6d.,

CHRONICLES of WOLFERT'S ROOST; and Other Papers. By WASHINGTON IRVING.

Forming Vol. IV. of "Constable's Miscellany of Foreign Literature."

"The neat and brilliant episode we can offer on the volume is, that it is worthy of its author, which is as much as to say, in other words, that it is worthy of being read by every body."—*Leader*

"It would not be easy to overpraise this American Miscellany."—*Athenæum*

Edinburgh: THOMAS CONSTABLE and Co.

London: Sampson Low, Son, and Co.; and Hamilton, Adams, & Co.

Now ready, at all the Libraries, in Two Vols.,

SAM SLICK'S NEW WORK, NATURE and HUMAN NATURE.

"Since Sam Slick's first work he has written nothing so fresh, racy, and genuinely humorous as this. Every line of it tells in some way or other, and there is not a dull sentence in the volume."—*Post.*

CONSTANCE HERBERT. By Miss JEWSBURY, Author of "Marian Withers," "Zoe," &c. 3 vols.

THE SECRET HISTORY of a HOUSEHOLD. By the Author of "Alice Wentworth." 3 vols.

HURST and BLACKETT (Successors to Henry Colburn).

CURIOSITIES OF LONDON.

Now Ready, in a closely-printed Volume of 800 pages, price 14s., with a Portrait of the Author, from a painting by T. J. Gullick,

CURIOSITIES OF LONDON: Exhibiting the most Rare and Remarkable Objects of Interest in the Metropolis: with nearly Fifty Years' Personal Recollections. By JOHN TIMBS, F.S.A., Editor of the "Year-Book of Facts."

This book will be found more full of information and less prolusive of the many conventional topics than the illustrative books of London. In the management of the details indicates qualities more superior to any which have been hitherto brought to bear upon more archæological questions of a foreign or scholarly intellect.—*The Leader*, March 3, 1855.

DAVID BOGUE, 86, Fleet-street.

Now ready,

THE FERNS OF GREAT BRITAIN: Illustrated by JOHN E. SOWERBY. The Descriptions, Synonyms, &c., by CHARLES JOHNSON, Esq. In 4 vols., cloth, beautiful coloured, 27s.; partly coloured, 14s. Also, Part 8, completing the work, price 5s. full, and 2s. 6d. partly coloured. The 4 vols. contain 69 Plates and Descriptions

JOHN E. SOWERBY, 3, Mead-place, Lambeth.

NAPOLEON AT PARIS

Now ready, and at all the Libraries, in 1 vol. 8vo., with coloured Illustrations 12s.

THE ISLAND EMPIRE;

or The Scenes of the First Exile of the Emperor Napoleon I. Traced in both a Narrative of his Residence on the Island of Elba, Extracts from Local Journals, &c. Papers of the British Resident, and other Authentic Sources.

By the Author of "Italy."

"I never yet published a work we have read with less interest. Many of Napoleon's remarks read like the words of a master and have an interest as pressing in our time as when they were uttered."—*Athenæum*

"A fresh subject, treated freshly, without being overdone. It has interest—it is free from prosaic affectation."—*Examiner*

"It has an historical value of real significance for political readers, and a lively interest for all."—*Leader.*

"It throws considerable light upon a critical point in modern history, and contains an illustration of the character of a great man deserving a second article."—*Spectator.*

THOMAS BOSWORTH, 215, Regent-street

TO TEACHERS OF DRAWING, &c., &c.

NEEDHAM'S LANDSCAPE ALBUM. A series of Twelve Plates of Landscape and Trees, printed with Tints and Hints, after the manner of Prout. Price each Study 1s. 6d. Twelve Plates, mounted, 2s. 6d.

Master, Boy and Son's respectfully direct their Studies to Teachers and Pupils. Their Publications are of the highest Artistic merit, and are to engage with those for artistic ability and the manufactures with which it distinguishing characteristics of every kind of wooded scene is created.

London: DAY and SON, Lithographers to the Queen, 17, Gate-street, Lincoln's-inn-fields.

INSTRUCTION IN ART.

MR. J. D. HARDING'S EDUCATIONAL WORKS ON ART.

Second Edition.

LESSONS on ART. By this work every one may learn to Draw, either with or without a Master. Imperial 8vo, printed on fine French paper sides, or One Volume, 18s., cloth. Containing 128 Lessons, 156 Pages of Text, 48 Lithographic Plates, and 108 Woodcuts.

Now Ready,

GUIDE and COMPANION to LESSONS on ART. In One Volume, imperial 8vo. Price 12s. 6d., cloth. Containing 178 Pages of Text, 16 Lithographic Plates, and 87 Woodcuts.

The above works are approved by the Department of Science and Art.

Fourth Edition (size, Imperial 4to), price 25s., cloth,

ELEMENTARY ART. Containing 97 Pages of Text, 24 Plates in Lithography (many tinted), and 45 Woodcuts

Second Edition (size, imperial 4to), in Six Parts, paper sides, or One Volume, cloth, price 30s.

LESSONS on TREES. Containing 12 Columns of Descriptive Text, and 65 Lessons in 30 Lithographic Plates

The whole of the above works have been greatly improved, and much reduced in price. N.B.—Any of the above books sent carriage free on receipt of Post-office Order.—London: DAY and SON, Lithographers to the Queen, 17, Gate-street, Lincoln's-inn-fields. To be had of all Printsellers, Booksellers, and Artists' Colourmen, in the Kingdom.

Price Five Shillings,

EDWARD JAMES FARREN'S LIFE CONTINGENCY TABLES. Part 1st.—On the Chances of Premature Death, and the value of Sickness and Annuity Benefits.

"In the very able work before us, Mr Farren has proposed to himself the resolution of a problem which will be interesting to persons familiar with the subject."—Philosophical Magazine.

By the same Author,

HISTORICAL ESSAY on the EARLY PROGRESS of LIFE CONTINGENCIES in ENGLAND.

"This and Mr. Milne's Historical Account in the 'Encyclopædia Britannica' are the only ones of which we know that treat the subject at any length. Both Mr Milne and Mr Farren give actual readers of the works they cite."—*Athenæum.*

Now ready, in Two Vols., post 8vo, cloth,

MR. SHIELS'S LEGAL and POLITICAL SKETCHES. Edited, with Notes, by M. W SAVAGE

"These volumes will add to the high and well earned fame of the general reader. They will in no respect suffer by contrast with the essays of Macaulay and Stephen, Macintosh and Sydney Smith, and other brilliant literary writers."—*Morning Post*

ALEXANDER HALL.

BURKE'S PEERAGE and BARONETAGE for 1855. Corrected to the present time from the personal communications of the Nobility, &c., in one volume, with 1500 Engravings of Arms

Published for H. Colburn, by his Successors, HURST and BLACKETT

"One of the wonders of the age."—*Britannia.*

TO ADMIRERS of JOSEPH HUME.—A [illegible] 10s together. Also, a fine Collection of Genuine Autographs from Hume, Cobden, Bright, Roebuck, Sir De Lacy Evans, Sir Joshua Walmsley, Sir William Molesworth, Sir Francis Burdett, Lord Brougham, Lord John Russell, Lord Palmerston, Lord Derby, Lord Aberdeen, Lord Clarendon, Lord Ellenborough, Lord Campbell, Lord Cranworth, Lord Lyndhurst, Lord Stanley, Lord Malmesbury, Lord Granville, Lord Normanby, Lord Carlisle, Lord Ashburton, Lord Dudley Stuart, Lord Ebrington, Lord Seymour, Lord Ellesmere, Lord Macaulay, Lord Wodehouse, Lord Elgin, Lord Dalhousie, Lord Panmure, Lord Hardinge, Lord Raglan, Lord Gough, Lord Strangford, Lord Stratford de Redcliffe, Lord Ward, Lord Cowley, Lord Howden, Lord Napier, Lord Ponsonby, Lord Clanricarde, Lord Shaftesbury, Lord Ashley, Lord Lansdowne, Lord Carnarvon, Lord Monteagle, Lord Wrottesley, Lord Overstone

THE ILLUSTRATED LONDON NEWS

No. 733.—VOL. XXVI.] SATURDAY, MARCH 24, 1855. [WITH A SUPPLEMENT, SIXPENCE.

THE VIENNA CONFERENCES.

DIPLOMACY is splitting straws in the Austrian capital; but, in the meantime, the Sword is doing, or has done, more valid work in the Crimea. Captain Pen is, doubtless, a great Commander; but Captain Sword, in the present circumstances of Europe, is the best and safest General. If this great "Edax Protocolorum" will so manage as to defeat the Russians in a pitched battle before Sebastopol, and capture the town immediately, or very soon afterwards, he will save Captain Pen an infinitude of useless trouble, and clear away a whole wilderness of entanglements from the path of Ambassadors and Ministers Plenipotentiary. But as Captain Sword may require the whole summer to work out his plans, and as the diplomatists assembled at Vienna only require about fifteen days to come to a conclusion on one or two very great and essential points, diplomacy will share with war the attention of Europe, and attract to Vienna, for a short time, an interest only second to that which centres around Sebastopol and Balaclava.

If we could suppose that the new Czar would throw himself upon the mercy of Europe, and endeavour to make peace, as John Bright or Joseph Sturge would make it—*à tout prix*—even at the price of national honour—we might not unreasonably expect that the temporary pacification of the world would flow from the exertions of the diplomatists of Vienna; and that we should forthwith enter upon the enjoyment of halcyon days. But, as we cannot suppose anything of the kind—for we have no right to imagine that Alexander II. is such a madman as to inaugurate his reign by an unconditional surrender, which would degrade both him and the nation in the eyes of his subjects, and probably lead to the loss of his crown and his life—we have only to inquire whether the terms to which he may be willing to accede will be such as to satisfy not only Turkey—the party mainly interested—but England, France, and Austria. He has already yielded the famous Four Points, and the general interpretation put upon them by the Allies; but there remain two grand points flowing out of one of them—the limitation of Russian power in the Black Sea, and the existence of Sebastopol as a military and naval position. The Czar cannot, we think, yield on these two points, unless upon compulsion. If the Allies should be idiotic enough to forego them, we shall have peace—peace which will hugely please the Quakers and some of the ex-members of the *ci-devant* Anti Corn-Law League, and which will last as long as it shall suit the purposes of Russia to keep it, but not a moment longer. Such a peace will be at the mercy of other Powers than Russia to undermine; for if, by any unfortunate mischance, the alliance between Great Britain and France should be weakened in years to come, or, worse still, converted into hostility, the Czar, whosoever he might happen to be, would seize his opportunity, emboldened to dare and do by the too easy terms on which he had been permitted to escape the penalty of his last transgression. A peace on the basis of the Four Points alone, without the destruction of Sebastopol, and the limitation of Russian power in the Black Sea, might last three years, or ten years, or even twenty years; but inevitably a war with Russia, on the old pretext or provocation, would sooner or later ensue. Thus, the work, neglected or postponed at the present time, would have to be done over again, at greater cost and with augmented misery.

No doubt a peace for twenty years would be, *per se*, a very good thing; and to attain it, the Potentates of Europe might well make a large sacrifice of personal feeling. But it is far from certain that a patched-up peace would last for so long a period as twenty, or even for three years. And for a peace dependent upon the caprice of a powerful foe, exasperated by previous humiliations, it would be in the highest degree impolitic and unwise to sheathe the sword. Even if peace should last for a whole generation, we should remember that in the existence of states and empires thirty or forty years are of small account, and that the men of 1855 are paying the heavy penalty of war because their grandfathers in 1787 were too short-sighted to prevent the Czarina Catherine from perpetrating a great wrong against Europe. That wrong, by being unpunished, led to many others—each more mischievous than its predecessor. The work of resistance, which might at first have been easy, be

RUSSIAN PRISONERS AT PLYMOUTH.—(SEE NEXT PAGE.)

came more difficult by the lapse of time—like a fire, which, at the right moment, may be extinguished by a bucketfull of water, but which ten minutes later may defy all the engines of a great city to subdue it.

Thus, although the Czar may have acceded to the Four Points, it is the duty of the Allies, while accepting those terms as the basis of pacification, to insist upon additional securities—upon tangible "material guarantees" in the shape of money or provinces, that he will not again force the nations to take up arms against him. Austria may possibly refuse to be a party to any further demands, although circumstances favour the supposition that she will support the Allies with fidelity and honour in all that they require; but, whatever may be her policy, France and England, as well as Turkey, having been put to great expense, will neglect their obvious duty, and will betray the interests of their people, if they do not insist not only upon indemnification for the past, but ample security for the future. If the negotiations should break off upon this point, and no other, it may be taken as a proof that Russian diplomacy is not to be trusted—that the conferences at Vienna are a "sham," as far as the Czar is concerned in them, and that any peace concluded at the present time would prove to be alike unstable and pusillanimous.

For the reason that we detest war so earnestly and so thoroughly, that we would have a peace which should defy the Emperors of Russia or any other Potentate to break it, we trust that Alexander II. will persist in the policy of his race, and that Sword, and not Pen, will settle the question. There was a time when Pen might have been competent to the task, but it has long since passed, and Sword has become the only valid, safe, and reasonable arbiter. After the fall of Sebastopol the work of diplomacy will be simplified, and the reconstruction of the map of Europe will be the task to be accomplished. While Russia is undefeated that question seems too large for the courage and wisdom of diplomacy. But the progress of the war would open the eyes of statesmen to its urgency, and they would see, like many humbler, but better informed and bolder men, that the map of Europe, with which they so much fear to meddle, is in a state so highly unsatisfactory and perilous as to demand revision in the interest of humanity and of civilisation. The reconstitution of Poland as an independent kingdom or republic, the guardianship of the Danube by Austria, and the restoration of Finland and the Crimea to their ancient owners—these are but some of the changes in the map which the circumstances of Europe seem imperatively to call for. France and England can lend their hands to the work in a pure and disinterested spirit. They seek no territory for themselves, and have no desire but for the establishment of truth and justice. If any changes become necessary, in additionto the few which we have thus briefly indicated, it will be the King of Prussia that will bear the blame and the penalty.

THE RUSSIAN PRISONERS AT PLYMOUTH.

A CLUSTER of buildings, situated on the shores of Millbay, Plymouth, first used as a prison during the last French war, and subsequently converted into barracks for Royal Marines and Militia, was, at the close of last autumn, redevoted to its original use; and, in the month of October, was prepared for the reception of several hundreds of prisoners of war, taken at the capture of Bomarsund. Soon after their arrival, Lieutenant H. T. Veitch, R.N., the Governor, effected a classification of them, which at present remains in full force. The establishment is divided by a range of offices into two extensive areas, an upper and a lower: a circumstance that much facilitates the arrangements for a separation of the natives of Russia Proper from those of her great European dependency of Poland—the former occupying what is called the "higher," and the latter the "lower" prison. The lower edifice is substantially built, three stories in height, and is capable of accommodating many more than its present number of occupants. In one of the wards on the right were located fifty-one Polish Jews, whose service in the battalions of the Czar, it may easily be imagined, was completely compulsory; and therefore their situation here, as compared with that they held when numbered in the ranks of the Muscovite army needs but little to be commiserated. A small platform, roughly erected, stands on one side against the wall, and is used by the Jews when at their devotions, in which they are occasionally assisted by a Rabbi. Several other of the wards in this wing are tenanted by 150 Polish Christians, the great majority of them being Roman Catholics, and five Finns, who were captured in one of the Russian traders by H M S. *Rosamond*.

The larger of the two prisons is at the head of this open space, and is divided, like the other into two wings, occupied by 500 Russians, including some members of Cossack regiments. Their habiliments are very slightly varied—most of them appearing in great grey coats, baggy trousers, and boots that reach nearly to the knees; a few keep themselves warm with coats made of undressed sheepskin. Such clothing, however, is hardly necessary here; for the wards are well heated with stoves. The prisons are far from crowded. The easternmost ward in the series is set apart for the religious services of the soldiers who are of the persuasion of the Greek Church.

Of the general behaviour of the prisoners there seems to be but little reason to complain. They are apparently as resigned to their fate as men under circumstances of confinement can be expected to be. No unnecessary constraint is imposed upon them, as much liberty of action being afforded them as is consistent with a due maintenance of discipline. The chief object is to keep their minds occupied; and those of them who are inclined to be industrious have facilities afforded them by the Governor; through whose kindness a workshop has been provided, where puzzles, boots, and other things are manufactured, and at times from fifty to one hundred men may be seen at work in this apartment. When the weather is fine the prisoners are allowed, at the discretion of the Governor, to go into the town and country for exercise; on such occasions they are invariably under the charge of a military escort. In the Sketch upon the preceding page, a body of them is represented proceeding through the Octagon, Union-road, Plymouth, on their return from a "general airing." In the Illustration are also shown portions of the north-east and north-west wings of the prison.

The number of individuals to be daily provided for in the establishment is 746 men, women, and children. The dietary is good and sufficient: tea in the morning and evening, and meat and soup at mid-day, are served out in messes.

STRENGTH OF THE ARMY IN THE CRIMEA.—On the 7th of February the total number of *effective* non-commissioned officers and men was 26,868, and the sick in Camp and elsewhere numbered 18,243. On the 23rd of February the number of effectives was 26,193, and the sick 18,185. In both instances this was exclusive of officers and of the Ambulance and Mounted Staff Corps. On the 27th of February the strength of the British army (non-commissioned officers and men), inclusive of Marines, Ambulance and Mounted Staff Corps, was 27,067. The actual number of sick was on that day 17,633, of whom 8309 were in Camp, and 12,324 at Scutari, or otherwise absent. The number of horses of the Cavalry and Artillery was, on the 7th, 1974; on the 23rd, 1803; and on the 27th, 1617.

COSSACKS AND TARTARS. The Cossacks are armed with a short carbine slung behind the back, a pair of pistols attached to their girdle, and a black lance, about eleven feet in length, tipped with iron well sharpened. This weapon is heavy, and difficult to balance; so that when the Cossack is on the gallop, making a foray among the Tartar herds, he places his lance across his saddle so as to ease the weight till he gets close to the object he is about to attack. The lance is a fearful weapon to the poor Tartar herdsmen, endeavouring to save their charge, and the Cossacks pitilessly run them through; but it is not dangerous to hold and skilful horsemen like ours, who easily parry the thrust and cut the lance through with one blow of the sabre, for the wood of the shaft is very slender.

FOREIGN AND COLONIAL INTELLIGENCE.

FRANCE.

(From our own Correspondent.)

PARIS, Thursday.

Last week took place, at the Greek Chapel in the Rue de Berry, a funeral ceremony, commemorative of the death of the Emperor Nicholas. The altar was covered with a cloth of black velvet, bordered with silver, and two masses—the one in Latin, the other in Russian—were performed. The honours of the occasion were done by Madame de Sabach, wife of the Saxon Minister, and daughter of M. de Nesselrode. The Princesse Mathilde, who is related to the family of the Czar by her mother, was present at the ceremony, and the Prince Napoleon was represented by one of his Aides-de-Camp. No funeral discourse was pronounced.

It appears that the Government, taking into consideration the enormous value of the collection of objects to be exposed at the Great Exhibition—a collection which it values at ten millions of francs a valuation likely to be increased, should reason be found to do so—has contracted an insurance for this sum. It has, besides, assured the Palace itself, with the buildings and accessories, for twelve thousand francs, guaranteed by different companies, and the Pavillon des Beaux Arts, in the Avenue Montaigne, for a million of francs (£40,000). It is said that in this addition—built in consequence of the want of space in the Exhibition itself for the reception of works of art no less than 13,000 pictures by French artists alone, are to be exhibited. Report gives to M. Ingres twenty-five specimens; to Horace Vernet, forty; and to Théodore Gudin, a hundred and fifty! all the artists being permitted to send, not only their later productions, but any they have already exhibited elsewhere. Without wishing to cavil at the arrangements of the Committee, we really think that it would be, not only more just to all, but more in the interest of art and artists themselves in France, to limit the picture accepted to a certain number, and those not previously shown elsewhere. How is it possible to form any judgment on individual merit where the eye of the visitor will be overwhelmed by the thousands and thousands of canvases, subjects, and colours that will thus, all at once present themselves?

There is a report that the Minister of State proposes to prevent the departure of Mdlle. Rachel until after the season of the Exhibition, in order not to deprive the visitors of the satisfaction of beholding the great tragedian.

A trial, the announcement of which has excited much attention, has just been concluded. It is that of M. de Jouvencel, nephew of the late *représentant*, and Madame de Jarsy, for the distribution of seditious writings. The former has been condemned to three years of imprisonment, *par contumace*, being abroad; the latter, a young and highly distinguished-looking woman—whose appearance on the bench excited no small degree of attention—to six months of the same punishment

M Clésinger, the celebrated sculptor, son-in-law of Madame George Sand, is employed on the pedestal of his statue of François I, which is to be placed in the Court of the Louvre. This statue has been ordered by the Emperor himself, who has, moreover, given the artist the subjects of the four bas-reliefs which are to decorate the pedestal; and on one of his first visits to the *atelier*, left with M. Clésinger the sum of 10,000 francs, to defray the first expenses of the work.

The last few weeks have been unusually rich in the production of new works of interest. Among these is "Histoire des Livres Populaires and de la Littérature du Colportage," from the fifteenth century up to the period of the establishment of the commission for the examination of books of the latter description, by M. Charles Nisard, Under-Secretary of the Commission. The work, in two thick volumes, illustrated with the coarse woodcuts of the books cited, forms a most singular and interesting collection, and exposes, in a striking manner, the nature of the literature that for so many succeeding ages formed the only intellectual food of the inhabitants of the country—a nature which, for the most part, is so composed of coarseness, immorality, triviality, and bad taste, that it is painful to reflect on the state of mind and morals that has been at once the cause and effect of the production of such books. Besides this, have appeared, a new edition of the complete works of Heinrich Heine, the Franco-German poet; the first volume of the "Mémoires of M. Dupin," the celebrated Jurisconsult; the second of the "Mélanges," of M. Villemain, the Academician; the "Légendes Fleuries," of the Marquis du Belloy; "Le Châtiment;" a most striking novel," founded on the manners of the day, by M. Adolphe Bélot; "Les Récits d'Heir et d'Aujourd'hui," by M. de Valbézen; "Les Mélanges Historiques and Littéraires," of M. Prosper Mérimée, who adds to the first quality of being a man of remarkable talent and distinction, the honours of Senator and Academician; and two or three other works of minor interest.

M. Duprez has completed, but not yet published, a new opera on a Scriptural subject, entitled "Samson." It is said to be a very remarkable production.

On Sunday took place at the Salle St. Cecile a concert for the benefit of the labourers out of work. At this concert sung M. Darius, who was one of the singers of the Chapelle Musique of Louis XV.; and who, after a series of brilliant successes in his art, as composer and performer, retired, and now, after a repose of thirty-two years, reappears on this occasion at the age of 102.

One of the principal theatrical successes of the day is "La Joie de la Maison," at the Vaudeville. On Tuesday evening their Majesties honoured the theatre with a visit, and were highly gratified by the performance; which, from its own merits, and the admirable acting of Felix and the pretty *spirituelle* little Mdlle. Luther, went off admirably. At the Français, "Les Jeunes Gens," by M. Léon Says, has been well received.

THE WAR IN ASIA.

Recent accounts from the Caucasus and Georgia show that the Russians are preparing to commence the campaign. General Muravieff, the new Commander of the Transcaucasian army, has just completed a tour of inspection, in which he has visited all the stations of troops. His plans of attack, and the number of troops to be placed at his disposal, were fixed, under the sanction of the Emperor Nicholas, before he left St. Petersburg. Important reinforcements had reached the General since his arrival in Georgia; these were two complete divisions of infantry, numbering nominally 14,000 men each, and accompanied by their artillery, and four regiments of light cavalry. General Jouriatinski has undertaken to the Emperor to hold Schamyl and his forces in check. The *Invalide Russe* gives the following report of a collision between the Turks and Russians:—

In consequence of their defeat on the 16th of June, 1854, on the Tcholok, the Turks had been compelled to remain on the defensive along the frontiers of the Gouriel; and, in order to cover their territory, they had formed, near the villages of Leghoy and Okhtchamury, two intrenched camps, each of which they had occupied with advanced detachments, to the number of 2000 men. In the night between the 30th and 31st of January, the chief of the Gouriel Militia, Second Captain Prince Gouziel, who was on this frontier, attacked the Turkish camps with considerable success. Crossing the frontier near the bridge of Tcholok, he advanced rapidly, and vigorously charged the Turks, who had advanced to meet him. Notwithstanding his numerical superiority, the enemy was completely routed. The militiamen followed close upon his heels, and entered the entrenched camp, which, after expelling the Turks, they destroyed.

In the meantime, the Turkish troops occupying the camp of Okhtchamoury proceeded in all haste to succour Leghoy; but they met in the way a sotnia of the Gouriel Militia detachment belonging to the flag of David Djokéli, and, after a protracted firing of musketry, were put to flight.

As soon as the first shots were fired at Leghoy, the inhabitants of the neighbouring villages of Gouriel, led on by the College Assessor, Matchavariani, Chef of Oeourghéti, and Prince Tavdghéridzé, Chief of the Gouriel Canton, came up to take part in the action. Their ready zeal proves the spirit that pervades the inhabitants of the frontiers. The Turks sustained a heavy loss in this affair. On our side we had four men killed and 39 wounded.

THE WAR IN THE CRIMEA.

The announcement that the whole of the batteries which surround Sebastopol, would reopen their fire about a fortnight ago, has not been fulfilled, as the telegraphic report from the Russian commander, dated March 12, states that no change had taken place. The letters received by the last mail, however, which come down to the 6th inst., leave little doubt as to the probability of an early assault taking place. At that date the weather was fine, the thermometer having been, on an average, 45 deg for several days, and everything seemed highly favourable in the English Camp. Fresh provisions were becoming abundant, and supplies of vegetables were to be had for the sick and scurvy-stricken. The siege works were in a state of completion, and said to have been admirably made. Those on which our troops were then engaged proceed uninterruptedly. A great number of mules and ponies, with a staff of drivers, from all parts of the world, had been collected together, which lightened the toils of the troops and of the Commissariat Department. The mortality among the horses had ceased; and though the oxen and sheep sent to the camps might not find much favour in Smithfield, they were very grateful to those who have had no food so long on salt junk alone. The sick were nearly all hutted; and even some of the men in those camps which are nearest to Balaclava had been provided with similar comforts and accommodation. Everywhere the reviving influences of the spring, and of a more vigorous and energetic system of management are visible. The policeman walks abroad in the streets of Balaclava; Colonel Harding, the new Commandant, is said to have exhibited great ability in the improvement of the town; and he has means placed at his disposal which his predecessors could not obtain. Lord Raglan is described as being about the camps every day; and Generals Estcourt and Airey are equally active. They pay full visit Balaclava, inspect the lines, ride along the works, and, by their presence and directions, infuse an amount of energy which will go far to make up for lost time, if not for lost lives.

The railway was extending its lines by night and by day. A little naval arsenal has grown up at the north side of the harbour, with sheers, landing-wharf, and store-houses, and a branch line was to be made from the spot to the trunk to the Camp. In a fortnight more it was hoped the first engine, which was lying all ready for work, with the driver, and all the apparatus for pulling up the trucks beside it, at its allotted station, was expected to be in operation.

The Electric Telegraph has now been established between head-quarters and Kadikoi, and the line will be speedily carried on to Balaclava. The telegraph is worked by four privates of the corps of Sappers and Miners, who have learned the principles on which it is constructed since they went out to the Crimea. The French have had a telegraphic communication by Semaphore established between the camps and naval stations for some time back. The Camp of the Allies is thus being rapidly concentrated, by these means of communicating with each of its parts with rapidity.

A council of war, attended by General Canrobert and General Bosquet, was held at Lord Raglan's head-quarters on the 4th. Nothing certain is known as to what the decision was, but the general belief in the Camp was that it had been resolved to commence active operations. The French were said to be rather uneasy at their position near Inkerman. The Russians were throwing up a new battery on the heights, but the distance was so great that no alarm was created. There was a report that General Pelissier had advanced against the Lorchis occupied by the Russians to the rear of Balaclava, but no particulars were known. On the 6th, one of our batteries, which commands the bottom of the Sebastopol harbour, had compelled a Russian steamer to quit its position in great haste

The English steam-transport *Impérador*, which had been sent from Malta to take on board 120 of the most robust and best-trained gunners of the garrison of Corfu, arrived there on the 4th, and left on the same day for Balaclava. She had on board, besides the men embarked at Corfu, about 260 artillerymen from the arsenal of Malta.

The following despatch from Lord Raglan appears in a Supplement to the *London Gazette* of Tuesday:

Before Sebastopol, March 8, 1855

My Lord, The enemy continued to manifest great activity in preparing the work which I mentioned to your Lordship in my despatch No 137, and are now bringing up platform timber and guns for the equipment and armament of it

Vast convoys are daily observed arriving on the north side of the town: and I learn, from information entitled to credit, that the road leading from Simpheropol is covered with waggons laden with provisions and munitions of war

This morning three British guns, placed in a battery overhanging the Tchernaya, opened upon two small steamers anchored at the head of the harbour, and, after a fire of about an hour, obliged them to take refuge behind a point. One of them appeared to have sustained considerable damage, and is supposed to have been deserted by her crew

The weather was fine yesterday, and is particularly so to-day, and the country is becoming quite dry

I have reason to hope that the sick are deriving material benefit from this change

I have established a convalescent hospital on the heights immediately above Balaclava, near a fine spring of water.

The Inspector-General of Hospitals entertains great expectations of the advantages that will result from placing the huts in so healthy a locality.

Lieutenant-General Penefather has resumed the command of the Second Division, and is, I am happy to be able to report, looking remarkably well

I inclose the return of the casualties to the 4th instant. I have, &c.,

The Lord Panmure, &c., &c. RAGLAN

NOMINAL RETURN OF NON-COMMISSIONED OFFICERS AND PRIVATES KILLED AND WOUNDED FROM 3RD TO 4TH MARCH, 1855, INCLUSIVE

KILLED.

21st Foot: Private Patrick Hanlan.

WOUNDED.

20th Private William Ogden, slightly
41st Sergeant Patrick Barley, severely
47th Private Matthew Kennedy, severely
49th Private Thomas Kelly, severely
88th Private Nolan Martin, slightly

J. B BOSANQUET, Estcourt, Adj.-General

CONTINUED ISOLATION OF PRUSSIA.

Advices from Paris and Berlin show that the Prussian Cabinet remains in its former undecided relations to the Western Courts, avoiding equally a breach and an alliance with France and England. A despatch of M. Manteuffel has appeared, the object of which is to remove the character of a demonstration against France from the recent proceedings of the Prussian Plenipotentiary at the Frankfort Diet. The Prussian Minister maintains that the resolution adopted by the Diet on the 8th ult., requiring the Germanic States to prepare their armies for war, was not intended as a demonstration against Russia. He declares that Prussia has no intention of turning against France, and contends that Austria has no right to criticise the motives of the resolution of the Diet relative to putting things on a war footing.

The King of Prussia arrived at Dresden on the 16th, as the guest of the King of Saxony, and was expected to remain until the 20th instant. The policy of the two Kings at this time coincident—both acting for Russian interests, in return for the patronage of the Czar.

EUPATORIA.—THE RUSSIAN ARMY.

Positive orders have been received by the Russian Generals to take Eupatoria at all hazards. A letter in the *Indépendance Belge* (a journal generally well informed) states that, for the purposes of the siege of Eupatoria, large masses of men are to be marched down from Perekop and Bagtchéserai. On their side, the Turks are neglecting nothing which can put their fortifications in the best possible state of defence. English, French, and Turkish vessels are posted on either side of the town, in order to protect the flank. The cavalry is the only arm of the service in which the Turks are deficient, and from the last advices the land and sea forces at Eupatoria amounted to about 50,000 men; and it was considered that their destination was not only to defend that place, but to execute in the spring the plan of Marshal St. Arnaud, and to operate against the fortifications of the north of Sebastopol, whilst the Allies would attack the south.

Speaking of the condition of the Russian armies in the Crimea, the *Militärische Zeitung* says that Bagtcheserai now resembles an enormous hospital. Thousands of sick and wounded soldiers are quartered in the town. The grand highway from Perekop to Bagtcheserai is covered with ammunition waggons on their way to Sebastopol. The number of Russian troops in the Peninsula is calculated at 170,000 men.

THE VIENNA CONFERENCES.

The second Conference began at one o'clock on Saturday last, but the second of the four bases of peace was not brought forward, although the sitting lasted full three hours. A protocol, containing an account of what had occurred on the 15th, had been drawn up by Baron von Meysenbug, the Secretary to the Conference, and it is supposed the nine Plenipotentiaries were occupied during the whole sitting of the 17th in revising

it It is said that the political situation of the Principalities was touched on in a general way; but there is no reason to believe that any details will be entered into until all the Four Points, with the interpretation given to them by the Allies on the 28th of December, have been formally accepted by Russia. The Vienna papers are silent as the grave on the subject of the Conference; and the Vienna politicians are so entirely ignorant of what is passing that they are literally necessitated to follow their example. The prevailing rumour set afloat by the Russian party was, that a pacific feeling prevails in the British Cabinet, but that France positively refuses to make certain concessions, which are counselled by Austria

A letter from Vienna, in the *Journal de Francfort*, sums up the almost inevitable probabilities of the present political situation in these words: "No treaty between Prussia and the Western Powers; no pacific result from the Vienna Conferences."

AMERICA

The steam ship *Baltic*, which left New York on the 7th inst., arrived at Liverpool on Sunday. The advices received by her are unsatisfactory, since they announce the defeat in the Senate of the bill for a general reduction of 20 per cent on the duties of foreign goods. From the manner in which the measure, in the first instance, was passed by the House of Representatives, and the feeling with which it was received by the country, there is reason to believe, however, that the question cannot be long delayed, and that the victory of the Free-tectionalists will be followed, as was the case in England with the Corn laws, by their being ultimately forced to submit to a broader scheme than that which they have now rejected. The session of Congress had terminated. Among its measures connected with finance and commerce has been one appropriating £1,650,000 for persons having claims on the revenues of Texas previous to the annexation of that State; one for the better management of passenger-ships; one for granting a line of way 200 feet in width to a private company for a telegraph from the Mississippi to the Pacific, which will enable a perfect communication to be established between New York and California; and one for altering the rates of postage, which in future are to be 3d. (1½d.) under 3000 miles, and 6d. (2½d.) for any distance beyond. The bill for continuing the subsidy to the Collins' steamers had likewise passed with some modifications

The *New York Times* publishes the correspondence at the recent Ostend meeting of American Ministers Plenipotentiary in Europe. It has exclusive reference to the acquisition of the Island of Cuba. The question is considered in all its bearings: the price suggested—the splendour of the acquisition to the United States treated of—the uses to be made of the money by Spain enlarged upon—the early necessity for disposing of the island, and the importance of arresting agitation referred to; and, finally, the forcible means by which the glittering prize is to become American, if a sale be refused by Spain, boldly avowed.

By an arrival at New Orleans we have later news from the Rio Grande. There were Filibuster enterprises against Mexico, and it was reported that parties at Brownsville and Monterey had raised a large sum of money to fit out an expedition under the command of Caravajal.

Later advices from Honduras mention the prevalence of rumours of Filibuster expeditions from the United States for the invasion of the Mosquito country, and of the design of General Carrera to subdue and annex the state of Honduras to Guatemala

Another demonstration on Greytown was also apprehended. The report had created an unusual excitement among the Hondurans

The Washington correspondent of the *New York Herald* states that the President had received a friendly autograph letter from the late Emperor of Russia, communicating intelligence received from his secret agents of an organisation against the United States by England and France. At the municipal elections the "Know-Nothings" had been the most successful.

INDIA AND CHINA

The Overland Mail has arrived with dates from Calcutta, Feb. 10; Bombay, Feb. 17; Canton, Jan. 21; Hong-Kong, Jan. 22; Shanghai, Jan. 16.

Perfect tranquillity reigns throughout India, and there is every prospect of its being continuing to do so. Some time since it was stated that Tagshund, in the Kokan, had been occupied by the Russians; whereas we are now assured that Tagshund has not been occupied by them, and that no Russians are within two hundred miles of the place A force has certainly arrived within some days' march of Khiva, but no Russian agent has been within reach of that town. The Shah of Persia is unremitting in his endeavours to effect an alliance with Dost Mahomed. The latter some time since sent one of his courtiers on a secret political mission to Persia: he lately returned to Cabul with costly presents from the Shah to the Dost, and a gracious and flattering letter, in which, among other things, the Ameer promises to restore all the territory wrested from Cabul by Persia.

Our negotiation with Dost Mahomed progresses favourably. The Governor-General did not think fit to send his reply to Cabul by any European officer, but entrusted it to a native of Affghanistan who had performed distinguished services for us under Major Edwardes. He was received with the utmost distinction by the Ameer, and conducted to the Durbar, where the letter excited the most lively satisfaction. Dost Mahomed is anxious to form an alliance offensive and defensive with us, and thus to obtain the benefit of our influence and prestige against the machinations of Russia and Persia. He has exhibited the highest confidence in us, by deputing the son whom he has selected for his successor to Peshawur to negotiate the treaty. He asks that we shall respond to this expression of good feeling by directing the Chief Commissioner, Mr. John Lawrence, the first authority in the Punjaub, to take charge of the negotiations which have hitherto been conducted through the agency of Major Edwardes. The Governor-General has cheerfully complied with this request, and Mr. Lawrence will immediately repair to Peshawur.

The latest advices from Burmah are to the 23rd ult. Orders have been issued by the Commissioner for two vessels to be in readiness in June next to proceed to Ava, whither the Ambassadors have already gone. They were so hard pressed for money at Rangoon, previous to their return to Ava, that one of them was necessitated to sell a handsome gold watch, presented to him by the Governor-General, for 120 rupees: about a fourth of its value. The Oude territories continue to be distracted by internal feuds. The state of affairs all over this country is grave and menacing. Several engagements have taken place, in one of which the enemy lost 60 killed, and the Government troops only 12. At the capital Colonel Outram was winning golden opinions—the King and people both feeling satisfied with, and reposing confidence in, the Resident's sound and impartial judgment

The principal item of Chinese intelligence has been received from Shanghai, whence we have advices to the 16th Jan.

The French force stormed the city on the 6th Jan., but were compelled to retire, with the severe loss of two officers and thirteen men killed, and four officers and thirty-three men wounded. The officers killed were Lieutenant Durrun, of the frigate *Jeanne d'Arc*, and Ensign Petit, of the steamer *Colbert*. On the morning of the 6th a breach was effected by a party of 200 men landed within the French wall, the *Jeanne d'Arc* and the *Colbert* cannonading the city at the same time. Two divisions at once succeeded in mounting the breach without accident, but on the wall they were exposed to a severe fire from the houses, which caused the heavy loss. A party pushed on to gain possession of the north gate, upon which they placed the French flag; but subsequently great confusion ensued from a body of Imperialists entering the breach and attempting to scale the walls. The French party had to retire, and regained the breach, when a recall was sounded. Nothing has since been done, although it was expected that Admiral la Guerre would not give up his intentions against the place in consequence of this disaster. The English and American forces took no part, considering that it would interfere with the neutrality that was agreed to.

At Canton the passive state of the rebels had temporarily restored confidence to the inhabitants; and this, coupled with some slight success in the neighbourhood of Fatshan, had made the authorities more active. The river and its approaches were still strictly guarded by the insurgents, and it was only by aid of foreign steamers that native vessels could carry on any communication with the city.

A Consular notification had been issued at Canton, stating that all boats laden with British property would be respected, and that the least interference with them would be treated by the naval officers as an act of piracy. The Bogue Forts were said to be in possession of the rebels, and this would afford facilities for a severer blockade than existed.

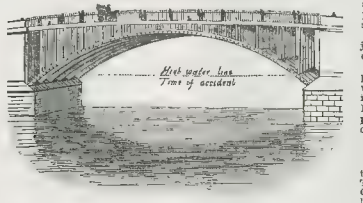
At Foo-chow the ground question was still creating much trouble, and there was great unwillingness on the part of the Chinese authorities to arrange it.

Her Majesty's brig *Bittern* had returned to Amoy, after succeeding in taking two of a large fleet of piratical junks—the others escaping in a fog. Six of the *Bittern's* men were wounded.

A newspaper in Chinese and English was started at San Francisco on the 1st of January last. It is called the *Oriental*; or, *Tung-Nyan-Sam-Luk*. It is published under the auspices of an English Missionary Society, for the purpose of converting the Chinese in California to Christianity. Its Chinese editor is one Lee-Kan, converted to our faith at Hong-Kong

TERRIBLE CATASTROPHE AT BRISTOL.—TOTAL DESTRUCTION OF AN IRON BRIDGE.

On Tuesday morning at about ten o'clock, the inhabitants of Bristol were electrified by the startling intelligence that the great iron Bridge leading from Bath-parade to the London road, had been completely carried away through a collision with a steam boat, and that a number of persons had been precipitated into the river and drowned. The intelligence spread like wildfire throughout the city, and within half an hour of the occurrence of the accident there could not have been less than 10,000 persons attracted to the spot. At the time when the tidal river of Bristol was converted into a floating harbour, a new course for the Avon was cut from the Hotwells, and this course directly crossing the high road to London and Exeter and the west of England, two bridges had to be constructed sufficiently capacious for the traffic. The one in question, which was called Hillsbridge, connects the city at a point near the termini of the Great Western, Midland, and Bristol and Exeter Railways with the main roads to London and Wells. It was a cast-iron bridge, made by the Coalbrook Dale Iron Works Company; was of 140 feet span, and comprised a single arch, with six cast-iron ribs, crossed by iron girders, tied and pinned, and supported by cast-iron stanchions. It occupied in its erection from 1805 to 1809; and it is worthy of notice that, in 1809, owing to some defects in the stone-work upon which it rested, it fell, and either killed or severely injured thirty-two persons The present accident happened as follows:—A screw-propeller, called the *John*, having an engine of six-horse power, had delivered her cargo of 180 tons of coke, and was descending the river on her return voyage, when she came in contact with the iron framework of the bridge, which rests on side piers. The force of the collision was so great that, notwithstanding the power of a very strong ebb tide, the steamer rebounded eight or ten feet, and the bridge immediately fell with a tremendous crash, carrying with it everything that happened to be upon it at the time of the occurrence. Of the extent to which life was sacrificed it is impossible as yet to speak with accuracy. Three or four persons swam to the banks, and were got out alive; but it is said that a woman with a child in her arms, and two ladies, who were seen struggling in the water, are missing, as also a



THE HIGHWAY BRIDGE AT BRISTOL.

little girl, who was seen close to the bridge, and who, it is believed, was upon it. Two carts were thrown in by the fall, and one or two of the horses drowned. Mr. Alderman Plummer had a narrow escape, as had also two gentlemen who were walking with him, and a gentleman in a horse and gig, who was within a yard of the bridge at the time of its fall. The fact of some hats having been seen floating down with the ebb tide induces fears that more persons than are known of must have fallen victims to the accident; and it is thought probable that some bodies will be found among the heavy *débris* of the ironwork. The steam barge was very much injured at the bows, and floated down the river to the second iron bridge, leading to Bedminster, where she ran with great force towards the pier on the Bristol shore, but happily grounded on a shelving rock.

THE CONFERENCE AT VIENNA.

To the information which we have been able to afford to the public on the subject of the Congress at Vienna, we have to-day but to add, that a second protocol—the record of the proceedings of last Saturday—has received the signatures of the Plenipotentiaries. The discussion of the Four Points will be proceeded with, as we have stated, *seriatim*; but before they are entered upon, there are, we believe, several necessary preliminaries to be yet agreed upon. It is obvious, for instance, that it is requisite for the Plenipotentiaries to decide whether their deliberations on one point shall be finally concluded before they approach another; or whether, having come to a general decision on one point, they shall pass on to another without arranging, for the present, every detail. In the latter case, it is evident that, in perhaps some ten days, the whole Four Points could be discussed and determinations taken; but, in the former, it may readily be imagined that each point would take a long time to settle—the very first, for instance, involving a complete revision of many treaties, and the new constitution of the conditions of existence of the Danubian Principalities.

If the Congress first come to a series of general decisions, and then subsequently work out the details, we shall have the great questions shortly settled; and, greatest of all, we shall know whether or not Russia will yield to our terms on the third point relative to Sebastopol and the Black Sea fleet. Otherwise, supposing no vital differences to arise out of the first two points, the Plenipotentiaries may not arrive at the third for weeks

Decisions on such matters as this having been arrived at, and the constitution of the Congress in its details having been settled, no doubt the work in hand will proceed as rapidly as possible. The parties present are, we fully believe, equally desirous of peace, but we hope not equally determined to obtain their own terms.

We have already warned the public against too ready a belief in peace as certain to be the result of the Congress at Vienna; and we would now also put them on their guard against the false reports circulated both at home and abroad—with reference to the proceedings of the Congress.

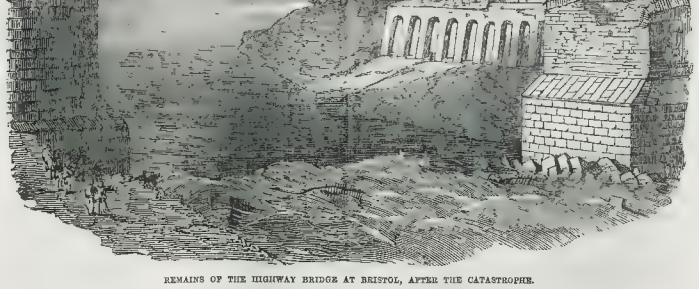
Yesterday, for instance, it was announced, in the columns of a contemporary, that "The first of the Four Points was, on the 17th, definitively settled, and adopted by all parties." This is quite erroneous, as are the protended accounts that have been published of what passed, and who spoke, at the various conferences

We believe that the intelligence which has appeared exclusively in this journal is alone correct—though necessarily scanty as, in the general conduct of the conferences, the most inviolable secrecy is observed.

We have already stated that, on Saturday, the protocol of Thursday's proceedings, recording the Four Points, and our interpretation of them, was signed by the Plenipotentiaries; and that the Russian Ambassadors, in affixing their signatures, did so—reserving always the dignity of the Russian empire from any detriment. Since this, a protocol of Saturday's proceedings has been signed, and in this form, from day to day, the labours of the Conference will be recorded.—*Morning Post*, Thursday.

THE GERMAN HOSPITAL, DALSTON. On Thursday evening the tenth anniversary festival of this excellent charity took place at the London Tavern. His Royal Highness the Duke of Cumbridge presided; supported by Count Kielmansegge, Hanoverian Ambassador, Count Bernstorff, Prussian Ambassador; the Rev. Archdeacon Robinson, &c., &c. The Duke of Cambridge was received with long and continued cheers; and the proposal for drinking his health—in which he was termed "a worthy descendant of Henry the Lion," was a signal for a fresh outbreak of applause. His Royal Highness stated how happy he felt in endeavouring to do good in a civil capacity, in the same degree as he had endeavoured to do in a military one. The report of the society was most satisfactory, and many fresh donations to the charity were announced during the evening. The entertainment was altogether of a first-rate description. The gallery was crowded with ladies. The musical arrangements were admirable: M. Benedict, Herr Ernst, Miss Bauer, and Herr Ganz, kindly gave their services. The total collection for the Hospital was £2000

A solemn service for the Emperor Nicholas was celebrated on Sunday in the Greek church in the Rue de Berry. Prince Jerome Napoleon, on account of the ties of relationship which unite him to the Imperial family of Russia, caused himself to be represented at the ceremony by two of his Aides-de-Camp. The Princess Mathilde was present



REMAINS OF THE HIGHWAY BRIDGE AT BRISTOL, AFTER THE CATASTROPHE.

ALL SAINTS CHURCH, MARGARET-STREET.

MANY of our readers may have been struck, while passing along Oxford street or Regent-street, with the appearance of a tall silvery-grey spire, rising from a lofty red brick tower with long belfry windows, above the monotonous mass of buildings to the north of the former, and to the east of the latter street. This is the spire of the still unfinished Church of All Saints, Margaret-street, of which we present our readers with an exterior view. The Church in question was undertaken several years since by voluntary subscriptions, to serve as a "model church" in its architectural arrangements and decorations, as well as in the future performance of Divine service; the first stone having, after long delays, been laid upon All Saints Day, 1850. The conduct of the work was undertaken, on his own responsibility, by A. J. Beresford Hope, Esq.; and that gentleman has been enabled to carry out the scheme up to the present time upon a very limited number of subscriptions—one of which is, however, stated to have been of the princely extent of £30,000 from a benefactor who requested, on giving it, to remain anonymous. Mr. Beresford Hope was fortunate enough to secure the services of that eminent architect, W. Butterfield, Esq., who has fully carried out—may, exceeded—in this remarkable Church, the high reputation which he attained very early in life in St. Augustine's College, Canterbury, as an artist of singularly bold and original conceptions, and one who thoroughly realised the dignity of architectural science.

The plan comprised a residence for the clergy and schools, besides the Church itself; and for these various purposes a lot of ground measuring only 110 feet from east to west (the line of the street), and 190 from north to south was all that could be procured. This area, including the site of the old Margaret-street Chapel, the property of the Crown, and three houses belonging to the Duke of Portland, was obtained at the cost of £9000, including leasehold interests, deducted out of the subscriptions originally raised. It is most highly to Mr. Butterfield's credit that he succeeded in producing so effective a building on so confined a space. The Church occupies the northern portion of the area, covering the extreme length of the ground from east to west; the buildings destined for the schools and the clergy house projecting like wings upon the street line—the former abutting to the back against the tower, and the latter nearly touching the chancel aisle and the vestry. The central space forms a court-yard, divided from the street by a handsome iron screen, containing the common entrance, of ornamental brickwork, in the centre. The style of the entire mass is that which is known as Early Middle Pointed, i. e. the style of about A.D. 1300.

The whole building is constructed externally of red and black bricks, partly banded and partly arranged in patterns, relieved with blocks of stone so as to produce an effect of constructional polychrome, in which the prominent material should be brick. Hitherto there had been a prejudice against the employment of this material in the revival of Pointed architecture; against which no sufficient argument could be produced, inasmuch as many of the finest Gothic churches of Continental Europe are built of brick. The prejudice seemed peculiarly absurd when the church was to be built in a city like London, where the great majority of the houses are, like those of ancient Babylon, of brick; therefore it was decided that the "model church" should be constructed of brick. It was likewise decided that it should internally present the aspect of con-

structional polychrome, by a greater employment of coloured marbles (chiefly from British quarries) that had ever been attempted in British Painted architecture; and by the devotion of large wall spaces to fresco paintings of the highest style of art.

Internally the Church is divided into nave and chancel, both clerestored, with north and south aisles; those of the nave being of three bays each; while those of the chancel are of one bay, not reaching to its eastern end. The tower stands at the south west angle of the Church, covering the space of the most western bay of the aisle on that side. It is, including the spire, 227 feet in height from the ground—the latter being of slate and lead, built in what architectural writers term the "broach" form: its general contour recalling the spires of the magnificent churches of Lübeck. It is, we believe, at present, and will be, until the completion of the clock-tower of the New Houses of Parliament, the highest spire in London, being more elevated than that of Bow Church, or of St. Bride's. The south porch, the principal entrance from the court to the Church, is just clear of the school-house. More eastward there is another door in the same aisle. The clustered pillars of the nave are of red Peterhead granite (the material of the columns so conspicuous in the façade of the Carlton Club-house), with boldly foliaged capitals of alabaster. But the largest use of marble has been made in the chancel, which is mainly lined by alabaster and statuary marble; the arches dividing the chancel from its aisles being filled with tracery of alabaster, resting on shafts of dark red serpentine; while on the ground line of the sanctuary beyond, these rich materials are delicately sculptured into canopied arcades, forming most graceful sedilia. But the most original treatment is to be found in the east end and the upper portions of the side walls. Local reasons prohibited the insertion of an east window—a privation which was the more contentedly submitted to, as it afforded an opening for the display of mural painting which would otherwise have been hardly attainable. The work was entrusted to that distinguished artist W. Dyce, Esq., R.A., who designed and has partly executed a painting in fresco of the highest order of pictorial excellence. The field for the display of his pencil presented a large surface of wall, rising into a high tympanum, with curved sides following the vaulting lines of the roof. This upper space is devoted to a large representation of the "Celestial Court, with our Lord in Majesty in the centre." Mr. Dyce has completed this painting, which is universally admitted to be one of the finest productions of modern art. Underneath there are to be in the large central panels in the upper line, the "Crucifixion," and below it the "Infancy of the Saviour;" and on either side, in twelve smaller panels, standing figures of the Apostles. The panels are framed in canopied architectural work (flat niches as it were) of alabaster. Figures of the four Evangelists, and of the four greater Prophets facing each other are to continue the design round the side walls of the sanctuary. The upper portion of the chancel is decorated with geometrical mosaic work in different-coloured marbles. The roof of the chancel is groined in stone, to allow space, for which treatment the chancel is externally more elevated than the nave, for which numerous precedents are to be found in German churches, as well as in Hythe Church, Kent. The further completion of the internal fittings, including pulpit, organ, stalls, &c., at present stands still for want of funds, many thousands more being needed to bring the building to its desired consummation, and its projectors preferring to carry out slowly, but entirely, their original idea, than to hurry into use a building of diminished artistic perfection. Important progress has, however, been made in the painted glass; the principal (western) window being already filled with a representation of the Root of Jesse—a favourite subject with old glass painters—by M. Alfred Gerente, a Parisian glass painter of high ability and promise, to whom (after the premature death of his elder brother, M. Henry Gerente, who had attained great eminence in his art) the execution of the principal windows of this church was entrusted. The window in question, designed after one in Wells Cathedral, is distinguished by the boldness of its treatment and the richness of its colour. Another window by M. Gerente is, we hear, shortly expected in the south aisle of the nave. The north aisle of the nave is destitute of windows, being reserved for a belt of frescoes.

The ground-floor of the tower is allotted to the baptistery. The organ, of large dimensions, is to be divided between the two chancel aisles, the trackers passing under the floor.

The Church, when completed, will become the parish church of a "Peel" parish, formed, in 1849, out of the district rectory of All Souls, St. Marylebone, in the perpetual patronage of the Bishop of London. Its present and first incumbent is the Rev. W. Upton Richards.

THE DAY OF HUMILIATION.

WEDNESDAY having been appointed by proclamation for "a solemn fast, humiliation, and prayer before Almighty God, in order to obtain pardon of our sins, and in the most devout and solemn manner to send up our prayers and supplications to the Divine Majesty, imploring His blessing and assistance on our arms, for the restoration of peace to her Majesty and her dominions," was devoutly observed throughout the whole of the metropolis. Closed shops and crowded places of worship were to be seen in all parts of London; and it may be doubted whether any day that has ever been set apart by Royal command for special prayer and religious exercise, within the memory of the present generation, was marked with more decorum. The Houses of Lords and Commons set a good example by attending respectively at Westminster Abbey and St. Margaret's Church; and at a later hour in the afternoon the Lord Mayor and Corporation of the City of London proceeded on foot to St. Paul's Cathedral, where a sermon was preached by the Bishop of the diocese. In all the parochial churches collections were made in behalf of various charities; the exceptions being chiefly such as might have been expected to lead in such a good work—for instance, St. Paul's, Westminster Abbey, the Chapel Royal (St. James's), and the Temple. Of the amount collected, some will be devoted to the erection of a Christian Church in Turkey, some to the relief of the wives and families of the soldiers in the East, some to orphan asylums and "homes," established mainly for the benefit of children whose parents have been connected with the naval and military services.

WESTMINSTER ABBEY.—HOUSE OF LORDS.

Every part of Westminster Abbey was filled prior to the hour appointed for the commencement of the service. A procession was formed in the House of Lords, and their Lordships walked from the House to the Abbey. There were present the Lord Chancellor, the Earl Granville, the Earl Waldegrave, the Earl Grey, Lord Redesdale, the Bishops of Chichester, Winchester, St. Davids, St. Asaph, and Salisbury, with some other peers. The sermon was preached by the Lord Bishop of Salisbury, from the words, "God be merciful to me a sinner" (Luke xviii, part of verse 13). He commenced by observing that the judgment that the war was a just and necessary one was very unanimous, and, on the whole, correct; and he put this remark on the very front of his discourse because a different judgment would introduce into the subjects of humiliation on that day other elements than those which belonged to it. One effect of such a judgment should be to increase, quicken, and confirm our endeavours to obtain success, and secure the restoration of peace. As regards the purpose for which they had assembled, national humiliation, to be anything better than the profession of the pharisee, must be based on personal humiliation—on a deep sense of those sad which mark our characters as individuals. And we must add to these confessions, to this acknowledgment of sin, hearty resolutions and vows of amendment—to do our utmost to lessen the evil that has happened, and to promote all those great objects which are yet unattained. And here, he admitted that the most sincere resolutions would meet with difficulties. When benevolent feelings were awakened, they would often find that principles of truth claim to regulate and guide them. The case of education illustrated this. No one has been able to mark out on the standing ground between secular and denominational education. Still, whatever may be these difficulties, every man will find plenty of work[to do, and a sound faith, a hearty charity, and a strong will, may work wonders—and open a pathway through all obstacles. In saying such things he was not throwing blame on any persons. If he were to proportion and distribute blame, he must confess that the clergy must receive the greater share, and that the burden of past neglect and present duty presses with more fearful responsibility on the Bishops of the Church than on any other men in this kingdom; but having owned this, he would give a caution against harsh and rough judgments about the Church and its minister, and would plead in their behalf that they are but men. In conclusion, he expressed a hope that besides any direct blessings which God may grant to them in answer to their prayers and other sacrifices, the moral influence of that day might be good, in steadying, calming, and giving decision to the national mind—in helping it to clear of wrath and bitterness, and in fixing it on the one legitimate object, a right and lasting peace. War might thus be not an unmixed evil. Indeed, it had already been profitable to us in many ways: our army and navy had given proofs of the noblest devotion to their country's cause; self-denial, and gentleness, and patience, and perseverance of those Christian women who have ministered to the wants of the sick and wounded, had set us at home a noble example; "and I trust, said his Reverence, "that we shall so learn that lesson, that whenever God, in His mercy, restores to us the blessing of peace, we shall find that the cloud which has cleared away many clouds which were darkening our horizon. Let us hope that those hearts which are being now practised in expressions of strong, yet tender sympathy, will not, when the present demand upon them ceases, draw in those sympathies from daily exercise; but that the poor, the ignorant, the publican, and the harlot, the prisoner, the orphan, and the widow, and the sick and the feeble will all experience the fruits both of that unselfish charity which the perils of war have so fostered and invigorated, and of that humiliation of ourselves before God. This confession of our sins—these resolutions to amend our ways—have been prompted by our earnest desires for a successful issue of the calamities of the present war, and for the restoration of peace."

ST. MARGARET'S.—HOUSE OF COMMONS.

The House of Commons assembled at a quarter before twelve, at which time there were a large number of members present. In a few minutes afterwards a procession was formed, and moved to St. Margaret's Church. It consisted of the Speaker, preceded by the Serjeant-at-Arms (Lord Charles Russell), and followed by Lord Palmerston, Sir George Grey, Sir Charles Wood, Mr. Vernon Smith, Mr. Wilson, Mr. A. Peel, Mr. Hanmer, Sir James Graham, Mr. Gladstone, Mr. Cardwell, Major Reed, Sir H. Willoughby, Mr. Guinness, Mr. Newdegate, Mr. J. Macgregor (Sandwich), Mr. G. Butt, Mr. E. Ball, Admiral Walcott, &c. Every door of St. Margaret's Church was besieged by crowds attracted by Mr. Melvill's popularity, and, though every exertion was made by the Rev. Mr. Cureton, the Rector, to provide accommodation for all, many were disappointed. After the usual prayers, and the prescribed form, the Rev. Henry Melvill, B.D., ascended the pulpit, and selected for his text the 8th chapter of the 1st Book of Kings, 44th and 45th verses:—"If thy people go out to battle against their enemy, whithersoever thou shalt send them, I shall pray unto the Lord toward the city which thou hast chosen, and toward the house which I have built for thy name: then hear Thou in Heaven their prayer and their supplication, and maintain their cause." The reverend gentleman commenced by referring to instances recorded in Scripture of the success which had attended acts of national humiliation. From these he argued that such acts were acceptable to God, though it could not be denied that it was their sincerity, and that alone, which caused them to find favour in His sight. He then alluded more especially to the circumstances of the present humiliation. We were not summoned as a nation to humble ourselves before God because we were engaged in a war which, if it had been fruitful in triumphs, had entailed on us no common disasters; because it rested with the Almighty alone, who was emphatically and repeatedly, in Scripture, called "the Lord of Hosts," to give the victory which we desired to our fleets and to our armies. We entered upon this war with no selfish purpose. We saw that Europe was already darkened by the shadow of a colossal power which was ever pushing forward its boundary, and it was not for England to sit tamely by while country after country lost its independence. If we had no fears for ourselves if we could not contemplate the probability that the advancing tide would break on our own shores—at least, it was in our charter not to suffer the weak to be borne down by the strong. Therefore, did we grind ourselves for the war. It was no war of ambition—no war of aggrandisement. We took up the championship of the oppressed; and if we looked beyond the immediate case, it was that we saw the world's liberties in peril, and we felt called on to make a stand for civil freedom, for enlightenment, for human progress and human happiness. And if we had unsheathed the sword only to maintain rights which ought not to have been invaded, and to prevent aggressions which threatened even worse disasters than those already felt, we might be sure that God would look favourably on our humiliation, and that He would not turn a deaf ear when, falling low at his footstool—the ashes on our heads and the sackcloth on our souls—we exclaimed, in the words of the text, "Hear thou in heaven our prayer and our supplication, and maintain our cause." The rev. gentleman pointed out, in glowing language and brilliant imagery, the peculiarity of the term, that it was in Heaven we especially desired that our prayers might be heard. The peculiarity belonged also to the Lord's Prayer, which was addressed to our "Father which is in heaven." In heaven the Divine Omnipresence must always be assumed or taken for granted in prayer. We could have no confidence if we knew nothing of God but that He dwelt in some far-off depth of infinite space.

ST. PAUL'S.

The Day of Humiliation was observed throughout the City with becoming solemnity. The choir of the Cathedral of St. Paul's was crowded in every part. The Prayers were read by the Rev. Mr. Calvert, and the Lessons by the Rev. Mr. Povah. The Sermon was preached by the Very Rev. the Dean, Dr. Milman, who took for his text the 2nd chapter of the Book of Job, and part of the 10th verse:—"What! shall we receive good at the hand of God, and shall we not receive evil?" In the course of the eloquent illustrations of the text, the character of Job, the type and model of all that was human, and the exposition of that which the reverend preacher described as a glorious poem, he proceeded to remark upon the meaning of a national humiliation as a national worship of God; and a reference to the war invoked a blessing on the arms of our country; and said if all in this eventful and momentous war had gone on smoothly, as at first, what would have been the issue? what the effect? let each man ask himself. Had all been successful, might we not have become too much clamoured of war? War was inevitable so long as there were powerful and ambitious sovereigns in the world. War was an evil, a terrible evil; but all history showed that there never was a war commenced under such circumstances, with so much magnitude, to such an extent, and with so much splendour, and at such a distance—upwards of three thousand miles from our own shores. We had, however, more than our share to contend with—famine, disease, and privation. He would demand full justice to those who had delayed the commencement of the war—who had clung to peace till peace could no longer be. Were we to be champions of the oppressed, with no suffering, no privation? Were the troops to respect our ships? So many leaden missiles, so many flashes of powder and thundering of cannon, and no falling of masses of living men! In all later wars the knowledge of battles won or battles lost came to our ears by the wonderful facilities of communication. They are no sooner over than they are before us in language and terms and with such power that we are, as it were, at the very seat of war, with all its splendour, ovation, and terror! Were we to expect to see charges of unbroken cavalry dashing through and destroying the enemy, and cannon thundering against the city, with no reverse, no check? God, in his own good time, would give us victory. Had we no faith in the justice of our cause? and if, from the events of the last two months, there was any dastardly weakness, who would have to answer for this? The league of the Powers of the West against the Autocrat and Northern barbarians might, however, bring forth peace. The Rev. Dean then proceeded, in language powerful and eloquent, to extol the conduct of our soldiers, who demanded all our admiration—soldiers who had never met their enemies but to strike, who had suffered with such noble endurance, sickness, disease, and privations, and human suffering beyond all imagination—exposure, cold, without repose, the very elements freezing and running the blood in their veins! After paying a just tribute to Miss Nightingale, and those ladies who had accompanied her in her holy mission, and who, by their assiduity, tenderness, and watchfulness, have saved so many valuable lives, the Reverend Dean concluded by calling upon all present to aid by their subscriptions, even to the humblest amount, the unspeakable sufferings of the sick and wounded, and the relief of the orphans and widows of those who had fallen.

KENSINGTON

The Venerable Archdeacon Sinclair took his text from Joel ii. 15:—"Blow the trumpet in Zion; sanctify a fast; call a solemn assembly." The Archdeacon remarked, that, while we are tracing the disasters which have befallen the greatest armament that ever crossed the seas, to faults in our administrative system, and to the negligence or incapacity of our administrators, we must on no account confine our thoughts to secondary causes, but must look beyond them to the Providence of God: that not only He woundeth, and His hands make whole, but He overrules the exercise of our intellectual powers; it is the inspiration of the Almighty that giveth understanding. He either frustrateth our counsels and turns our wisdom into foolishness, or giveth us knowledge, discretion, and intelligence. The question therefore arises whether God contendeth with us? To what cause shall we ascribe our frightful and deplorable reverses? Was it want of bravery in our soldiers or seamen? On the contrary, they evinced a courage seldom equalled, and never surpassed in the annals of the world. Did they betray effeminacy or impatience under suffering and privation? On the contrary, never were extremities of hardship more manfully endured. Did they give evidence of irreligion or profaneness? So far from this, the private letters both of officers and men abound with sentiments of piety so naturally, so forcibly, and in the hour of death so pathetically expressed, that the man is little to be envied who can read these documents of piety without emotion. If then," continued the Archdeacon, "there be nothing in our gallant armament that would especially draw down upon it the Divine displeasure, the question next arises whether there be anything in ourselves, and in the nation at large to provoke that displeasure." After entering on the general faults and errors of the nation—such as the progress of superstition, the prevalence of crime, the irreligion of the working classes, and the negligence of the higher orders in not applying efficient remedies for these evils—he proceeded to remark upon those national sins which have special connection with our present warlike struggle—pride and gloriousness, our imprudence, and our pugnacity. "Notwithstanding our insular position, so favourable to peace," he said, "the history of Great Britain is a history of successive wars; we have not many intervals of tranquility to boast of;" and he proceeded to express his apprehensions lest, at the present crisis, in the pugnacious temper of the public, our rulers should "go with the tide, decide against their own judgment, and be overborne in proposing or accepting terms of peace which their better information would them to be wise and equitable." In conclusion he exhorted his hearers to self-examination, advising each to ask himself the question—"Do I find that my general sentiments and conduct have been, and continue to be, such as to give my Father-citizens reason to reproach me for contributing more or less to provoke Divine displeasure, and call down God's judgment, at a most critical period, upon my country, instead of doing all I can, through Christ the Prince of Peace, to propitiate his favour!"

ST. JOHN'S, WESTMINSTER.

The Rev. John Jennings, Rector, took his text from Isaiah xxvi., "When Thy judgments are in the earth, the inhabitants of the world will learn righteousness." Having stated that the terrible disasters which have befallen our Army in the East, which has been more than decimated by the sword and the pestilence, and having called upon the congregation humbly to acknowledge the Divine justice, that has and scourged us for our nation with the sore visitations of the sword and pestilence, to confess and deplore those sins; by means of which, both as a nation and as individuals, we are offensive in God's sight, and to entreat Him "in His mercy, for we have no claim to favour as a nation," the preacher enumerated some of those grievous national sins, which have drawn down the judgments of the Almighty, and more especially our national vanity and proud boastings. As of old, "God turneth wise men backward, and maketh their knowledge foolish; He sent among them pestilence after the manner of Egypt; their young men has He slain with the sword, and taken away their horses, and made the smell of their camps to come up into their nostrils." He concluded by earnestly appealing to his congregation to seal their solemn vows of humiliation and amendment of life, by their gifts to the treasury of the Lord, by their alms to the sick and needy; so doing, their fast and humiliation would be sanctified to them by the Holy Spirit, and their prayers would ascend to the mercy seat through the intercession of our great High Priest, and draw down a blessing upon our arms for the restoration of peace; and the righteous Lord, the Prince of Peace, who love thrighteousness, would teach us righteousness by His judgments.

TRINITY, SLOANE-STREET, UPPER CHELSEA

The Rector, the Rev. Joseph Burgess chose his text from Psalm lxxi... 14 "Thou art the God that doest wonders; thou hast declared Thy strength among the people." After defining the object for which the people assembled in the respective places of worship that day, the preacher proceeded to answer some popular objections as to the fitness of the time for such humiliation; and the main scope of the discourse was to show that it was inconsistent to acknowledge the hand of God in our victories, and cease to acknowledge the same power in our disasters. The several events in which the providence of God had been strongly marked during the war were then pointed out, and the duties of those at home to assist, as much as possible, in relieving the wants and sufferings of those who had fought our battles. Finally, the censure which was so carelessly passed upon our brave commanders, without a sufficient knowledge of the difficulties they had to contend with; and he ended with an appeal to the congregation on behalf of the institution existing or about to be formed, where the infants of our soldiers would be taken care of.

CHAPEL ROYAL, WHITEHALL.

The Rev J. S. Anderson, one of her Majesty's Chaplains, delivered an eloquent discourse upon Galatians, vi., 7-8:—"Be not deceived; God is not mocked; for whatsoever a man soweth that shall he also reap. For he that soweth to his flesh shall of the flesh reap corruption; but he that soweth to the spirit, shall of the spirit reap life everlasting."

QUEBEC CHAPEL.

The Rev H. Alford chose his text from Lamentations, c. iii. v 40: "Let us search, and try our ways, and turn again to the Lord." The preacher delivered a very impressive discourse to a crowded congregation, and was heard with extreme attention. There was no collection made here; a collection having been made on the preceding Sunday, for the London Reformatory for Adult Male Criminals, when the sum of £223 was contributed.

PERCY CHAPEL,

CHARLOTTE-STREET

The Rev. Robert Montgomery preached at this chapel an eloquent sermon, taking for his text Ecclesiastes, c. viii, v. 14, "In the day of adversity, consider." The preacher dwelt with great power upon the aspect of the present times, and the state of the war, and our reliance upon our own exertions and the Divine aid to bring the great struggle to a successful termination. The discourse was heard with profound attention by the congregation; and the poetic eloquence and impressive manner of the preacher were fully appreciated.

ST SAVIOUR'S, SOUTHWARK.

The Rev. W. Curling delivered an impressive discourse in the morning upon Jeremiah c. viii., v. 9:—"They have rejected the word of the Lord; and what wisdom is in them!" The preacher commenced with observing that it was a fearful sign of national irreligion when a people, in the midst of troubles, did not regard those troubles, nor desire to be humbled under them. He made this remark because the present proclamation for a National Fast did not appear to carry with it, to the extent it ought, the nation's sympathies. Some seemed to consider that there was no more for the humiliation than a mere form to be gone through at this moment. But, to his own mind, the duty of penitence and prayer was most pressing and urgent: "I look at God," he observed, "with hope and trembling, for I know not what He will do. I think we have been so chastened in the affective visitation He has laid upon us—I think the indications of His displeasure have been so marked in the disasters we have experienced since we entered on this formidable war—that, to me, it appears the strongest infatuation to indulge at this time in the strain of thanksgiving and song of triumph. We may, indeed, bless God that He has dealt with us less than our iniquities have deserved. But He has surely smitten us with unusual severity. He has wounded us in our pride by cutting off our army. He has pierced us in the depths of our hearts; for when has our nation had such mourning as the dismal tidings from Varna and the Crimea produced among us a few months ago? With such an affliction 'laid upon our loins' we ought to be prostrate at the feet of our God. We ought to come together, asking the cause why He has so afflicted us; and, if we can ascertain the cause, we ought to deplore the sin, and ask for grace to sin no more." The preacher then, comparing England with Israel, showed in both cases that God had given His word to guide both nations in the dark hours of their duty; that as it was needed, so in England, "the Word of the Lord" had been "rejected" practically by rulers and people. Rulers had ceased to ask "What is Scriptural!" and expediency was all they thought about in the determination of the great questions; the polar star of religious principle, which guided our fathers when the Word of God was restored to us at the Reformation, having been long lost sight of in the free-thinking spirit of the age. The people, also, notwithstanding their possession of the Scriptures, very little regarded them, as the neglect of the means of grace, the increasing amount of Sabbath desecration, and the demoralisation and vices of the age fully showed. He believed that God has punished us as he did Israel, by taking away wisdom from our rulers, the mismanagement of which the nation so properly complains;—a mismanagement that has cost us the best portion of the best army in the world, as not to be viewed (said the preacher) as an accident, but as a positive judgement from God." He could look for nothing but a continuation of evils if rulers and the ruled did not joinly return to "the Word of the Lord;" in obedience to which the nation would again be prosperous, triumphant, and happy. The St. Saviour's congregation was immense.

OLD ST. PANCRAS

The Incumbent, the Rev. Cornelius Hart, preached an impressive discourse from Zephaniah, c. ii. v. 3: "Seek ye the Lord, all ye meek of the earth, which have wrought this judgment: seek righteousness, seek meekness, it may be ye shall be hid in the day of the Lord's anger." The preacher forcibly, in the captivity of the children of Israel under the Babylonish yoke, counsels them to forsake their evil and corrupt practices, and to turn with their whole heart to God the Gracious and the Merciful in pure and holy worship. In the day of wrath, Jehovah alone is the hiding-place of His people. Meekness is the resignation of things past, present, and to come, to the Supreme Disposer of all events. Righteousness is not only the righteousness of the Mediator, but also the righteousness, justice, and equity between man and man. God's righteous indignation is manifested against every iniquity and transgression of man. He is a just God, and will by no means spare the impenitent guilty. The preacher concluded with an earnest appeal to seek God's mercy, pardoning the past and prospering the future, that He would over-rule. The church was crowded, and the sermon was listened to with great attention

ST DUNSTAN'S IN THE EAST

The Rev. T. B. Murray preached in the morning, taking for his text Isaiah xxvi., 9:—"When Thy judgments are in the earth, the inhabitants of the world will learn righteousness." He said that, in order to take in fully the [illegible] passage, the student of Scripture should go back to the 24th chapter, which [illegible] according to its heading gives us Bibles," the doleful judgments of God upon the land," and read to the end of the 26th chapter. This exercise, among the duties of the day on which they were assembled, the preacher recommended to his hearers. They would see, in the intermixture of warnings and promises, that the picture of the ancient Jewish people was a picture of ourselves, darkened by Almighty goodness with peculiar favours; which, indeed, happy: in prosperity—forgetful of God, proud, self-willed—chastised, and brought low by His hand; in the time of trouble, seeking the Lord in repentance and prayer. "Events in our own history serve to show that St Paul's words written nearly two thousand years ago, concerning the people of Israel—These things happened unto them for ensamples, and they are written for our admonition' are applicable to our times, as they were to his. Living as we are, with all the awful interest of antiquity about us, and in the midst of war, as terrors were inflicted by solitude, disease, famine, and the sword, and to a foreign climate, who can read that list of inflictions for 'incorrigibleness,' in Amos iv., without being impressed by the lesson! Has not this land, the depository of the Christian faith, had its premonitory punishments for its sins? 'Blasting and mildew' mysteriously touching and spoiling a valuable article of food. 'The pestilence' those repeated visitations of cholera—'sent among us.' More recently, 'Your young men have I slain with the sword, and have taken away your horses.' It well becomes us, not only as a nation, but each one individually, who knows the plague of his own heart, to observe these portentous symptoms, and to bow beneath the rod in penitence and prayer." In the afternoon the Rev. S. Gell, M.A., Curate, preached on the 1st Peter, iv. 1:—"Arm yourselves, therefore, likewise with the same mind." A collection was made for the poor after each service

CHRISTCHURCH, BLACKFRIARS.

The Rector, the Rev Joseph Brown, took his text in the morning from Amos, iv., 10:—"I have sent among you the pestilence after the manner of Egypt; your young men have I slain with the sword, and have taken away your horses: and I have made the stink of your camps to come up under your nostrils; yet have ye not returned unto Me, saith the Lord." In the evening the rev. gentleman chose Psalm cxix., 17:—The sacrifices of God are a broken spirit: a broken and a contrite heart, O God, Thou wilt not despise." The evening sermon was a continuation of the morning sermon; both pointing out—I. The duty of humbling ourselves before God: that it applied to nations, as families, to individuals. II. The reasonableness of this duty, especially at the present time—1. From the difficulties already encountered. 2. From the difficulties still before us. III. The encouragement to the performance of the duty we have shown—1. From the promise the Almighty has made to hear prayer: 2. From the many instances of the Lord's deliverance, as seen in the Scriptures. In conclusion, the congregation were exhorted—to find out their own sins; to seek pardon through the Lord Jesus Christ; to pray for our own country; to pray for peace; to pray for our forces now engaged in the war, and for those who have been bereaved of their relatives: and, finally, to pray for that time so often and so long foretold in the Bible, when the Prince of Peace shall reign throughout the whole as King of Kings and Lord of Lords.—The attendance was in all classes, especially the poor, was very good.—1855 persons were present at Divine Service during the day. Policemen were stationed at each gate to count the number.

ST. MICHAEL'S, CORNHILL

The text was the 14th verse of the 2nd chapter of the Gospel according to St. Luke:—"On earth peace and goodwill to men." Before entering upon the main subject of his discourse, the Rev. F. W. Wrench referred to the object for which they had assembled—"to implore God on behalf of our distracted country, and to mourn over those disasters which, in His divine providence, He has seen fit to cast upon us." After painting the horrors of war, and showing how much it is opposed in its nature to the Gospel of Peace, he concluded by urging his hearers to make the Fast what it ought to be, as commanded in the Scriptures, by giving food to the hungry, and extending their aid to the poor

ST. ANDREW'S, HOLBORN

THE Rector, the Rev. J. J. Tregoed, chose for his text, Ezra, viii., 21:—"Then I proclaimed a fast there, that we might afflict ourselves before God: to seek of him a right way for us and for our little ones and all our substance." In the text, Ezra—the leader of the colony of the Jews—proclaimed a fast, considering it right that the nation should humbly and sorrowfully acknowledge their offences against God, and supplicate His gracious favour, that He might guide and help them. The preacher dwelt at some length upon the nature of fasts, and concluded thus: "War is the scourge of God on nations for their sins; and, to whatever secondary causes our misfortunes may be attributed, we was the commencement of them. The sins of the nation have called for punishment, and the object of the appointment of this day is, that we may seek repentance and pardon therefore. In the prayers to be used we are taught thus to pray—'Grant, O Lord, that we may learn righteousness from Thy judgments abroad. Take away from us all pride and hardness of heart, and contempt of Thy word. Endue us with a spirit of piety and devotion, of justice and temperance, of humility and charity, as becomes our Christian profession; and that the blessing which we have long enjoyed, both spiritual and temporal, may, through Thy providence, be continued to us and our posterity. Teach us ever to lift up our hearts above this lower world to Thy heavenly kingdom, where pain and sorrow and war and hatred shall be no more."

The Madras Government is about to establish a class of assistant civil engineers for employment on the public works in the provinces, open to all qualified, whether European or native; the salaries being fixed from 400 to 600 rupees a month, while the highest species of engineering accomplishments do not seem to be insisted on.

CALENDAR FOR THE WEEK

SUNDAY, March 25.—5th Sunday in Lent. Queen Elizabeth died. 1603.
MONDAY, 26.—Duke of Cambridge born, 1819.
TUESDAY, 27.—Peace of Amiens, 1802. Gunpowder introduced, 1380.
WEDNESDAY, 28.—Imperial Alexandrine died, 1801.
THURSDAY, 29.—Siege of Acre, 1799.
FRIDAY, 30.—Cambridge Term ends. Dr. Hunter died, 1783.
SATURDAY, 31.—Oxford Term ends. Beechcven died, 1827.

THE ILLUSTRATED LONDON NEWS.

LONDON, SATURDAY, MARCH 24, 1855.

WITHIN a week the House of Commons has had the opportunity of expressing its opinion upon several subjects of a social rather than a political character, and it will not be unprofitable to examine the chief of these decisions, less in reference to their own merits than as a gauge of the fidelity with which the House of Commons expresses the feelings of the nation. Among the topics which have been submitted to the House have been the Wife's Sister question, the Protection of Factory Women and Children question, the Education question, and the Sunday Amusement question. It will not be denied that all these measures have a direct interest for the mass of the people, and that these are subjects which will be considered, discussed, and fought over, long after the ephemeral contests of factions, and their success and failure, shall have been forgotten. The rational settlement of any one of these points is of more vital importance to the country than the vindication of the character of a whole Cabinet of statesmen, or the rise or fall of half-a-dozen political cliques; and when this and cognate truths are not only admitted, but the conviction is acted up to, by the Legislature and the public, we shall find less time wasted upon men and more time bestowed upon measures. At present, unquestionably, the pervading feeling in Parliament is the other way, and the character of the man has precedence of that of the measure, sometimes to the exclusion of the latter—as was curiously instanced in the House of Lords a few nights ago, when Lord Montagle's censure of a financial operation, by which he alleged that the country was about to be saddled with half a million of new taxation, was met by the Government leader there, very slightly upon the merits, but very zealously upon the point whether Mr. Gladstone had or had not been consistent.

The agitation which a small, but wealthy and interested party, continue to cause in order to procure the alteration of the law which prevents marriage with the sister of a deceased wife, the continually bringing the question, as a vexed one, before the Legislature, and the retaining it in an uncertain condition, will most probably, sooner or later, compel a recognition of the marriages which it is thus sought to legitimatise. There is an exceedingly strong feeling, nevertheless, throughout a large and most respectable class of the community, against such marriages; and both religious and social objections are indignantly put forward against the proposed alteration. The subject was, perhaps, never worse argued than in Parliament last week, and assuredly no vote could have been swayed either way by anything that fell from the antagonists on the debate originated by Mr. Heywood. We do not, however, state this as a reproach. This social battle is always fought as one of feeling, whatever pretext of argument and logic may be put forth; and in this respect the House, upon the occasion in question, did represent the country, which has uttered and listened to little or no argument on either side of the subject. We are not now advocating either the retention or the relaxation of the law; but we believe that the agitation system, applied to a subject of this kind, is a positive evil, and also that it will ultimately succeed, thereby establishing a baneful precedent.

On Mr. Cobbett's bill for the extending to women and young children engaged in factories the privileges which, whether they were beneficial or not, were certainly intended to be conferred when Parliament last interfered upon the question, the House of Commons showed itself a faithful representative of one of our national characteristics. It responded in the half-indolent, half-practical tone of a thorough John Bull, when urged to revise and complete something at which he has previously laboured with his heart in the work, and who answers, "Well, yes, I did mean to have done that; but it is hardly worth while taking up the thing again; and I don't know, after all, whether it is not best as it stands." We can hardly complain of the Commons for not being more earnest and more decided than those who elect them.

Then came Sir John Pakington's attempt to deal with the great question of the Education of the People. This is one of the topics which neither journalist nor reader can approach without a feeling of humiliation. Every man in England knows that the humbler class in this country is not educated (by which word we mean, of course, trained, not merely taught); and that, in consequence, our streets are full of idleness, ribaldry, and ruffianism, and our gaols crowded with specimens of all three in fuller development. The children cry aloud for teaching. Their cry is not a direct appeal for that of which they know not the nature; but who does not recognise, in every brutal outcry of the demoralised children in our streets, the utterance of their need. The blackguard boy yells out a foul phrase as he passes you. You are shocked, angry; you look for the policeman, and declare—as a magistrate upon the bench, in no haste but in all earnestness, recently declared—that "the children of London are its greatest curse!" And such is the point to which civilisation has brought us in 1855. But, after your irritation is past, you interpret that wretched boy's words, and you find that they meant, although he knew it not, "Teach me!" and you reflect that, had you formerly called in the schoolmaster, you need not just now have looked round for the constable. Well, streets full of vice, gaols full of crime, and out comes a permissive bill of the mildest character—homœopathy for brain-fever—a flask of oil for a raging sea; and everybody (a few sectarians excepted) smiling and thanking the promoter of the measure which, after all, will probably not pass. Is not the House of Commons John Bull all over? "No doubt, Sir; no doubt. Education the great thing, Sir. Much wanted. Frightful amount of vice—frightful. But you see that in any large plan there are so many things to be considered—so many worthy people have scruples; and so—." And so he does not educate, but tries what he can do with the old punishment instead of the new prevention; and gaols rise instead of schools. Is the House of Commons in earnest? Quite as much so as the country; and the responsibility must not be shifted from the people to the Parliament.

Lastly came the Sunday question. The proposed alteration was confided to the weakest championship, and something was lost by this. But the enormous hostile majority would not have been much diminished had Mr. Hume (as was wished) survived to lead the attack. The nation spoke its will in that division, and yet in no way committed itself to the permanent exclusion of the public on Sundays from certain places where the treasures of art and of nature are aggregated. It did not affirm that it was more improper to look at the Gallery of Antiquities in the Museum, upon Sunday, than in the same day to look at the Hampton-court pictures, nor did it assert that it was less Sabbath-breaking to examine the Kew Palm-house on Sunday than to visit the exotics behind the curtain at Sydenham. But it brought out the shrewd old John Bull notion that the small end of the wedge makes way for the large one; and that a legal act, doing away with one set of Sunday restrictions would sooner or later lead to the opening the shops in the Quadrant "after service hours." The law of trespass, and the danger occasioned to rights of ownership by permission of very small encroachments, are topics upon which our old Saxon tenacity is very celebrated. The young Conservative leader, Lord Stanley, threw himself into the ranks of the movement party; and the veteran Premier, after an unanswerable declaration that Sunday ought to be kept properly, declined to intimate by his vote either way, where he conceived propriety to lie; but 235 to 48 was a trumpet-tongued testimony to the real determination of the country that Sunday shall not be made, hereafter, a day of *work*.

On all points, therefore, the House seems to have been no better and no worse than the country, and at all events to have, in these instances, fulfilled its mission. If the nation really think otherwise, in reference to these or other topics, it should begin by making *itself* understood—perhaps by understanding *itself*.

We notice, with regret, that the papers of the manufacturing districts are beginning to dwell with some earnestness on an increase of pauperism. There have been added, it is said, 15,023 persons to those claiming relief in Lancashire and Yorkshire. From the official returns, we know that, at the beginning of 1855, there were 20,735 persons more in receipt of relief than at the corresponding period of 1854. Such circumstances, coming after a decline in pauperism for several successive years, till the winter of 1853, when the increase again began, may excite a little apprehension. Amongst us there are always many persons desirous of making political capital for themselves out of any public misfortune or any great distress. At present the agitators for peace are likely to take advantage of this increase of pauperism to gain converts to their views; and therefore we must remind our readers that, at the present time, there is much greater distress comparatively in the seaport towns of the United States than is to be found in England. A letter from a Catholic priest resident at New York was published in the *Times* of Thursday, in which he draws a frightful picture of the distress suffered by the people there, and adjures the authorities in England and Ireland to prevent the further emigration of the Irish to the United States. It is, in fact, notorious that thousands of persons have been thrown out of employment in the States; that meetings of the discontented have been held in New York, at which property has been threatened; that great subscriptions have been entered into, and great exertions made to relieve the distress, which in spite of them continues. The distress there, however, tells on our country. It checks the emigration that was going on, and has actually sent back to England a considerable number of emigrants. America, too, is our greatest and best customer, and its demand for our goods has latterly fallen off a full fourth, in consequence of its own deficient means. Our readers are well aware, too, that the trade to our Australian colonies has received a very severe check; that in one of them, Victoria, there has lately been an insurrection, preceded and followed by considerable disorder and a diminished demand in the colony for the productions of our looms and forges. These circumstances have much more to do in causing the deficiency of employment and the distress which are complained of in the manufacturing and other districts than the war; and we remind our readers of them that the facts and the truth may be widely known.

The great cause for the increase of pauperism was the very deficient harvest of 1853—one of the worst that has been experienced in this country for many years. It was accompanied, too, by a general deficiency on the Continent, and led to the highest price for wheat in our markets (upwards of 80s.) in January and February, 1854, that has been experienced for many years. A similar cause is now affecting the people of the United States. Tempted by the high prices which prevailed in Europe through the early part of 1854, they exported largely; and the harvest there in 1853 having been a failure, they are really suffering as our people suffered, from short crops. They have at least a fifth less to export than they had last year, and consequently they can buy less goods from foreigners, and have less trade. According to the reports from New York, the price of flour and wheat there has been for some months quite as high as in England, and the consequence is, that they are now sending us no breadstuffs—whereas last year, at this time, they were sending us 100,000 barrels of flour per week and we are sending them comparatively little cloth and iron. A war, which interrupts the fair and reasonable distribution of the harvest of different countries, may undoubtedly aggravate the calamities of bad harvests, but it is quite plain, from the example of the United States, and the condition of our own country, that the nature of the harvests themselves, as they are good or bad, has more influence over national prosperity than war. The United States are in the full enjoyment of peace, but it does not save them from deranged trade, high prices, and considerable distress.

LATEST INTELLIGENCE.

THE WAR IN THE CRIMEA.

Accounts from Balaclava to the 12th have been received. A council of war had been held that day. It is also stated that the bombardment of the town was proceeding with greater vigour on the part of the Allies. Another despatch states that "on the 10th inst the weather was beautiful before Sebastopol. The new works were nearly completed. Sickness had almost disappeared. Lord Raglan had sent Lord Burgheresh to Sebastopol to announce the death of the Emperor Nicholas. The Russians do not believe it. The French continue to throw rockets into Sebastopol. The siege works are advancing. The *morale* of the troops is excellent. One the 8th Omer Pacha sent a messenger with a flag of truce to Prince Radziwill, who commands the Russians in that quarter, to announce the death of the Emperor Nicholas."

The death of Prince Menschikoff, from the effects of typhus, is again reported, but without confirmation.

THE VIENNA CONFERENCE.

Some of the German journals assert most distinctly that, if the result of the Conference should not end in the restoration of peace, Austria will declare war against Russia, according to Article 5 of the Treaty of Dec. 2. The *Constitutionnel* affirms the same fact.

The Vienna Correspondent of the *Morning Chronicle* states that the "first point" was definitively settled at Vienna on the 21st.

FUNERAL OF THE CZAR

A letter from St. Petersburg, of the 12th, says:—

The funeral of the Emperor took place yesterday. In some houses, which were well situated, windows were let for as much as 400 francs. At nine o'clock on the morning the first salvo of artillery, fired from the citadel of St. Petersburg, intimated to the public that the ceremony was about to commence. At ten o'clock a second salvo was fired to announce that the cortege was to form itself in the order fixed by Count Gurjew, President of the Commission for the Funeral; and at eleven o'clock, a third salvo announced that the funeral cortège had commenced its march. Everywhere, as the body passed, the spectators made the sign of the cross; and most of them, when they knelt down, touched the earth with their forehead, weeping bitterly. At the different churches the procession halted, and the various ranks of the clergy paid homage to the ashes of the chief of the Orthodox Russian Church. Prayers for Divine mercy to the soul of the deceased were offered up in every place of worship; and Nicholas himself was called on, as the chief of the Church, to address prayers to God to give force to Russia to combat with success for her rights and her territory. Cannon continued to fire until the coffin reached the Cathedral of Paul and Peter. The Service for the Dead of the Greco-Russian Church was then celebrated; and salvos, fired by the troops, announced the end of the ceremony. The evening was far advanced before the crowds of people who had assembled to witness the ceremony ceased to fill the streets.

THE COURT.

The arrival of the Court at Osborne was announced in our last Number

On Monday morning the Prince Consort embarked in the *Fairy* for Portsmouth, accompanied by the Prince of Leiningen, to inspect the Royal yacht *Victoria and Albert*. The Prince afterwards visited the Portsmouth Sailors' Home. The Queen embarked at Osborne-pier, at half-past twelve o'clock, and steamed into Portsmouth harbour, where the Prince re-embarked. The Royal yacht then proceeded to Spithead, and passed through the fleet lying at anchor there

On Tuesday her Majesty and his Royal Highness Prince Albert, accompanied by the Prince of Wales, Prince Alfred, Prince Arthur, the Princess Royal, Princess Alice, and the Prince of Leiningen, and attended by the Ladies and Gentlemen in Waiting, embarked on board the Royal yacht *Fairy*, and went to Spithead to witness the departure of the advanced squadron of the Baltic fleet, under Captain Watson, C.B., which was appointed to take place at about three o'clock, p.m. On the *Fairy* approaching the fleet, which fired a Royal salute, signal was made for Captain Watson and the Captains commanding to come on board the Royal yacht, where they had the honour of being presented to her Majesty, to take leave. As soon as the Captains had returned on board their respective ships, the order was given to weigh, and the squadron immediately proceeded to the eastward, under steam, preceded by the *Fairy*. At about half past four o'clock the Royal yacht turned and passed each ship in succession, the crews of which manned the yards and cheered her Majesty in passing. The Queen returned to Osborne at half-past five o'clock.

On Wednesday, being the day appointed for the General Fast, the Queen and Prince, with the Prince of Wales, Prince Alfred, the Princess Royal, and Princess Alice, attended Divine service at Whippingham parish church, where the Rev. G. Prothero performed the service and preached.

The Duchess of Leinster's state of health is understood to be improving.

Viscount and Viscountess Palmerston have issued cards of invitation for a grand banquet to their Royal Highnesses the Duchess of Cambridge and Princess Mary this evening (Saturday). Her Ladyship will receive a brilliant circle of the aristocracy in the evening.

SANATORIUM OF THE CONSUMPTION HOSPITAL.—The committee of the Consumption Hospital at Brompton are making active exertions to secure the early and efficient working of their Sanitorium at Bournemouth. This asylum has been established to give patients the benefit of sea air, &c., after treatment at the parent institution. In aid of the funds for this purpose an anonymous friend has offered a donation of £500, providing ten other sums of £50 each are subscribed before the 1st of May next. Already several amounts have been received; and it is to be hoped that the full number will be realised before the date of expiry. In further aid of the same benevolent cause, Colonel and Mrs. Waugh, of Bankes Castle, have generously offered the free use of their estate for the purpose of holding a bazaar and fancy fair.

SCHAMYL AND HIS SON.—Within the last few weeks Schamyl has been rejoiced by the return of his son, who, eleven years ago, when of tender age, had the misfortune to be taken prisoner by the Russians. Since then Schamyl had not heard of the boy, and long ago gave him up for lost. It appears, however, that when he was captured, the Russian General, Prince Woronzoff, took him to St. Petersburg, where the late Emperor took a liking to the lad, and had him educated in the Military Academy. It happened last year that Schamyl, in some sudden surprise, took several Russian ladies prisoners, amongst whom were the Princess Dchawawaddy. They were conducted to one of Schamyl's mountain fastnesses, and confined there as prisoners of war, but treated with the respect and decorum due to their rank and sex. The Governor-General of Tiflis sent a flag of truce to Schamyl to demand the release of the captured ladies, offering a large sum of money and the liberty of several Circassian ladies who had been made prisoners by the Russians. But Schamyl replied that if his son were alive, and the Russians would restore him, he would release all the lady captives. The Emperor Nicholas sent for young Schamyl, gave him his liberty, and fitted him out with the needful equipment to undertake the long journey. The exchange took place in the end of January. Young Schamyl, who, when at St. Petersburg, was not required to abjure the Moslem creed, has profited by his involuntary *séjour* at the Russian capital, and has now returned to his overjoyed father an accomplished cavalier, with a complete military education

THE BALACLAVA RAILWAY.

THE railway had reached Kadikoi by the beginning of March, the date of the above Sketch. In another fortnight it was expected that the entire length would be finished and handed over to the charge of the military authorities, who will now find themselves relieved from a world of hard work. Our Artist has brought in the newly-erected battery on the left, commanding the scene of a desperate engagement with the Russians. The pile of planks for soldiers' huts, drawn by two horses, gives one a notion of the marvellous improvement in the mode of transit which the "navvies" have already effected in the Crimea. To render the contrast more striking between the old and the new state of things, we have only to glance at the dromedarian vehicle in the background ploughing its way through the mire in the most helpless fashion, while a large party of the labourers, sitting at their ease on the top of the planks, look down with pity on the poor dromedary driver.

The end of April was generally assigned by engineers as the date at which the Railway would be in action; but the activity and skill of the men intrusted with it appear to have overcome all obstacles in a manner which few could have anticipated, even though accustomed to the celerity of workmanship in England, and which to our soldiers in the Crimea, worn out by the failure of so many fine schemes, appeared an idle dream. It is once more proved that the men who have made England great by their skill, enterprise, and powers of organisation, are of a far different calibre from the officials whom Government employs. While months have been spent in getting warm clothing and the barest necessaries for hospital practice, a few weeks only has been required for the conception and execution of a novel and most difficult enterprise.

PROGRESS OF THE BALACLAVA RAILWAY TO THE CHURCH OF KADIKOL.—(SEE PRECEDING PAGE.)

BEFORE SEBASTOPOL—INTERIOR OF THE LAST PARALLEL, TRENCH LINE (SEE P. ...

INTERIOR OF THE LAST PARALLEL. FRENCH LINE.

Of what our Artist saw on the 1st of March, during a visit to the French lines, he has here given a faithful Sketch. The parapet, as will be observed, is formed of gabions, surmounted with earth or sandbags. Here and there little holes are made for the sharpshooters to take their aim at the Russians without being seen. In the covered way a number of soldiers are busily engaged, with picks and other tools, cutting the rock. The men near the parapet are in the act of loading or discharging their guns; while several officers are looking through the holes in the parapet, trying to find out what the Russians are about.

IMPERIAL PARLIAMENT.

(Continued from page 283.)

HOUSE OF LORDS.—THURSDAY.

The Earl of ALBEMARLE asked whether the Governor-General of Canada had communicated to the Home Government the fact that some of the native Red Indians had contributed the sum of £100 in aid of the Patriotic Fund for the relief of the wives and families of our soldiers and sailors engaged in the war against Russia?

Earl GRANVILLE said that he had not, as yet, received any information of the fact, but he would inquire into the matter

The Earl of DERBY asked whether it was the intention of the Government to introduce any measure during the present session for the amendment of the law of partnership. The noble Earl then alluded to the growing deficiency of the materials for the manufacture of paper, and said that, from some successful experiments which had been made, it appeared that an excellent description of paper could be manufactured from the fibrous material of the plantain-tree, which grew luxuriously in the West India Islands. As it was desirable to give every encouragement to such a manufacture, he hoped the law of partnership would be so altered as to allow the investment of small capitals in such undertaking.

Lord STANLEY of ALDERLEY said, that the Government had in preparation a Bill to Amend the Law of Partnership, which, however, could not be introduced until after the Easter recess. He hoped that the measure would remove many of the evils complained of.

HOUSE OF COMMONS.—THURSDAY.

In consequence of forty members not being present at four o'clock, there was no HOUSE.

HOUSE OF LORDS.—FRIDAY.

CONVENTION WITH SARDINIA.

The LORD CHANCELLOR communicated a message from her Majesty, stating that her Majesty had concluded, in concert with France, a Military Convention with the King of Sardinia—whereby the King of Sardinia engages to maintain, in all of the war against Russia, 15,000 men, well organised and instructed; and her Majesty has undertaken to recommend to Parliament to enable her to advance to the King of Sardinia a loan of £1,000,000—£200,000 to be paid as soon as possible after the assent of Parliament, and the remainder upon the expiration of six months from the payment of the first instalment. Her Majesty further engages, after the expiration of twelve months—should the war continue—to advance to the King of Sardinia a like sum of £1,000,000; the Government of the King of Sardinia engaging to pay four per cent per annum interest—one per cent of which was to be applied to the Sinking Fund. Her Majesty had directed a copy of the Convention to be placed before their Lordships; and she relied upon the spirit of the House of Lords to enable her to make good the engagement which she had contracted with her ally.

THE MILITIA.

In reply to the Earl of Malmesbury, Lord PANMURE stated that the law officers of the Crown had given it as their opinion that every militiaman now serving under the Act of 1854, whether he had enlisted in 1852 or subsequently, was legally compellable by law to serve as a regular embodied militia man

Lord BROUGHAM called attention to the subject of the Criminal Law Procedure, with a view to certain alterations and improvements, and concluded by proposing a resolution declaring the necessity of a measure for the better and more speedy trial of criminals

After a few words from the LORD CHANCELLOR, the resolution was agreed to.

HOUSE OF COMMONS. FRIDAY.

On the motion of Mr. HAYTER, a new writ was ordered to be issued for the borough of Wilton, in the room of Mr. A'Court, who has accepted the office of a Special Commissioner of the Income and Property Tax

Mr F. PEEL, in reply to Mr. G. Dundas, stated that measures had been taken by the Government to send out to Balaclava large quantities of peat charcoal, to prevent any ill-effects arising from the influx of the burial grounds; and that those forming the Sanitary Commission recently sent out had full powers to carry out any measures they may deem necessary.

Mr. MONSELL, in reply to Mr. Baillie, stated that various reports had been received respecting the trenching tools supplied to the Army, and that new patterns were being prepared

The SPEAKER read to the House the Treaty entered into with the King of Sardinia—the terms of which will be found in the report given of the House of Lords.

Lord PALMERSTON, in reply to Mr. Bowyer, stated that the Treaty would be brought forward for consideration on Monday.

On the motion of Lord PALMERSTON, seconded by Mr. DISRAELI, a vote of thanks was passed to the Rev H. Melvill for the newspaper-stamp Bill delivered by him at St. Margaret's Church, on the National Fast-day.

THE NEWSPAPER-STAMP BILL.

Mr. DEEDES gave notice that, on Monday next, he should move as an amendment on the motion for the second reading of the Newspaper-stamp Bill, "That the second reading of the Newspaper-stamp Bill be postponed until after the Chancellor of the Exchequer has made his Financial Statement."

EDUCATION IN SCOTLAND.

The LORD ADVOCATE moved for leave to bring in a bill for the promotion of education in Scotland. He said that the measure was substantially the same as that which had been introduced last Session, and which was lost by a small majority. He trusted that, in consideration of the efforts which were being made to improve the system of education in England, the House would assent to a measure extending the advantages to Scotland.

THE GREAT GOLD ROBBERY IN AUSTRALIA.—CAPTURE OF THE BURGLARS.—The notorious Henry Garrett, who stands charged with robbing the Victoria Bank, Melbourne, South Australia, of nearly £20,000, was detected by policeman Ellis, aided by two detectives, on Thursday, and, without a struggle on his part, though armed to the teeth, lodged in the St. Giles's police-station, Clark's-buildings. He was only a few days arrived from Melbourne. On the prisoner being searched the stations say, the following property was found on his person: Two credit cheques on Coutts and Co.—one for £1957 6s. 4d., and the other for £300; £130 in gold, a dagger, a knife, two revolvers, a cutlass, four nuggets, and other valuable property. It appears that the prisoner lodged at No. 15, King-street, Soho. From the well-known character of the prisoner, and his ferocious disposition, it was deemed advisable by the inspector on duty to direct a police constable to sit with him in his cell during the whole of Thursday night, in order that he might be closely watched. On Friday (yesterday), at one o'clock, he was brought before Mr. Hardwick, at Marlborough-street police-office. Mr. Clarkson, who appeared on behalf of the prosecution, said that the prisoner at the bar was charged to be one of four persons who met together at Ballarat, and concerted for the robbery of the Bank at Victoria. The other three persons were already in custody at Melbourne. These four persons, of whom the prisoner was one, went to the bank in broad daylight, having their faces covered with crape; secured the only two persons who were in the bank at the time, by tying them in the ground, and then proceeded to rob the place to the amount of between £18,000 and £20,000. One of the prisoners now in custody at Melbourne, who had been admitted as King's evidence, had fully described the whole of the proceedings, and identified his three companions in crime. Garrett, it appeared, had lately arrived in London, having come hither in the ship *Deistos*, which arrived at Deal on the 12th inst. The prisoner was remanded till next Friday, at one o'clock

IMPROVEMENT IN SCREW STEAM MACHINERY. A very simple but effectual plan has recently been introduced by Mr. Penn, the eminent engine-maker, for preventing that constant and excessive wear and tear of the bearings on the shafts of screw-steamers to which they have hitherto been found a great practical difficulty and so continually recurring a source of expense. He introduces between the bearing and the shaft thin slips of wood, which have the remarkable property of entirely suspending that incessant waste of material which, after a certain pressure on the square inch has been attained, is constantly in progress. This simple expedient has been adopted in the recent repairs of the *Himalaya*, and will probably be applied, if found successful in her case, to all screw steamers. While the surface of the bearing is preserved from waste, angularity enough the slips of wood show no indication of being rubbed away or heated.

PILGRIMS FOR PALESTINE.—A fresh caravan of pilgrims to the Holy Land embarked on the 15th on board the *Egyptus* steam-packet at Marseilles. Among the party are Count de Rotterman, of Piremont (Belgium), president; M. H. Perié, of Castres sur l'Agout, vice-president; the Abbé Gillard, of Bué (Lot et Garonne), chaplain; R. de Vergès, of Paris, treasurer; Regnen, of Nantes, secretary; Count de Boisrenard, of Paris; Counts G. and Arthur de Busseret, and Count E. de la Barre, of Brussels, &c. Previously to their departure they were all invited to the palace of the Bishop of Marseilles, when each of them received from that Prelate a small silver cross, bearing the date of their departure. Another caravan is to be organised, to leave at the end of August

TOWN AND TABLE TALK ON LITERATURE, ART, &c.

WE have to record a wonder. A recommendation of a Committee of the Commons has been carried into effect by the Lords of the Treasury! This is, indeed, a rare occurrence. Committees and Commissions are too frequently granted to stave off a pressing emergency. The fever will be over, it is said, by the time the Committee has done its work; and the most clamorous cannot any longer complain but what Government has been willing to listen to complaints and to take their suggestions into future consideration. But this future seldom comes at all, and the labours of the Committee or Commission are at length represented by a big Blue book, that some of our Senators sell to their buttermen in exchange for fresh butter and (let us hope) still fresher eggs.

The wonder we have to record is, that the recommendations of a Committee of the Commons of the year 1853 are in part carried into effect in 1855, and that the subject thus taken up in a time of war relates to so peaceful a matter as the Fine Arts. Sir Charles Eastlake—the best-read artist this country has produced (we have not forgotten Mr. Fuseli, my learned R.A.)—has just been appointed the salaried Director of the National Gallery. It will be remembered, doubtless, by many that the Commons Committee, consisting of men so well known as Mr. Stirling, Mr. Labouchere, Mr. Monckton Milnes, Colonel Mure, and others, agreed to eight brief recommendations connected with the Keepership of the National Gallery. They were these:—"1. That a system of management by a Board of Trustees should be continued. 2. That no person should in future, in virtue of any office, become a Trustee of the National Gallery. 3. That the Trustees be appointed by the Treasury. 4. That it is expedient that the number of Trustees be diminished as vacancies occur. 5. That the office of Keeper of the Gallery should be abolished. 6. That a salaried Director should be appointed by the Treasury for a definite time, at the expiration of which he may be reappointed. 7. That every recommendation for the purchase of a picture should originate with the Director, and be made in writing to the Trustees. 8. That a fixed sum should be annually proposed to Parliament for the purchase of pictures, and placed at the disposal of the Trustees." The practical good sense of these recommendations was universally admitted as soon as they were divulged; and, though we expect to hear that Mr. Morris Moore, Mr. Cuningham, and perhaps one or two more, will complain of the selection of Sir Charles Eastlake as the salaried Director, with one thousand pounds a year, yet we as confidently believe that the selection will meet with the fullest approbation of the British public.

This change for the better, in one half of the building in Trafalgar-square that is dedicated to the Fine Arts, has been accompanied, almost at the same time, by a change for the better in the eastern wing of the building. The assembled thirty nine Royal Academicians have just elected Mr. E. M. Ward, A.R.A, to be a Royal Academician, with permission to attach the well known "Esquire" after his name. Mr. Ward, a very able artist (as our pages have often exhibited), has been chosen to succeed a very indifferent artist—the late Mr. J. J. Chalon. In making this selection, the thirty-nine have passed over Mr. Danby, Mr. Patten, Mr. Elmore, and Mr. Sydney Cooper; and, while we implicitly admit the propriety of the selection, we cannot but express that a kind of injustice has been (unintentionally, no doubt) rendered to more than one artist well deserving to wear the ornamental R.A. appended to his name. Mr. Sydney Cooper is said to have run Mr. Ward hard in the election.

The Committee of Inquiry into the Literary Fund has had its first meeting—a full gathering, we understand; and there is every prospect of a Report, and of a call for a special meeting of the subscribing members before the London season of 1855 is over. Some of the elderly members foresee a falling off in the dinner receipts; but we have no such fear, if the fund is only managed with a purpose more erect (not more honest) than it has been for some years past. The committee have taken too seriously Dr. Johnson's famous couplet —

> What various ills the scholar's life assail —
> Toil, envy, want, the PATRON, and the gaol.

Forgetting that "*patron*" was substitued for "garret" to vex Lord Chesterfield. When Johnson was asked why Pope had written a certain line without much individual meaning, the great moralist answered, happily enough, "Why he thought it would vex somebody."

This mention of Pope reminds us of a pleasant rumour accounting for the delay that has occurred in the appearance of Mr. Croker's promised edition of the works of that author. To his mass of unpublished and most important materials, he has recently been enabled to add the unpublished correspondence of the poet with Dr. Arbuthnot, Lord Bathurst, and David Mallet. Another important accession throws curious light on Pope's dealings in the far-famed South-Sea Bubble

That honest love of emulation which now exists between the English and French will be seen admirably exemplified in the forthcoming National Exhibition at Paris. All our best artists have applied, or are applying, to the possessors of their very best works for permission to send them to Paris; and very liberally, as we hear, have these applications been responded to by the possessors. Stanfield and Roberts, Eastlake and Frost, Leslie and Landseer, Mulready and Ward, Frith and Egg, are all on the eve of sending the choicest specimens of their art to the capital of France. Time, it is said (and no doubt truly), has mellowed some of the works of our living English artists into the rich and enduring condition of old masters. Our school will be seen to advantage, and will stand well.

Many besides ourselves had the pleasure of listening, on Thursday last to a well-weighed and well-delivered lecture, by Mr. Thackeray, on a subject, as some most erroneously thought, foreign to his nature—Charity and Humour. How often are the best-informed—or those supposed to be so—mistaken in their estimate of their fellow-men. An author's nature is not to be judged of by his works—Grimaldi, the *Clown*, was naturally sad; Rowe, who wrote gloomy and successful tragedies, was always laughing; Thomson, who describes the delights of bathing, was (so Savage said) a stranger to its enjoyments. Mr. Thackeray (we have no idea of panegyric) is a living example (despite his works) of Charity and Humour. We will not offend him by any further allusion to the first subject of his lecture; but we will appeal to those who saw him on Thursday if Humour (the second subject) is not seated most unmistakably in his eyes. The way in which Mr Thackeray referred, on Thursday, to some of his living contemporaries afforded a pleasing proof that he is more than willing to admit "a brother near the throne." Mr. Thackeray had delivered this lecture in America; but, on Thursday, it was heard for the first time in this country.

AN EXTRAORDINARY METAL.—The attention of the Paris Academy of Sciences was, some months since, directed to a discovery made by M. Sainte-Claire Deville, Professor of Chemistry at the Superior Normal School, in conjunction with M. Wöhler, Professor of Chemistry at the University of Gottingen, of the metal called *aluminium*. The Emperor, on hearing of it, ordered that every encouragement should be given to utilise the discovery, and some manufactured specimens of the metal will appear at the Exhibition. In a report made to the Emperor by the Minister of Public Instruction, proposing that the two above-named savans shall be promoted to the rank of officers in the Legion of Honour as a reward for their scientific skill, we find the following:—"When this extraordinary metal, light as glass, white and shining as silver, almost as unchangeable as gold, malleable and ductile in the same degree as these precious metals, strong as iron, and which is capable of being worked into any form by casting, by the hammer, and by the file; when this metal, which is found in abundance in the commonest clay, shall have taken its place in the domestic economy and the arts, no astonishment will be felt at the encouragement which your Majesty has given in order to render its extraction easy and less costly. Once more it will be admitted, that everything is connected in science, and that the same wonderful discovery of the decomposition of bodies by the pile, which procured for Davy the grand prize founded by Napoleon I., has led to this not less wonderful discovery of the conversion of potters' clay into a metal which may rival gold and silver in its unchangeableness, and iron by its abundance on the very surface of the ground." The report is followed by a decree making the appointments proposed.

OBITUARY OF EMINENT PERSONS.

LORD ERSKINE

DAVID MONTAGU ERSKINE, Baron Erskine, of Restormel Castle, in the county of Cornwall, was the eldest son of the great advocate and orator, Thomas, Lord Erskine, Lord Chancellor of England, by his first wife Frances, daughter of Daniel Moore, Esq., M.P. He was born in 1788; and married, first, in January, 1850, Frances (who died the 26th March, 1843), daughter of General Cadwallader, of Philadelphia; secondly, the 29th July, 1843, Ann Bond (who died the 18th April, 1851), daughter of John Francis; and, thirdly, the 21st December, 1853, Anna, widow of Thomas Calderwood Durham, Esq., of Largo and Pathos—which lady survives him. His Lordship has had issue by the first marriage only He succeeded his distinguished father as second Baron, on the 17th November, 1823. His Lordship was educated at Trinity College, Cambridge, where he eventually became a M.A. and L.L.D.; he was called to the bar in 1811. His life, however, was spent, not in the practice of the law, the judicial honours of which so deservedly fell to the share of his father and brother, but in the diplomatic service of his country. He was British Envoy at Washington from 1806 to 1810, and was afterwards Minister from St. James's at the Courts of Wurtemberg and Bavaria. He retired in 1843. Lord Erskine died on the 16th inst. at his residence, Butler's-green, Sussex. He is succeeded by his eldest son, Thomas Americus, some time Attaché at Munich, now third Baron Erskine; who married, the 12th May, 1836, Louisa, daughter of G. Newnham, Esq., of New Timber-place, Sussex, and widow of Thomas Legh, Esq., of Adlington, Cheshire.

SIR EDWARD FRENCH BROMHEAD, BART., OF THURLBY HALL, COUNTY LINCOLN.

THIS Baronet died on the 14th inst. He was the eldest son of Lieut.-General Sir Gonville Bromhead, of Thurlby Hall (created a Baronet in 1806), by Jane, his wife, daughter of Rose, Baroness French, and grandson of Bordman Bromhead, Esq., a Colonel in the Army, by Frances, his wife, only child of William Gonville, Esq.

Sir Edward was born 26th March, 1789. Never having married, he is succeeded in the Baronetcy by his nephew, now Sir Edmund Gonville Bromhead, Bart The deceased Baronet was M.A., Camb.; F.R.S. of London and Edinburgh, and F.L.S.; and High Steward of the city of Lincoln.

LIEUT-GENERAL DUFFY, C.B.

LIEUT-GENERAL JOHN DUFFY, C.B., Colonel of the 8th Regiment of Infantry, died on the 17th inst., at his residence in Jermyn-street. This old and gallant British officer entered his country's service in 1795, and for more than eighteen years from that period was constantly on active employment He was in the West Indies with Abercrombie in 1796, in Holland in the same year, in the East Indies in 1799, in the campaign in Egypt in 1801, and at the siege of Copenhagen in 1807 He was also with the 43rd Infantry throughout the long Peninsular war; he received a gold medal for Badajos, and the silver medal for Fuentes d'Onor, Ciudad Rodrigo, Vittoria, Pyrenees, Nivelle, and Nive. He was wounded in the head at Vittoria, and he commanded a storming party at the capture of Ciudad Rodrigo. Lieut.-General Duffy became a Military Companion of the Bath in 1831.

MYLES LYNCH M'DONNELL, ESQ.—This gentleman, whose sudden death occurred recently in Dublin, was the eldest son of Joseph Myles M'Donnell, Esq., of Roe Castle, in the county of Derry; he had only attained his twenty-second year. His loss in the part of the country where the family property was situated will be severely felt by the poor. Though very young, for some years past he had the management of the estate, which passed into his hands pursuant to family arrangements; and his amiable and upright conduct had made him everywhere very popular

CAPTAIN STRODE.—Captain J. Chetham Strode, of the 14th Regiment, who died at Southill, Somerset, on the 16th ult., of fever, and of an inflammation of the liver (contracted in India), saw during his brief but gallant career much active service. He was with the 61st Regiment in the Punjaub campaign of 1849, was present at the battle of Goojerat, and went with the 61st force in pursuit of the enemy to the Khyber Pass, for which he obtained a medal and one clasp. He joined the expedition into the Eusufzie country, and was in action with the enemy on the 11th and 14th December, 1849, when he aided in the capture and destruction of the insurgent villages of Saggoor, Pulles, Zoormundie, and Seerkanee. Strode was also with the expedition against the Afreedies, in the Kohat Pass, in February, 1850. This brave and efficient officer was only in the 25th year of his age at the time of his lamented demise. He was the youngest son of Vice-Admiral Sir E. C. Strode, K.C.B., K.C.H.

„ 22	28.861	39·0	33·0	34·4	— 7·8	100	N.E.	0.28

Note.—The sign + denotes above the average, and the sign below the average

The reading of the barometer increased from 29 52 inches, at the beginning of the week, to 29 61 inches by the 17th; decreased to 29.45 inches by the afternoon of the same day; increased to 29·61 inches by the 19th; and decreased to 28 85 inches by the end of the week The mean for the week, at the height of eighty-two feet above the level of the sea, was 29 50 inches.

The mean temperature of the week was 41·45, being 0·85 lower than the average of the same week during thirty-eight years

The range of temperature during the week was 25·29, being the difference between the highest and lowest readings of the thermometer on the 20th.

The mean daily range of temperature during the week was 15·19. The greatest was 25 2 on the 20th, and the least 8 on the 22nd.

Rain fell in five days during the week to the depth of rather more than half an inch.

The weather has been generally dull, the sky overcast, and rain falling frequently. The 20th was fine, and the temperature was high; but on the 21st the weather was again cold, and the 22nd was very cold; snow fell from some time in the early part of the day, and rain, snow, and sleet fell to the depth of 0.3 (three-tenths of an inch) nearly.

Lewisham, March 23, 1855. JAMES GLAISHER.

HEALTH OF LONDON. In the week ending March 17 the births of 926 boys and of 873 girls (in all 1779 children) were registered within the metropolitan districts. Within the same week the deaths of 1425 persons were registered—a number greater than in the preceding week by 68. The average number of deaths in the weeks in the corresponding periods for the last ten years, was 1226, so that the mortality exceeded its average by 199. Diseases of the respiratory organs were fatal in 278 cases, while in the preceding week the number was 210; the numbers for hooping-cough, 76; and influenza, 9. The number of deaths in the week show clearly that the consequences of severe weather, and changes of weather, affect the number of deaths, for some time after it has passed away

THE FOLEY-PLACE MURDER.—Luigi Baranelli, who stands charged with the murder of Joseph Latham, otherwise Lambert, was brought before Mr. Hardwick, at Marlborough-street, on Tuesday, for final examination. The prisoner—who, under the advice of his professional adviser, reserved his defence—was fully committed on the double charge of shooting Joseph Latham, and of shooting at Mary Ann Jeanes, with intent to do her some grievous bodily harm.

THE LORD CHANCELLOR IN DANGER.—An accident, that might have been attended with very mischievous consequences, occurred at the House of Lords on Tuesday. A stone of considerable size was being raised to the parapet of the new works; but, when near its destination, the fastening gave way, and it fell through the ceiling of one of the corridors, and rolling against one of the stained-glass windows at the north-east end of the House, slightly disfigured the feet of one of the female figures. If the impetus had been a very little more, it would have burst through the windows into the gallery of the House. The Lord Chancellor was delivering judgment in an appeal at the moment, and the excitement was considerable until the cause of the noise could be ascertained.

WILLS AND PERSONALTY.—The Most Noble Harriet, Duchess Dowager of Roxburghe, personalty £8000, within the province of Canterbury. General the Hon. Thomas Edward Capel, C.B., £14,000. Sir Michael Hicks Beach, Bart., £90,000. Nathaniel Betton, Esq., of Shrewsbury, £40,000. Rev. James Buckingham, B.C.L., Devon, £14,000. Thomas Robyns, M.D., Somerset, £10,000; and he has bequeathed to the Bristol Infirmary, Clifton Dispensary, and National School, Fishguard, S.W., £50 each. Mr. Thomas Farr, of Cheltenham, has left to the English College for Training, and the Parochial Infant School (both of Cheltenham), £250 each.

NAVAL AND MILITARY INTELLIGENCE.

THE BALTIC FLEET.

The flying squadron having gone, there are now at Spithead 19 pendants under the command-in-chief of Rear-Admiral the Hon R. S. Dundas, C.B., and those 19 ships require only about 600 petty officers and seamen to fill up their full complement. The flying squadron was composed of 7 pendants; the 19 now at Spithead make 26; the full force of the Baltic fleet will include 108 pendants. We shall have 30 screw ships of the line (including the screw guard-ships), and to each of those ships will be attached a screw gun-boat manned with a complement of 34. These alone will count 40 pendants. But all this force will not be ready for at least two months.

Captain Cuming has been selected for the command of one of the battleries. Captain Halstead (late of the *Dauntless*) and Captain Beauchamp Seymour (late of the *Bride*) will each have the command of one of those formidable ships. They are progressing very rapidly at Blackwall. Gangs of men are employed night and day to complete this new and difficult modern engine of warfare. Whilst the ships are being constructed in building and the massive wrought-iron plates are being fitted to the sides, the engineers are busily engaged in fitting the machinery on board.

THE General Commanding-in-Chief has directed that for every volunteer received from the militia, by recruiting parties, the regulated sum of 7s. 6d. be paid to the militia sergeant upon final approval.

SEVERAL of the ambulances sent down to Portsmouth some time ago, to assist the wounded on their arrival, being landed were found so heavy and rough as to be totally unfit for use. Common street omnibuses have been hired in preference.

THE A, B, and C divisions of the New Land Transport Corps, numbering 261 men, under Lieutenant-Commander Addick, arrived at Plymouth on Monday, from Hornfield barracks, Bristol, to embark for the Crimea.

REAR-ADMIRAL BERKELEY, the senior Lord of the Admiralty, accompanied by Mr. Burnley, Accountant-General of the Navy, arrived at Portsmouth on Monday, and went out to the fleet in the *Vivid* yacht, to make arrangements for "paying down" the ships before starting. The fleet was joined on the same day by the *Blenheim*, 60, Captain W. H. Hall, the *Odin*, 16, Captain Willcox; and the *Basilisk*, 6, Commander Jenner. The *Leinbarah*, 38, Captain Hewlett, commenced to swing for the readjustment of her compasses, prior to coming. No day is yet fixed for the sailing of the main body of the fleet; upwards of 16,000 men in it are now daily victualled at Portsmouth alone, and at the Royal Clarence-yard they are slaughtering as many 200 bullocks per week: they are also loading vessels for Malta, Constantinople, and Balaclava daily. A number of the new class of medical officers, styled "dressers," will forthwith embark in the "flying squadron" for the Downs.

ORDERS have been transmitted from the Horse Guards addressed to the commanding officers of the several cavalry depôts at Manchester, Norwich, York, Piershill, Exeter, Sheffield, Maidstone, Canterbury, Dorchester, and Newbridge (Ireland), to hold in readiness for embarkation as many disciplined mounted men as may be available to reinforce the following cavalry regiments in the Crimea, viz.:—4th Dragoon Guards, 5th (Princess Charlotte of Wales's) Dragoon Guards, 1st Royal Dragoons, 2nd North British Dragoons (Scots Greys), 4th Light Dragoons, 6th Inniskilling Dragoons, 8th Royal Irish Hussars, 10th (Prince of Wales's) ditto, 11th (Prince Albert's Own) ditto, 13th Light Dragoons, and 17th Lancers. It is estimated that the depôt of each regiment will be able to supply at least two troops of 80 men each, making a total of 1760 sabres. In addition to the above, the 4th Dragoon Guards (Carbineers) quartered at Hounslow and the 15th Hussars, stationed at Exeter, are held in readiness to proceed to the seat of war. Each of these regiments can now muster upwards of 600 sabres. The 12th Lancers, 700 strong, are also on the route for the seat of war from India. The draughts from the depôts, with these three regiments, will make the cavalry reinforcements amount to 3600 sabres. Also 500 horses, for the remounts of the cavalry at present in the Crimea, will proceed in charge of the draughts which will embark early in the ensuing month.

OPENING OF THE CALCUTTA, DELHI, AND LAHORE RAILWAY, BY THE GOVERNOR-GENERAL OF INDIA.

THE merited sarcasm of the illustrious Burke—that, were the British expelled from the wide-spreading empire of Hindostan, the only traces left of them, and their rule, after the lapse of a century, would be those of the vulture and the lion has ceased to be true: this stigma on England's fame exists no longer.

On the 3rd of February was officially inaugurated the partial opening of one of the most gigantic engineering works ever undertaken by man—a line of Railway, which, with 1350 miles of unbroken length, will bridge the sacred Ganges, the Soane, the Jumna, and the Sutlej; traverse the most fertile tracts of India; connect its most populous and ancient cities with the ocean; cut the inexhaustible wealth and resources of remote, and at present, for commercial purposes, inaccessible districts; ameliorate the condition, weaken the prejudices, and enlarge the minds of millions of the human race; consolidate our power in the East; and finally leave an indispensable monument to the end of time, of the energy and beneficent dominion of the adventurous Saxon.

At an early hour the Armenian Ghaut on the Calcutta side of the river, here about half a mile in width, and the Howrah terminus on the other, were thronged by masses of the native population, whose excitement evinced much pleasure and interest in the spectacle. It is said, that very rarely, except in their religious ceremonies, have they displayed so much gratification and curiosity on any public occasion

A long arcade, covered with flowers and foliage, led to the water's edge, where two steam-boats, engaged for the occasion, ferried over those having the privilege of admission to the other bank. As far as the eye could reach along the river, large Indiamen, with lofty spars, crowded merchantmen of many nations, and native boats, lay moored in long lines up and down the stream. The steamers were adorned with branches, flowers, and flags; as was a leafy arcade, leading up to the station.

About nine o'clock the Marquis of Dalhousie, attended by his staff arrived, announced by a salute of nineteen guns. He was received by Mr. Rowland Macdonald Stephenson, and Mr. George Turnbull—the former, fourteen years since, the projector, and now Managing Director of the Railway; and the latter the Engineer-in-Chief. A prayer was now read by the venerable Bishop of Calcutta, together with appropriate selections from the Scriptures.

The Governor-General remained till the departure of the first train, but ill-health prevented him from being present at the banquet. On the platform were to be seen most of the leading members of the Government and society in Calcutta. They were conveyed in two trains—the first leaving Howrah at twenty minutes to ten a.m., and arriving at Burdwan, where the coal-fields commence, sixty-six miles from Calcutta, at half-past twelve o'clock.

At Burdwan a long arcade of leaves, ornamented with flags, and affording a pleasing shelter from the mid-day sun, led to the spacious tents, where covers were laid for 700 persons.

Grace having been said by the Bishop of Calcutta, the company dispatched an excellent champagne breakfast; after which Mr. R. Macdonald Stephenson gave the following toasts:—"The Queen," "Prince Albert and the Royal Family," "the Governor-General," "the East India Railway Company," "the Engineers, Locomotive Superintendents, and Contractors of the Railway," "the commercial interests of India," "Dr. O'Shaughnessy and the Electric Telegraph," "the Army and Navy."

The Chairman, in replying for the East Indian Railway Company, stated that, although fourteen years had elapsed since the subject came under semi-official consideration in England, it was but four years since the works were actually commenced. A line, exceeding in length either of the two great lines of England, had been completed and opened—a work of disadvantage sufficient to the construction of works, in a country where a strange language, a trying climate, imperfect means of communication and transport, and other serious drawbacks, had been encountered and overcome—within a considerably less period, and at less than one-fourth of the cost of the two great lines referred to—the London and Birmingham and Great Western railroads. 121 miles of the East Indian Railroad were then complete; 649 miles were under contract, to be completed by 1857; 200 miles were being constructed by the Company; and 380 miles were being surveyed: making a total of 1350 miles.

The first return train started from Burdwan at twenty minutes to four p.m., and arrived at Howrah at twenty minutes to seven. The weather was perfectly fine throughout the day, and the arrangements admirable. At night the terminus and houses near to—the Ghants were illuminated.

A DEPOSITORY for Bibles and other religious books, in various languages, is about to be opened in the Frank quarter of Constantinople, as a branch of the similar establishment existing in Stamboul. A committee has been appointed to make the necessary arrangements, and a room has been engaged in the main street of Pera, near the British Consulate. In connection with the book store, it is proposed to provide accommodation for reading a few of the principal English and American newspapers, one or two of the French and Italian journals, and some of the religious and secular periodicals published in Great Britain, America, and on the Continent. Although pecuniary help is expected from one or more of the religious societies at home, whose publications will be offered for sale in this new Depository, yet the founding and support of the whole institution must chiefly depend upon local resources.

CHESS.

TO CORRESPONDENTS.

LEONARD C., Cleveland, Ohio. The publication of "Loose Leaves of Indian Chess" has been postponed; Mr Cochrane's professional engagements not allowing him leisure to complete his work.

C. P. H. H. S. *Future.*—1. Your Solution of the Indian Problem is correct. 2. The position will be examined.

E. C. S.—There is no difference. 2. The small pierced Chess figures are far more trouble than they are worth. 3. Your Solution is correct.

A REGULAR Reckoned.—You may procure a book of the "Rules for Playing Double Chess" either of Leuchars (Piccadilly) or Sherwin (Queen-street, Lincoln's-inn-fields), makers of the men and boards for the particular game.

M. ALLEN, France.—Thanked for his obliging communication.

C. W., Sandwich.—They shall be reported on shortly.

TOM OF LOCKLEY.—If Tom at Chess Meeting at Leamington is appointed to take place on 19, 20, 21st, and 22nd inst.

DELTA, Scotland.—We shall be glad to hear the result of your exertions.

J. H.—The last is undefended by actively 24 and 26, are but indifferent.

C. W., M. N. O.—They want point, and are much too easy.

W. C. S.—No. 3 forms a tolerable Enigma. The other is extremely simple.

A. Z. P.—Promising, but not quite up to our standard.

PHILO.—See our Solution.

H. H., Liverpool.—We answered this question last week.

MILO.—Your solution of the Indian Problem is correct.

T. P. C., Edinburgh.—You can procure blank Chess diagrams of Messrs. Kent, publishers, 23, Paternoster-row. The best, we believe, are 5s. 6d. per hundred.

R. M. J.—Hers are both excellent; but Bilguer's (Second Edition, 1852) is the more comprehensive. 2. The former is in two volumes; the price of each about 12s.

DONALD.—All we know of the matter is, that a match has been talked of between Herr Schulten, who is now permanently resident at Aix-la-Chapelle, and Mr. F. Deacon, of Bergen. Nothing, we believe, has been, as yet, definitively settled.

F. R. O.—You must refer to some authority now obsolete. All modern writers concur in declaring Stalemate a Drawn Game.

G. H., Dresden.—We, and others, before attempted to solve any of the curious and ancient Problems presented in the Treatises or articles on Oriental Chess, see our remarks in the Number for April 16th on the old moves and powers of the Piece.

DELTA, St. Mary, W. C. C., W. E. W., T. K. S. W., J. T., Dorby.—The Solutions of Mr. Horwitz and Mr. Kennedy are correct.

J. S. (Oxford).—Received. The Problem is declined, although the first be on the board.

I. K.—It shall be reported on in our next.

C. H. B.—An elegant little trifle; but we have already published it.

ANONYMOUS.—The Paris Chess periodical *La Régence*, edited with its chief editor, Kieseritzky. We are glad to hear that there is a prospect of us being re-established under auspices which will secure to it the patronage and support of the most eminent players of Europe.

The sellership, it is understood, will be intrusted to M. de Rivière, the present Honorary Secretary of the Paris "Cercle des Echecs."

SOLUTIONS OF PROBLEM No. 577, by J. M. of Sherburn; M.D., Alpha, S. P. Q. R., D. D., are correct.

SOLUTIONS OF PROBLEM No. 578, by A. Z., M.P., Chicury Raris, E. H. M., F. R., of Normanby Hall, Beverley, J. T., Derby, J. A. M., Faketham, D. D., Sharpite, Sapiens, Verb. Felix, Dereven, F. T., Derby, J. A. M., Faketham, D. D., Sharpite, Sapiens, Verb. Felix, Dereven, F. T., Derby, J. A. M., Faketham, D. D., Sharpite, Sapiens, I. T., Omega, Verjuice, Tartar, Dodo, W. E. W., Cecil, Cuthbert, J., Stonehouse, T. K., J. T., Blackburn, are correct.

SOLUTIONS OF ENIGMA, by Sharpite, W. M. W., Dereven, M. T. W., F. S. A., Cantab, Omicron, F. F., Camelot, Old Sarum, D. D., are correct. All others are wrong.

SOLUTION OF PROBLEM No. 576.

WHITE.	BLACK.
1. Q to K 3rd	Kt takes Q (*e*)
2. R checks	K takes Kt
3. B to Q 3rd—Mate	

(*e*) If P takes R, the Q checks at Q 3rd, and then gives Mate. If R takes Kt, the R checks at Q R 6th, as Q mates next move. If R plays to K 3rd, the Q checks at Q 3rd, and the R then mates. And, finally, if R is played to K B 4th, the Kt gives check at Q B 3rd, and the B mates.

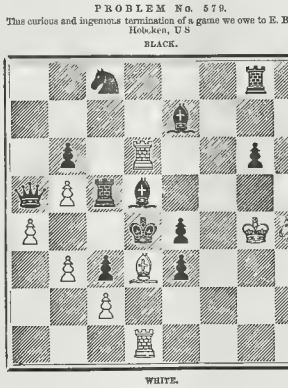
SOLUTION OF PROBLEM No. 577.

WHITE.	BLACK.	WHITE.	BLACK
1. Q to Q R 4th (ch)	K takes R	3. Q to Q R 4th (ch)	K takes Kt
2. Kt to Q Kt 2nd (dis. ch)	K to Q Kt 6th	4. R to Q R sq	K takes R (best)
		5. Q to Q B 7th—and mates next move.	

PROBLEM No. 579.

This curious and ingenious termination of a game we owe to E. B. C. of Hobken, U S

BLACK.



WHITE.

White to play, and draw the game.

CHESS IN PARIS.

We have this week the pleasure of presenting a Game, hitherto unpublished, played shortly before his death by the celebrated Livonian Professor Kieseritzky, with M. Journoud, an accomplished amateur of the Paris Chess circle.

(*Evans' Gambit.*)

WHITE (M. J.)	BLACK (M. K.)	WHITE (M. J.)	BLACK (M. K.)
1. P to K 4th	P to K 4th	26. Q R to K sq	K to B 2nd
2. K Kt to K B 3rd	Q Kt to Q B 3rd	27. Kt to K 2nd	Kt to K 6th
3. K B to Q 3 4th	K B to Q B 4th	28. Kt to K Kt 3rd	P to K 4th
4. P to Q Kt 4th	K B takes Kt P	29. Kt takes Kt	P takes Kt

24. B takes Kt (ch)	K takes B	49. B to K H 6th	
25. K R to K 3rd	P to Q Kt 3rd	And Black surrenders	

(*a*) With all his fine genius and extraordinary knowledge of the game, Kieseritzky was the most wayward player of players. It was thus and his constitutionalinfidelity, perhaps, which prevented his occupying the highest place amongst the chess masters of the day. In his Opening delights, and in all sorts of odd, out-of-the-way manœuvring. In his End Game, when the road to victory lay plain and direct before him, he would turn aside as if from sheer wantonness, and lose himself in some inextricable maze, while his opponent took time and heart and reached the long-despaired of goal. These eccentricities have been set down to an originality of mind. We are disposed to attribute them in part, at least, to another cause. He entertained a great repugnance to giving odds; and, as his opponents were for the most part immeasurably inferior to him both in skill and bookish lore, he could of course afford, when playing "even" with them, to risk a good deal. Of what import was the loss of a few moves or of two or three Pawns to one who felt he was a Rook stronger than his adversary? It was thus, we suspect, that he acquired that fondness for rash attacks, and whimsical defences, which injured his game, and told against him so terribly when he came to cope with men of mettle like his own.

The move in the text was one of his *caprices*, and cost him many a game.

(*b*) He should rather have played K R to K sq.

(*c*) A wise precaution against Black's occupying this rank with his Q Rook.

(*d*) This and the succeeding moves on White's side are very cleverly played.

A SOMNOLENT MEMBER.—After the body of the House of Commons was cleared on Tuesday evening, some amusement was caused to the ushers and the doorkeepers by the discovery of a member asleep in the gallery. The Earl of Mulgrave called out from the floor of the House, "Hi! wake up!" but without effect; the honourable member's slumbers were too profound to be lightly disturbed, and he was only brought to a sense of his undignified position by a gentle shake on the shoulder from one of the doorkeepers. The honourable gentleman, at once appreciating the situation, jumped up, and hastily quitted the gallery.

THE SILENT MEMBER. No. IX.

THIS week has been, as it were, cut in two by the Fast-day, which has given rise to other divisions besides those of time, for there has been much division of opinion as how it ought to have been kept, or whether it ought to have been kept at all, except by those whose sins of omission and of commission had been the cause of a Fast-day having been appointed. It is to be regretted that a day set apart for religious observances should have been made the subject of a war of opinion which has been waged with so much bitterness, that the parties to it, instead of entering into the spirit of a Fast-day by humbling themselves, have seemed to throw all their energies into the attempt to humiliate each other. Now, that it is all over, let us hope that it was, on the whole, observed in such a manner as to aid the professed object with which it was proposed, and that it may have awakened those in authority to a due sense of the sin of reducing a powerful nation to the condition from which we have asked Providence to rescue us.

The Sunday question has this week undergone a discussion in the House of Commons, with a result that will disappoint some and satisfy others: for the proposal to open some of the national exhibitions on Sunday afternoon has been negatived by a large majority. The subject is beset with difficulties; for, though in these days few would deny that a portion of Sunday might be well appropriated to harmless recreation by those who labour all the rest of the week, there are still fewer who would wish this advantage to be obtained by making Sunday a working day for a large number of persons whose employment would be necessary to provide for the recreation of others. Perhaps the better course to be pursued by those who advocate the harmless amusement of the masses, is to urge the adoption of shorter hours of labour on the working days rather than the establishment of any amusements on Sunday, which would lead to the loss of that day as a day of rest, to any considerable portion of the community. Though an English Sunday may be rather dull, there are not many of us who would wish to see it converted into a Continental Sunday—of which, however, there is not much fear while the national feeling and temperament remain the same as they are at present. Individually, I would like to see the British Museum, the National Gallery, the Crystal Palace, and other places of an amusing and elevating tendency open on the Sunday afternoon; but I am told that "if we once begin, we shall not know where to stop"—an argument which, I confess, appears to me always absurd and contemptible. Everything good might be stopped—or rather might never be commenced—if this principle were adopted; for there is nothing, however excellent, which may not be carried too far, if we do not know where to stop. And that is precisely the knowledge which we are morally bound to acquire. We might as well say we could not venture to light a fire, lest from "not knowing where to stop," we burn down the house; or we might adopt the same argument with regard to the use of everything, —for there is nothing which, if we do not know where to stop, might not, by abuse or excess, become a source of injury. In all cases where the public good is concerned it is the duty of Government to find out where to draw the line—and draw it accordingly. It might be too much to expect the extreme of nicety in the performance of this rather difficult operation; but when there is a very large minority in favour of any proposition, we may be sure that the line is not drawn so fast as it might be to the point that is most generally desired.

If the Vienna Conference proceeds as slowly as diplomatic negotiations usually do, it will be some time before the Colonial Secretary is at leisure to attend to the affairs of the Colonies. Perhaps it is felt by the Government that distant possessions are appropriately presided over by a distant Minister; and that, as any grievance, to be remedied at home, must travel some thousands of miles before it can be heard, there is not much additional hardship in dispatching it on a second trip, or letting it rest after its journey till the proper authority returns home from the Continent. Besides, it does not seem that the absence of the Minister can cause more delay than if he were at his post; for a draught constitution which arrived from the colony of Victoria on the 31st of May, last year—when the Duke of Newcastle was "at home" as Colonial Secretary, before he began to be "not at home" at the War-office—is still in that condition which precludes Sir George Grey from giving a "pledge" as to when it will be "considered." Perhaps, if the recent outbreaks had continued, we should have heard that "something must be done forthwith;" but as the colonists have happily restored order among themselves, and got rid of a most obnoxious Colonial Minister, sent out to them by the Colonial-office three years ago, there will be nothing to be done but to see what valuable appointments remain to be filled up from home, and let matters take their chance till next Session.

The weather continues to be the favourite topic of Lord Raglan, and the subject has been taken by the author of the telegraphic despatches, from one of which we learn that "a bright moon impeded operations by night"—an effect that seems rather remarkable. If the moon puts a stop to everything by night, the sun must *a fortiori* have the same effect by day, and thus, between the sun and the moon, everything must necessarily be at a dead stand-still. It is to be hoped that the telegraph is in error in announcing that the British army is "moon-struck," though there is reason to believe that some of its heads have been for some time in that unhappy condition.

Some year or two ago there was a good deal of talk, followed by a conversation in the House of Commons, about the alleged committal of a person to prison for an extra month, for having called a policeman a pig at the Middlesex or Westminster Sessions. Many persons thought the penalty rather severe for an offence unknown to the statute-book; but what will be thought of a recent sentence of the Lord Mayor of London, who is reported to have given a pickpocket an additional month of imprisonment and hard labour—not because he called anybody any name, but because he refused to call himself any name—at the Mansion-house. "Prisoner," said the Lord Mayor, "I give you the utmost punishment I can give you three months, with hard labour. If you had given your name I would have given you no more than two months." If this is a correct version of what occurred, it is evident that a man is to be imprisoned one month, with hard labour, for not giving his name—a statute of things I beg to recommend to the attention of the same member of Parliament whose curiosity impelled him to ask by what law the calling a policeman a "pig" is punishable with imprisonment? The statute under which a person is liable to a month's imprisonment for not giving his name must be a still more remarkable object, and if any amount of research can bring it to light, and thus the discovery is made the better, in order that such a law may be repealed as quickly as possible. Perhaps, if the Lord Mayor had been satisfied with giving the "nameless one" the additional month, it might have been inferred that there is some old law in some old nook of our code, to justify, or rather to legalise, his Lordship's act; but this presumption is negatived when we find a reason adduced, instead of an Act of Parliament quoted, in support of the sentence. "If," said the Lord Mayor to the prisoner, "you had been at all respectable, you would have given your name." But this is a conclusion to which I am not disposed to jump hand in hand with the Chief Magistrate. It does not seem to have occurred to the Lord Mayoral mind that the accused, without being "at all respectable," might have given any body else's name instead of his own; and as the former would have served his purpose as well as the latter—inasmuch as Jones or Jenkins would have been quite as satisfactory to the Lord Mayor as Smith or Brown—the withholding of a name is rather in favour of the prisoner's respectability than otherwise.

A tragical scene that occurred the other day at Marlborough-street, when a Chinaman charged with begging cut his throat in the court with a knife he had in his possession, suggests some reflections on the propriety of searching all persons that are taken into custody. Some of the Judges have condemned the practice with more or less of declamation on the sacredness of the liberty of the subject—which liberty, it must be remembered, being already taken away by the act of arrest, forms, in reality, no part of the subject for discussion. The question simply is, whether it would not be safer for themselves and others that all persons in custody should be required to give up (it might be, except in cases of felony, to any one they might think proper) whatever they are happen to have about them. The sacredness of the person, which some of the judges so eloquently talk about, is gone as far as it can go, when a man becomes a prisoner, and therefore it is only the sacredness of the pocket which is the object of so much jealousy. When we recollect that a missile has been sometimes sent from a prisoner in the dock towards a judicial head—to say nothing of cases of violence committed on themselves and each other by persons in custody, and of robberies perpetrated in prison cells—it would seem to be as much for the good of prisoners themselves as of those who have to deal with them that all means of mischief should be carefully taken away from them.

EMBARKATION OF THE WILTSHIRE MILITIA, AT PORTSMOUTH.

THE ROYAL WILTS MILITIA.

On Friday (last week) the Dockyard at Portsmouth presented a very animated appearance, during the embarkation of the Royal Wilts Militia on board the General Screw Steam Company's ship *Croesus*, for Corfu. They go out, under the orders of Lieutenant-Colonel Lord Methuen, of the following strength:—24 officers, 36 sergeants, 30 corporals, and 600 rank and file. The regiment is in splendid condition. The men marched down to the Dockyard from their barracks, accompanied by their own excellent band and that of the South Lincoln Militia, who have just been quartered in Portsmouth. The men went on board in excellent order, not a single case of drunkenness occurring.

The accommodation on board is very complete, and from the size of the vessel and her being specially adapted for a large number of passengers, the men anticipate a pleasant and speedy voyage.

Four officers and 128 non-commissioned officers and men of the 20th Foot, and four officers and 128 non-commissioned officers and men of the 68th Foot, also embarked on board the *Croesus*, for Malta, to join the reserve of Lord Raglan's army there. The *Croesus* sailed on Saturday morning. In the second Illustration, the fine ship is shown leaving the harbour. Our Artist has, in his Sketch, shown in the distance, H.M.S. *Resistance*: on board which, on Thursday evening, the following other draughts, sent down by railway, embarked for Malta, to join the reserve there:—6 officers and 128 non-commissioned officers and men of the 42nd Highlanders; 2 officers and 65 non-commissioned officers and men of the 46th Foot; 4 officers and 128 non-commissioned officers and men of the 79th Highlanders; 3 officers and 128 non-commissioned officers and men of the 93rd Highlanders; and 4 officers and 128 non-commissioned officers and men of the 97th Foot.

RECEPTION OF THE HON. MAJOR FEILDING, AT NEWNHAM.

The villages of Failton and Monk Kirby, and Newnham Hall, the seat of the Earl of Denbigh, have recently been the scene of the impressive welcome of his Lordship's son, the Hon. Percy Feilding, Major in the Guards, who was severely wounded at the battle of Inkerman. The Earl and his family are absent in Paris; but, no sooner had it become known that Major Feilding was about to sojourn for a short time at Newnham, than the tenantry of his father resolved to convey to the gallant soldier an expression of affectionate sympathy, and hearty congratulation upon his return.

On the morning of the 1st inst., at about twelve o'clock the tenantry and other neighbouring gentlemen, well mounted, began to arrive at Failton; and by one o'clock about fifty of them proceeded on the Harborough-road and met the carriage which had been sent to convey Major Feilding from the Rugby Station. The Major sat in company with his uncle, Colonel Feilding. The horsemen halted and loudly cheered, after which they formed a double line, and entered Failton in the following order:—A large union-jack, French and Turkish flags, carried by three gentlemen on horseback; the Lutterworth brass band; fifty horsemen; another union-jack and flags carried by footmen; the Major's carriage, passing through a beautiful evergreen arch, in the centre of which was inserted a pink and white device, on which was inscribed on one side "P. F. Welcome," and on the other, "The Queen, God bless her." The whole party formed a circle before the Rev. E. Everett's house, where the Royal Standard, belonging to Captain Tryon, was hoisted, the band playing "God Save the Queen." After three hearty cheers, the procession moved on towards Kirby, and entered that village where the bells were ringing, and the band playing in good style "See the Conquering Hero Comes." The horsemen again formed a circle in front of garlands suspended from a fine oak-tree, in the centre of which was the inscription "Honour the Brave." Over this was the family crest, surmounted by a large Union

"THE CROESUS" LEAVING PORTSMOUTH HARBOUR, WITH THE WILTSHIRE MILITIA ON BOARD.

RECEPTION OF THE HON. MAJOR FEILDING, AT NEWNHAM HALL, ON HIS RETURN FROM THE CRIMEA.

Jack, and French and Turkish flags floating on each side. Here the horses were detached, and the carriage was drawn by about thirty men. A little further on was a white streamer thrown across the street, bearing the inscription "Better health and long life to Major Feilding." This was taken down and carried before the carriage. At the park-gate was another arch of evergreens, on which was the inscription, "Welcome Home." The procession again halted, while about two hundred children belonging to the Failton and Kirby schools sang "See the Conquering Hero Comes." At the entrance to the Court was a double arch of evergreens, with the inscription, "Long Live our Noble Patron;" and on the reverse the words "Alma and Inkerman," surmounted by a flag originally belonging to the Guards. On the carriage being drawn up to the hall-door, three cheers were given for the Major; after which the Rev. E. Bromfield, the clergyman of the parish, read a congratulatory address; to which the Major feelingly replied, concluding with these words:—"While I feel grateful to those who have showed by their presence the interest they feel in my welfare, and who have mingled their prayers with my own while I have been engaged in the war, I cannot sufficiently express my gratitude to God, who had mercifully preserved me while in circumstances of danger upon the battle-field." The Major was again cheered. Three cheers were also given for "The Queen," "The Army and Navy," "The Earl of Denbigh," "Old England, the Land of the Free," "Our brave Allies, the French," &c.

The Major looked exceedingly well, considering the fatigue and suffering he had passed through; and, when he left his carriage, he walked among his friends with the aid of two sticks. We wish the brave young Major a speedy restoration to perfect health.

"A GAME OF ROMPS," AT THE PRINCESS' THEATRE.

We this week give an Illustration of Madame Girardin's poem, as acted by Mr. C. Kean's company. The performance has so little story or incident that the title conveys all the interest which the piece embraces. In acting it becomes a sort of brief spectacle, in which the accompanying scene is the principal feature. But the spectacle is not of the ordinary kind; it consists not of the ordinary gew-gaws of the stage, but is composed of the chief female beauty of the theatre, which, whether collectively or individually, is certainly striking. The Misses Ternan, Leclerq, Heath, and Murray are the illustrators of the poet's ideal; and, by the grace of their movements and the cheerfulness of their general carriage, they contrive an imposing *ensemble*, the effect of which has an innocent charm that must prove attractive to the drawing-room audience of the stalls and dress circle at a fashionable theatre. The whole is an elegant and tasteful entertainment, which is not only amusing, but is calculated to cultivate an appreciation for accomplishments which, while "they make the virtuous still more virtuous," add a spirit to life, and give a stimulus to healthful and benevolent habits.

SCENE FROM THE NEW FARCE OF "A GAME OF ROMPS," AT THE PRINCESS' THEATRE.

MUSIC.

GRISI and MARIO have returned to London, after their six months' sojourn in the United States. Their last appearance was in New York a few weeks ago, when Mr. Hackett, the *entrepreneur*, informed the public that, after paying Grisi and Mario their stipulated terms (£12,000 sterling, besides expenses of living and travelling), he himself had been a great gainer by the speculation his net profits amounted to 20,000 dollars. This sets the question at rest as to the success of these great artists in America. Having amassed an immense fortune, they will now, it is said, retire to their estate in the neighbourhood of Florence. Meanwhile, however, it is believed (though the fact is not positively known) that Mario will appear during the ensuing season at the Royal Italian Opera.

OUR sedate neighbours, the Dutch, have been smitten with the Lind-fever, which now rages among them as violently as it did in Eng land. It appears that Madame Goldschmidt has resumed professional life for a time, in order to raise a fund for endowing a hospital in Stockholm She is now giving a series of concerts for the sufferers from the late disastrous inundations in Guelderland and Brabant The first took place a few days ago at Amsterdam, and produced a clear profit of about £400 sterling When she appeared in the concert-room, the audience rose en *masse*, with demonstrations of the utmost enthusiasm. At the conclusion the band struck up the Swedish National Anthem, and six children belonging to the most distinguished families of the city advanced towards Jenny Lind, and presented her with a garland, and a testimonial of gratitude written in the Swedish and Dutch languages. Her vocal powers and captivating qualities are described as undiminished. We regret to add that we are able, on unquestionable authority, to give a positive contradiction to the statement, which has appeared in several papers, that she is about to revisit England. She has no such intention, at least this season.

THE THEATRES.

HAYMARKET.—A new Spanish ballet has been produced at this theatre, in which Senora Pepe Nena and Senor Marcos Diaz display their usual merits. It is entitled "Una Noche de Fiesta in Sevilla," and leads off the evening, which still continues to be "Sheridan Fête" The scene of the new ballet is laid near Seville, by moonlight, and the subject consists of villagers and gipsies dancing—in part very wild in character; but the Peron Nena eclipses all other *danseuses*, and entrances two cavaliers, who contend for her preference, which, however, she does not declare. The whole affair is exceedingly elegant, as well as vivacious. It will increase the reputation of the corps

LYCEUM.—"A Cozy Couple"—a new, and, it is said, an "original" piece—was produced on Thursday week. It is a neat conversation drama, turning not upon a situation, but upon that of mind—a picture. In a word, of domestic felicity abruptly disturbed by an old acquaintance recently returned from foreign travel. His glowing statements operate upon the husband, and induce him to propose a temporary separation, in order that he may accompany his friend and go abroad for a while The distress of the wife is so great that the friend is moved to compassion, and, by reversing the picture, he contrives to disgust his infatuated victim with the project he had previously recommended. The merits of this piece, however, have not, it would appear, availed to secure the prosperity of the house—from the management of which it is stated that Mr. Mathews intends shortly to retire.

NATIONAL SPORTS.

ALTHOUGH its sister pursuits have been in nowise affected by the war it cannot be denied that the war has acted very prejudicially on the prospects of racing. The January entries were considerably below the average; speculation at Tattersall's has for some months back been very feeble; and lessees of grand stands will have to mourn over sad deficiencies, if their ticket sellers do not find more customers than they have had at the early spring meetings. Still the army of race-horses at present in training is, numerically, very strong. The four-year-olds, &c., have been headed by the hitherto invincible Virago; and include Muscovite, Rataplan, Andover, The Hermit, Meteora, Acrobat, Ivan, Knight of St. George, and Scythian—whose forms are quite near enough to create no small amount of speculation whenever they meet over a Cup course. We fancy that Ivan will prove the best of the lot, and make matters very unpleasant to Virago as he did last year at York. Two-year-olds of last season were all so exceedingly moderate (except it be Nettle) that at this present moment the Derby may be said to be confined to the rather useless to Rifleman, but we should be glad to hear that he was placed in the hands of a man like Harlock, as a final preparation in a small private training stable does not generally bode luck to a first favourite. "The Squire" looks cuddly forward to the Spring Meeting at Epsom and Doncaster, but the public will be unable to gauge these as the Claret nears the Bushes in the Two Thousand Guineas. The two-year olds of the present season are likely to be as good as their predecessors and that is saying a good deal when the running of Fazzy, who was bought for 155 guineas at the last Royal sale, shows that the forms of he conquerors, Wandering Willie, Gamester, and the Bold Buccleuch, are as hopeful as the race in which they were pitted.

No great interest attaches to the Northampton Meeting, which will come off on Tuesday and Wednesday next. The Northamptonshire Handicap will be run on the first day; but there has been as yet very little betting on it, although Meteora has been slightly fancied in some quarters. Nevertheless, her clever victory at York last year hardly convinces us that she will be at home over two such difficult miles as the Stakes course here presents. Lord Spencer's Plate, and the Althorp Park Stakes, are the great features of the second day. Croxton Park carries on the game on Thursday and Friday, after so many weeks of frost, the Melcombe are hardly likely to consider it the *finale* of the Melton season, as they have hitherto been wont.

Steeplechasing will attract its crowds at Birmingham and Wansford on Monday, and at Louth and Beckford on Tuesday. The Yorkshiremen have also a day's sport at Tadmster on Wednesday; while Hexham and Dis are the fixtures for Thursday; and the Liverpool Hunt master for the same purpose at Hoylake on Saturday. Although "*the* Marquis" has not sold over any of his stud, his brother Irishmen have carried everything before them this spring; Seaman and Augustine are both the property of Mr. A. M'Donough, and the former is the horse on which Mrs. M'D. rode in her recent steeplechase match.

Hare and coursing secretaries are alike lively after their holiday, and meeting follows meeting in quick succession. The following are the principal ones in the ensuing week, to wit—Abington, on Monday, &c.; Mountainstown (Meath), on Monday and Tuesday; North Union, on Tuesday and Wednesday; and Biggar (open), on Wednesday, &c.; hence the Scotch sportsmen, who mourned sadly over the defeat of their elegant little Scotland-yet, in the run-up with the impetuous dashing Judge at Ulster, will have their hands especially full.

The Harrow and Taunton steeplechases are to be united, and the lovers of that sport in the metropolis are promised an afternoon of it on Thursday week. Racing news generally is very scanty; but it will be observed that Lord Anglesey (whose 1200 guineas Derby colt, Strood, is a very doubtful purchase) has begun the season well with Naboth and Astrologus; the latter is own brother to Augur (who is much liked at Lincolnshire), and was bought as a yearling at Mr. Jacques' York sale.

ADAMS'S ORRERY, AT THE ADELPHI THEATRE.—In Passion Week Mr. C. H. Adams will present his Orrery and deliver his annual Lecture on Astronomy, for the twenty-fifth time in the metropolis. The lecturer's success for a quarter of a century is the best proof of the interest and value of an orderly recommend all who desire to obtain a very lasting impression of the most sublime of all sciences to pay Mr. Adams a visit at the Adelphi Theatre during the next very short season. The lecturer illustrates the numerous additions made to our planetary system by the recent discoveries of Hind, Lassell, and others.

ROYAL LONDON YACHT CLUB.—On Monday evening last a numerous meeting of the members of this club took place at their rooms, Clarendon Hotel, Albemarle, to present their Commodore, Adams Gordon, Esq.) with a magnificent silver épergne and salver, valued at 150 guineas, as a slight token of the estimation and respect in which himself and his services are held by every member of the club. The ceremony was performed by Sir Thomas M'Tress, one of the committee, who, in a graceful and complimentary address, called attention to the flourishing state of the club, numbering nearly 600 members, and among the many gentlemen of high position and influence, both here and abroad; and mainly indebted for that success to the exertions, management, and uniformly gentlemanly bearing of their respected Commodore Mr. Goodson, in returning thanks for the honour they had conferred upon him, most feelingly alluded to the assistance he had received from their late lamented Rear-Commodore and the other officers, in carrying out his efforts for the success of the club. Both the address and reply were received with the greatest enthusiasm. Captain Andrews and George Eagle, Esq., addressed the members on their re-election as Vice-Commodore and Treasurer; and the harmony of the occasion was kept up till a late hour.

CHURCH, UNIVERSITIES, &c.

PREFERMENTS AND APPOINTMENTS. *Rectories:* The Rev. J. R. Lewis to Cascot, Radnorshire; Rev. W. English to Bradfield, near Norwich; Wilsham, Norfolk; Rev. W. F. Rose to Homersfield, with south Elmham St. Cross, near Bungay, Norfolk; Rev. T. Lewis to Denbigh; Rev. A. W. Wetherall to Stonegrave, near Oswaldkirk, Yorkshire; Rev. J. Pearce to Tittleton, near Aberystwith; Rev. R. J. F. Thomas to Yeovil, Somerset; Rev. E. C. Swainson to Winstanslow, near Shrewsbury; Rev. H. Clerke to Christchurch, Bristol. *Vicarages.* The Rev. F. W. Harris to Mildenham, Buckinghamshire; Rev. J. A. L. Campbell to Helpstone, near Market Deeping, Leicestershire; Rev. H. Gipps to Crosthwaite, Cumberland. *Incumbencies:* The Rev. H. Woodward to St. James's Church, Kennington road; Rev. J. J. Garrard to Oakhanger, St. Helen's, Isle of Wight; Rev. J. T. Wreford to St. Paul's Church, Newport, Monmouthshire; Rev. J. L. Nash to the new church at Jacob's-well, near Bristol; Rev. W. Hutchinson to Armin, near Goole; Rev. R. C. Rimbersly to Cartmell; Rev. G. H Newman to Tentonhill, near Ilchester.

NEW LONDON CHURCHES.—Several new churches are about being commenced in the metropolitan district, and others are so far advanced as to be ready for consecration before the Paddington three new churches are to be at once commenced, the Bishop of London having given £10.0 towards that object. In Coventry-street, Haymarket, between Regent-street and Piccadilly, a church is to be erected, at her Majesty the Queen having subscribed £500, and the Bishop of London £1000 for that purpose. Three new churches are to be erected in Cornwall; an influential committee, of which the Earl of Shaftesbury is at the head, having been formed to raise the necessary funds. In the parish of St. Andrew, Holborn, a large church is to be erected, at the sole ex pense of Mr. J. G. Hubbard, the Governor of the Bank of England, a site having been given by Lord Leigh. At Limehouse a church is to be built at the sole expense of Mr. William Cotton. "A Merchant," whose name has not transpired, has also undertaken to build and endow a church in London, in any spot the Bishop may point out. A committee, consisting of Earl Nelson, Earl Grey, Lord Ashley, M.P., Lord Radnor, M.P., Lord R. Grosvenor, M.P., Sir W. R. Farquhar, Bart., Vice Chancellor Sir Page Wood, M.P., Mr. A. J. B. Hope, and other gentlemen, has been formed for securing the erection of additional churches in St. Pancras, Shoreditch, Whitechapel, and other densely-populated districts. Amongst the new churches which are approaching completion are St. Matthew's Church, Oakley-square; St. Luke's, Nutford place; All Saints, Notting-hill; St. Andrew's Church, Victoria-street, Westminster, All Saints' Margaret-street, Cavendish-square and one at Limehouse, built at the sole expense of Mr Alderman Cubitt, M.P.

MONETARY TRANSACTIONS OF THE WEEK.

(From our City Correspondent.)

Notwithstanding that money has been unusually plentiful—the advanced period of the quarter considered, and with the transfer-books closed and that the arrivals of bullion have been on a very extensive scale, great inactivity has been experienced in all the departments of business, and prices have ruled low. The leading causes of the depression are—first, the slow progress of the Conference now assembled at Vienna towards peace; and, secondly, the want of all information as regards the Chancellor's Budget. The question now agitating the minds of both *Bulls* and *Bears* is, shall we have a loan in the Stock Exchange, or shall we have fresh taxes? Until, therefore, the determination of the Chancellor on that head, and the result of the Conference, are known, any serious changes in the price of Consols, cannot be expected.

The imports of bullion, since we last wrote, have been about £600,000 from Australia, £71,000 from the Peninsula, £293,000 from New York, and 1,169,076 dollars from the West Indies, Mexico, &c. The shipments have been principally confined to £52,600, mostly in silver, to India, China, &c. The foreign exchanges being favourable, there is now no profit on the export of gold from this country; and the stock in the Bank of England is now steadily on the increase. In the event of the exchanges continuing at about present rates during the next three or four weeks, the supply of gold in the Bank by the first week in May will be nearly or quite £18,000,000 sterling, which will be ample to afford a good stil. on passage from Australia; and we have every reason to anticipate steady importations from New York in the period just alluded to

On Monday, no material change took place in the value of the Three per Cents marked 93¾ ¼ to 93 for money, and 93⅜ ½ ⅜ for the Account. Long Annuities, 1859, were 4⅞. India Bonds, 1l 5; Exchequer-bills, 92 to 95 prem.; Exchequer Bonds, 1858, were 99¾. India Stock, 224½. The transfers on Tuesday were dull and drooping. The Three per Cents, for transfer, were done at 93½, down to 92⅞; the New Two-and-a-Half per Cents, 78¾; and Consols, for Account, 93⅞ to 93½. Long Annuities, 4 15-16ths. Bank Stock, 214 to 216 prem. India Stock, 225½; Bank Stock, for the Account, 216; Exchequer Bonds, 1858, 99⅜. Wednesday was observed as a close holiday The market on Thursday was very unanimous and closed at rather better prices. The Three per Cents, 93⅝ ½ 93⅜ for Transfer, and 93⅝ to 93 for the Account. Exchequer Bills were 6s. to 9s. prem.; and Exchequer-bonds, 99⅜ ⅝.

The Foreign Stock markets as unpleasant change has taken place in prices. Brazilian Five per Cents have realised 103; Mexican Three per Cents, 20; Sardinian Five per Cents, for the Account, 87½; Spanish Three per Cents, 37; Ditto Six per Cents, 24; Ditto Deferred, 5; Ditto Passive, 5; Portuguese Four per Cents, 36; Russian Five per Cents, 96; Ditto Four-and-a-Half per Cents, 86; Dutch Two-and-a-Half per Cents, 63; Dutch Four per Cents, 84¾. Greek Bonds, 19⅝; Russian Five per Cents, 100; Russian Four-and-a-Half per Cents, 90 to 91; Venezuela Three-and-a-Half per Cents, 20½; French Three per Cents, 70l. 1 Ditto Scrip, 6½ to 8½ prem.

There have been very few dealings in the Railway Share Market. Prices have shown a tendency to give way. The following are the official closing prices on Thursday

ORDINARY SHARES AND STOCKS.—Caledonian, 64½; Chester and Holyhead, 11½; Eastern Counties, 5½; Edinburgh and Glasgow, 86; Great Northern, 88, ex div.; Ditto A Stock, 72 ex div.; Ditto B Stock, 124½ ex div.; Great Southern and Western (Ireland), 91¾; Great Western, 65 ex new; Lancashire and Yorkshire, 92 ex div.; London and Blackwall, 8; London and Brighton, 98; London and North Western, 99½; Ditto £10 Shares, 6¼; London and South-Western, 85½; Manchester, Sheffield, and Lincolnshire, 24⅝; Midland, 69⅜; Ditto, Birmingham and Derby, 42⅝; North-Eastern—Berwick, 72; Ditto, York, 49; North Staffordshire, 12½; South-Eastern, 61¼; Vale of Neath, 18½ ex div.

LINES LEASED AT FIXED RENTALS.—Hull and Selby, 105½; Lowestoft Six per Cent, 108; Manchester, Buxton, and Matlock, 8½; Midland Bradford, 91; Wear Valley, 52.

PREFERENCE SHARES.—Eastern Counties Extension, No. 1, ¼ pm.; ditto, No. 2 ¼ prendium; Great Northern Five per Cents, 107¾ ex div.; Ditto, Four-and-a-Half per Cents, 101¼ ex div.; Great Western Four per Cent, 91 ex div.; Ditto, Chester Shares, 9⅞; Ditto, 1¼; Lancashire and Yorkshire, 5½ ex div.; London and Brighton Five per Cent Stock, 114½; Ditto, New Five per Cents, 114; Midland, Bristol, and Birmingham Six per Cents, 134½; North-Eastern —York H. and S. Purchase—5½; Oxford, Worcester, and Wolverhampton Six per Cents, 107; Waterford and Kilkenny Six per Cents, 1⅝.

FOREIGN.—Antwerp and Rotterdam, 6⅝; Dutch Rhenish, 8⅝; East Indian Five per Cent, 92⅝ ⅞; Ditto, Extension, 11½; Great Western of Canada Shares, 17⅝; Hamilton and Toronto, 19½; Lyons and Geneva, 11½; Sambre and Meuse, 8⅜.

Mining Shares have been dull, Australian have marked 1; Imperial Brazilian, 2⅜; Copper Miners of England, 7⅜ per Cent Preference, 26; Pontgibaud Silver Lead, 16; Santiago de Cuba, 6; United Mexican, 6½.

Friday Evening.

It being stated that the Conference at Vienna is broken up, Consols have been heavy, to-day, at drooping prices. The Three per Cents, for Money, are 93⅞ ⅜, and for the Account 93⅝ ½ Foreign Bonds and Railway Shares are very dull.

THE MARKETS.

CORN EXCHANGE, Monday.—From the week's deficiency in the arrivals of English wheat to this day's market (this week, consisting only of one day), but little variation can be noticed in the value of that article, which is nominally the same as on Monday last; the supply of barley is extremely small. Foreign wheat—the show of which was last week rather—was also very. In the quotations no change has occurred from Monday. There was rather a firm market for flour at full prices; but malt commanded very little attention. The oat trade was tolerably firm at very full prices. Both beans and peas were steady, the former rather dearer. The flour trade was steady at full quotations

ARRIVALS.—English: wheat, 3292; barley, 1030; malt, 4760 qrs. oats, 2980; flour, 9250 brls; oats, 5640. Foreign: wheat, 2460; oats, 470, flour, 400 sacks.

English.—Wheat, Essex and Kent red, 65s. to 70s., ditto, white, 72s. to 84s.; Norfolk and Suffolk red, 65s. to 68s., ditto white, 70s. to 74s.; rye, 44s. to 46s.; grinding barley, 27s. to 29s.; distilling, 29s. to 30s. malting, 32s. to 32s.; Lincoln and Norfolk malt, 65s. to 68s.; brown ditto, 62s. to 64s.; Kingston and Ware, 66s. to 70s.; Chevalier, 71s. to 73s.; Yorkshire and Lincolnshire feed oats, 22s. to 27s.; potato ditto, 27s. to 32s.; Youghal and Cork black, 24s. to 27s.; ditto white 28s. to 30s.; Londonderry, 24s. to 25s.; beans from 34s. to 40s.; of horsebeans 36s.; white, 36s. to 40s.; harlots, 36s. to 42s. per quarter. Town-made flour, 42s. to 44s.; Suffolk, 40s. to 41s.; Essex and Yorkshire, 41s. to 43s. per 280 lbs. in America, 20s. to 24s. per barrel.

Scotch.—The general demand has been less active this week, yet prices are fairly supported

Linseed.—Baltic, crushing, 56s. to 70s.; Baltic, crushing, 50s. to 52s.; Mediterranean and Odessa, do. to —; Hempseed, 45s. to 50s. per quarter. Coriander, 20s. to 24s. per cwt. Brown Mustard seed, 12s. to 14s., white ditto, 10s. to 11s.; Tares, 9s. to 12s. per bushel. English rapeseed, 23l. to 25l. per last of ten quarters Linseed cakes, English, 12l. to 13l.; ditto foreign 11l 10s. to 12l. 12s., rape cake, 7l. 5s. to 7l. 10s. per ton. Canary, 45s. to 56s. per quarter. Red clover seed, 52s. to 62s.; white ditto, 70s. to 80s. per cwt.

Bread.—The prices of the 4lb. loaf are from 8d. to 10d.; of household ditto, 8d. to 9½d. per 4 lb. loaf

Imported Weekly Averages.—Wheat, 66s. 11d.; barley, 30s. 5d.; oats, 24s. 10d.; rye, 29s. 4d.; beans, 40s. 4d.: peas, 39s. 6d.

The Six Weeks' Averages.—Wheat, 68s. 0d., barley, 31s. 3d.; oats, 25s. 5d.; rye, 31s. 4d.; beans, 42s. 2d., peas, 39s. 9d.

Teas.—A full average business is doing in all kinds of tea, at fully last week's currency. Common sound congou is selling at 9½d per lb. The supply on offer is large.

Sugars.—The demand for nearly all kinds of raw sugar has been heavy, and, in some instances, the quotations have had a downward tendency Foreign sugars alone, have met a slow enquiry. In crushed, very little is doing Refined goods are tolerably firm. Brown lumps 45s 6d.; and low to fine grocery, 43s. to 49s. per cwt.

Coffee.—Our market continues firm, at very full prices. Good ordinary native Ceylon has changed hands at 47s 6d. per cwt.

Rice.—The amount of business doing in our market is by no means extensive; nevertheless, the quotations are well supported

Provisions.—All kinds of Irish butter have moved off heavily, at drooping prices Foreign qualities have given way 6s to 8s per cwt. English bacon rule almost as heavy. The bacon market is rather active, and the quotations have an upward tendency. Lard, and other kinds of provisions, support former terms

Oils.—Linseed oil is dull, at 28s. 9d. to 30s. per cwt. on the spot. All other oils move off slowly, at barely late rates Turpentine is heavy, and spirits may be had at 33s. to 34s. 6d., rosins, 8s. 6d. to 9s. per cwt.

Spirits.—Government has taken 90,000 gallons of rum, yet the demand for that article is by no means active. Proof Leewards, 3s. 3d. to 3s. 6d.; East Indies, 3s. to 3s. 1d. per gallon Brandy is tolerably firm, but not dearer. Geneva was extra spirits as last advised.

Hops and Seeds.—Mondays' hop, 45 bags. to 45 bags. choice ditto, 23 to 25 5s.; and rare, 21 3s. to 21 10s. per cwt

Coals (Friday.)—Hasswell, 20s.; Hetton 20s.; South Hartlepool, 19s. 6d.; Holywell, 20s.; Tanfield, 20s.; Hartley 19s. 6d.; Lambton, 19s. 6d. per ton.

Hops (Friday).—Good and useful hops continue in steady request, at full prices and over other kinds remain in extreme rates. This week's imports are 10 bls. from Hull; 1 at 24 from Aldborough. Mid and East Kent pockets £14 14s. to £20: Weald of Kent, £14 £15 5; Sussex, £14 to £16 5; bearings, £7 to £12

Smithfield (Friday.)—To day's market was moderately well supplied with beasts As the attendance of buyers was limited, the beef trade ruled heavy, at barely last week's quotations. Sheep—the supply of which was by no means extensive—sold steadily, at full prices. Lambs met a dull inquiry, at from 5s. to 5s. per 8lbs. In calves very little was doing, at a decline in value of full 2s. per 8lbs Pigs were very dull at barely late rates

Per 8 lbs. to sink the offs s.—Coarse and inferior beasts, 3s. 2d. to 3s. 4d.; second quality ditto, 3s. 6d. to 3s. 8d.; prime large oxen, 4s. 0d. to 4s. 2d.; prime Scots, &c., 4s. 2d. to 4s. 4d.; coarse and inferior sheep, 3s. 6d. to 3s. 10d.; second quality ditto, 4s. 0d. to 4s. 2d.; prime coarse woolled sheep, 4s. 4d. to 4s. 6d. prime Southdown ditto, 5s. 0d. to 5s. 2d.; large coarse calves, 3s. 10d. to 4s. 0d.; prime small ditto, 4s. 4d. to 4s. 6d.; large hogs, 3s. 6d. to 3s. 8d.; neat small porkers, 4s. 2d. to 4s. 4d.; suck [illegible] quarter-old store pigs, 20s. to 25s. each. Total imports into London last week—Beasts, 329; calves, 142; pigs, 430. Foreign beasts, 316; calves, 150

Newgate and Leadenhall (Friday.)—The general trade ruled heavy, and prices were barely supported:

Per 8lbs. by the carcase:—Inferior beef, 3s. 6d. to 3s. 8d.; middling, ditto, 3s. 10d. to 4s. 0d.; prime large ditto, 4s. 2d. to 4s. 4d.; ditto small ditto 4s. 2d. to 4s. 4d.; prime Scots, 4s. 6d.; inferior mutton 3s. 6d. to 3s. 8d.; middling ditto, 3s. 8d. to 3s. 10d. prime large ditto, 4s. 0d. to —0d., veal, 3s. 6d. to 4s. 8d., small pork, 3s. 10d. to 4s. 6d.

THE EARL OF CARLISLE,

LORD-LIEUTENANT OF IRELAND

Of all the appointments made by Lord Palmerston in forming his Administration, none has been more popular than that which nominated the Earl of Carlisle to the high and important office of Viceroy of Ireland, vacated by the resignation of the Earl of St. Germans. The announcement that the noble Earl had accepted the post was received with satisfaction in Ireland, not merely by those who are politically of the same views as himself, but also by his opponents. Considering that Lord Carlisle has never disguised or compromised his opinions on the great subjects which agitate the minds of men in the Sister Island, such a unanimity of feeling is the strongest testimony that could be offered to the personal qualities of the noble Lord.

Ireland and Irishmen have had experience of those qualities. For several years he acted as Chief Secretary; and, as it was during the period of his administration that some of the measures were passed or proposed which most excited religious and political controversy in the Sister Island, he may well be envied the mysterious talisman by means of which he bore away with him the united suffrages of politicians and religious partisans so hot and hostile. We believe that the grand secret of his success was a certain natural dignity, derived from the influence of a high moral sense. It was perfectly well known that Lord Morpeth was not to be swayed or influenced by any of the lower classes of motives, so that he commanded respect among men who, though as a general rule, they love the sin which makes a Minister bend to influence, are almost unanimous in covering with contumely and contempt the sinner. Yet, withal, Lord Morpeth was ever so accessible, so courteously impartial, and there was so much amenity and suavity in his manners, that even refusals from him never took a provoking shape, and he was to a great extent exempted from that virulent abuse which the disappointed are too ready to pass off as public opinion. He returns to the scene of his labours with all the prestige attending his former sojourn, swelled by many political and senatorial triumphs, and honours fairly won as an administrator and a philanthropist. He is himself an embodied "conciliation."

George William Frederick Howard, now the seventh Earl of Carlisle, first entered public life in 1826, as Viscount Morpeth. Born in 1802 at his father's mansion in Hill-street, Berkeley-square, he was educated at Christ Church, Oxford, where he took honours. At the age of twenty-four he was returned for the borough of Morpeth, where his family have always exercised a predominating influence. As a scion of one of the "great Whig houses" his earlier Parliamentary efforts were watched with considerable interest, but, although he made many able speeches—somewhat too much formed on the old Parliamentary models—he did not rise into any importance till the commencement of the Reform era. He had, like Lord John Russell, steadily acted with his party during the interval between 1826 and 1830. In that year occurred the first great political event of his life. To represent the West Riding of Yorkshire has always been regarded as an object of the highest ambition. It is looked upon as a kind of model constituency, so composed of the territorial and commercial influences as to become a kind of barometer of public opinion. Mr. Brougham's election heralded the Reform agitation. Lord Morpeth's proved that it was not a mere democratic cry, but that it was sanctioned and participated in by the aristocracy. This election gave a fresh impetus to Lord Morpeth's rising reputation; and he took rank in the House of Commons accordingly. As a speaker in support of Reform, and subsequently in general defence of the measures of the Whig Administration, he often acquitted himself very much to the satisfaction, not seldom to the admiration, of the House of Commons. His speeches were exactly those that might have been expected from a young Whig nobleman playing at democracy; and during this part of his career he kept strictly within the limits marked out by his chiefs

HIS EXCELLENCY THE EARL OF CARLISLE, K.G., LORD-LIEUTENANT OF IRELAND.
FROM A PHOTOGRAPH BY KILBURN

In April, 1835, when the Melbourne Administration was reconstituted, after the brief but glorious effort of Sir Robert Peel to reconsolidate the Tory party, Lord Morpeth was appointed to an office worthy of his party influence and his talents, and requiring qualities of no ordinary kind for the discharge of its duties. By the alleged "Lichfield House Compact," the revived Whig Ministry, it was supposed, had entered into bonds to "do justice to Ireland." To Lord Morpeth it fell to be the organ and medium of these measures of "justice," which in the natural course of things would ever be too small for the one party, and too great for the other. It fell to his lot to introduce and defend in the House of Commons much of that important legislation which has contributed to cement the union between England and Ireland; and it would be difficult to explain, though the fact be true, how much the personal character of the young nobleman entrusted with the Chief Secretaryship contributed to soften the ordinary asperities of party feeling. How he succeeded as a merely local administrator, we have already described.

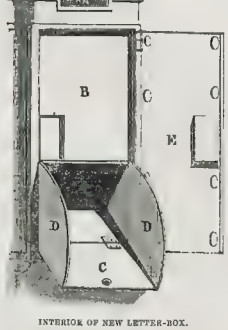
During five years and a half, Lord Morpeth continued thus to administer the affairs of Ireland, and share the general policy of his party in Parliament. But the first parliamentary tactician of any age had long been devoting his forces to the destruction of the Whig Administration, and in September, 1841, he consummated its downfall. His tactics had in the meanwhile proved fatal to the subject of this sketch, who at the general election of 1841, was deprived of his seat for the West Riding. Of course he left office with the Melbourne Ministry.

Lord Morpeth now took a bold resolution—not singular, because Mr. Macaulay afterwards took a similar one. He determined not to re-enter Parliament except as the representative of the West Riding of Yorkshire, and remained deaf to all appeals to shake his resolution. Fond of travel, he devoted the time necessary for the recovery of the public partly to a foreign tour. When he returned, he applied himself with much energy and perseverance to questions of sanitary and social reform, which derived a certain vogue (and, so to speak, respectability) from his countenance of them. In February, 1846, a vacancy having occurred in the West Riding, Lord Morpeth was once more returned for that loyal constituency, thus receiving the reward of long self-denial. The break-up of the Peel Ministry, and the return of the Whigs under Lord John Russell, brought Lord Morpeth again into office, this time as Chief Commissioner of Woods and Forests. In the discharge of the duties of this office he was enabled to carry out many of the views he had adopted while in comparative retirement. In March, 1850, however, he changed it for the Chancellorship of the Duchy of Lancaster, which he held till the downfall of the Russell Administration in February, 1852. In 1847 he had been appointed Lord-Lieutenant of the West Riding. In the year 1849 he was elected Lord Rector of the University of Aberdeen. In 1848, on the death of his father, he succeeded to the Earldom of Carlisle, and entered the Upper House of Parliament. In the Coalition Administration he took no part; but accepted from Lord Palmerston the post of Lord-Lieutenant of Ireland, for which his experience and local influence eminently fit him. Lord Carlisle is one of the Council of the Duchy of Cornwall, and Ranger of Dean Forest. He has appeared with success in the arena of literature, as a contributor of elegant verse to annuals; and as the author of a "Diary in Turkish and Greek Waters," the result of the noble author's recent visit to the East. This work, which was reviewed in the ILLUSTRATED LONDON NEWS for October 28, 1854, is now in its fourth edition.

The Peerages inform us that the noble Lord is the seventh Earl of Carlisle. The family is a branch of that of Norfolk. The first Earl was Ambassador to the then Czar of Muscovy, in the seventeenth century, and afterwards Governor of Jamaica. The third Earl rose to be Prime Minister; and the fifth, like the present, became Lord-Lieutenant of Ireland. The sixth Earl was in office as Lord Privy Seal. The noble Earl is a bachelor; his heir presumptive being his brother, the Hon. and Rev. William George Howard, Rector of Londesborough, in Yorkshire. The mother of Lord Carlisle was the daughter of the fifth Duke of Devonshire.

NEW STREET LETTER-BOXES.

THE accommodation at the Post Receiving Houses in various parts of the metropolis, has long been of a very imperfect kind. Formerly a Receiving House was denoted by a richly-emblazoned pane, in which the time-honoured British lion shone in full national emblazonry; and here and there the tutelar animal's mouth was the receptacle of letters; just as the famous Dick's head at Button's coffee-house, received contributions for the *Guardian*. Few shop-fronts, however, bore so distinctive a feature; but the letter-mouth might be seen at various levels—rarely, as an artist would say, "on the line"—so as to render its discovery somewhat perplexing when the mixed topography of shop-windows is considered. Then came the mean-looking iron crown upon the top of the nearest street-lamp, which did not much enlighten the public in their pursuit of a post-office under difficulties. Next, the example was set by the French Post-office authorities of having cast-iron pillars set up in various streets of Paris, for the reception of letters; and this experiment having been found successful, a similar plan has been adopted by the authorities in St Martin's-le-Grand. At stated points have been erected cast-iron letter-boxes, one of which—that at the corner of Fleet-street and Farringdon-street—is shown in the accompanying Illustration. It is much less ornamental than the Paris pillar. Our Letter-box is a stove-like design, reminding one of the latest of the London conduits. An outer panel of the box bears this inscription:—



INTERIOR OF NEW LETTER-BOX.

LETTER BOX
FOR STAMPED AND UNPAID LETTERS ONLY
Newspapers posted here will not be forwarded

5 "	6 "	
6 "	7 "	
10 "	11 a.m.	8 p.m. for delivery next morning 8 a.m.

The Town Delivery is complete in about 1½ hours
The Suburban Delivery takes from 1½ to 3 hours from the time of dispatch according to distance.

The material is cast iron; and the manufacturers are Messrs. H. and M. D. Grissell, of the Regent's Canal Ironworks, Eagle Wharf road, New North road, Hoxton. The front of the Letter-box is shown in the Engraving; and the accompanying Diagram shows the interior contrivance for taking out the letters:—A, opening for letters; B, inner wooden front of box; C, flap, which opens and forms an inclined plane with the bottom of the box, by which means the letters are shot into the postman's bag: D D, slides to the flap, to prevent the letters falling over; E, inside of iron door. The locks are the "patent detector," by Messrs. Chubb, St. Paul's Churchyard.

THE RUSSIAN MEDAL.—On the bodies of numbers of the Russian soldiers who recently fell before Eupatoria were found the silver medal of the decoration of St. George. On one side is engraven the Russian eagle with two heads, holding in its talons the terrestrial globe and the sceptre of the Sovereign; over the eagle is the Imperial Crown of Russia, surmounted by the illuminated dove, and round these figures is the following motto, in the Russian language—"Fall on your knees, idolators, for God is with us." On the other side of the medal is the following motto, also in Russian—"For the submission of Hungary and Transylvania;" which sufficiently indicates its origin.

The temporary huts for the encampment of 20,000 men on Aldershott-heath are ordered to be ready for the troops on the 1st April. The nearest station to the Camp is Farnborough.

THE NEW POST-OFFICE LETTER-BOX, AT THE CORNER OF FLEET-STREET AND FARRINGDON-STREET.

PRINCE MENSCHIKOFF.—The disgrace of this commander is more complete than was signified in the first accounts from St. Petersburg. An order of the day, dated the 4th instant, removes him, under the form of accepting his resignation, not only from the command in the Crimea, but from the post of Chief of the Naval Staff, and from the Governor-Generalship of Finland. He retains only the titular appointments of Aide-de-Camp General and Councillor of State. Therefore, in addition to Rokassowski and Dannenberg, we may now put down Menschikoff as the last of the Generals whom the war has cost their command. Prince Menschikoff's removal into inactivity has been by no means accompanied by any bestowal of laurels. The Prince, it is true, undertook, with 50,000 men, to defend the Taurian peninsula against any enemy; but by degrees the conviction has gained ground that any other Russian General, with such a *terrain* as that of the Crimea, and with such fortifications as those of Sebastopol, could in all probability have done as much. In every case where he attempted to do more than just defend himself his enterprises failed. Alma and Inkerman are his witnesses, and now Eupatoria. No acknowledgment, no approbation of these operations—only encomiums on the bravery with which the soldiers fought at the bombardment of Sebastopol and various actions—proceeded from the deceased Emperor. The Grand Duke Nicholas was commissioned to hint to Prince Menschikoff that the state of his health, which has been ruined in the service, might perhaps make it desirable for him to recruit it, and that, in the meantime, the supreme command could be made over to Prince Gortschakoff. Prince Menschikoff understood the hint, and forwarded to the by that time deceased Emperor his request to be allowed to retire. The present Emperor accepted it, and, on the 4th inst., relieved the Prince of all his offices

EXHIBITION OF THE NATIONAL INSTITUTION.

(SECOND NOTICE.)

As our last week's Illustration from the Portland Gallery, we made Mr. Raven carry us (and very pleasantly he carried us) into the haunt of the fallow deer; this week Mr. Charles Dukes wafts us, by the ready resources of his pencil, to a touching incident of domestic life—common, let us hope, in every cottage hearth in England—a young mother listening to a chapter from the Bible from the lips of her eldest born; and Mr. Arthur Gilbert speeds us away into a solitude wherein we may think down hours to moments, so sublime and yet so beautiful is the repose he has brought most unmistakeably before us.

Mr. Dukes has very appropriately called his picture "Reading a Chapter." It is a kind of Cotter's "Saturday Night." The father has not yet returned from his toil as a fisherman; and the young mother, having washed her youngest born, is on the eve of putting him to bed, but not without teaching her children that praise and prayer are necessary for every condition of life. There are few sights more beautiful in domestic nature than that of a young mother thus properly employed. It is a scene of innocence—it is a prospect of happiness hereafter. Mr. Dukes has entered into this feeling with a very fine sense of what is beautiful and good; and the result has been that he has given us a picture which will find many admirers, though his colouring is somewhat too soft. The general defect of his picture is a want of firmness and crispness of touch; but these acquirements—the results of greater study—will soon come to him.

In conceiving a subject so commonly painted as "Tranquillity," Mr. Arthur Gilbert has not attempted anything that is very new; nor has he made any additions to nature, or had recourse to the compositions of other artists. He has been struck with what he has seen—what, indeed, thousands are seeing every year; some with eyes alive to its beauties, and which others (a large number) pass unregarded by, as an effect in nature pretty enough, and nothing more. But Mr. Gilbert has been gifted with an eye alive to the rich combinations of nature, and has rendered a scene of solitude as if he had never heard other sound than that of the rustle of the aspen leaf, or of a bird on the wing to its evening nest. How solemn is the repose of that deep water, under the shadow of that thick line of trees! It is one continual pool, never disturbed on its surface but by the slenderest insects. The very leaves in autumn fall so gently upon it that its smooth current (if current it has) can hardly be said to be touched by them. Here the greatest hater of London and its street cries, and the eternal rattle of its wheels, will find a change equal to the deepest solitude of his wishes. Here is a solitude as intense as that so exquisitely described by Dr. Donne:—

> Where together
> Feathers and dust—to-day and yesterday

A second personage in such a scene would jar with the sentiment of the spectator. As we stand musing before it, we are inclined to be angry when any person approaches to participate in the pleasure of so solemn a repose, and when (on quitting the Gallery) we are hurried into the throng of Regent-street; we have recourse to poetry, and record our approbation to ourselves of a very fine work of art by all the scraps of poetry about solitude that we can call to mind. Grainger might have added another image or two to his "Ode on Solitude" (so justly admired by Dr. Johnson) had he seen Mr. Gilbert's picture. Our poets have not drawn largely enough on images and effects in art. Few of our poets, indeed, have understood art—none, we suspect, thoroughly but Thompson, Gray, and Mr. Rogers.

"READING A CHAPTER."—PAINTED BY C. DUKES.—EXHIBITION OF THE NATIONAL INSTITUTION OF FINE ARTS.

FINE ARTS.

THE ART-UNION OF GLASGOW.

The prize paintings of the Art-Union of Glasgow, intended for distribution in the current year, are now on view at the Gallery, 121, Pall-Mall.

The Collection consists of 128 pieces, besides some five-and-twenty which are exhibited at the British Institution and the Edinburgh Academy; and more will probably be added as the season advances, and further subscriptions come in. The system adopted in this Art-Union is different from that of the "London," and contains some advantages, whilst undoubtedly, in the minds of some, it may be open to objections. It is this, that instead of a money prize being awarded, with which the fortunate holder may purchase any picture of his own selection, the gross amount of prize money is laid out in pictures by the committee, to be afterwards distributed; and this it is considered will ensure an average better quality, both as to subject and execution, in the art so patronised. In the exercise of this discretionary power, also, the Committee do not restrict their choice to works which have already been publicly exhibited, but seek to forestall the public, which, just now, is a cormorant with respect to pictures by artists of any note or likelihood, by securing pictures whilst yet on the easel. Amongst the works purchased under these circumstances in the present Collection, we must certainly congratulate the Committee, and the subscribers generally, upon a very fine picture by Sant, "Watching the Combat"—a group of three Saxon maidens, which is remarkable for forcible dramatic effect and poetic character. We remark also with

PARIS UNIVERSAL EXHIBITION.

(From our Special Correspondent.)

PARIS, Thursday.

SINCE I last addressed you, great activity has manifested itself in various parts of the Exhibition. But the most exciting event which has yet taken place in connection with the Exhibition was the delivery of pictures and sculpture on the 15th inst. On this day, according to official announcement, the doors of the Fine Art Galleries were to close upon contributors; early on this morning, therefore, artists began to arrive before the back doors of the galleries, accompanied by their works. Before mid-day the scene was most amusing: every variety of Parisian conveyance, from the dashing *remise* down to the humble hand-barrow, had been in requisition. Some, too economical to employ the proprietors even of hand-barrows, arrived, carrying their pictures under their arms. Great excitement prevailed when a colossal painting was driven up; and, under cover of this excitement, timid ladies were seen to make their way to the doors, and taking a little portrait from under their cloak, to leave it, and hasten away. There were groups of calm artists lounging about, with cigars in their mouths, discussing the merits of the various performances they had seen in their friends' *ateliers;* workmen busy with crowbars; foremen with gay ribbons in their caps; custom house officers looking on sardonically; firemen of ferocious aspect; and groups of workmen, from the factories in the neighbourhood, come, with their huge lumps of bread grasped in their broad hands, to eat their breakfast, and feast upon the novel sight before them at the same time. In the midst of all the bustle stood colossal statues, looking very dead and leaden, as statues always look when drawn along public streets. Then, to take from their effect, some of them were half hidden by cloths and rugs—the sculptor not wishing his performance to be polluted by the eye of the vulgar. And not the least interesting object to the crowd was your artist sketching. His acquaintance—who had delivered their pictures, and felt a load off their mind—were skipping about in great delight; then, one by one, sauntered off to the Champs Elysées, to look at the masked madcaps of a Parisian *Mi-Carême.*

Our readers will learn with infinite regret that, up to the time at which I write, not a single English painting has reached Paris—the reason being that Lord Cowley and Mr. Owen do not consider the Art Galleries safe, on account of the contiguity of a sugar refinery, worked by steam. M. Arago, to whom I talked on the subject, and who, it may be remembered, is the Inspector General of Fine Arts, declared that there was no danger whatever, in the first place; in the second place, that an overwhelming force of firemen would be kept constantly on the premises; and, in ... that he had assured Lord Cowley, when he visited the galleries, that the English pictures should be placed in the part of the building the farthest removed from the refinery. Yet these assurances do not seem to have satisfied his Excellency. He was promised that the Continental schools should all perish before the British was touched, yet our diplomatic representative of Brudwood in Paris was inflexible. The French pretty openly describe this obstinacy as a ruse, by which the English intend to escape the damage their artists would receive by direct contrast with the artists of Paris; and this is to be sincerely regretted, since the public mind will be made up, and our English contributions will be regarded with prejudice (should they be sent, after all) by men who will be long sore about the unfriendly judgment our Ambassador has passed upon the Exhibition arrangements of our allies. It will grieve many of Horace Vernet's admirers in England to learn that his labours as juror are suspended by an illness which I hope is not so severe as it is rumoured to be. Before turning from the Art portion of the Exhibition, I may add, for the information of English Art students, that throughout the approaching summer no copying will be allowed in the Louvre, as this establishment will be open to the public daily, for the convenience of Exhibition visitors.

I again visited the Palais de l'Industrie on Thursday last. While I was in the building the first waggon-load of contributions arrived. It was amusing to remark the wondrous excitement which this arrival appeared to cause among the gentlemen charged with the reception or goods. Although I watched the scene from the most respectful distance, the officials wildly waved their hands to me, begging my removal to another part of the Palace. I am afraid one fiery little gentleman would have been seized with a fit of apoplexy had I not instantly obeyed. I skipped up the staircase (or the ascent yet to be marked out with stairs) very nimbly—wondering, by the way, that not more than three or four workmen were at work upon this backward part of the works. However, these staircases, when finished, will be really fine: they are very prettily inlaid with marble: and their solidity contrasts very pleasantly with the light galleries to which they lead. These broad galleries, with their arched roof, will certainly be the most striking feature of the building. Already, at the eastern extremity, there is some light skeleton work up, evidently destined to display textile fabrics. It was so fragile in appearance, however, that I remarked its resemblance to a child's game of dead men's bones. In the Northern Galleries lie heaps of fragments of old Exhibition stalls, marked Lyons, evidently destined to be furbished up. Unhappily, some of the Cupids' legs were missing; and there were loyal ornaments, in vogue perhaps at the French Exhibition of 1844, but hardly palateable to the powers that be. However, I remarked that the escutcheons were all left blank, to be filled, in by the sagacious tradesman owning them, with the device that might best recommend his goods. The Western Gallery was chalked out into squares of space given to Saxony, Prussia, Wurtemberg, &c. Before leaving these galleries, I may remark that the great western painted window is advancing, I fear, amid the laughter of the majority of Parisian artists. That part of the design already set up looks like an elaborate glass caricature by Champ. Yet it is a serious work. I will simply describe two of the figures: one is a lady, who is nursing a cornucopia, the body of which resembles a flute, and the mouth of which disgorges—not grapes, and all the golden plenty of the earth, but—clocks and candlesticks, and all the golden manufactures of Paris. Under this figure is a sheep, and upon the head a shop-window of *articles Paris* is falling in the least admirable confusion. Next to the lady holding this extraordinary horn of plenty is a female of dignified aspect, clothed in a red garment, and standing near an enormous jar. This ... possibly only a fanciful figure of *Polichomanie.*

... long Machinery Gallery is even less advanced than the Palace; yet energy may accomplish much in six weeks. People who remember the Crystal Palace in Hyde-park six weeks before the opening day would not despair were they to go over the Paris Exhibition works at the present time. Nearly all the stalls are up.

Among the curious promises of the Exhibition are—excursion trains from Spain, the excursionists of which will proceed to Sydenham, after having visited the Paris Exhibition. This is a good sign.

A statue of Lord Clarendon, hitherto placed opposite that of Hampden, in the principal entrance to the Houses of Parliament, was on Tuesday removed to another pedestal, and Foley's new statue of Selden was raised to ... place

IMPERIAL PARLIAMENT.

HOUSE OF LORDS.—MONDAY.

THE LIGHT CAVALRY CHARGE AT BALACLAVA.

The Earl of LUCAN moved for copies of papers and correspondence respecting the charge of the Light Cavalry Brigade at the battle of Balaclava. He regretted the non-appearance of the day, referred to the orders which had been sent to him by Lord Raglan, contending that in the position in which he was placed he was left without any discretion to decline or delay the execution of the last order he received. He commented on the correspondences which had taken place between the Commander-in-Chief, the War-office, and himself; vindicated the whole of his proceedings; and pressed in his demand for a court-martial, before which he might establish his case.

The Earl of CARDIGAN made some observations; after which

Lord PANMURE said, it was against military law to grant the court-martial required, for Lord Raglan had condoned every complaint on his part by giving the noble Earl further employment, and to institute the inquiry would strike at the root of the discipline of the Army.

Viscount HARDINGE considered the order of Lord Raglan discretionary, and not imperative, and, as differences had arisen between two officers high in position, so that they could not act in concert for the interest of the country, it was necessary one of them should be recalled. He expressed the confidence the Government had in the Commander-in-Chief in the Crimea, and they could not with safety grant the inquiry.

The Duke of RICHMOND regretted the Earl of Lucan had brought this motion forward. He ought to have read the order "advance in pursuit," not "advance and take."

The Earl of DERBY saw great difficulties in granting the court-martial; but he thought the publication of Lord Raglan's second letter injudicious, as it placed the Earl of Lucan on the horns of a dilemma. The noble Earl had entreated to have the fullest inquiry into his military character; and, though it was refused, he had made his statement to that House, and he might with safety leave the character in the hands of his country

The Duke of NEWCASTLE hoped the matter would go no further, and that the HOUSE would not establish a most dangerous precedent.

Lord HARDWICKE differed from the noble Duke, and considered the Earl of Lucan justified in taking advantage of the privilege of sitting in that House to vindicate his character.

After some observations from the Marquis of Breadalbane, the Earl of Lucan, and the Duke of Newcastle, the correspondence was ordered to be laid on the table

HOUSE OF COMMONS.—MONDAY.

THE NEWSPAPER-STAMP

The CHANCELLOR OF THE EXCHEQUER, after stating the circumstances which led to the Newspaper-stamp Bill of Mr. Gladstone, proceeded to show that the measure now proposed was identical with that bill in principle and substance. Whatever credit might be due to the adoption of it, therefore, was due, not to him, but to Mr. Gladstone. The object of the resolutions which he meant to propose was to abolish the legal definition of a newspaper, and extend the existing rules with respect to newspapers to all printed periodical publications which appear at intervals not greater than thirty-one days. The present penalty for publishing news without a stamp will be repealed, leaving it optional with the proprietors of any such periodical either to stamp any portion of their impression or to leave it altogether unstamped. In other respects the law will be the same as it is as regards the postal charge; and all newspapers or periodical publications which avail themselves of the postal privilege will be subject to the present rule regarding registration and sureties. The effect of the proposed change he went on to describe as follows —

With regard to such publications as the *Builder*, the *Athenæum*, the *Medical Times*, and the *Medical Gazette*, they will be permitted by the law to retain that indulgence which they now possess, practically in defiance of the law, or at least unsanctioned by the law. They will be permitted to retain that exemption, and to stamp such portion of their impression as they think fit. The same legislation will be extended to the whole of the rest of the press, the political newspapers, such as the *Times*, or the *Morning Herald*, or the *Morning Advertiser*. They will be subject to precisely the same rules as the *Athenæum* now is subjected to. They will be permitted to stamp that portion of their impression they wish to send by post; and if there be any demand independent of that which is wanted by transmission by post, they will be permitted to publish that portion of their impression without a stamp. Beyond that change I do not propose to go. The bill which I beg leave to submit to the House will be confined to that. I could now, Sir, with the permission of the House, examine certain objections which have been made to this plan, and which have been represented as fatal to its successful operation. One of those is, that there would be a great confusion in the publication between that portion of the impression which is stamped paper and a portion on unstamped paper, and, consequently, loss to the proprietor of the newspaper. Now, Sir, I have used my best endeavours to ascertain how far that objection is well founded. I may be excused, I may be stated that the number of the existing class papers—of which a return has been moved by my hon. friend the member for Westminster—is not less than 187; all of which publications conduct their business with a certain circulation of stamped and unstamped copies. With regard to any one of that numerous class of quasi newspapers, the presumption is, that no practical difficulty is found in a mixed circulation. The principal newspaper, however, which publishes a portion of its impression upon stamped and a portion on unstamped paper, is the periodical which is familiarly known to all the members of the House—namely, *Punch*. *Punch* published 425,000 stamped copies in the year 1854. I understand the gross circulation is about 40,000 a week, of which 2000 are printed on stamped paper, and about 32,000 on unstamped paper. I have had an interview with the manager of that periodical (Laughter) not for the purpose of inquiring into the manner in which that interesting publication is compiled, but in order to inquire into the economical part of the management—and he was so good as to inform me that he has actually no trouble with regard to the printing of that paper, that no confusion in printing the mixed impression partly on stamped and partly on unstamped paper was occasioned, and he described the difficulty to be, in his idea, altogether imaginary. I have made further inquiries of the publisher of the *Athenæum*, which is a publication printed partly on stamped and partly on unstamped paper, and I was informed that about 3000 copies of the *Athenæum* are printed on stamped and 4200 on unstamped paper. The gentleman connected with that paper stated that there was no practical difficulty in conducting that paper. It was and, moreover, that the number of unstamped copies varied according to the greater or less demand for certain numbers; and, moreover, that at the period of the year when many gentlemen went out of London, there was a greater demand for stamped copies, in order that they might be sent through the post, instead of being furnished in town, but that these temporary variations were easily adjusted, and that there was neither confusion nor loss. I have further consulted the proprietor of the ILLUSTRATED LONDON NEWS, a gentleman of great experience with regard to the management of newspapers. He has brought the circulation of that paper up to nearly 140,000 copies a week, and he is intimately acquainted with the management and printing of that paper. He gave me his confident opinion, that no difficulty would arise in the management of his newspaper, or in the management of any daily newspaper, from a mixed system of stamped and unstamped copies. Another objection more serious connected with the management of a newspaper has been presented to me by various persons who, both orally and in writing, have described a proposition which repealed the compulsory Newspaper-stamp as dangerous to society. It is described to me as a measure which will open the floodgates of sedition and blasphemy, which will inundate the country with a licentious and immoral press, which will undermine the foundations of revealed religion, and which will overthrow broadcast over the land. Now those expressions are not an exaggerated representation of opinions which have been expressed to me from many quarters, since this measure has been in contemplation. I regret to say that my right hon. friend the member for the University of Oxford is considered an accomplished advocate of these wicked and dangerous designs. Now, Sir, I need not say, that if Her Majesty's Government proved that there was any reason in the views, or for any appreciable part of these views, they would not propose the measure which I am now submitting to the House. They have great confidence in the stability of our institutions, in the solidity of our position, in the loyalty and good disposition of the people (Cheers); and they do not believe that any increased facility of public discussion through the press would lead to such consequences as those which have been described (Hear, hear). But we are not left merely to conjecture or to indirect reasoning with regard to the probable character of a cheap unstamped press. There are already in existence a large class of publications which, not containing news, are not subject to the stamp, are published at a very cheap rate, and circulated most extensively through the country. But, though these publications do not contain news, they would, if it were true that the public of this country had or was able or capable to form moral and licentious principles of a very different character from those which they now are. I beg to call the attention of the Committee to some of these publications. The ILLUSTRATED LONDON NEWS circulates 140,000 a week, and is published only once a week just as a cheap unstamped publication. The *Times* circulates 50,000 a week, and it has admission into almost every family in the country (Hear). The next unstamped publication which has a large circulation is that which bears the lower classes. Among them is the *London Journal* (of which, probably, few of you have heard) which circulates (I am credibly informed) 500,000 a week, which, if true, would be a circulation of 25,000,000 a year, or 10,000,000 more than the annual circulation of the *Times*), and the price being only one penny. I have examined some of the numbers, and find the contents part of morality, if not wholly unexceptionable, at events by no means tainted with the high-flown pictures drawn of them. It resembles rather the *Penny Magazine* publications. There is also the *Family Herald*, a similar periodical, with a circulation of some 240,000. These facts show that the popular taste of the poorer class of readers as to cheap unstamped publications leads them to prefer a class of periodicals of a nearly innocuous character, at all events free from those dangerous elements which have been apprehended. I may add that there were some years ago five or six cheap publications in London, of a bad class, of which there is not now one existing. And that the were several newspapers of a higher price, but of a similar character—the *Age*, the *Argus*, and the *Satirist*, which have ceased to exist. So that it seems that no removal or licentious period is long-lived or enjoys an extensive circulation (Hear). Another objection is that the measure will lead to the establishment of one class of periodicals for the rich, another for the poor; one for the upper and educated classes, and another for the lower and uneducated masses; and that there will be a class of cheap newspapers intended exclusively for the poorer orders. To a certain extent that is so now. There are newspapers published at a very cheap rate, weekly or several times a week, for the poorer classes—as, for instance, the *News of the World*, and *Lloyd's Weekly Newspaper* have a large circulation, and that is owing to the penny being 5d. instead of 8d. And assuming this to be the case to a certain extent, I say not even that there is any reason to regret it. If the taste of the poorer classes prevents them from enjoying the periodicals prepared for the richer orders, and if another kind of periodical rises up adapted to their wants, and moral and useful in character, is it not an advantage that such a kind of periodical should circulate among them; and we are to assume that periodicals published for the working classes will be printed with immoral or anti-social doctrines. At all events, those who devote themselves to the improvement of education and the division of sound opinions among the masses, will find a boundless field for their philanthropic exertions, and will be enabled to counteract any mischievous or anarchical opinions circulated through channels of that description.

Should the House decide in favour of the resolutions, it would be his duty to call upon them to provide the slight deficiency which would be occasioned by the change. The present duty produced £400,000, one-half of which, it was estimated, would be lost by the change. As regards the cheap postage of books and pamphlets, he had not included that in his bill; but, as he fully admitted the importance of a cheap book-post, he should be quite ready, if the House would entrust him, to refer the matter into consideration as a separate question. He concluded by moving the following resolutions —

That it is expedient to amend the laws relating to the Stamp-duties on newspapers, and to provide for the transmission by post of printed periodical publications.

That any periodical publication, to be entitled to the privilege of transmission and retransmission by the post, shall be printed on paper stamped for denoting the Stamp-duty imposed by law on a newspaper, printed on the like number of sheets or pieces of paper, and of the like dimensions, with respect to the superficies, of the letterpress thereof

That printed newspapers (British, colonial, or foreign) shall be transmitted by the post between places in the United Kingdom and her Majesty's colonies or foreign countries, or between any ports or places beyond the sea (whether through the United Kingdom or not), either free of postage or subject to such rate of postage not exceeding 2d. for each newspaper, irrespective of any charge for foreign postage, as the Commissioners of the Treasury and her Majesty's Postmaster-General, with their consent, shall from time to time think fit

Mr. GLADSTONE deprecated discussion before the printing of the Bill, but regretted some of the changes which had been made in his bill. He regretted that registration should have been retained as a condition of the privilege of postage. The right hon. gentleman had made no allusion to the question of copyright, which was a very important consideration, for there could be no doubt but that newspapers has a right to protection as well as literary productions. Unless foreign correspondence, and literature. He was aware how difficult it was to lay down a plan, because, as far as related to news, it might be thrown into such a variety of forms as to render it impossible to grasp it; but he hoped that attention would be given to the subject, to ascertain if the law of copyright could not be extended in some way so as to meet the case.

Sir F. BARING said, the loss of £400,000 of revenue at the present period was a very serious consideration. He had no objection to the bringing in of the bill, but he warned the House not to incur such a serious loss until they had before them the Financial Statement for the year.

Mr. M. GIBSON objected to considering the proposition upon the fiscal principles, and preferred the plan of Mr. Gladstone to that of the Chancellor of the Exchequer. He hoped soon to see a cheap postage system for all printed matter

After some observations from Mr. MacGregor and Mr. Warner, Mr. BERNAL said, the measure would effect a revolution in the press; and, unless great care were taken, the country would be inundated with licentious publications

Mr. LOCKE said it was of paramount importance that no taxation should be given up at the present crisis, nor until they could see more clearly how the exigencies of the war were to be provided for

Mr. HUME thought the £500,000 should not be considered as an insuperable difficulty to the adoption of this plan. He knew of a great number of publications daily sold otherwise in Manchester and elsewhere, which would be sold in this shape if the change should be carried out. He quoted an article from the *Times* of last May condemning the tax on newspapers in every possible way, and expressed his conviction that the *Times* would become knowledge of the population, and abide by every word it contained. He was delighted to have so high an authority in favour of his views

After some observations from Mr. Packe, Sir H. Willoughby, Mr. J. G. Phillimore, and Mr. Bowring, the resolutions were agreed to, the House resumed, and they were ordered to be reported to-day

MEDICAL ATTENDANCE IN THE EAST.

Mr. A. STAFFORD called attention to the medical arrangements for the sick and wounded soldiers in the East, and expressed a wish to ascertain from the Government what measures they were adopting to prevent the recurrence of such evils as they had so much reason to deplore.

Mr. PEEL stated at some length what had been recently done at Smyrna, Balaclava, and Scutari, and also stated further measures for the efficiency of the medical department which were being carried on by the Government.

Lord PALMERSTON said, there was no duty more imperative upon the Government than that of attending to the sick and wounded, and his noble friend at the head of the War Department was fully impressed with this necessity

After some observations from Colonel KNOX, Captain Duncombe, and other members, the House went into Committee of Supply, and the remainder of the evening was spent in the discussion of the Estimates

HOUSE OF LORDS. TUESDAY

POLICY OF PRUSSIA.

Lord LYNDHURST called attention to the position which Prussia now occupied with regard to the war, and the negotiations now in progress at Vienna. After premising that the aggressions of Russia, especially with respect to the navigation of the Danube, had seriously imperilled the interests of every Germanic nation, the noble Lord traced the conduct of the Prussian Government throughout the whole period that had elapsed since the accession of the Emperor of that country had always subserved Russian interests, and seemed to be guided by Russian inspiration. Acquitting the Prussian nation of any complicity in the policy of their rulers, he alluded to the Treaty of Vienna, to prove how little the views of war or diplomacy in particular were those of Prussia

The Earl of CLARENDON said, he could not admit the charges of vacillation and timidity against the Prussian Government. He thought too well founded Prussia had not been admitted as a party in the proceedings of the Vienna Conference, although he did not apprehend that all hope was lost of inducing that country to assume a more active and manly member of the Alliance against Russia—a result to which considerations for her honour and interest alike pointed. The result hitherto of Prussian policy had been to frustrate, and to prevent a united and uniform language on the part of Germany towards Russia. The issue had, in fact, been to prevent that union which would have gone far to secure a lasting peace, and to give to Germany the guarantees of which she stands so much in need. Prussia was in an isolated, and therefore in a false position, and although that fact might give satisfaction to her enemies, it was deeply regretted by the Allies, and deeply felt by her own patriotic people. He was a portion from which neither honour nor advantage could be derived, and one which both this and the French Government were most anxious to see united to the body of the Allies. He could assure them, Lords, that no exertions should be spared to secure the free co-operation of Prussia, while everything should be done in a friendly spirit, and with due regard to the honour and feelings of a great and independent nation

HOUSE OF COMMONS. TUESDAY

HUNGARY AND POLAND

Lord W. GRAHAM, in pursuance of notice, inquired whether the Austrian Ambassador in this country had taken any formal notice of an expression attributed to a member of the Government (Sir R. Peel) to the effect that no "petty interest of the Austrian Empire would be satisfactory unless Poland and Hungary were in

Lord PALMERSTON expressed his gratification in having secured the services of Sir R. Peel as a colleague in the Administration. With respect to the question proposed to him, he remarked that the Austrian Ambassador was fully aware that the British Government considered the preservation of the integrity of the Austrian Empire, so far as it was consistent, essential to the peace of Europe. As to the present condition of Poland constituted a standing menace to Germany, he submitted that the solution of that difficulty should be left to the German Powers themselves, bearing also that no point involved in such question would be raised at the pending conference in Vienna

COLONY OF NEWFOUNDLAND

Mr. ROEBUCK referred to some discontent which he alleged had arisen among the inhabitants of Newfoundland, on account of the delay in the introduction of the promised representative institutions in that colony, through the act of the ... Government

Lord PALMERSTON assured the House that there would be kept with the colonists as to the establishment of a representative government in Newfoundland

Mr. LOWE having remarked upon the criminal condition of the colony of Victoria at the date of the last despatches,

Mr. GREY observed that the disturbances which had occurred among the gold-diggers had been promptly suppressed. The constitution prepared for the colony would, he added, be shortly presented for consideration

SANDHURST.

Col. NORTH moved a series of resolutions relative to the Military College at Sandhurst, with the view of extending and improving the means of education for officers in the Army afforded in that establishment. He proposed, also, that free education and maintenance should be granted in the College for the orphan sons of officers of the Army, Navy, or Marines.

Some considerable discussion took place on the motion, and calls were made for a division. Ultimately, however, Lord Palmerston consented to refer the subject to a Committee; and on this intimation Col. North withdrew his resolutions.

OPENING OF THE BRITISH MUSEUM AND NATIONAL GALLERY ON SUNDAY.

Sir J. WALMSLEY proposed a resolution setting forth the expediency of throwing open the collections of natural history and art in the British Museum and National Gallery for public inspection after morning service on Sundays. So far from occasioning any desecration of the day, the opportunity to visit these collections, he contended, would tend to purify the tastes, elevate the character, and deepen the religious sentiments of the people. Sunday was emphatically the poor man's day, and it was only just to furnish him with the means of spending it most beneficially to his mind and body.

Mr. BIGGS supported the motion, contending that the arguments which had been on former occasions advanced against similar propositions were based upon superstitious ideas respecting the observance of the Sabbath. The cases of restrictions caused most invidious and injurious distinctions between the rich and poor, and formed part of the too extensive mass of class legislation which disfigured our code of laws.

The motion was opposed on religious grounds by Mr. L. Davies, Mr. Drummond, and the Marquis of Blandford.

Mr. A. PELLATT remarked that a desire for a stricter observance of Sunday was spreading among the public. He proposed an amendment, suggesting that the Museum and National Gallery should be opened on Saturdays and Mondays, as being more convenient to the working classes.

Mr. KINNAIRD believed that the motion would lead to results which would greatly deprive the working man of his day of rest.

Lord STANLEY considered that the objections to the motion were founded upon respectable prejudices. Intellectual and moral improvement formed a part of religion, and constituted a fitting exercise for the day set apart for sacred uses. To the numerous individuals occupied during the week with manual labour, there was no opportunity for acquiring such improvement except upon Sunday. There was no other time or means of continuing through life the education which the members of the working class were enabled to begin in their youth. As a matter of comparison, he saw no reason to keep the Museum shut while Hampton Court and Kew Gardens were open; and, in a religious point of view, denied the right of imposing compulsory restrictions on the conscience of the people.

Mr. E. BALL opposed the motion.

Mr. GOULBURN, adverting to the annual memorial brought forward by Mr Pellatt, promised on behalf of the trustees of the British Museum that the establishment should be thrown open on Saturdays if that proceeding were found to suit the convenience of the public. Respecting the present motion, he urged that if the Museum were opened on Sunday the precedent would be set for allowing shows, theatrical entertainments, and a amusements of every character on the seventh day.

Mr. W. J. FOX contended that the question was not one of theology, but of property. The institutions under discussion were maintained by public money; they belonged altogether to the people; and it was unjust to lock the people out on the only day when they could enjoy them. Declaring that Sabbatarianism was a modern invention, and the creed of a minority, he proceeded to argue that art was religious in its tendencies, and had been adopted by the members of every sect to propagate and popularise their principles.

Lord PALMERSTON opposed the motion, believing that the respectful observance of Sunday was either a symptom or a cause of morality and good conduct among the people. Individual actions might be left to the consciences of individuals, but Parliament should not sanction a step which would shock the religious scruples of a very large proportion of the community.

Mr. Barrow and Mr. Heywood having spoken,

Sir J. WALMSLEY replied, offering to withdraw his motion. The members opposed to it, however, insisted on recording their votes, and a division took place. For the original motion, 65; against it, 235: majority against the motion, 157.

The amendment was then also put, but withdrawn without a division.

SANITARY REFORM IN BALACLAVA.—Colonel Harding, who came forward at the eleventh hour to make good what the culpable neglect of his two predecessors had made bad, must surely be in constant communication with the Board of Health, for all his measures and arrangements savour of Whitehall rather than of the expedition to the East. He has come to the conclusion that the place is hopelessly swamped with mud, impregnated with filth, deluged with abominations, and that every inch of ground, each house, each stone, is pregnant with the germs of disease. Having settled this point in his mind, the reasoning Commandant did not, as is the custom in the army, sit down and leave the case alone as hopeless and irremediable, but he resolved to pull the town down, to destroy it utterly, to burn it with fire, and to build up anew Balaclava in the place of the old one. This resolution is now being carried out. For, after all, this town, though a nuisance, is a necessity, and we are compelled to dwell in, even if it were to become the very cradle of pestilence and the occupation costs the lives of hundreds per week. The shortest manner of dealing with Balaclava would have been to burn the place outright. But, as we want the houses for stores, offices, and quarters, there were some very obvious objections to this summary plan of radical reform. Colonel Harding's method is to pull down one house after another, and to erect wooden houses in their places. The cellars are cleaned out, and the filth and rubbish brought to the light of day, heaped up in the open places, and burnt. For days past such fires have been burning in all parts of Balaclava, and a dense cloud of black, stinking smoke hangs over the town. The stones of the ruined houses are carried away, broken up, and used for the improvement of the roads. The places where the houses stood are levelled, and large quantities of quicklime strewed over them. It is a curious and interesting sight to watch the fatigue parties of soldiers, in their smooth and motley winter dresses, invading a doomed house. In they march, with axes and picks, and in a few minutes out come from the windows and by the doors, abominations, old and new, foul straw, broken bottles, soiled rags, bits of biscuit, bones with the blackened and shrivelled flesh still sticking to them, mouldy cheese, piles of broken furniture covered with bugs, and whole heaps of unalloyed, indescribable, unmentionable dirt—are thrown up into a funeral pile—a matchbox is produced and a wisp of straw, the pile is properly lighted, and a dense cloud of smoke rising up proclaims that another act of purification has commenced. Next comes the work of the axe and the pick. The tiles and rafters are pushed up, and come rattling down, to the great amusement of the bystanders, who are numerous; for the destruction of a house always attracts a crowd. Then the earthwork and masonry of the walls is pushed out, the floorings and verandahs come down, and the posts and heavy woodwork follow in due course. Part of the fatigue party cuts asunder the wood from the rubbish and stones, and others at once cart away the stones and level the place. Where the morning sun shone on a house, there the evening sun shines on a smooth level place, whitened over with lime and prepared for house-building, in the sense of the Camp. Before the next morning brings another fatigue party, headed by carpenters, and loaded with posts and planks. Holes are dug, posts fixed, the place is crowded and busy all day, and by the evening shines again a large wooden hut. Such has been, in between sunrise and sunset; and sheds, too, for stabling horses, spring up as if by enchantment; and all that is now going forward proves how much can be done if those in authority have but the sense and the will to keep things in order.—*Letter from Balaclava, Feb 26*

THE NEW GOLD DISCOVERIES IN BRAZIL.—St. Louis de Maranham is a city of Brazil, situate two degrees south of the Equator, is a seaport and the capital of the province, with a population of from 35,000 to 40,000 inhabitants. At some distance from Maranham, in the interior of the country, lies the wild valley of Maracassumée, entirely covered by virgin forests, and enclosed by two navigable rivers, the Tury-assú and the Gurupi. The wilderness which has made this valley a refuge from the pursuit of their masters have been for some time exchanging gold in the rough state for such supplies as the neighbouring locality could furnish them with; and the gold, they said, was found in abundance on the surface. Under these circumstances, a company was formed at Rio, with a capital of £1,500,000 francs, and an expedition despatched to investigate the auriferous locality, said to lie between the Tury-assú and the Gurupi. Three of the principal auriferous sites have been explored—all three of extreme richness and easily worked, at least in the rainy season: and even in the dry season the necessary water may be obtained at very little expense by works led from the rivers that border or cross the valley. The soil is composed of quartz, schistus, and ferruginous clay. The auriferous bed must extend, according to the explorers, to a chain of mountains called the Sierra Acaounha, inhabited only by Indians in a state of nature. During their short stay the exploring party acquired some magnificent specimens of the richness of the earth. One of the miners brought away a bit of quartz of about six inches in width, four inches and two and a half in thickness; and, besides fragments reserved for analysis, this stone yielded ten ounces of gold.

FRENCH JOURNALISM AND THE WAR. The editors of all the Paris journals were summoned to the Ministry of the Interior, on day last week, and told that in future they would not be permitted to publish any intelligence respecting the movements of the French Army, even should it relate merely to the transfer of a regiment from one part of France to another. A representative of one of the papers inquired, by way of assuring for an example, whether they were not to be at liberty to reproduce from the *Journal de Toulon* the paragraphs which that journal was constantly in the habit of publishing about the military movements in that port. The answer was this: the Toulon journal would no longer be allowed to publish those paragraphs; that all the prefects had been supplied by a confidential circular to enforce the same secrecy in the provinces which in the Governance was determined to enforce in the metropolis; and that if, by any accident, military news of the kind alluded to should appear in a provincial newspaper, the Paris press would nevertheless not be at liberty to adopt it. The editors were at the same time enjoined not to report a word of what might be said about the possible journey of the Emperor to the Crimea.

NOTES OF THE WEEK.

THE examinations before Mr. Roebuck's Committee continue to exhibit the same sad tale of incapacity and mismanagement; but as, in an ill-regulated household, it is impossible to trace who is the real culprit answerable for the reduction of your dinner-service, or the smashing of your chimney ornaments; so at Woolwich or Southampton, at Kulalee, Scutari, or Balaclava, we know that there has been any amount of short-comings and blunderings, causing not only a deep blot on the glory of England, but, what is of far more moment, a fearful and needless quantity of misery to the bravest and best-conducted army that ever left our shores; yet it seems quite hopeless to attempt to find out who is to blame. Mr. Stafford, maddened as he seems to have been by the state of the hospitals at Scutari, hardly ventures to impute neglect or misconduct to any one in particular; in fact, he says that in almost every case he found it impossible to find out to what department it was proper to apply for the redress of the most crying abominations. "I never could find out where the duties of one department ended, and that of another commenced;" when, horrified at the persistence of a nuisance almost too disgusting to describe, he offered his own money to pay for its removal, he could get no one to accept it. Every word that has been written home by the *Times* Commissioner as to the absence of half the necessaries and nearly all the comforts of life in the hospitals, has been repeated by him before the Committee, and corroborated, nay, extended, by other witnesses; yet it appears that before he went out the Duke of Newcastle (whose *bond fides* no one doubts) assured him the fund he was about to administer would be totally useless, "as, if a man wanted champagne or anything else more expensive, he would only have to ask for it." It was only the other day that a Cabinet Minister assured the House of Commons that by the last returns the number of the British army fit for duty amounted to nearly 30,000; per contra, we have the word of the Duke of Cambridge that it did not then much exceed 12,000. Surely here there is a chance of fixing the cause of a grave error. How was Mr. Gladstone misled, by whom, and for what purpose? If this false estimate of our numbers was believed, as seems likely, at Lord Raglan's head-quarters, it would at once explain why there could be no recovery from, but rather an increase in the sickness of the troops. All accounts concur in representing that over-work had more to do with it than any other cause, and if 12,000 actual men were put to do the work of 30,000 in buckram, the reason why they should be five nights out of seven in the trenches may easily be comprehended. In the meantime public expectation of the immediate receipt of important intelligence from the Crimea is stretched to the utmost. The City is in a fever, and the Clubs participate in the disorder, only in a minor degree—the fortunes of their denizens not depending to the same extent on the alternatives of Peace or War; and, like the human body in a similar condition, have broken out into an eruption—not of humours but of *rumours*. Tuesday was a regular field-day for the *canards*. The Turks had been defeated at Eupatoria—the Allies had been beaten in an attack on Sebastopol—the Austrians were making separate terms with Russia—the French Emperor was to go to the Crimea at the end of the week. Luckily, up to the present moment, none of the tales have been justified.

Sir Benjamin Hall has introduced his bill for the better local management of the metropolis. Probably never before was so clear a case for reform made out—for this is, perhaps, the only occasion on record when, upon a similar proposition, no bold Tory was found to get up and assure the House that no alteration was wanted, and that the present system was as perfect as it was humanly possible it should be. Sir Benjamin conducted his case with considerable tact, using no theoretical arguments, but confining himself to a mere statement of facts, a *catalogue raisonnée* of some of the more glaring and amusing absurdities perpetrated by the hundred paving, lighting, and other boards who despotise over the metropolis. The general principle seems to be, that—in most parishes—for every £300 laid out on the roads, £400 is paid to officers for seeing that it is laid out. The climax of absurdity is attained in Westminster, where the division of the authority of the several boards usually runs along the centre of the street; so that if they did not agree as to the time of watering (as actually happened), one-half the thoroughfare would always be wet while the other half was dry. It seems that the local management is better in the City than elsewhere—a fact, by-the-by, which, from the apparent condition of the thoroughfares therein, one would scarcely have guessed—and in the wealthy parish of St. Marylebone about the worst. It is to be hoped that the provisions of Sir B. Hall's bill will not be frittered away in Committee, which has been too often the case where the patronage and jobbery of powerful communities have to be fought against. The fact is that London has hitherto been considered too much as an ordinary town, instead of (as was well said in the debate on Friday) as a built-up province, with the population, and more than the wealth of a secondary kingdom. What is wanted, is a simple uniform system of management for the whole extent of the metropolis, headed by an *Edile*, a great officer of State, something like the Préfet de la Seine, in Paris.

Any one might have guessed that the Great Exhibition of 1851, in Hyde-park, was sure to have a crowd of imitators. The copies have not hitherto prospered like the original: that in Dublin, though well managed in many respects, did not pay, and that at New York was, from the unpunctuality of its opening to the disasters of its close, one of the completest failures on record. If we may believe a letter addressed to the *Daily News*, signed "W. G. Rogers, carver in wood to the Queen," the management thereof was not more respectable than the result was remunerative. It appears that Mr. Rogers sent to the New York Exhibition certain works of art, under a guarantee that they should be returned free of charge, and an assurance from the "sole agent for Europe" that the goods should be thoroughly insured. For nearly a year after the close of the Exhibition he could hear nothing of his property, though he learnt that the jury had awarded him one of the ten silver medals. At last, "being accidentally in the London Dock," he recognises his packages on the wharf, and on getting them home and opening them he finds breakage to the estimated cost of £114 10s., for which he sends in his bill to the "sole agent." But the "sole agent" goes immediately to France, and poor Mr. Rogers can hear no more about the matter, until he does so in the unpleasant form of a claim from the broker for £15 3s. 10d. for duty and dock charges. So much for the "guarantee" and "insurance."

The sale of the Bernal Collection still goes on. To hear the prices that are given for the merest little dots of cups and saucers, no one could imagine there was such a thing as a war or an Income-tax. A whole flock of real sheep would be dear at the price given for a couple of Shepherdesses in Dresden or Sèvres. We read of "an old stone jug, with silver mountings, six inches high," and that "it seemed probable the lot would go for *only* £7 or £8, but suddenly the biddings rose to £36!" Surely the catalogues should end as the old play-bills did—"No money returned!"

THE mania or forming mining companies appears to be on the increase. The local share lists contain the names of twenty-five mining companies, with a subscribed capital of about one million and a half, all of which, with one exception, were established last year.

A LARGE NUGGET. An immense block of gold is on its way to the Paris Exposition. It is the largest that has ever yet been seen, and weighs 180 lbs., of which fifteen only are of quartz, all the rest being pure gold. It has been sent from the county of Calaveros, in the state of California, and, according to the *New York Herald*, its value is 38,916 dollars. It belonged to a digging party of five miners, who sold it to an American for 40,000 dollars. The block is nearly ten times longer than that found in 1853 at Sonora, which weighed 247 ounces, and was valued at only 4350 dollars.

EPITOME OF NEWS—FOREIGN AND DOMESTIC.

Sunday being the natal day of the Princess Louisa Caroline Alberta, born March 18, 1848, and the Court being at Osborne Palace Isle of Wight, the whole of the fleet at Spithead fired a Royal salute in honour of the event.

The health of the Empress Elizabeth of Austria is improving so rapidly that no more bulletins will be issued. The infant Archduke is doing well.

The Grand Dukes Michael and Nicholas left Sebastopol on the 13th, for St. Petersburg.

The report of an early visit of the Emperor of the French to this country has been revived. It is said that the Empress will probably be the guest of her Majesty at Buckingham Palace shortly after Easter.

The Queen of Prussia has proceeded for a few days on a visit to her twin-sister, the Queen of Saxony.

On Monday the French Emperor reviewed, in the Place du Carrousel, the Grenadiers of the Guards destined for the Crimea, or who are, as soon as will have it, to accompany his Majesty to the scene of action.

Her Majesty has granted a pension of £300 a year to the widow of the late Mr. John Montagu, Colonial secretary at the Cape of Good Hope.

The anniversary service for the repose of the soul of the Empress Josephine was celebrated on Saturday in the church of Rueil, where her remains are buried. Some personages belonging to the Imperial household, and a number of persons from Paris were present.

The Conde de Montemolin, the Infant Don Sebastian, and the Count and Countess of Chambord, assisted at the funeral of Donna Carlos, which took place at Pesaro on the 14th inst.

The Earl of Aberdeen, it is understood, will shortly leave England for Egypt, in order to see his son, Lord Haddo, who contemplates prolonging his sojourn in the East for some time to come. Lord Haddo is at present in the neighbourhood of Cairo.

The Archduke William arrived at St. Petersburg on the 11th, and was received in full state by the Emperor and the other members of the Imperial family. The Archduke was present at the funeral obsequies of the Emperor Nicholas.

The health of the aged King Louis of Bavaria is greatly improved; and, as soon as the state of the weather permits his travelling, he is going with his physician, Dr. Becker, to Italy for change of air.

The Earl of Carlisle sailed from Kingstown for Holyhead on the 15th. It is said to be his intention to be in Dublin again on Tuesday, the 20th April. A levee will be held on Wednesday, 18th April, and a drawing-room on Thursday, 19th April.

Private accounts from St. Petersburg state that the Empress Dowager is very ill.

Prince Maximilian of Thurn and Taxis is about to proceed to St. Petersburg to congratulate the new Emperor on his accession to the throne.

The widow of Don Carlos, who is residing at Trieste, has requested the Spanish Government to allow the body of her husband to be removed to Spain, and deposited in the vaults of the Royal family.

The *Cologne Gazette* of the 18th inst. announces the departure of the King of Prussia for Dresden.

Lord Panmure, Minister of War, on Monday took possession of the splendid mansion in Belgrave-square, *vis-à-vis* to Lord John Russell in Chesham-place, and lately tenanted by the Right Hon. Sir C. Wood, the First Lord of the Admiralty.

The Duke and Duchess de Nemours have arrived at Cadiz to pay a visit to the Duke and Duchess de Montpensier; and the Duke of Saxe-Coburg has left the same port for England.

Baron Goldsmid and Sir Joseph Bailey, the principal owners of the Birkenhead property, have signed a preliminary agreement, by which they bind themselves to accept 12s. in the pound for their property in the docks, payable in three and six years, with interest at the rate of four per cent. The amount, altogether, will be £1,300,000.

The King of Prussia has given permission to have the magnificent statue of the late King, Frederick William III., sent to the Paris Exhibition. The Prince of Prussia has also allowed to be forwarded to the same Exhibition the beautiful Album presented to him by the Rhenish provinces on the occasion of his marriage.

A letter from Rome of the 10th, in the *Univers*, states that a Mr. Palmer, represented as a distinguished man at Oxford, had a few days before read his recantation of Protestantism, and been received into the Roman Catholic church.

It is said that Count Nesselrode will visit Vienna as soon as the deliberations of the Conference become critical.

Mr. Layard has fixed Thursday, 5th April, as the day for his installation as Lord Rector of Marischal College, Aberdeen.

A grand dinner was given by Prince Paul Esterhazy on the 15th inst., to the members of the Vienna Conference, when all of them appeared, except the Russian Plenipotentiaries, who were prevented from attending.

The Queen of Spain has presented the Pope with six beautiful Andalusian horses.

The Lord Chancellor of Ireland and Lord Seaton, commanding the forces in Ireland, have been sworn Lords Justices of Ireland.

The visit of the Emperor Napoleon is much talked of at Constantinople, and the Sultan is every day inquiring from his Ministers whether any positive news has been received on the subject.

Mr. Charles Dickens has consented to visit Ashford to read his "Christmas Carol," on Tuesday next, for the benefit of the South-Eastern Railway Mechanics' Institution.

The celebrated pianist, Thalberg, is now at Turin, on his way to Vienna, where he intends superintending the production of one of his compositions.

At a general meeting of the Royal Academy of Arts, last week, Mr. E. M. Ward was elected a Royal Academician, in the room of the late Mr. J. J. Chalon.

A. M. Darius, formerly first bass singer of the theatre of Rouen who is not less than 102 years old, and who is the oldest professional singer in France, is to sing in a concert which is to be given for the benefit of unemployed workmen.

Mr. Barry Charles Hampton Knight, son of Mr. Charles Knight, is appointed index-maker to the *London Gazette*.

Closinger, the French sculptor, has lost the sight of one eye by at his work a chip of stone flew into it, and destroyed it.

Cardinal Macchi, the oldest member of the Sacred College, is stated to be so enfeebled as to have received the last sacraments. Four Cardinal's hats are already vacant in consequence of deaths since the beginning of the year.

Last week Russian subjects residing in Brussels took the oath of fidelity to the Emperor Alexander II., in presence of M. de Oreptowitch, the Russian Ambassador to the King of the Belgians.

A deputation from the Committee for the Reduction of the Duties on Wine had an interview with the Chancellor of the Exchequer on Tuesday, at his official residence in Downing-street.

Mr. Scholefield, the member for Birmingham, has given notice of the appointment of a Select Committee of the House of Commons, with a view to put down the adulteration of flour. Some cases of the kind have recently been discovered in the West Riding of Yorkshire, which have led to the conviction of several corn-millers.

The firemen of the London Brigade, together with the fire-engines appointed to proceed to the East to protect the hospital at Scutari, left London on Saturday last in the *Eldon*, steam screw-ship.

In the event of the Czar's Guides quitting Paris, the cuirasses which they now wear will be exchanged for others made of aluminium, the metal lately discovered.

It is said to be the intention of Government to introduce their bill this week for the abolition of the testamentary jurisdiction of the ecclesiastical courts.

The quantity of malt made in the United Kingdom, in the year 1854, and charged with duty, amounted to 36,819,554 bushels, against 42,039,752 bushels made in 1853.

The subscriptions to the Patriotic Fund amount in Bombay to upwards of £10,000; and in Poonah, and the other stations subordinate to the presidency, the call has been nobly responded to, as it has also been all over India.

An Italian railway company has obtained permission to construct a railway from Milan to Paris. The same company is treating with the Sardinian Government for the construction of a line from Novara to Milan.

The passage from Dover to Calais has been made by some of the new steamers in one hour and twenty minutes.

The sick and wounded soldiers from the Crimea who have died in Liverpool are to be buried in one grave, over which a monument will be erected by public subscription.

THE EARTHQUAKE AT CONSTANTINOPLE.

THREE months since the hurricane which destroyed the British transports burst over the Black Sea with a fury not to be surpassed by the tornadoes of the Mexican Gulf; and on the 28th ult. Constantinople was shaken by an earthquake which, had it lasted long, might have been reckoned among the calamities of the human race. At five minutes past three in the afternoon the shock was felt, and it lasted, as nearly as can be computed, about half a minute. The motion was not the slow wavelike movement which marks the earthquakes that extend over whole continents, but a sharp, rapid, trembling, which caused every pane of glass and every tile on the housetop to rattle; it is possible, therefore, that the disturbance may have been merely local. But the violence of the movement was far beyond that which is generally felt in the earthquakes of the Ionian Islands and the coast of Asia Minor, and the chief fear that it inspired was that it might only be the prelude to a more severe visitation. Happily, although it was succeeded by a number of other shocks, each of the following movements diminished in violence, and the only harm done was caused by the first. Many persons were only aware of a simple disturbance; but between three and five o'clock no less than six shocks were counted; two took place between seven and eight o'clock in the evening; and the last that was felt was at a few minutes before midnight. With the exception of the shock at ten minutes past seven o'clock, all these were slight, and might not have been remarked, but for the apprehensions that had been roused by the occurrence in the afternoon. The consternation caused by the great shock was extreme. The lower animals seem to have had some feeling of what was about to happen for several seconds before it was felt by human beings. Whether the vibration made itself known to them before it was perceived by man, or whether what is called instinct gave them a peculiar warning, it is certain that horses, both in the streets and stables, stood still and trembling for some time before the shock was felt; and for some minutes after they were in great terror. The motion was chiefly felt in the upper rooms of houses. Pera is situated on a hill, and the higher stories of some of its lofty buildings are at no small elevation above the level of the sea. In these rooms glasses were thrown off the tables, and persons who were standing were obliged to sit down, or to cling for support to some fixed object. The motion is described by one who happened to have mounted to the top of Galata Tower as that of a ship in a gale. The British Embassy is one of the most solid edifices in the country; but, being constructed at the summit of the Pera-hill, it was exposed to the full violence of the shock. A stack of its massive chimneys was thrown down, and the large square stones of which the walls are constructed are said to have been displaced in certain parts. Every bell in the palace rang violently; and even in one or two churches the still larger masses of metal resounded dismally. A number of minarets in Stamboul and Pera were thrown down; and the large iron chimney of the building where the French bread is baked was broken short off by the shock. The bazaars are said to have been cracked in several places. If this be correct it will convey to all who have visited them an idea of the violence of the motion. The long low-arched passages, constructed of heavy stones, and, even in the height of summer, shutting out the heat and glare, and forming cool, shady tunnels, which invite the weary passer-by to enter, would seem to be the last kind of construction liable to be shaken by subterranean violence. Yet these are said to have been split in many parts, so as to require repair. Some of the large stone houses of Pera are also injured. Of the smaller houses one or two are in a very unsafe state. The wooden edifices have received no injury.

The motion increased in intensity during several seconds, and for a moment before its cessation it certainly seemed as if the house was coming down. In most cases the building seemed to be struck from without, and the feeling was as when two vessels come into collision. The motion then ceased abruptly.

After the shock was over there was much commotion in the place. Business was to a great degree suspended, and husbands and brothers hastened home to see if the female part of their families had received any injury from the convulsion, or terror it caused. The lower classes of the city were much frightened, and had recourse to prayers and supplications. The Turks in the neighbourhood of Galata Serai rushed out of their homes and crouched down in their attitude of devotion; while the Christians showed their terror by cryings and ejaculations after their various rituals. Many persons in the course of the day became anxious to retire to their wooden country houses, through an apprehension that a more severe shock would be felt in the course of a few hours; but next day the alarm had subsided.

At Brousa the mischief done has been very serious. Letters from that place announce that, in addition to a vast number of mosques, many large khans, manufactories, and old houses were thrown down. Among the disasters was the destruction of a large silk factory. Sixty women, at work there, were buried under its ruins. Violent shocks were also felt some days before at Samos and the adjacent islands, and in Anatolia. At Macri the sea suddenly rose, and inundated the warehouses on the quay to the depth of two feet. The very frequent oscillations lasted some time

BRIDGE AT BROUSSA.—FROM A SKETCH BY JAMES ROBERTSON, OF CONSTANTINOPLE.

THE LAKE AND RUINS OF INKERMAN.

THE Crimean correspondent of the *Morning Herald*, who had seen our Artist while taking the Sketch below and several others, gives him credit

LAKE AND RUINS AT INKERMAN.

THE STEAM-FRIGATES "LEVIATHAN" AND "LEVEN" ATTACKING BATTERY ON THE CIRCASSIAN COAST (SEE PAGE)

as will be seen, for going through his rather hazardous work in a very cool manner :—

I saw to-day the Sketching Correspondent of the ILLUSTRATED LONDON NEWS, who had been permitted to sketch amusing groups about the Camp. He has made a very clever and graphic sketch of the still unburied Russian bodies which have been lying in a putrid state, bordering the river Inkerman, ever since the 5th of November. While engaged taking his sketch, the enemy fired a few shots upon him from the opposite side, but he succeeded in completing his work before he left the place.

Our Artist writes, March 3rd :—"The last week I passed in the front, near Sebastopol, in the batteries, trenches, and advanced works, and I send you the result. I had commenced a View of the Town, from a height in front of the Green-hill Battery ; but having several shots fired at me from the Russian rifle pits, with rather unpleasant precision, I thought it advisable to defer the washing-in of this effect until some more favourable occasion, when the attention of the Russian sharpshooters might be directed to some other objects ; for I assure you that the sound of a rifle-ball is any thing but pleasant to the ears of an amateur.

"I send you a View of the Lakes and Ruins of Inkerman. In the foreground may still be seen several bodies, marking the retreat of the Russians from the field of battle. The reason of their remaining so long unburied was that the burying parties were fired at by the Russian riflemen, who were hidden in the caves and behind the ruins on the opposite side of the lake.

"For the last fortnight," he continues, "the enemy have scarcely fired a shot at our works, consequently our casualties have been very few ; their attention being chiefly directed to our neighbours, the French, who occupy the extreme left attack."

We shall Engrave three other Sketches sent by our Artist next week.)

THE QUEEN AT SPITHEAD.

THE scene represented on the preceding page took place on Thursday week, when the *Fairy* steamer, with her Majesty on board, passed through the fleet at Spithead. The huge vessel to the left is the *Duke of Wellington*, with her flags and yards fully manned. The *Neptune*, on the right, and the *Royal George* astern of her, are both fully manned also. The next little vessel on board of which the Queen has come to view her magnificent men-of-war, now nearly ready for the Baltic, shrinks into nothing beside those enormous ships. In such proximity the *Fairy* seems a most appropriate name for the Royal steamer.

On Tuesday last the Queen paid a visit to the flying squadron, previous to its departure for the Baltic. Soon after nine in the morning the advanced division of the fleet, consisting of—*Impérieuse*, 31 guns (screw) ; *Arrogant*, 51 (screw) ; *Arrogant*, 47 (screw) ; *Tartar*, 21 (screw) ; *Archer*, 16 (screw) ; *Conflict*, 8 (screw) ; *Cruiser*, 17 (screw), lit fires and got up steam. At three o'clock precisely the *Fairy*, with the Queen on board, was making for Spithead, from Osborne Palace, when a Royal salute was fired from the fleet. The *Fairy* then steamed slowly alongside each vessel under orders, and passed from west to east, the ships manning rigging and heartily cheering the Queen. After which signal was made for the *Driver* to get under way, and the *Fairy* proceeded to between the Warner and Nab Lightvessels, where the vessels passed in succession, manning the rigging and cheering. The farewell signal was hoisted on board the Royal yacht at 4.45, and the *Fairy* returned to Osborne.

THE ATTACK ON KERTCH.

THE Sketch engraved upon the preceding page is from a drawing by one of the naval officers, and will be interesting as showing the position of the *Fulton*, a French vessel, under the command of Lieutenant Le Bris, and the *Leopard*, commanded by Captain Giffard, had been making a reconnaissance on Anapa and Kaffa ; and, in passing by the small open bay to the north-west of the Lake Koulen flow into the Black Sea, they discovered a column of Russians marching over the spit of sand that separates the lake from the sea. A few shells put this column to flight, and the boats of the *Leopard* landed an armed force, who destroyed some houses, and burnt a rather considerable store of provisions. They also found at this spot four 24 pound guns, two of brass and two mounted abreast, of cast iron. The excessive cold, however, and the snow then falling in abundance, compelled the Captain of the *Leopard* to recall his boats, and to return to the anchorage at Kertch.

On the night of the 23rd 24th Feb the two vessels were surrounded with ice, but they were able to make way by six o'clock in the morning, and in two hours and a half were abreast of the entrance to the lake. Captain Le Bris undertook to keep a party of Cossacks at a distance. The *Fulton* neared the coast, drove the cavalry from a village situated on the borders of the lake, and her shells set the houses on fire, though they were still covered with snow. During this time the armed paddle-box boats of the *Leopard* drove back on Anapa a company of infantry that appeared to be marching towards Taman. Having made themselves masters of both sides of the lake, a force was disembarked that destroyed everything they found on the spot ; ten 24-pounders, cast in 1850 and 1851, were rendered useless ; and a large supply of provisions and warlike stores destroyed without any loss of life on our side, while that of the Russians was considerable

The following despatches from Tuesday's *Gazette* give the official report of the affair :—

DESPATCH FROM SIR E. LYONS.

ADMIRALTY, March 19.

A despatch, of which the following is a copy, has been received from Rear-Admiral Sir E. Lyons, Bart., G.C.B., Commander-in-Chief of her Majesty's ships and vessels in the Mediterranean and Black Sea :—

PROCEEDINGS AT KERTCH

Royal Albert, off Sebastopol, Feb. 27

SIR,—With reference to my letter of the 20th instant, reporting the highly creditable proceedings of the blockading squadron off Kertch, under the command of Captain Giffard, of her Majesty's ship *Leopard*, I have now the honour to enclose copies of two letters which I have received from that active and intelligent officer, reporting his further proceedings, and of his having, in conjunction with his imperial Majesty's steamer *Fulton*, captured and destroyed ten 50 cwt. 6-inch guns, and burnt seven large boats, two ranges of barrack-buildings, also a quantity of military stores and provisions, near the Boghaz of the Koulen Lake, on the 22nd inst. ; and I beg leave to call their Lordships' particular attention to the fact that this gallant service was performed during weather which must have rendered its accomplishment exceedingly difficult, and that Vice-Admiral Bruat and I consider that it reflects the highest credit on Captain Giffard, Captain Le Bris, of the *Fulton*, and the officers and men of both nations employed on the occasion.

I am, &c.,

ED. LYONS, Rear-Admiral and Commander-in-Chief.

To the Secretary of the Admiralty, London

Her Majesty's steam-frigate *Leopard*, off Kertch,

February 2nd, 1855.

SIR,—I have the honour to inform you that on the 22nd inst. his Imperial French Majesty's ship *Fulton* having gone to Kaffa to reconnoitre, I proceeded towards Anapa in her Majesty's ship *Leopard* ; but, on passing the Boghaz of the Koulen Lake, we observed numbers of troops crossing the passage in boats, from Anapa to Tamna, so I ran in and anchored off the passage in 4½ fathoms.

The troops had landed, but we opened fire on them, and drove them to the hills.

I sent a small force of boats, under Lieutenant Graham, to examine the buildings, &c., upon which proved to be guard houses, barracks, store-houses, &c., one of which was on fire ; but, a heavy snowstorm coming on, I recalled the boats.

Lieutenant Graham reporting he had seen some cannon and other military stores, which he had not time to destroy, and which the enemy were transporting from Anapa to Kertch, I determined to proceed there on the 24th inst., in company with the *Fulton*.

A few rounds of shot and shell drove the cavalry and other troops, to the number of 200 in number, to the hills. Lieutenant Graham landed, and Monsieur Le Bris, of the *Fulton*, took a position to the north-west, to check the advance of the enemy, who soon after brought some field batteries on the hills and opened a heavy fire of shot and shell upon the ships and boats.

The very accurate fire of the *Fulton* drove them from two positions, and the *Leopard's* shell from a third, after which they retreated behind the hills.

After three hours' work the boats returned, having captured and destroyed ten new and handsome 24-pounder 50-cwt. guns, burnt seven large boats, two ranges of barracks and buildings, also a quantity of military stores and provisions.

The *Fulton* received one shot on her hull, and I am happy to say no casualties occurred.

The loss of the enemy must have been considerable [illegible]

Rear-Admiral Sir Edmund Lyons, Bart., G.C.B., &c.

HEALTH OF THE ARMY OF THE EAST

WAR DEPARTMENT, March 20, 1855.

Extract from a Despatch received by Lord Panmure from Field-Marshal the Lord Raglan, dated "Before Sebastopol," March 3rd, 1855.

I beg now to lay before your Lordship Dr. Hall's report of the state of the sick ; and I will direct him to make one weekly, which I will transmit for your Lordship's information.

Extract from a Report from Dr. Hall, Inspector-General of Hospitals, to Field-Marshal Lord Raglan, dated March 2nd, 1855.

I will offer a few observations on the weekly state up to the 24th of February ; and, in doing so, I may premise that the general state of the sanitary condition of the army up to that period is by no means so satisfactory as the previous improvement during the week of fine weather that we had had led me to anticipate ; but though the unfavourable change in the weather, from the genial warmth of spring to the bitter cold of winter, which took place on the 20th, had an injurious effect on certain classes of disease in weakly subjects, still there is sufficient improvement remaining to enable us to look forward with confident hope to the future ; and I am the more inclined to indulge this hope from the favourable change which has taken place in the type of fever prevailing in the General Hospital at Balaclava, in the 93rd Highlanders and some other regiments, from low typhoid to that of a remittent, and even intermittent character.

The attention now given to the cases of fever removed from the General Hospital at Balaclava to the convalescent establishment on the point of the old castle, overlooking the sea, and when the remainder of the huts are erected which I expect this week will soon be now the case, the highest results to follow, from being able to place from 400 to 500 convalescents there, in place of causing them to go down to the crowded establishment at Balaclava, and up the steep road from the latter to the camp of the Light Division, to reach the more comfortable locality ; and, by a very little labour, the road up to the huts from the town could easily be made practicable to ambulance carts and horses. I am informed, the Commanding Royal Engineer has been ordered to carry into immediate effect.

The position of the huts, I think, promises every advantage : they are placed on a dry ridge overlooking the sea, sufficiently removed from the noise and stench of the town, and not too far from our stores and resources

There is a running stream in a ravine close at hand, of easy access, and fed by a spring higher up in the hills, which could easily be led to the huts themselves by means of gutta-percha tubing.

Out of 542 patients received into the General Hospital at Balaclava between the 18th and 24th of February, only three casualties have occurred ; which, I think, may fairly be termed a low rate of mortality, considering the class of patients that are generally sent in there for treatment from the front, and even from Camp, and found too ill to embark when they arrive at Balaclava

The huts in the vineyard in front of the hospital have relieved the hospital, and prevented the necessity of crowding it so much as we were formerly occasionally compelled to do

The ventilation, too, of the main building has been improved, by having two rows of large auger holes through the wooden ceiling of the ward. Mr. Hanbury and the medical officers doing duty under him are very attentive to their duties. The sick have also the benefit of the care of Miss Langston and the nurses under her, who are a great comfort to them, and I am glad to be able to assure your Lordship, that the staff of the purveyor's store is such as to ensure every comfort the sick can require.

The Cavalry division, encamped in a sheltered valley near Kadikoi, has enjoyed better health of late ; and the mortality this week, though high, is compared with service at home, still cannot be considered excessive ; but, with the increased comforts the men now enjoy, and their removal from their present duty, further improvement may be expected. The 4th Division has also enjoyed good health ; so has the Highland Brigade which occupies the lines in front of Balaclava, part of which are elevated, and much exposed. But being near Balaclava, they have exerted themselves, and got wooden huts up for the accommodation of both the sick and a portion of the men in health. They have had the advantage of better shelter for their men in the village of Kadikoi during the whole winter. The men are warmly clad, and have the additional benefit of being nearer their resources than the men in front. The 2nd, 4th, and Light Divisions have improved in health, but the 1st and the Brigade of Guards, continue sickly.

The Guards have just been removed to Balaclava, where rest and better shelter will, I have no doubt, soon have a beneficial effect on their health

The Third Division, too, will be relieved in some degree by the 4th Regiment, just come from Malta, which is completely armed and quite efficient. Huts have been erected for them on an eligible site, and they have a fair chance of escaping any serious outbreak of disease

Bowel complaints remain the most prevalent class of diseases ; but I think they are not so serious as they were a short time ago, nor is scurvy so manifest as it was since the issue of lime-juice daily as a portion of the men's rations. Lately, I have instructed the medical officers of regiments to inspect the men, for the purpose of detecting this complaint in its incipient stage—and seeing that the men are clean in their persons, and change their shirts and flannels at stated periods. The last week's return is favourable. In the Fourth Division, which is the only report I have at hand in my hut, only 148 out of 2266 men inspected, bore any traces of scurvy ; and this is one of the divisions that was so much affected with it than any division in the army a short time ago. Mr. Roberts, the Staff-Surgeon recently appointed to superintend the medical concerns of the division, is an intelligent, active young officer, and he has effected wonderful improvement since he joined. If the issue of fresh meat could be ensured, together with vegetables and lime-juice, I am quite satisfied, now that the men are warmly clad, and will soon be better sheltered, a manifest improvement would take place in their health And if the military operations carrying on would only admit of some longer exemption from duty, a still greater improvement would be observed.

I am inclined to think our greatest difficulties and miseries have been surmounted, and we may now look forward for better and more cheering times. It was wonderful to see the cheering effect the few fine days had on the health and spirits of the men : and as the winter may now be considered nearly at an end, I am full of hope and confidence.

PRINCE ALBERT'S VISIT TO PORTSMOUTH.—Prince Albert proceeded from Osborne House to Portsmouth on a visit of inspection of the new Royal yacht and of the Sailors' Home, on Monday. The visit was a private one. The Prince first went to the yacht ; on board of which he remained upwards of an hour, going over the whole vessel in detail, and examining its various arrangements, and directing some alterations for the greater convenience of the crew to be made. On leaving the yacht the Prince proceeded to the Sailors' Home in the dockyard, passing the dockyard, where he minutely examined the accounts of the institution. He then went to the Commander-in-Chief's residence, and most kindly inquired after the health of Sir Thomas Trowbridge—a task he has since repeated, was severely wounded at Inkerman, and who is a relative and guest of the gallant Admiral at the present time. The *Fairy*, with the Queen on board, came straight into the harbour, and his Royal Highness at once went off to her, and remained for about half-past one o'clock. By orders of the Queen the fleet did not salute on her arrival, but this order not being repeated when she returned, the ships in harbour and at Spithead poured forth a royal salute.

BREAD WITHOUT YEAST FOR THE ARMY.—Before the recent changes in the Administration, Mr. Alfred Bird, chemist, Birmingham, communicated with the Duke of Newcastle, as head of the War Department, offering to supply the troops in the East with the preparations of flour which would admit of their being regularly supplied with fresh bread, as well as prove invaluable in the hospitals for the supply of the sick and wounded with bread, light cakes, light puddings, and other articles of food suited to their condition His Grace, in reply, desired that a list made with the fermenting powder should be sent to him, and requested that the loaf might be made in the presence of the authorities in Birmingham, from whom a certificate was to be sent stating that the bread was made without yeast. After being applied for, and witnessed the making of fourteen pounds, or one peck of flour, with the powder and a little salt, into five loaves, the operator capturing no more than four minutes each time, and being baked they were found to weigh 20 lbs. 2 ozs. One of the loaves was stamped with the corporate seal, and forwarded to the Duke of Newcastle, together with a certificate from the Mayor of Birmingham as to the mode of its production ; and another from Dr. Evans, to the effect that he had on several occasions partaken of bread made with Mr. Bird's powder, and that the bread was light and good ; this doctor, moreover, expressing his belief that the powder was a good substitute for yeast. In due course his Grace acknowledged the receipt of the bread, which he pronounced to be sweet and good ; and, in order that the powder might receive a fair trial, desired Mr. Bird to communicate with the Board of the Admiralty, who supply the Army from the victualling yards. Their Lordships replied by requesting that a loaf, as a specimen of the bread, might be sent to them ; on receipt of which they admitted the bread to be wholesome, sweet, and palatable. The result is that Mr. Bird has received a communication from Lord Panmure, the present Minister of War, announcing that the Government intend to give the fermenting powder a thorough trial at the camp of instruction at Aldershott, with a view to its introduction into the Army and military hospitals abroad.

THE LATE CZAR.—In the course of those memorable conversations which he held with Sir Hamilton Seymour between January and April, part of which have been published, the British diplomatist observed, "If war between Russia and Turkey should unfortunately break out, neither you Majesty nor I would probably live to see it terminated." The Emperor asked Sir Hamilton how old he was, and, on his replying "fifty-five," said—" Then I can certainly order than you, but still I cannot agree to that terms.

A TATTLE-HUNTER.—Died, on the 7th March, in the Epsom Union Workhouse, in his eighty second year, Nathaniel Payne, the last of the family of Six more Londoners. In the Bo[illegible]. The deceased was a member of the gentry in the county of S[illegible]

SEBASTOPOL AND VIENNA.

Is Sebastopol to fall ? That is the question which is now anxiously asked and discussed on all hands. The problem is no longer a mere question of time—a calculation of weeks and days, as heretofore ; but of the feasibility of the undertaking. If mens' minds were too sanguine at the outset of this expedition, if they under-rated the enemy's strength and over-estimated the possible fruits of brilliant achievement, we think it cannot be denied that a more than corresponding reaction has since taken place, and that, worn out with daily watching and expecting, there are many who have given up "the siege" as a failure. There can be no doubt that the plan of operations with which the work was commenced was a mistake, and that no possibility existed at any after the mistake was found out of retrieving the first false step. But does it follow at all from this that Sebastopol is not to be taken ? We will not admit the deduction. Sebastopol has not fallen, because it has not as yet been attacked with adequate means and in the only proper manner. It was thought, in the first instance, to take the place by a *coup de main* ; then it was attempted to knock its casemated batteries down by sheer pounding ; but both these expectations have been disappointed, and the balance between the attack and defence, contrary to precedent and to general expectation, turns, for the present at least, in favour of the latter. The most perplexing feature in the case is, that all the time our artillery has been powerless to destroy the works we came to attack, the besieged, having apparently unlimited resources at their command, have been throwing up additional fortifications, external and internal, themselves sufficiently formidable to call for regular works of siege for their reduction ; so that, under the supposition of our still adhering to the project of taking the place by main force, we must (under the existing conditions) look to taking it piecemeal—bit by bit—with a severe struggle at each stage of the proceedings. The truth we believe to be that, under the present plan of operations, even if we should succeed in mastering the outworks of recent construction, and in making our way, at the bayonet's point, within part of the enceinte itself, we would not be able to maintain our position there, there being no important portion of the works which is not effectually commanded by others. The boldest general would hesitate long before he would lead his troops to almost certain destruction in such a venture.

Is, then, Sebastopol not to fall ? the reader will ask, casting away the paper from him with disappointment, and almost a feeling of disgust. Our answer is prompt. Sebastopol, properly invested, *must* fall in time, even if it were a mass of cast iron. Hitherto it has not been invested ; it has been open, throughout one-half of its boundary, to receive reinforcements and stores of all kinds in greater abundance and with greater facilities than the besiegers. It has hitherto suffered none of the ordinary trials of a siege efficiently conducted. When this pressure—the pressure of a hermetic cordon—is placed around it, its strength must wane, its insolent front quail, its iron ribs collapse ; but this must be the work of time, more or less in duration according to the extent of the resources within the place at the time its isolation commences.

The instances are numerous illustrating the importance of the blockading process. Three, however, will suffice as examples, and they are all of seaport places, otherwise considered unassailable. Gibraltar stood a siege of nearly four years' duration. The attack being defeated by the valour and intrepidity of the defenders, the active siege was converted into a blockade ; timely succour, however, was thrown in—partly in consequence of the negligence of the commanders of the enemy's fleet ; and before the issue of armed resources could be decided, the siege was stopped by the treaty of Paris Malta is more to the point : here the blockade was strictly maintained for a period of two years ; and, after gallant resistance, in the midst of terrible privations—the last attempt at relieving the place having failed—the garrison was at length forced to capitulate to the British flag. The case of Rochelle is still more remarkable, as an example of the extraordinary resources to which the assailants had recourse in order to complete the investment of the place, and thus secure success which seemed their labours. Entirely shut in by land, the garrison had for four or five months continued to receive succours by sea, and, so sustained, defied the besiegers. Richelieu, in order effectually to meet this difficulty, caused a mole to be constructed across the mouth of the harbour ; and, at the end of ten months the brave Rochellois were starved into submission Why should not similar means be tried with Sebastopol ? By sea it is already blockaded ; by land also on the south and east. All that remains to be done is to shut it in on the north, where Espatoria as a base, strike the flanking works of counterval-lation, or by means of an army of observation, extending to Simpheropol or Perekop. Indeed, these dispositions having been made on the part of the besiegers, and the sunken ships, which at present obstruct the mouth of the harbour, being blown up and removed, we might even be on the cards to take the place by force, by a combined operation on all sides, by sea and land. Sooner, or later, however, it must fall, and with it the whole of the Crimea and of Russian power in the Black Sea.

These considerations should not be lost sight of, and are now doubly important in connection with sinister suggestions which have been put afloat of a possibility of the present political difficulty being got over, and peace established, without the capture or ex-sion of Sebastopol as a *sine qua non*. These suggestions, if report be true, form the Court of Vienna, and are to be matured, or at least made the subject of discussion, at the pending Conferences. It is at Vienna, then, and not at Sebastopol, that, according to these writers, the Eastern question is to be solved, and the power of Russia upon the Black Sea reduced within limits consistent with the quiet of the rest of Europe. We, however, cannot concur in these expectations, and we also feel satisfied that neither the Government nor the people in this country or in France would consent, after all that the war has cost, in money, in blood, and in suffering, to patch up not a peace, but a precarious truce, by any such miserable arrangement as that shadowed forth by the Vienna politicians.

The grounds upon which these views are urged are so untenable as the alternative policy proposed would be mischievous and unreal. To be considered too much to demand of the Czar to surrender and destroy his favourite stronghold which the Allied armies have hitherto been unable to take. But Sebastopol may and will be taken if the siege be properly carried on, and, as the result of the struggle, we would ask, whose feelings ought to be deferred to ?—those of the wrongdoer, who has caused all these troubles, or those of the powerful States who have gone to the expense and hazard of enormous armaments to reduce the pride and power of that wrongdoer ?

But the demand for the reduction of Sebastopol under the now admitted policy of opening the Black Sea, comes almost as a matter of course, and without the slightest implication of offence to Russia ; being strictly according with the principles of public law, and supported by numerous precedents. Dunkirk is an example of the dismantling of a fortress as the demand of a neighbouring State, which the proud French nation submitted to, by the treaty of 1713, and which arrangement continued in force until abandoned by consent of England, in the treaty of 1783. As to the alternative proposed by the Vienna politicians, of the Maritime Powers erecting fortresses or establishing military posts on the southern coast of the Euxine—as at Batoum, Trebizond, Sinope, &c.—it is too absurd to be seriously entertained for a single moment. Instead of peace, this would establish a state of perpetual war ; and make the sword, instead of the diplomacy and consent of nations, the public law of Europe. No ; whatever it cost, Sebastopol must be taken, or surrendered ; and the Conferences at Vienna must start upon no other basis. Q.

THE GRAVES OF THE HEROES AT SCUTARI.

THE spot represented in the Sketch on page 288 is recommended by the peculiar interest which attaches to it as the burial-place of many of England's bravest sons. There sleep not a few of the heroes of the Alma, of Inkerman, and of Balaclava ; and side by side with them those less known, but not less-deserving men, who, having endured with a patience never surpassed privations and pining sickness in the discharge of their duty to their Sovereign and their country, at length escaped to that place where "the wicked cease from troubling and the weary are at rest." It was after attending the funeral of one in whose last moments were portrayed by every act and every word all the fortitude of a soldier, the humility of a Christian, and the courtesy of a gentleman, that the accompanying Sketch was taken. On the evening in question the sun was setting behind the distant islands of the marble sea, which reflected his last long line of glory towards the resting place of our beloved countrymen. One of these graves, on the edge of the cliff overhanging [illegible] of Mammora, is the resting place of Lieut-Col Anstie, [illegible] by a small wooden cross, on which is cut the name, rank of [illegible]

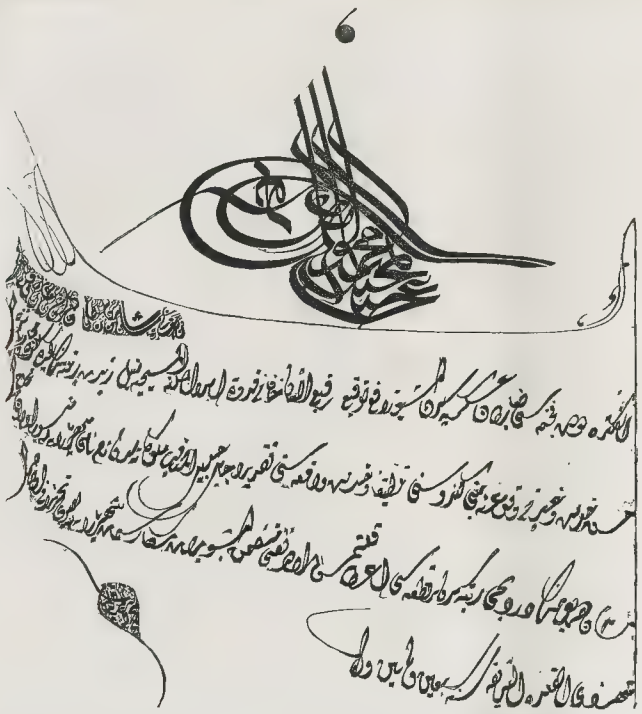
PATERSON, of the Middle Temple, Barrister-at-Law, and Professor of English Law, &c., at King's College, London.
Also just published, 8vo, 10s. 6d. cloth,
QUESTIONS for LAW STUDENTS on the THIRD EDITION of Mr. SERJEANT STEPHEN'S NEW COMMENTARIES on the LAWS of ENGLAND. By JAMES STEPHEN, Master in Chancery, Barrister-at-Law, and Professor of English Law, at King's College, London.
London: H. BUTTERWORTH, 7, Fleet-street. Law Publishers to the Queen's Most Excellent Majesty.

PRACTICAL PHOTOGRAPHY, on GLASS and PAPER.—A Manual, containing Simple Directions for the Production of Portraits and Views, by the cheapest and easiest Means, including the Collodion, Albumen, Calotype, Waxed Paper, and Positive Paper Processes. By CHARLES A. LAKE. Price 1s.; by post, 1s. 6d.
BLAND and LONG, 153, Fleet-street, London.

Just published, 12mo, gilt edges,
RULES for the PRESERVATION of SIGHT. By ALFRED SMEE, F.R.S., Surgeon to the Royal London Ophthalmic Hospital, Moorfields, and Consulting Surgeon to the Royal London Hospital for Consumption and Diseases of the Chest, Brompton.
"We recommend the volume to the attentive perusal of the general reader." Medical Times and Gazette.
"We have derived much pleasure from the perusal of this little work, and can cordially recommend it to the attention of our readers." Medical Circular.
"Mr. Smee's little work is full of practical information, and we recommend it to the attention of our readers." Lancet



FIRMAN SENT BY THE SULTAN TO THE FAMILY OF THE LATE LIEUTENANT MEYNELL.

THE LATE LIEUT. MEYNELL, OF HER MAJESTY'S 76TH FOOT.

THE career of this gallant officer, and the recognition of his bravery at Silistria by the Sultan, form a deeply interesting episode of the war.

Lieutenant William Meynell, of her Majesty's 75th Foot, was the fifth son of Godfrey Meynell, Esq., of Langley-park, Derbyshire. This officer, in the month of May, 1844, received a certificate of honourable distinction and special approbation of the Commissioners of the Royal Military College, Sandhurst, and was presented at the same time with a commission as Ensign of the 75th Regiment. In the year 1849 he accompanied his regiment to India, where he continued till the spring of 1853, when he returned to England on sick leave. Having recovered his health before the expiration of his leave, he solicited, but ineffectually, from the Horse Guards, an appointment with the forces about to proceed to the East. Notwithstanding his disappointment he determined to proceed to the East, hoping to obtain some appointment on the staff of General Cannon (Behran Pacha) during the remaining portion of his leave. In this he succeeded, being appointed Assistant Aide-de-Camp to the General, and was present in the operations in the Delhi-Ormand Forest; entered Silistria with General Cannon on the 12th of June, 1854; was present in Arab Tabia when the last attack was made by the Russians, and was by the side of the gallant Captain Butler when he received his mortal wound. Upon the retreat of the Russians he accompanied General Cannon in the reconnaissance made by that officer at Turtukai. On the 7th of July, under the command of Colonel Balfour Ogilvie (Youer Bey) he crossed the Danube, and with a small part of the force, in conjunction with Captain Arnold and Lieutenant Burke, R E, took possession of two Russian redoubts in a position a mile and a half higher up the river than where the main body landed. These redoubts were held by them against a very superior force for more than two hours; and, when the Turks were eventually driven out of them, the bodies of Lieutenant Meynell and Captain Arnold were found the following day lying within the redoubts they had so bravely defended.

THE LATE LIEUTENANT MEYNELL.

The Sultan marked his high sense of the bravery of Lieutenant Meynell by conferring the order of the Medjidié, together with the accompanying firman, which were forwarded by Lord Raglan to the relatives of the deceased. We have engraved in fac-simile the firman, of which the following is the translation:—

The bearer of this Imperial diploma, one of the most distinguished of the nation of the Messiah, Mr. Meynell, an officer in the British army, has rendered important services, and given proofs of zeal and devotedness, at the time of the siege of Silistria. Therefore, appreciating his services, and wishing to give him a mark of my Imperial satisfaction, I have granted him the 4th class of my order of Medjidié, which bears my Imperial name; and it is to this effect that this Imperial diploma has been delivered.

Written in the month of Zil Kaadi, in the year of the Hegira 1270.

The following is the letter of Lord Raglan:—

Before Sebastopol, December 25, 1854.

Sir,—Her Majesty's Government having authorised me to deliver to the officers upon whom Omer Pacha had announced that the distinction had been conferred, the decoration of the Order of the Medjidié, it becomes my duty, as your son has unfortunately fallen, to transmit the same to you as a memorial of his distinguished services, and a recognition of them by the Ottoman Government. I have the honour to be, Sir, your most obedient humble servant,

RAGLAN.

We understand that a Tablet is about to be erected to the memory of Lieutenant Meynell in the parish church of Langley, in the county of Derby, by the Colonel and officers of her Majesty's 75th Regiment, now serving at Peshawur, in India, with the following inscription:—

The Lieutenant-Colonel and officers of H.M. 75th Regiment, to their late comrade and brother officer, WILLIAM MEYNELL, Senior Lieutenant, who, a volunteer, on leave from his regiment in India, fell gloriously at Giurgevo, on the Danube, the 7th day of July, 1854, aged 28, whilst gallantly leading a party of Turks against the Russians. This Tablet is erected as a mark of their affectionate regard and esteem, and of the deep regret they felt at his untimely but glorious fate.

GRAVES AT SCUTARI.—(SEE PAGE 286.)

LETTERS ON THE WAR AND THE EASTERN QUESTION. (No. I.)

(From our Special Correspondent.)

PRAGUE, March 24.

GERMANY is not the place for a travelling stranger to pick up much news. There are no second and third editions of enterprising and well-informed journals, like those of London, to be had at railroad stations, or anywhere else, to keep him *au courant* of the world's business; and if, perchance, the English traveller is induced to buy the dingy, shabby little bit of paper, that the Germans call a "Zeitung," he will, in all probability, find nothing in it that he did not know two or three weeks before he left London, unless it be small gossip and personal news, indigenous to the locality. London is the great focus of intelligence; whence it is dispersed in floods of light to every state and people that do not resolutely shut their eyes against it. As regards war and peace I have heard absolutely nothing but vague rumours since I left London—some of them in the highest degree absurd. One was to the effect that Lord John Russell had abruptly quitted Vienna; that the Conferences were at an end; and that war à *l'outrance* had been declared. But in passing through Dresden yesterday, I ascertained, what I anticipated, that the statement was an idle fabrication, destitute of the slightest shadow of foundation. I stopped a forenoon in the Saxon capital, and heard that the King of Prussia had arrived four days previously on a visit to King John. His Prussian Majesty preserved the strictest *incognito*; and whether his visit was purely one of friendship and private business, or whether he had come to discuss with his Royal relative the great questions of peace or war, and convert him, if possible, to a neutrality akin to his own, no one could tell. The supposition, however, was, that the two Kings, if not exactly pro-Russian in their immediate objects, were decidedly anti-Austrian. The Prussian King never will forgive the high position that Austria has taken on the Turko-Russian question. He is anxious to assume the leadership of Germany; but he has not the skill, the wisdom, or the honesty, to employ the right methods of attaining it. On all these points he has been foiled by the young Emperor of Austria—a Sovereign who has acted from the very commencement in a clear and straightforward manner—perhaps rather more slowly and cautiously than has suited the wishes of Great Britain and France—but with singleness and honesty of purpose, and a wise appreciation of the true interests both of his own dominions and of all Europe. Judging from the print-shops in Dresden, a traveller might be forgiven for coming to the conclusion that in Saxony the war is popular. My attention was caught by a large and well-executed lithograph, which I recognised as an old acquaintance, and which I saw in at least half-a-dozen shop-windows. It was no other than a very fair copy (with here and there a slight alteration) of the large print which was originally published in the ILLUSTRATED LONDON NEWS of July 15, 1854, representing the Sultan as the centre figure, surrounded by Lord Raglan, Marshal St. Arnaud, General Canrobert, Omer Pacha, and other less distinguished officers of the Allied Armies. The print goes in Germany under the title of "The Defenders of Freedom," a name which was not given to it by the ILLUSTRATED LONDON NEWS. I mention this circumstance to show not only the extensive popularity of your Journal in quarters where its influence might not at first be suspected, but the strong current of German sympathy in favour of the Allies. The same design is also doing duty upon pocket-handkerchiefs, which are exposed for sale at the linendrapers' doors—another little fact which may show, like a straw, how the wind blows in Saxony, and possibly in some other parts of Germany.

Prague, if not strictly beautiful, is a most interesting city. Its multitudinous spires and minarets, and the general character of its architecture, give it a semi-Asiatic appearance. It is finely situated upon the Moldau, and wears a strange outlandish aspect to the traveller who is familiar only with French, Belgian, and German cities. There are scores of picturesque old towns in France and Germany; and the towns of Belgium are perhaps more picturesque still; but none of them have the quaint and almost grotesque splendour of the Bohemian capital. I only made a stay of eight hours in it; but in that time, under the guidance of an active and intelligent German *commissionaire*, who spoke tolerable French and intolerable English, I managed to see the principal sights. Among these I would particularly recommend all future travellers not to omit the Old Bridge over the Moldau, with its gigantic statues of Bohemian and other saints and bishops on either side the Hradshin (pronounced Radshin), the present residence of the ex-Emperor Ferdinand; the Cathedral of St. Vitus, with its crystal coffin and costly silver shrine of St. John of Nepomuk. The silver in this shrine weighs no less than thirty-seven cwt.; but the shrine itself is tasteless as well as useless, and might advantageously be employed in making a beginning for a silver currency in Austria, to replace the filthy notes of ten kreutzers (about fourpence English) which form its principal paper currency. Another interesting spot within the limits of the Hradshin is the ancient palace of the Count of Waldstein—celebrated in the annals of Europe, and made immortal by Schiller in the tragedy of "Wallenstein." Schiller took a liberty with the name of his hero, which was Waldstein the same as is borne by the family at the present day. In this building is preserved the horse which the General rode, and which was killed under him at the battle of Lutzen. The skin has been exceedingly well stuffed; but portions of the head and legs have disappeared, and have been replaced by newer pieces from less illustrious animals. All the rest is the identical hide of the identical horse which bore the great soldier on that memorable day; and is adorned with the real trappings, bit, bridle, stirrups, &c., just as

THE NEW AMERICAN CLIPPER, "GREAT REPUBLIC."—(SEE NEXT PAGE.)

Waldstein (*must* he be called Wallenstein?) left them. In the same apartments are portraits of the hero and his second wife, undoubted originals, but badly executed. Until within the last twenty years the palace of the Waldsteins belonged to the Government, and was used as a cavalry barracks. Waldstein having been declared a traitor, his private property and a portion of the family estates were confiscated. His brother succeeded to the title and to considerable wealth; and the present Count Waldstein, anxious to recbtain possession of a place so interesting to the family, purchased it of the Government about twenty years ago, and has since made it his residence. Under his auspices it has been tastefully restored; and the Great Hall, which was whitewashed in the time of the troopers, has been cleaned, and is now a real "Marble Hall," which Bohemian girls may dream of, and dance in, if it please the proprietor to invite them. In close proximity are the palaces of Prince Schwarzenberg, and of a whole host of the high nobility of Bohemia, who reside here for a portion of the year to economise, and thence transfer themselves in the proper season to Vienna, to make a display. There are upwards of 12,000 Jews amid the population of 130,000 souls in Prague; and though they are not now cooped up by the law, as they formerly were, in one quarter of the town, they still remain in the place associated with their love as well as their degradation—partly from old habit and association, and partly that they may be near their synagogues, and the graves of their forefathers. The Jewish quarter is by no means inviting to the senses either of sight or smell. I certainly should not like to walk through it on a warm summer day. But I performed the feat this morning, much wondering at my own temerity in venturing amid the squalid dwelling-places of these filthy children of Israel, redolent of old clothes and rags, and of the unmentionable creatures that live and breed in the old mattresses and dilapidated bedsteads that they buy and sell. But I was not altogether unrewarded for my pains. I saw one, if not two, of the greatest curiosities in Prague the old Synagogue and the old Burial-place of the ancient people. Their Synagogue is a copy, a very small one, of the Great Temple of Solomon, and is said by the Jews themselves to have been built in the tenth century, and by other authorities in the twelfth. However this may be, the place is in the highest degree curious. The walls are blackened with age and smoke, and have not been cleaned for centuries. Everything as it now stands is exactly as it stood five hundred years ago, no alteration being permitted in it by the Jews except such repairs as are imperatively necessary to keep the place from tumbling about their ears. But it is substantially built, and has been flooded scores of times by the Moldau, which, so lately as 1845, deposited five feet of water in the "Holy of Holies." The building will doubtless last for centuries to come, unless Baron Rothschild, or Sir Moses Montefiore, or their successors, shall buy the Holy Land in the interval, and gather the Jews, by force of money-bags, into the dwelling-places of their forefathers. But anything so mean-looking, so dingy, so dirty, so grimy and black and yet so venerable, I might also say so awe-inspiring, for its antiquity, and from the high religious feeling which has induced the Jews to keep the place standing through so many centuries of evil days—of persecution, of reviling, of contempt, and of cruelty—it is impossible to conceive. It is the oldest synagogue in Europe, if not in the world; and is seldom used at the present day, except for the most solemn festivals of the Hebrews: when the Books of the Law written upon parchment in the ninth century—are taken from the Tabernacle by the Chief Rabbi, and read before the males of the children of Israel. The females are not allowed to enter within these hallowed precincts for the purposes of worship; but may, like Christian strangers, visit the Tabernacle at after-hours, for the gratification of their curiosity. The Jewish Burial-ground is scarcely less remarkable: it is piled and heaped with the remains of the dead Jews of nearly a thousand years. The graves are at least ten feet higher than the floor of the adjoining Synagogue; and not only have the dead been buried—but the tomb-stones themselves have met the fate of the bodies whose memory they were intended to perpetuate, and have been covered up by the soil. Grave-stones, originally eight or ten feet above the surface, have been obliterated from the gaze of the living by the successive interments of thirty generations of Israelites; and of many a tall monument nothing appears above the clod but some small salient angle or topmost corner—Tradition itself, with its proverbially long memory, having lost all trace of the individual whose name or virtues it recorded. No interments have been permitted in this cemetery for more than a hundred years; but it is constantly visited by Jews from all parts of Europe. The inscriptions, in the Hebrew characters, are clear and legible on many of these memorials; and that on the tomb of one Rabbi, buried about seven hundred years ago, is as distinct as if engraven but yesterday—the characters being cut an inch deep. My *commissionaire* drew my attention to the little pebbles that were placed on most of these monuments. These pebbles answer the same purposes as the garlands or *immortelles* used by the French, and are placed as memorials of remembrance or affection. I saw but one tomb in the whole mound of this dense mortality that had not a pebble upon it. It was destined to remain no longer solitary amid its compeers; for I sought and found a pebble, and placed it upon the nameless and unknown grave just because it was nameless and unknown, and because it seemed to my fancy to be the grave of as good a Jew or Jewess as any amid the two or three hundred thousand who slumber in that receptacle.

On returning to the hotel, I saw Ferdinand I. coming out of a shop on the Kolowrath Strasse. I was prepared to see a man answering to Beranger's description of himself "laid, chétif, et souffrant;" but the ex-Emperor by no means realised the picture. He is a little man, certainly; but not ugly; and appeared to be in excellent health. So far from looking vague or idiotic, his face wore an expression of intelligence, mildness, and amiability. I was told that he was beloved by every one in Prague, and that he passed his time in acts of benevolence and charity, making himself the friend of the sorrowful, and raising those who had none other to help them. At the time of his abdication, his mental and bodily health was impaired; but freedom from care wrought wonders both on mind and body; and the Monarch, overburdened with a task too mighty for his faculties, subsided, in a couple of years, into a quiet, highly-respected, and, it is to be hoped, happy citizen.

Prague has entirely recovered from the effects of the sanguinary proceedings of 1848 and 1849. The damage done by the bombardment under the orders of Prince Windischgratz has been repaired, with the sole exception of some of the Titan-like saints upon the Bridge, which were broken to pieces, and overthrown by the cannon-balls, and have not since been replaced. The moral traces of the revolutionary period are as rapidly disappearing; and the Tchek population has ceased to dream of establishing an independent Bohemian kingdom. The Government has acted with much clemency since the final suppression of the revolt; and the keeper of a public-house in Prague—one of the ringleaders, bearing the historical name of *Ziska*—has been allowed to remain at peace at his usual business, although his popularity and eloquence, and his alleged desire of becoming the Masaniello of the movement, if not the Tchek King of Bohemia, very greatly exasperated the disturbances. But clemency and forbearance are the order of the day in Austria. The young Emperor inspired hopes, and as yet he has done nothing to destroy, but very much to increase them.

My second letter shall be from Vienna.

THE AMERICAN CLIPPER, "GREAT REPUBLIC."

THIS gigantic vessel—partly destroyed by fire soon after she was built, during a great conflagration in New York, having had her damages made good arrived in the Thames on her first voyage last week; having made the run from New York to Scilly in thirteen days, and beat up Channel to the Downs in three days against the heavy east winds which have been prevailing. She is at present exciting much interest, from her immense proportions and peculiar rig, as she lies at her moorings off Purfleet.

There is nothing particularly different in her hull, as seen from the shore, from the ordinary American clippers, except her length and the great sheer forward from the fore chains to the figure-head; but, on boarding her, one is struck with her enormous width of beam, which equals that of the largest line-of-battle ships afloat; and one of the great peculiarities of the vessel is her singular rig—she having four masts, and partaking of the qualities of both ship and barque. The topsails, instead of being on the ordinary plan, are housed, or divided into two, the upper one of which can be reefed to half its depth, or sent down altogether. The yards of the lower topsails are secured to the caps of the lower masts by iron slings, and have no further lift from that position. She has large hurricane-houses on her upper decks; and just abaft the mainmast is a roundhouse, containing an engine of 8-horse power. This engine does nearly all the heavy work of the ship—lifts yards, hauls on the braces, walks up the anchor, and assists in receiving and discharging the cargo.

In consequence of her immense beam she cannot enter either of the docks here; and, drawing with her cargo nearly twenty-five feet, she is compelled, from insufficient depth of water higher up, to discharge her cargo in the Long Reach; but it is intended when that is accomplished to bring her up to moorings at Blackwall. She is 3400 tons burthen; 335 feet long; 53 feet beam; hold, 30 feet; and has come here ballasted with 3000 tons of guano. She is the largest sailing ship in the world.

FOREIGN AND COLONIAL NEWS.

FRANCE.

(From our own Correspondent.)

PARIS, Thursday.

REPORT fixes the 6th of April for the visit of the Emperor to England; but, as Good Friday falls on that day, we think it little likely that his Majesty will finish Lent and spend Easter out of France. Another rumour, which seems more probable, names the 9th. We are assured on *excellent* authority—authority to which the private as well as public reasons of Louis Napoleon are known that, if peace be not in the mean time concluded, his visit to Sebastopol remains a point quite decided, and will inevitably take place. It was remarked that, last week, at the review of the troops, the Emperor, for the first time, carried his sword naked—an indication, it is said, of active command.

The Emperor has presented to Vely-Pacha, through M. Fould, a beautiful service in Sèvres porcelain, having heard that his Excellency had expressed an intention of taking with him some specimens of this manufacture.

It has been impossible for many of the artists who propose to exhibit their pictures in the Salle des Beaux Arts of the Exposition d'Industrie to have all these productions ready by the day fixed for their reception—the 15th of March; some having been mistaken in their calculations as to time, others from the difficulty of getting frames, the services of all the frame-makers in Paris being put into the most active requisition to supply all the demands created by the occasion. Indulgence has therefore been accorded them, and all that were intended to appear will, it is expected, find places. Among the most important productions of French artists may be cited a "Chasse au Lion," by Eugène Delacroix, in which, it is said, the celebrated painter has shown himself to be as fine a draughtsman as he is known to be a colourist; "La Retour de l'Armée après la Bataille de Paris, en 1814," by M. Muller—a picture eighty feet long; "Les Pilori des Sages," by M. Glaize—sixty feet long; and "La Maréchal Ney faisant le coup de feu"—an episode in the retreat from Russia—by M. Yvon.

The medical service for the Palais d'Industrie has just been definitively organised. Four physicians, assisted by two aids, selected from among the *internes* of the Paris hospitals, are attached to the service during the whole time that the Exhibition remains open. Particular rooms are allotted to the use of the physicians and their attendants, and such arrangements are made that one of the medical officers shall always be in attendance from eight o'clock in the morning till six in the evening.

It has been decided that there are to be no admissions gratis to the Palais d'Industrie. On the *jours réservés*, the tickets are to be five francs; on the ordinary days, one franc; and on what are called *les petits jours*, four sous. The Palais des Beaux Arts which belongs to the Government, will be subject to different arrangements, and will have certain days of free entrance.

We stated in our last that it was believed the Minister of State intended to refuse to Mdlle. Rachel the permission to fulfil her engagement to the United States while the Industrial Exhibition remained open. This right of detention existed in virtue of an Act entitled, *le décret de Moscou*, by which no *sociétaire* of the Théâtre Français could have the right to retire, or to play elsewhere, unless permitted by the State so to do, within the space of twenty years from his or her admission. As Mdlle. Rachel has only occupied the place of *sociétaire* eighteen years, she has not, according to this rule, the right to retire; yet, on the other hand, her *démission* from the theatre, sent in last year, having been accepted, she appears to stand in a peculiar position, which it is difficult to define. Whatever may be the justice of the case, the celebrated tragedian requests the permission to perform her American engagement, not as a right, but as a favour. The state of her health rendering a prolonged artistic career impossible, and finding in this engagement a pecuniary benefit which will secure an independence to herself and her family that no length of service in France could obtain, she places her case in the hands of the Minister of State; who, it is supposed, can hardly refuse the demand, seeing that, whether she goes or remains, the public here cannot benefit, the acceptance of her retirement enabling her to refuse to play in France. Several of the Paris papers have taken up the question with more or less warmth.

On Sunday took place at the Madeleine an imposing funeral service for the repose of the soul of Don Carlos. A Spanish priest, assisted by all the clergy of the parish, officiated, and a number of distinguished Spaniards, and Spanish refugees, attended the ceremony.

M. Troplong, the President of the Senate, is at this moment completing a most important work of jurisprudence, entitled "Physiologie et Philosophie des Testaments." Among other new publications of interest may be named, "Mémoires d'un Conspirateur," by the Comte Rufini, the friend and co-operator of Mazzini; "Les Aveux d'un Poëte," by Heinrich Heine; "Les Mémoires de M. Prudhomme," by Henri Monnier; and a "Correspondance Inédite" of Stendhal, preceded by an introduction by M. Prosper Mérimée. There is also a talk of the appearance of an autobiography of the *père* Ventura—who has left off preaching, and devotes himself wholly to writing.

The Minister of State has ordered the engagement of Madame Emilie Guyon at the Théâtre Française, to fill the place left vacant since the departure of Mdlle. Georges; Mdlle. Rachel's position being different to that occupied by that great tragedian.

Thalberg has just completed an opera, entitled "Monaldeschi." He is now at Turin, where he is instructing Bettini in the principal part, which has been written especially for him.

COUNT NESSELRODE'S CIRCULAR.

THE following circular has been sent by Count Nesselrode to the Russian diplomatic agents abroad, announcing to them that the Emperor confirms them in their functions, and at the same time giving a sketch of the line of policy which their new Sovereign proposes to pursue with regard to the questions of peace and war:—

St. Petersburg, Feb. 26 (March 10)

My despatch of the 18th February (March 2) announced to you the accession of his Majesty Alexander II. I had the honour at the same time to send to you the Imperial manifesto issued on the first day of the government of our august Sovereign. That document expresses the profound conviction with which his Majesty recognises the importance of the duties he is called upon to fulfil. Divine Providence imposes these duties upon him in the midst of a great trial. In ascending the throne of his ancestors the Emperor finds Russia engaged in a struggle unparalleled in the annals of history at the commencement of a new reign. Our august Sovereign accepts that trial, confiding in God, inspired with the sentiment of security in the unshaken fidelity of his people, with a religious veneration for the memory of his well-beloved father. With filial piety he welcomes (*accueille*) in his succession two obligations, which are equally sacred to him. The first exacts from his Majesty the development of all the power which it has pleased God to place in his hands for the defence of the integrity and of the honour of Russia; the second imposes upon his Majesty the duty of consecrating with perseverance his care to the accomplishment of the work of peace, the bases of which were sanctioned by the Emperor Nicholas. Faithful to the idea which manifested itself in the last dispositions of his august father, the Emperor has renewed the powers and confirmed the instructions with which the Russ an Plenipotentiaries were provided since the month of December, at the period when the negotiations at Vienna were to be opened. In this manner the intentions of the Emperor Nicholas will be conscientiously fulfilled. Their object was:

To restore to Russia and to Europe the blessings of peace; to consolidate the freedom of worship and the welfare of the Christian populations of the East without distinction of rites; to place the communities of the Principalities under a collective guarantee; to assure the free navigation of the Danube, to the advantage of the commerce of all nations; to put an end to the rivalries of the great Powers in the East, so as to prevent the return of new complications; finally, to come to an understanding with them on the revision of the treaty by which they recognised the principle of the closing of the Dardanelles and of the Bosphorus, and thereby to arrive at an honourable arrangement for all parties.

A pacification founded upon these bases, in putting an end to the calamities of war, would invoke the blessing of all nations upon the new Government.

Nevertheless, Russia feels deeply, and Europe must know that the hope of a conclusion of peace will remain fruitless if the conditions of the arrangement to be concluded should exceed the just limit which the sentiment of the dignity of the Crown traces irrevocably in the resolutions of our august Sovereign. The Emperor will tranquilly await the manifestation of the views which frame the policy of the Cabinets called upon to solve, in concert with Russia, this question, which is of a general interest for all Christendom. Our august Sovereign will join the deliberation in a sincere spirit of concord. Such is the thought which I am charged by his Majesty to express to you in his name. The general instructions with which you are provided trace out to you the line you are to continue to follow relative to the direct relations you have to entertain with the Government to which you are accredited. The Emperor, in confirming you to-day in the post you obtained from the goodness of his august father, confidently counts upon your fidelity and zeal. It is his desire that, by your conduct and by your language, you should render testimony on every occasion to the loyalty with which Russia fulfils the obligations which rest upon the faith of treaties, to her constant desire to live in good harmony with all the Powers her allies or friends; finally, to the respect she entertains for the inviolability of the rights of all States, and her firm resolution to maintain and cause to be respected the rights which Divine Providence has intrusted to the Emperor, for the welfare of his country, and protector of the national honour of his country. You are requested to make known the present to the Court at which you had the honour of representing the Emperor Nicholas of glorious and much-cherished memory.

NESSELRODE

AMERICA.

By the mail steam-ship *Canada*, which arrived at Liverpool on Thursday morning, we have dates from New York to the 17th inst.

There is no intelligence of moment from the United States. The news of the Emperor of Russia's death had been received. The Russian Minister, however, considered the reported death of the Czar to be a hoax.

The latest news from Texas is comprised mainly of accounts of the ravages of the Indians, committed in the most daring manner. Emigrants continued to arrive in large numbers, and there was plenty of employment for them.

A bill had been introduced into the Legislature to exclude from the mines all persons who are not eligible to citizenship. This bill, if it become law, will drive from the mines many thousands of the Chinese.

A new political party had sprung up in San Francisco, whose ulterior designs were supposed to aim at the formation of a Great Western Republic. It proposed immediately to organize Oregon and California into States, and to annex the Sandwich Islands and Sonora, and as much more of the territory of Mexico as can be conquered or purchased.

Late advices from Honduras mention the prevalence of rumours of Filibustering expeditions from the United States for the invasion of the Mosquito country, and of the design of General Carrera to subdue and annex the state of Honduras to Guatemala. It was also expected that another bombardment and the destruction of Greytown would take place. These reports had created an unusual excitement among the inhabitants.

There is nothing important from Havannah up to the 10th inst. The trial of those concerned in the conspiracy had commenced.

WILLS AND PERSONALTY.—Rear-Admiral Edward Augustus Down, £4000; Captain John Charles Conolly, 23rd Fusiliers (at Alma), £3000; Colonel Thomas Leighton, 2nd Grenadiers (Bombay), £7000; Thomas Graham Arnold, M.D., Stamford, Notts, £10,000.

THE LATE CZAR'S PHYSICIAN.—Dr. Mandt, homœopathic physician to the late Emperor, is said to have left Russia in great haste and secretly. He is reproached with having too long concealed from the august deceased that his lungs were attacked; also with having himself prepared the medicines destined for the Emperor, instead of having had them prepared by a druggist. Great irritation was manifested against him at St. Petersburg, and the Emperor Alexander himself advised him, it is said, to leave Russia.

NEW BELGIAN MINISTRY.—A new Ministry has been formed, as follows:—Viscount Vilain, XIV., Foreign Affairs; M. de Decker, Interior; M. de Nothomb, Justice; General Greindl, War; M. de Dumon, Public Works; Mr. Mercier, Finances.

On Wednesday the anniversary festival of the City of London Truss Society Charity was held at the Albion Tavern, Aldersgate-street. Viscount Ranelagh was in the chair. Since the establishment of the charity, in 1806, no less than 197,000 persons have been relieved—the number in the last year being 7325.

A branch Synagogue, recently erected in Great Portland-street, was consecrated on Thursday afternoon by the Chief Rabbi, Dr. Adler, assisted by the Rev. Mr. Ascher, the Rev. Mr. Green, and the wardens and other honorary officers of the congregations.

On Monday last, at Thames Ditton, the daughter of Lady Lambert expired, after a few hours' intense suffering, from the bite of her favourite cat.

THE second reading of the Newspaper Postage and Stamp Duties Bill now stands for Monday, 16th April—not the 23rd, as at first arranged.

We have much satisfaction in stating that Sir John Herschel will be succeeded as Master of the Mint by the distinguished Professor Graham, of University College, now one if the Assayers.

THE WAR IN THE CRIMEA.

The repeated announcements from the Allied Camp that active operations were about to commence have hitherto ended in nothing. Up to the 26th of March Lord Raglan and General Canrobert appear to have deemed it their wisest course to act on the defensive. A council of war was held on the 11th, at which Omer Pacha and the English and French Admirals and Generals were present; but, although they spent several hours in discussing what ought to be done, nothing is known as to what they have resolved to do. The letters from the Camp which come down to the 16th continue to give a highly favourable account of the condition of the English troops. The improved weather has wrought as a charm in raising the spirits and improving the health of the men—and, of course, by increased numbers, abundant clothing and provisions, improved arrangements as to transport—immensely facilitated by the railway—and renewed activity and hope as to the bombardment. These letters are now as buoyant as were those written anticipatory of the opening of the fire in October last, with better grounds for favourable anticipations. They represent our works as very far advanced, and immensely strong in cannon and ammunition, and, though the Russians are as active in erecting defences and counter-batteries as ever, it is tolerably evident that their now much more extensive and complex line of works must be less abundantly manned and supplied with guns and stores than those from which they first replied to our fire. This may almost be inferred from the greater caution shown by the Russians in expending their shot. One of the greatest blunders which they committed from the first, was their useless waste of powder and shot. They have frequently fired from such an enormous distance at moving objects, that they have sometimes wasted 100 round-shot, and as many shells, to kill one of our soldiers. They have now grown much wiser. On the 16th, while Lord Raglan was inspecting Gordon's Battery, the English fired repeatedly upon the enemy, and succeeded in shelling out the Russian riflemen, who lay perdu in front of the lines. All the while the Russians scarcely returned one gun for ten of ours. Formerly a single shot fired from the English works would have been replied to with such a volley as would have silenced ours in a short time.

A despatch from General Osten-Sacken announces that, on the 17th, three battalions of Zouaves attacked the Russian works in front of one of the new redoubts, and were repulsed. Another despatch states that the Russians made a general attack on the lines of the Allies, and were repulsed with considerable loss.

The Russian forces are said to be distributed as follows:—At Perekop is encamped the corps of Dragoons, a Division of Light Cavalry, and various other detachments, amounting in all to 20,000 men, under the command of General Pawloff I. At Simpheropol there are about 45,000 men, commanded by General Read. Near the Belbec General Osten-Sacken's headquarters have been placed, with 50,000 men, including the garrison of Sebastopol. On the Tchernaya is encamped General Liprandi, with 18,000 men; and in the valley of Baidar is General Wagner, with 9000 men. It appears that the first operations which General Osten-Sacken had executed, on his appointment to the chief command, was to have all the heights along the coast occupied and fortified from Karabelnaya to the mouth of the Tchernaya. The heights on the left bank of the Alma have also been fortified; and this defensive system seems to show that not only is Bagtchesarai the centre of the General's operations, but that a greater importance is attached to the communications of Bagtchesarai with Sebastopol and with Arobat, than to those of that town with Perekop. The Russians, in fact, seem determined to defend to the last extremity the basis of the Salzir as well as the ground extending from Simpheropol to Ruffa, their intention being, to all appearance, to procure their provisions and stores from the side of Anapa, and their reinforcements from Perekop. Should the Allies think fit to enter into operations not immediately in the neighbourhood of Sebastopol, it is not improbable that they will set against that object the centre of the Russian position.

The situation of the Allies in the Crimea is represented in the official *Journal de St. Petersbourg* in the following terms:—

The position of the Allies is now completely shut in by an enclosure of formidable intrenchments, extending from the great infantry camp near the citadel by the heights of Inkerman, along the Tchernaya, as far as the approaches of Baindava. New divisions have joined the army. Grave events are expected.

The latest despatches from Omer Pacha state that the Russians were evidently preparing another grand attack on Eupatoria. The Turkish General was with confidence of his power to resist the enemy. His supplies had nearly all arrived from Varna, and his defences were complete. The enemy appeared to be still waiting for reinforcements. Omer Pacha is anxious to obtain more cavalry to profit by the anticipated repulse of the enemy; but there are none to spare from the Allied Camp

WHAT RUSSIA MEANS TO DO.

The most recent accounts from St. Petersburg give no encouragement to the notion that Russia is likely to be more anxious for peace under the new reign than she was under the old. The preparations for war are said to be going forward as actively as ever from Cronstadt to Sebastopol. At the great fortress of the Baltic, the Russians appear to be adopting the same system as they have pursued in the Black Sea. Telegraphic despatches announce that there have been sinking several ships of the line and other vessels between piles in the navigation way at Cronstadt. As regards the sentiments of the young Emperor, the following letter from St. Petersburg, of the 17th, professes to give his views regarding the course which Russia ought to take —

Allow me to relate to you a scene which took place at the Winter Palace on the 4th, on which day all the Generals and subaltern officers of the Guards and Grenadiers received orders to assemble in the apartments of his Majesty at half-past ten in the morning. The Emperor appeared at eleven o'clock, and addressed them in the following terms:—

"By the death of the late Emperor we have lost our benefactor: we have all received a heavy blow. The loss which I have sustained is greater than that of any other person, and my grief is more acute. In the first moments of the disaster which has just fallen on us, my feelings were in the first place directed towards you, my well-beloved comrades, in order to share with you my affliction and to communicate to you the words of our illustrious benefactor, in testimony of his love for his faithful troops." (Here the Emperor read the words, which have been already published, "I thank you, my faithful and valiant guard," &c.) On coming to the words of his father, "So long as this spirit shall be preserved, the security of the empire, both abroad and at home, is secured, and woe be to its enemies," the Emperor made the sign of the cross, adding, "God grant that it may be so!" All the officers present also made the sign of the cross, and exclaimed "It shall be so." After reading the remainder of the expressions of the deceased Czar, the Emperor continued, "I hope that these words will be deeply engraven on your memories. They will always remind us of what we owe to the deceased Emperor, our benefactor. In taking leave of you, as General Commander-in-Chief, I do not separate myself from you in heart; on the contrary, you are closer to me than formerly—you are in my charge. I have always loved you, and I shall always love you sincerely as my children. I will never abandon you. Believe me, when I say that the happiest days of my life were those which I spent in your ranks. I thank you from my heart for your services and for your true devotedness to my late father and benefactor. I hope, and I am sure that you will always retain those feelings of noble devotedness. It is a guarantee for me *that we shall not yield one step to our enemies;* we will never abandon our well-beloved Russia, which we all, you and I, *must and will serve to the last drop of our blood;* for it is by that conduct alone that we can worthily honour the memory of our late Emperor, and respond to his deep solicitude for the welfare of the country."

The conclusion of the speech was hailed by a loud shout of approbation. In dismissing the officers, the Emperor blessed them with the sign of the cross, adding "Adieu! may God be with you."

The *Abeille du Nord* of St. Petersburg publishes a fanatical appeal to the Russian people to rise in arms for the defence of the Church. It calls upon the clergy to exhort their flocks to fight for the good cause, and to impress upon them that the present war is the ancient war "of the Prince of Darkness against the Kingdom of Christ." It concludes with a prayer to the Almighty to admit those who fall on the field of battle for the good cause at once into the Kingdom of Heaven.

In the recruitment which was effected on the night of the 12th, the fourth within fifteen months, not fewer than 20,000 men were taken in different parts of the kingdom of Poland, the greater part on the left bank of the Vistula. A fourth of the levy consists of married men and fathers of families. In the levy were some hundreds of men who had cut off their first finger to incapacitate them for serving; but they have gained nothing by it, as they have all been enrolled.

A RECONNAISSANCE AT EUPATORIA.

On the 5th of March Skender Beg left Eupatoria with 300 irregular cavalry and 100 Tartar Bashi bozouks, to make a reconnaissance, and while doing so was met by four strong squadrons of regular Russian cavalry. Notwithstanding the disproportion of numbers, an obstinate struggle ensued; but Skender Beg was compelled at last to retreat, retiring slowly and fighting inch by inch of ground. In this affair the Russians lost about thirty men. The Tartars had made five prisoners, but they afterwards escaped. Skender Beg, according to the Turkish bulletin, had only eleven killed and two wounded; but he himself received a sabre-cut on his right hand, which damaged three fingers and rendered amputation of a fourth necessary; he also received the thrust of a lance near the heart; but the most serious wound was a cut from a sabre across his forehead. No fears are, however, entertained of saving the life of this brave and dashing cavalry officer

The following letter from Eupatoria, dated March 5th, gives a more graphic account of the affair:—

To-day it was decided that a reconnaissance on a little larger scale should be undertaken. Accordingly three squadrons of regular cavalry—two of them of the 2nd Regiment of Rumeli (called Hadji Alay, because it has made the pilgrimage to Mecca), and the third a squadron of Redifs of the 2nd Regiment of Guards—about 30 Bashi-bozouks, and 150 mounted Tartars, went out, under the command of Skender Beg

The Russian videttes occupy a number of mounds running nearly parallel with those occupied by the Turkish videttes. The first mound left is close to the bridge which leads over a creek running inland from the putrid lake Sasik, while about the centre of the whole line are two other mounds, not far from each other, one of which has an appearance as if it had been opened. These three mounds are the scene of the daily excursions. Beyond them the Russian line of videttes falls back towards the little lake to the north of the town, on whose shore the white ruins of the Tartar village Meskow may be distinctly seen. For the support of the Russian videttes there was a squadron of Lancers hid in a hollow near the bridge to the right, two sotnias of Cossacks towards the centre on which the videttes retired when they saw the Turks coming; and besides this a squadron of Hussars on white horses appeared sometimes towards the left. From the daily excursions of the Turkish cavalry, these forces, as well as their respective positions, were tolerably known. On this Skender Beg, who had always left these military promenades, built his plan. He sent the two squadrons of the 2nd Regiment to the right, in order to keep in check the squadron of Lancers, while he himself, with the remaining squadron of Redifs, the Bashi-bozouks, and the Tartars, advanced towards the two mounds in the centre. The Russian videttes retired, as usual, on the main guard; but, before their reserves could come up, Skender Beg gave the order to charge, and Tartars, Bashi-bozouks, and Redifs went off pell-mell in full gallop towards the Cossacks, who, keeping their skirmishing line, made a precipitate retreat towards their reserves, which were advancing at full speed. Both parties kept up a brisk fire, and the Turks were already in the midst of the retiring main guard, when the Russian reserves came up. Skender Beg, seeing this, commanded a charge against them; and he himself at the head charged with his accustomed courage: but he was only followed by the Bashi-bozouks: the Tartars, with few exceptions, remained stationary; while the Redifs, after having followed for a while, and lost a few men through the fire of the enemy, turned back and ran Now the Cossacks charged and drove back Redifs, Tartars, and all Skender Beg, who was only followed by two Bashi-bozouks, had to cut his way back through the enemy, which he effected, but not without receiving a sabre-cut over the forehead, which penetrated the skull, a lance-thrust, which glanced off from his breast, and a cut over the hand, which broke two of his fingers. Four Bashi-bozouks, six Redifs, and one Tartar are lost

About 2000 yards from the mounds where the charge took place the Turkish cavalry at last halted and formed. Skender Beg, notwithstanding his wounds, which were copiously bleeding, wanted to remain and return to the charge; and when he was with great difficulty persuaded to go back to the town, Sefer Pacha (General Koscielsky, a Polish officer, took the temporary command

THE THIRD "POINT."

As it is commonly understood that this is the most important of all the "Points," we reprint the exact terms in which it was laid down in the identic note of August 8. It was there declared that the re-establishment of the relations between Russia and Turkey on a friendly basis was impossible—"*Si la teneur du 13 Juillet, 1841, n'est par remise de concert par toute les hautes parties contractantes dans un interet d'equilibre Europeen.*" (Unless the treaty of July 13, 1841, is revised in concert by the high contracting parties in favour of the balance of power in Europe.)

In their despatches of the 22nd of July, M. Drouyn de Lhuys and Lord Clarendon interpreted this Third Point in the same manner. Lord Clarendon said:—"The privileged frontier of Russia in the Black Sea has enabled her to establish in those waters a naval power which, in the absence of any counterbalancing force, is a standing menace to the Ottoman Empire

The Vienna correspondent of the *Times* records in juxtaposition the interpretation of the Third Point agreed on by the Allies, and that handed in by Prince Gortschakoff on the 9th of January.

The *Aide Memoire* of the Allies ran—	The Third Point, according to the Russian interpretation.
3. The object of the revision of the treaty of July 13, 1841, could be more completely to attach the existence of the Ottoman Empire to the European balance of power, and to put an end to the preponderance of Russia in the Black Sea. The arrangements to be made in this matter depend too immediately on the events of the war for their bases to be settled at present. It is sufficient to have indicated the principle.	3. Revision of the treaty of the 13th July, 1841, to attach more completely the existence of the Ottoman Empire to the balance of Europe. I do not refuse to come to an understanding in formal conferences for peace on the means which the Imperial Courts may propose to put an end to what they call the preponderance of Russia in the Black Sea, on condition that in the choice of those means, there be not one of a nature to infringe upon the rights of Sovereignty of my august Master on his own territory

PRUSSIA AND THE WESTERN POWERS.

A circular despatch, dated the 16th instant, signed by M. Manteuffel, and addressed to the Prussian Ministers at German Courts, contains a statement respecting the special missions of Herr von Bodicon and General von Wedell to London and Paris. It is therein laid down that, "according to the express command of the King of Prussia a regular understanding with the Cabinets of London and Paris cannot be attained, until Prussia has, by participation in the Peace Conference, acquired a thorough knowledge of the full import of the bases of peace, for the attainment of which she would have to enter into obligations." It is added—"As yet there has nothing taken place between us and the Western Powers beyond a confidential interchange of ideas, from which we, for our part, have not departed, and which character, if it had been observed on all sides, would, perhaps, have prevented many misunderstandings. This interchange of views, however, cannot, with all our sincere desire of arriving at an understanding, lead to engagements by entering into arms."

Count Buol has officially notified the commencement of the Conferences to Prussia, at the same time expressing his sincere regret that, "notwithstanding the efforts of Austria, Prussia, who takes so sincere a part in the Eastern question, should not be represented at the Conferences, so that the Imperial Government will be alone in defending German interests.

INDIA, CHINA, AND AUSTRALIA.

The steamer *Bombay* arrived at Trieste on Wednesday, at eleven o'clock a.m., in 112 hours from Alexandria. The India, China, and Australia mails left Alexandria on the 23rd inst., with intelligence from Calcutta, Feb. 24th; Madras, 28; Galle, March 3; Bombay, March 9; Shanghai, Feb. 6; Hong-Kong, 15; Singapore, 23; Sydney, Jan. 27; Melbourne, 31; Adelaide, Feb. 3; Mauritius, 18.

Hyder Khan, as representative of Dost Mahomed, has arrived at Jellalabad, on his way to Peshawur, to negotiate with the Chief Commissioner Lord Dalhousie has gone to the Neilgherries. The condition of Oude becomes daily more deplorable.

The French had again attacked Shanghai, and been repulsed, with loss, by the rebels. The country round Canton is in the hands of the rebels.

Sir W. Denison, Governor-General of Australia, arrived at Sydney, Jan. 17. No further disturbances have occurred at Ballarat. Trade in Australia has somewhat improved, but political matters are unsatisfactory.

THE VIENNA CONFERENCE.

We believe we are correct in stating that the Third of the Four Points having come under the consideration of the Congress of Vienna, and the Plenipotentiaries having exchanged their ideas upon this important condition, it has been found by them necessary to communicate with their various Governments, and especially with St. Petersburg, in consequence of the inability of the Plenipotentiaries to reconcile their respective instructions

The Third Point, it will be remembered, stipulates for the entrance of Turkey into the European family, and for the limitation of the preponderance of Russia in the Black Sea. This point, it is true, was, with the others, accepted by that Power; but now, when its object and scope come to be determined, it is not surprising that Russia should endeavour to interpret them in a manner as little injurious to herself as useless to us; whilst we are determined to see them carried out in material guarantees—such as the limitation of the naval forces of Russia in the Black Sea to a squadron of a strength merely necessary for the purposes of police, and quite inadequate for aggression.

In matters of such importance as these is was not expected that Plenipotentiaries would be authorised to give a final answer. But, as the case now stands, M. Titoff and Prince Gortschakoff will have put their Imperial master in possession of the requirements of the Allies on this point, and will, no doubt, in the course of some days, receive his instructions

While waiting for these the Congress will probably continue to meet, and, we suppose, will pursue the study of the First and Second Points—which have not been accepted, as it has been erroneously stated, but merely acknowledged as to their general bearing. They have yet to be canvassed in all their difficult details; and this, if ever it be come to, will be a work of many weeks.

We must caution the public, then, against the many erroneous telegraphic messages and letters which have obtained currency, and against the premature statements which may be made, either peaceful or warlike, during the short interval which must elapse ere an answer is received from St. Petersburg

We wish we could entertain hope that the Government of the young Czar will submit to the terms on which alone an honourable and safe peace can be obtained; but we fear that, great as our efforts have been, it may need yet greater before we can be satisfied of the future tranquillity of Europe.—*Morning Post.*

NATIONAL SPORTS.

ONE more week and Easter-Monday will see the doors of the antique rubbing-houses and weighing-stands, at Newmarket, once more creaking on their rusty hinges, and the racing season of 1855 begun in earnest. Next week will be a complete lull among racing men, who have only a small meeting at Lincoln to engage them on Tuesday and Wednesday. To the seven flat races, three of which are on Tuesday and four on Wednesday, £210 is added. The Handicap Hurdle Race, and the Spring Handicap, on the latter day, have each eleven entries; but the other stakes have yet to fill. The late dull meeting at Epsom is not without incident. The first of "Mr. Howard's" high-priced two-year-olds appeared in the shape of the five-hundred-guinea Spindle, who was beaten easily by another filly, which cost 345 guineas less at the same Royal sale. Ireland's colts, also considered to be so useless at the end of last season, that his owner is said to have given him away to Mr. Baron Martin for a park hack. Owing to some mistake, the horse was never sent for by the learned Irishman; he was consequently put into training, but was thought so little of by his stable, that though his owner won £380 in stakes, he lost a £100 to £5 bet about him. Fandango (thanks to the restiveness of Cornelius), justified the confidence of his Yorkshire friends, who journeyed south in shoals to back their favourite "red spots," which were worn on this occasion by Sam Roger's best pupil young Steggle.

Steeplechasing has also a very scanty bill of fare to offer for the week. Lincoln will have two events—the principal of which, on Tuesday, has twelve nominations; and Henley-in-Arden holds its jumping fête on the same afternoon. Harrow and Uxendon join in a five-event card for Thursday; but since the memorable struggles of 1850, in which Maria Day and Frisby so much distinguished themselves, steeplechasing in the neighbourhood of the "great metropolis" has faded away to nothing. Thursday, however, the engagement of Mr. Johnson, of York, as secretary, will infuse fresh spirit into this meeting, and he has succeeded in getting nineteen entries to the principal stake. The practices of this dubious sport have received a fresh exposure at Liverpool, where the death of Miss Mowbray produced a chemical examination of her stomach, which was found to have been charged with a pint of deleterious liquor only an hour before her fatal start. An acquaintance of their trainer's, who had the care of her at Liverpool, will, it is said, be prosecuted. This sport was seen in its best phase at Leamington last week, as Bourton (whose leg had wonderfully recovered by ten days' rest), gave 56 lbs. to Seaman, and was only defeated by the shortest of heads

Coursing may be said to have come to an end in England and Scotland with the present month, although the Irish coursers sometimes slip at a hare in May. *Apropos* of dogs and hunting, we may mention that the New Forest pack, with its nine hunters, will be sold at Tattersall's on Monday next, and on that day fortnight the Oakermoor hounds, consisting of fifty couple of working dogs, and thirty-five couples of puppies, will also be brought to the hammer, as well as twenty-five of the Heythrop Hunt stud

As far as we know, the first cricket match at Lord's is fixed for May 28th, and already the knights of the Willow are big with preparations for their coming campaign.

The Oxford Eights have commenced the boating season, and their metropolitan brethren will have their opening day towards the close of next week, when a £10 a side oars' match will be rowed, between four watermen, from Battersea to Hammersmith; while the London Unity Club row their first match from the same starting-point to Westminster.

CROXTON PARK RACES. THURSDAY.

Farmers' Plate.—The Times, 1. Sultan, 2
Coplow Stakes. Springy, 1. Maid Tom, 2
Granby Handicap.—Dead Heat between Miss Briggs and Ethelwolf.

FRIDAY.

Farmer Handicap.—Sultan, 1
Belvoir Castle Stakes.—Benburb, 1. Pole Star, 2
Gold Cup Hercules, 1. Ethelwolf, 2.

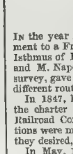
NORTHAMPTON AND PYTCHLEY HUNT RACES.—TUESDAY

Stand Plate Commodore Charley, 1. Cranbourne, 2
Great Northamptonshire Stakes.—Hungerford, 1, Quince, 2.
Pytchley Stakes. Queenscake, 1. Vulcan, 2
Whittlebury Stakes. Thames Ditton, 1 Park, 2
Her Majesty's Plate.—Kingstown, 1. Rataplan, 2

OBITUARY OF EMINENT PERSONS.

SIR W. M. S MILNER, BART.

SIR WILLIAM MORDAUNT STUBT MILNER, fourth Baronet of Nun-Appleton Hall, Yorkshire, was the eldest son of Sir William Milner, the third Baronet, by his wife, Diana, eldest daughter of Humphrey Sturt, Esq., of Critchill House, Dorsetshire. He was born on the 20th October, 1779, and succeeded his father, as fourth Baronet, on the 9th September, 1811. The Milners Baronets are among the most extended landed proprietors in Yorkshire, and, in politics, incline to the Liberal side. Sir William, the fourth Baronet, was a Whig, and his elder son, has been for some years, M.P., on the Whig interest, for the city of York. Sir William, who was a Deputy-Lieutenant of Yorkshire, married first, in 1803, Selina, daughter of the Right Hon. Theophilus Clements, by whom (who died the 28th May, 1804) he leaves one daughter, Catherine, wife of the Rev. Canon Markham. Sir William married, secondly, in 1809, Harriet Elizabeth, daughter of Lord Edward Charles Cavendish Bentinck, by whom he leaves two sons and five daughters: of the latter two are married, viz., Mrs. Egerton and Mrs. Strickland. Sir William died at his seat, Nun-Appleton-hall, on the 24th inst. He is succeeded by his elder son, now Sir William Mordaunt Edward Milner, the fifth Baronet, whose wife—Anne Georgina, youngest daughter of Frederick Lumley, Esq.—is great granddaughter of the fourth Earl of Scarborough.



LADY KATHERINE MOLYNEUX. This lady was the youngest daughter of William Philip, second Earl, and sister of Charles William, fourth and present Earl of Sefton. She was born the 20th December, 1808. Her Ladyship died (unmarried) recently, at Croxteth-hall, near Liverpool, the seat of the Earls of Sefton.

THE PANAMA RAILWAY.

IN the year 1846 a charter was granted by the New Grenadian Government to a French company for the construction of a Railroad across the Isthmus of Panama. A survey was then made by order of Louis Philippe, and M. Napoleon Guerilla, the Chief Engineer who conducted the said survey, gave a brilliant report thereon; and is map exhibited but a slightly different route to that now accomplished.

In 1847, however, the same year that Guerilla completed the survey, the charter of the Railroad Company was transferred to the Panama Railroad Company—an American one—and the following year preparations were made for securing such change of charter, then in possession, as they desired, which was completed in April, 1850.

In May, 1850, the month following the grant of the charter, Messrs. Baldwin and Trowtwine, and six men, went from New York to Navy Bay, and commenced clearing away the timber, &c., upon the Island of Manzanilla, on which the town of Colon, or Aspinwall—of which we are

PANAMA RAILWAY.—THE CULEBRA OR SUMMIT STATION.

enabled to give a very faithful representation—is situated. They had with them a large storehouse, which the Company still uses. This they proceeded to erect, living meanwhile and for some three months on board the vessel that brought them. When the clearing was commenced not a tree had been felled on the island, and with Mr. Baldwin lies the honour of having felled the first.

In June, 1850, Mr. Stephens (President of the Company) and Colonel Tatten (Superintending Engineer) arrived with thirty men from Carthagena; and, on the 31st August following, Dr. Rodgers arrived from New Orleans with a number of mules, and forty-five Irishmen—the first white labourers employed on the island. They cleared a road from the head of the island, a short distance from the mainland, to what is now called Monkey-hill, a place subsequently made the burying-ground, and where thousands have unfortunately been buried during the carrying out of this work. In September and October, 1850, the houses on the point of the island in the foreground of the Engraving, near the lighthouse (from whence the View is taken), used as storehouses and dwellings for the Company's officers, were brought from New York, and put up. Immediately following supplies of labourers took place from Jamaica, and the engineering and work on the line were proceeded with rapidly. Unforeseen obstacles, however, arose, which retarded the work greatly in 1852. The mortality had been lamentable in extent, and the supplies of men were insufficient. Considerable reinforcements from Carthagena and Jamaica were subsequently obtained, and by the beginning of last year the line was opened out a distance of about forty miles—viz., to "The Culebra or Summit Station," within ten or twelve miles of Panama. From that station all passengers, goods, and specie were conveyed by mules—of which there was always a very large supply kept—to Panama; and Hampstead-heath, in its happiest time, could not present a more amusing sight than the "Summit Station" on arrival of a train and the transferring of its motley group of some thousand passengers to the backs of as many mules, amidst all the excitement of rival ownership.

It was not until the 29th of January last, after four years and a half of most arduous labour, that Colonel Tatten had the gratification of traversing, with a few friends, the whole length of line, returning the same day to Aspinwall, and receiving the warm congratulations of all around him.

The traffic on the line was, however, the very next day stopped, and remained suspended for about a week, owing to unusually heavy rains, which lasted for three days without ceasing, having washed in the new cutting at "the Summit," and by overflowing the rivers damaged some of the bridges. Every exertion having been used, the way was again made clear, and great preparations made for the formal opening on the 16th ult., when a large party of the Directors and friends arrived from New York, and the young town, with its many-coloured population in the greatest excitement, and in its holiday attire, with the buntings of all nations, real and imaginary, fluttering in the breeze, did full honour to the great occasion.

The railway across the isthmus of Panama, connecting the two oceans, is now a *fait accompli*; and presenting as the route does a direct line to Australia from England, together with facilitating the passage to the west coasts of North and South America, avoiding the tedious and dangerous voyage round the Horn, it is to be hoped that the enterprising Company which have, at great outlay, and under almost insurmountable obstacles, accomplished this undertaking, will be amply rewarded by the business arising therefrom, which already is rapidly increasing.

At the present time two steamers arrive fortnightly from America—viz., one from New York, and one from New Orleans via Havanna. These are large ships bringing and taking back each trip more than a thousand passengers (chiefly Californians), together with all the specie from that country for America. The Royal West India Mail Company have also a steamer every fortnight, with not many passengers, but a very considerably increasing freight of goods, &c., for transit to the coasts of Chili, Peru, &c. They also have the conveyance of the specie brought across from those parts for England. On the Panama side there are a sufficiency of steamers plying regularly—an English company going to the south, and American ones northwards to California.

THE UNITED STATES MAIL STEAM-SHIP COMPANY'S PREMISES, AT ASPINWALL.

BURNING OF THE SHIP "MADONNA," OF BELFAST.

BURNING OF THE BARQUE "MADONNA."

On the night of Thursday week, at about eleven o'clock, it was discovered that a fire had broken out on board the *Madonna*, of Belfast, a barque 560 tons burthen; the property of Mr. W. Newett, Corporation-street. Superintendent Magee, of the Harbour Night Force, upon finding the vessel to be on fire, proceeded to the place where she was lying, in company with two sailors, in boats belonging to the *Swift* schooner. At this time it blew a brisk gale, and it was impossible either to approach the vessel or render any assistance to extinguish the flames. Fortunately, the ship was placed in an isolated position, and there was no danger of the fire extending to any other vessel. About twelve, the burning ship presented an awful spectacle. The fore, main, and mizen masts gave way shortly after, and went to leeward, with a dreadful crash. Before morning the ill-fated ship was burnt to the water's edge, and the conflagration had not been completely extinguished up to a late hour on Friday night. Captain White, Harbour-Master; Mr. O'Neill, Deputy Harbour-Master; Mr. A. M'Lean, ship-builder, and others, were present, and rendered what assistance was in their power. No person had been in the vessel for a considerable time before the fire broke out; and we are happy to state that the loss of the owner is entirely covered by insurance.

FUNERAL OF DON CARLOS.

A Correspondent has favoured us with the accompanying Sketch the solemn Funeral of the late Count Molina (Don Carlos), which took place at Trieste, on the morning of the 19th inst., at nine o'clock—when the funeral convoy left the Palace del Lazzaretto Vecchio, and traversed the Piazza Giuseppina, and the Corso, bending finally towards the Cathedral of St Just; from whence the accompanying Sketch was taken.

The cortège had a most magnificent appearance. The coffin was followed by his Royal Highness the Count of Chambord, the General Cabrera, the Count Luchesi Palli, the Duke of Levis, and many other distinguished personages—as well as the representatives of all the civil and military authorities, the Mayor and municipality, and all the foreign Consuls. The Right Reverend the Bishop of Trieste officiated at the convoy, and subsequently celebrated in the Cathedral the holy mass.

As it is the custom in Spain for sons not to appear at the funeral of their father, the three Princes, sons of Don Carlos, were not present. The whole population were on foot, and the streets were crowded; every one

FUNERAL PROCESSION OF DON CARLOS TO THE CATHEDRAL OF ST. JUST, AT TRIESTE.

regarding with interest the Count de Chambord, who, in a black frock coat, and without any order or sign of rank, walked after the body.

THE ROYAL FAMILY OF SPAIN AND THE LATE DON CARLOS

(To the Editor of the ILLUSTRATED LONDON NEWS*)*

If you think the enclosed of sufficient interest to occupy a corner in your valuable paper, it is at your service. There was a slight mistake in your obituary of Don Carlos in the ILLUSTRATED LONDON NEWS for March 17. He left issue three (not two) sons—Charles, born 1818; John, born 1822, and Ferdinand, born 1824. John has issue two (not three) sons, the Infants Charles and Alphonso, born 1848 and 1849

It is a singular circumstance in relation to the Royal Family of Spain, as bearing upon the fortunes of the unlucky Don Carlos, that the civil war which for so many years distracted that unfortunate country was not, as is generally supposed, originated by either Ferdinand Carlos or Christina, but was owing to the insane ambition and pride of their younger brother Don Francisco de Paula's wife Louisa (the sister of the present King of the Two Sicilies) This woman it was who first suggested the alteration in the succession, and the consequent expulsion of Carlos. King Ferdinand VII. was four times married. By his first three wives he had no children; but, on the 11th of December, 1829, wedding his fourth Queen Christina, by her became the father of two daughters, the present Queen of Spain and the Duchess of Montpensier. In the natural course of events Carlos would have succeeded his brother: and in all human probability he would quietly have ascended the throne, had it not been for the intrigues of his sister-in-law Louisa. She suggested to Christina (who, we may premise, was her *own* sister), the facility with which she might work upon the feelings of the old King, to bequeath the crown to their infant daughter, and required as the price of her assistance in the matter the hand of the future infant Queen for her son Francis. To this Christina consented Their intrigues were successful. Ferdinand, worked upon by the entreaties of his wife, brother, and sister-in-law, in an evil moment for his country acceded to their demands; and, by a testament drawn up in 1830, excluded his brother from the succession, and bequeathed his crown to the infant Isabella This will he secretly revoked in 1833, but was again persuaded to re-enact prior to his decease, which occurred 29th September, 1833 It is said that Christina showed no eagerness to perform that part of the engagement which related, to the marriage of her daughter; but, being admonished by her sister, on her dying bed (she died in 1844), of her promise, she swore anew to the performance of it. The result was the marriage of the present Queen to her cousin, Francis D'Assis, which took place on the 4th of October, 1846 It is an additional curious circumstance, as showing the dissensions which still exist amongst the most closely-related members of the Spanish Royal Family, that Caroline (Countess of Montemolin) is a younger sister of Louisa and Christina. Thus the intrigues of the two elder sisters have deprived the younger of a Crown, as effectually as brother deprived brother. There are three other sisters—the wives respectively of the Grand Duke of Tuscany, the Infant Don Sebastian, and the Emperor of Brazil. To those who view retributive justice as the certain lot of the wicked, the fate of Louisa's husband and children affords a striking example—her eldest son's (the present King-Consort) ill-assorted union is matter of notoriety; her second son, Henry, married a Spanish lady, was deprived of his rank as Infant, and his posterity debarred from the succession; her third son, Ferdinand, died unmarried, last year. Of her daughters, the three eldest have all married Spanish subjects, and forfeited their privileges and prospective claims to Royalty, as Infantas of Spain: the two youngest, the Infantas Mary Christina and Amelia, are unmarried. Thus it will be seen, and it is almost an unprecedented occurrence, that, of all Louisa's numerous offspring, not one (with the exception of the King-Consort) has formed a Royal alliance; as for her degraded husband, the Infant Francisco de Paula, his conduct has but lately been made matter of public notoriety by his marriage to a woman of notoriously abandoned character, to the great horror and disgust of the royalty and nobility of Spain. Such is the history of the Francisco de Paula branch of the family. That of the Christina members is too well known to require description And, with such a history of the past, who will dare to prophesy the future? W. T. J.

Lewisham, March 22nd, 1855.

[Of the exact claim of Don Carlos and his heirs to the Crown of Spain an elaborate account has been given in the ILLUSTRATED LONDON NEWS.

CALENDAR FOR THE WEEK.

SUNDAY, April 1.—Palm Sunday. All Fools' Day.
MONDAY, 2.—Marlborough died, 1791. Battle of Copenhagen, 1801.
TUESDAY, 3.—
WEDNESDAY, 4.—St. Ambrose.
THURSDAY, 5.—Maunday Thursday. Goldsmith died, 1774.
FRIDAY, 6.—Good Friday. Stow died, 1605.
SATURDAY, 7.—Fire Insurance due. Don Pedro abdicated, 1831.

THE ILLUSTRATED LONDON NEWS.

LONDON, SATURDAY, MARCH 31, 1855.

IT is stated, and with great truth, that "the heads of the two departments of the army which are said most conspicuously to have broken down—the Commissariat and the Medical—no more imagined the army would have passed a winter in the Crimea than they thought of a Christmas campaign in Nova Zembla." These two departments are precisely the branches of the service with which civilians, clergymen, amateur inquirers, and others, would most readily come into contact, and probably find the most reason to complain of. The acts and resolves of the various chiefs, both at home and abroad, they were less able to criticise. Accordingly, the minute matters belonging to these departments have been much dwelt on in correspondence, and latterly—particularly the medical department—have almost exclusively occupied the attention of Mr. Roebuck's Committee. It seems to be losing its way amidst a labyrinth of hospital details, of beds, kitchens, and storehouses, and likely to divert public attention from the real causes of our national disgrace to the multifarious but painful scenes of sickness, wounds, and death, that occur in every war and every hospital. Earnestly desiring to see the truth of this great transaction elicited, and the burden of disgrace placed on the right shoulders—be they those of the Commander of the army abroad, of the Admiral commanding the fleet, the Commander-in-Chief of the Army at home, the Ministers, the public journalists, the Parliament, the whole nation—this direction of the inquiries of the Committee is, we think, much to be regretted. In all hospitals *improvised* at a time of war—in all places overcrowded by men stricken down by pestilence, there must, and will occur—there always have occurred instances of neglect and disorder; and the real authors of the national disgrace can desire nothing better than that the public indignation against them, whoever they may be, should be lost in the deep emotion of pity at great, but in many cases, unavoidable suffering.

Confining our remarks to the gentlemen of the medical profession implicated by the inquiry and for them as well-educated men, destined from the commencement of their studies to mitigate human sorrows and human woes, we entertain feelings of great respect—we must mention that Dr. Andrew Smith, the head of the Army Medical Department, has resigned or been dismissed, and takes with him into retirement much public obloquy; and that Dr. Menzies, the Deputy Inspector of Hospitals, has fallen, before the Committee, into sad contradictions, and has got into merited disgrace. Thus, two of the gentlemen of the medical department who were wholly unprepared, from what cause is not known, for the winter campaign both of whom had a great deal to do, if they did it not wisely, zealously, and well have already been sacrificed, and are probably to be made the scapegoats of others. That the medical men with the army have, almost one and all, been overwhelmed with work is quite true. Dr. Menzies states, in his evidence, that, besides attending to the sick, he had an immense deal of writing to do—reports to make, requisitions to draw; and that his duties, and the duties of the purveyors and all his subordinates, were vague and ill-defined, so that there was continual contention; and his health, like the health of others, gave way before the enormous fatigue. It will really be a great additional injustice if the medical men, whose labours have been unremitting, should be made responsible for all the evils resulting from bad regulations, from conflicting authorities, and from their being not duly informed of the winter destination of the army, and not duly provided for meeting it.

We are disposed to ascribe much of the evil to an unrevised system of antiquated regulations, which, till they were brought to the test, were supposed to be perfection. Dr. Andrew Smith stated in his evidence that, when the Expedition started, he required more medical men, but could not get them; though medical men of adequate capacity, as the public well know, are to be found in scores practising in all our towns or walking the hospitals, looking out for a berth. But Dr. Smith could not, except by dispensing with an Order of Council, employ these ready-made practitioners. He could select only gentlemen as assistant-surgeons who have passed their examinations at the Royal College of Surgeons of London, Edinburgh, or Dublin. All other practitioners, however skilful, are excluded. They may be the first men of their profession; but, if educated at Paris, Vienna, Berlin, or Aberdeen, they could not be made, however great the emergency, assistant-surgeons of the Army, unless an Order of Council were set aside. Nor could any assistant-surgeon, however skilful, be promoted to be a second-class staff surgeon, to make way for new assistant-surgeons when required, till he had served five years, unless the same Order in Council was set aside. Here, then, is a positive regulation drawn up in the most solemn manner, and with the greatest authority, which bound Dr. Smith and prevented him from employing a sufficient number of medical men, caused the insufficient number to be overworked, and stood completely in the way of obtaining, when required, a proper supply of surgeons. In a quiet time of peace such a regulation may be complied with; but it is wholly inapplicable to an emergency. The gentlemen of the medical profession are some of the most estimable of society, and we cannot do otherwise than denounce as most unwise any regulation which impedes the employment of them, when necessary, in the service of their country. Whatever may be the case at present—and we are afraid that on this point there is some degeneracy the former great successes of our Royal Navy were always mainly due to its drawing its vigorous life-blood from the most extensive mercantile marine of the world. If the two services were not identical, the latter was always the chief source of the vital power of the former. In the same manner real strength can only be given to every department of the public service by planting it in some corresponding branch of civil society; and the medical department of Army and Navy would be efficient or perfect in proportion as it was identified with the medical profession in civil life. By an arbitary regulation, they are separated, and therefore the official branch, while in society the medical profession is strong, breaks down in a moment of trial. The fact is an illustration of our whole official system. It has been cut off from civil society; it has no strength but antiquated regulations, no real life of its own; and it tumbles, rotten and decayed, to ruin, whenever a stress is laid on it.

ON Monday the House of Commons decided in favour of the Bill for Abolishing the Stamp on Newspapers as a fiscal regulation, and retaining it on such as are sent by post, continuing to them all their present postal privileges. Hereafter the bill may be subject to some trifling changes in Committee; but its success as a whole seems assured. Being a money bill, the House of Peers is not likely to meddle with it. It is precisely such a measure as we desired and have endeavoured to procure; and we cannot be otherwise than pleased with the apparent result. When a Treasury Minute is passed to carry all printed matter of four ounces weight for a penny—which, we believe, is likely to be the case—there will be nothing left to desire from postal regulations for the diffusion of intelligence; and then it may be hoped that all questions concerning newspapers and the Post-office, except as time may introduce great changes, will be set at rest.

MORE than eighty years have passed since the "European family," uniting for crime, perpetrated the first Partition of Poland, and still the story of her wrongs excites the indignation of the hearers. Vain is the attempt to consign the deed to the keeping of history, as an "arrangement"—open, indeed, to criticism—but one which must now be accepted as a thing of the past. It is felt to be matter of criminal record, not of historical narrative; and it is the sentence of avenging justice, not of literary scrutiny, that is demanded by outraged humanity.

It was not to be supposed that the claims of Poland could slumber while an agitating crisis was trembling round the thrones of her chief enemies. For the moment, England—who stood aloof from her in her trouble, and hypocritically commended her case to "the intervention of the Almighty," the "only one" which, Lord North thought, could "remedy her evils"—is the solitary Power who can afford to listen to her claims. It is something at such a point of the war—when, to all appearance, the attempts at negotiation are failing, and while we are listening for the tidings that the Allies have rushed upon Sebastopol—that the case of Poland should be heard before the Parliament of England, and that the Premier should renew his declaration that the spoliation of Poland was a violation of moral law and public right. At any period it would be well to have such a declaration on the part of the Government of England, renewed and registered in the face of Europe; but at this time it has a special weight and significance.

In a very able and energetic speech, Mr. Phinn, the member for Bath, brought the subject before the House of Commons on Tuesday. He asked for an address to her Majesty, praying that an effort for the reconstitution of the kingdom of Poland should be made, in the event of negotiations being commenced with a view to peace. It was impossible that the claim could be more temperately or discreetly urged than in this form, and Lord Palmerston adroitly took advantage of its moderate phraseology as an additional and technical reason why the House should not agree to it. His Lordship contended that the motion did not go far enough, and that the proposed address should require that war should be carried on until the object in question had been attained. We have so frequently had to discriminate between House of Commons answers and answers which would be given to reasonable men outside its atmosphere, that it is scarcely worth while to remark that urging the claims of Poland by no means implied that we would make no peace unless they were accorded; or that Mr. Phinn, as an accomplished legalist, was not perfectly well aware that the forcibly interpolating a new element into a contest begun upon a defined principle would be a departure from the usage of diplomacy. But the reply answered its purpose, if it did not answer Mr. Phinn. Lord Palmerston further contended that the House ought not to dictate to the Government in reference to negotiations, because the former could not be in possession of information as to all the "nicely-balanced considerations" which the latter had the opportunity of obtaining. He saw no harm in the discussion, but much harm in letting it assume any other form than that of a demonstration; and as such he treated it, appealing to Mr. Phinn not to press his motion. This species of appeal from a First Minister, especially at such a time, is not one to be resisted, and the motion was withdrawn.

Mr. Phinn took considerable pains to meet by anticipation certain objections which, as it turned out, were not brought forward. He sought to show that Austria had, in great measure, repented of her share in the crime against Poland, and would be glad to make restitution. He cited what Maria Theresa declared to the French Ambassador at Vienna, namely, that the "affair" with Poland had brought a great stain upon her reign, and that her own exorbitant demands and pretensions had been really urged, not in earnest, but in the hope that the other two plunderers would be startled at such requisitions, and break off the negotiations; but the consciences of Russia and Prussia were not so easily shocked; and, to the Queen's "distress," they assented to the "cruel arrangement." Mr. Phinn also quoted a declaration of Metternich, who, at the Congress of 1814, hypothetically and hypocritically contemplated the restoration of Poland. More to the purpose, he brought out a little-known passage from the confidential correspondence between the Emperor Alexander and Lord Castlereagh, in which the latter, in skilful and energetic language, pointed out to the Sovereign the justifiable alarm felt by Europe, at the aggressions of Russia—aggressions which "totally exposed to her attack, the capitals of Austria and Prussia, without any line of defence or frontier." That Austrian rulers have admitted the criminality of their conduct, is not unsatisfactory, so far as it goes—such an admission may hereafter have a certain value; but the passage from Lord Castlereagh is more striking, because it suggests considerations of the extreme art with which, for forty years, Russia has succeeded in making the Courts of Vienna and Berlin close their eyes, wilfully, to a condition of things as apparent to themselves as to the English Minister of that day. Nations may ask by what agreements, or at what price, a despotic Monarch induced two brother despots to leave their capitals at his mercy? Was the Czar a political Vauban, whose engineering motto was, "I destroy, but I defend"? Were capitals laid open that palaces might be the safer?

The policy of our ally France towards Poland, Mr. Phinn showed to have been unvarying. Napoleon restored to Poland a considerable portion of the spoils of Austria and Prussia, and promised to secure her nationality. It is also worth remembering, though not mentioned in the debate, that when the three spoliators revoked the Treaty of 1815, and "annexed" the Free Republic of Cracow, this act was protested against by England, France, Sweden, and *Turkey*. Mr. Phinn referred to the manifestation by Louis Philippe on behalf of Poland, and his appeal to the present Premier (then Foreign Secretary), who, however, declined interference, on the ground that Russia was a friendly Power, and on the ground of our celebrated "non-interference" policy. The Napoleonic idea—and assuredly Napoleon's idea in regard to Poland was neither the least noble nor least politic of his conceptions—may reasonably be supposed to have been transmitted with his name and his diadem; but it is far more easy to see the difficulties which for the time may preclude the present Emperor from an effort towards the re-establishment of Poland, than to discover the rationale of our non-intervention at the time alluded to. Had Lord Palmerston listened to Count Walewski, Lord Clarendon would not have had to threaten Count Nesselrode, and Warsaw might have saved Sebastopol.

But neither Austrian repentance nor French consistency were argued by Lord Palmerston, who, after demolishing some petulant assumptions by Lord R. Cecil, that England's humanizing rule in India resembled the cruel tyranny of Russia in Poland, addressed himself to the getting rid of the question rather than the meeting the arguments. It was, perhaps, all that could be expected; and, if the grounds upon which the Premier urged the setting aside of the matter were stated in the old diplomatic tone, rather than with the candour his hearers out of doors would have preferred, we are not unwilling to believe that this was a sacrifice to the exigency of diplomatic etiquette. It was not for his Lordship to speak over the shoulder of Lord John Russell at the Conference Board, and as he said nothing which could commit even his own Government—the nation is, of course, not to be committed by any speeches—to a future non-intervention policy. When the rights of Poland are again in contest—and that they will be so, one day, no man who believes in the justice of Providence can venture to doubt—it may prove to have been well that, in the midst of a terrible war, England, through her Government, made renewed proclamation that the Partition was a robbery and a crime.

THE French Minister of Foreign Affairs left Paris on Wednesday evening for London; and, on his return, will proceed to Vienna, to assist M. de Bourqueney at the Conferences

THE Postmaster-General has just paid a fifth part of the life assurance annual premium of every Post-office official in the kingdom who has insured his life.

LATEST INTELLIGENCE.

THE VIENNA CONFERENCE.

The Conference took the Fourth Point into consideration, on Thursday, the Third Point having been left aside for the present. The departure of M. Drouyn de Lhuys for Vienna has caused much speculation in Paris. The most contradictory opinions prevail as to the motives which have led to these apparently sudden movements of the Minister of Foreign Affairs. The Peace party consider the presence of so eminent a personage at the Conference as a confirmation of their most sanguine hopes; while those who entertain opposite views connect it with the recent despatch, stating that the Plenipotentiaries have written home for more ample instructions, and argue that some new complication has arisen.

The *Journal des Débats* of Thursday has an article contributed by M. de Sacy, giving a concise, and apparently authoritative, narrative of the proceedings at the Vienna Conferences. The two first points were discussed and decided at the sittings of the 17th and 28th instant. The First Point places the rights of the three Principalities under the collective protectorate of the Great Powers. The Second libe rates the navigation of the Danube, and places all future questions relating to it under the jurisdiction of a mixed commission; Russia preserving the fortresses on the left bank, but with alterations rendering them no longer dangerous to the free navigation of the river. The discussion on the Third Point was commenced in the sitting of the 26th of March. The Allied Envoys demanded the revision of the treaty of 1841, with the objects—(1) of bringing Turkey into the European family; and (2) of making the Dardanelles and the Bosphorus free for the passage to and fro of the ships of all nations. They additionally demanded that the preponderance of Russia in the Black Sea should cease. M. de Sacy then intimates that the most pacific intentions seem to animate all parties; that Russia is ready to make all honourable concessions and that the Western Powers will not demand anything inconsistent with the dignity of Russia. He points out that there are several ways of effecting the reduction of Russian preponderance in the Black Sea. The Russian war fleet may be reduced, and an equal number of ships from each of the Western Powers may be introduced. Or, France and England may establish at Sinope and Bourgas fortified ports to counterpoise Sebastopol, with Baladava established as a free port, and Consuls from the Western Powers in Sebastopol

A letter from Berlin in the *Bourmalle*, states that there still exist some differences between Russia and the Western Powers as to the Aaland Isles. The Allies insist that there shall be no fortifications whatever on the left bank of the Danube from Reni to Sulina; and that all the Russian military posts shall be beyond cannon-range distance from the river. It is also stipulated that the towing-path shall be perfectly free, it being difficult to ascend the river without towage.

THE COURT.

Her Majesty and the Prince Consort, accompanied by the Prince of Wales, Prince Alfred, the Princess Royal, Prince Arthur, Prince Leopold, the Princesses Alice, Helena, and Louisa, and the Prince of Leiningen, returned to Buckingham Palace from Osborne on Friday, the 23rd inst. Her Majesty embarked on board the *Fairy*, at Cowes, at twenty minutes past two o'clock; and the yacht, having at once got under way, ran up to the fleet at Spithead, the whole of the ships being dressed in colours, and manning yards. After the *Fairy* had passed to windward, a general Royal salute was fired by the fleet.

On Saturday the Duchess of Kent visited the Queen at Buckingham Palace. Lord Panmure had also an audience of her Majesty in the evening.

On Sunday the Queen and Prince Albert, the Prince of Wales, the Princess Royal, Prince Alfred, the Princess Alice, the Duchess of Kent, the Prince of Leiningen, the Ladies and Gentlemen in Waiting, and the domestic household, attended Divine Service in the private chapel of Buckingham Palace.

On Monday her Majesty held her third Levee this season. In the evening the Queen and Prince Albert, accompanied by the Princess Royal and the Prince of Leiningen, visited the Duchess of Gloucester, at Gloucester House, on the occasion of a party given by her Royal Highness to celebrate the birthday of the Duke of Cambridge. The Duchess of Kent, the Duchess of Cambridge, and the Princess Mary and the Duke of Cambridge were among the guests of the venerable Princess.

On Tuesday the Prince Consort visited Messrs. Robinson and Cottam's factory, in Pimlico; and honoured Mr. Bacon by inspecting his cast for the statue of Mendelssohn.

On Wednesday the Prince Consort visited Mr. Scott Russell's ironworks at Millwall, for the purpose of inspecting the new floating batteries, and the large steamer in course of construction there. In the evening the Queen and his Royal Highness, accompanied by the Prince of Leiningen, honoured the Haymarket Theatre with their presence.

On Thursday her Majesty held her first Drawingroom for the present season. The Queen and the Prince arrived at St. James's Palace shortly before twelve o'clock, escorted by a detachment of Life Guards. The attendance of company was very brilliant, and the presentations were numerous.

The Duchess of Atholl has succeeded Lady Churchill, as the Lady in Waiting to the Queen. Earl Somers and the Hon. Mortimer Sackville West have relieved the Earl of Listowel and Sir F. Stovin, in their duties as the Lord and Groom in Waiting to her Majesty.

THE LEVEE.

The Queen held a Levee (the third this season) on Monday afternoon, in St James's Palace. Her Majesty and Prince Albert arrived from Buckingham Palace, escorted by a detachment of the Life Guards.

The Earl St. Germans had an audience of her Majesty, on his return from Ireland.

His Royal Highness the Duke of Cambridge and his Serene Highness the Prince of Leiningen attended the Levee.

The Queen wore a train of green silk, brocaded in white, and trimmed with white blonde and green gauze ribbon. The petticoat was of white satin, trimmed to correspond. Her Majesty wore a diamond circlet.

Among the presentations the most interesting were those of—

The Earl of Elgin, on his return from administering the Government of Canada, by Sir George Grey.

Viscount Ramsmere, Lieutenant and Captain Scots Fusilier Guards, on promotion and return from the Crimea, by his Royal Highness the Duke of Cambridge.

Sir Samuel Morton Peto, on his being created a Baronet, by the Duke of Newcastle, and Mr. E. H. Hargraves, the celebrated Australian gold discoverer.

The Countess Colloredo, wife of the Austrian Minister, had an assembly at Chandos House on Thursday, after her Majesty's Drawingroom

The Countess Walewska had a reception on Tuesday evening, at the residence of the French Embassy, Albert-gate House.

The Hon. Edward Mostyn, eldest son of Lord Mostyn, and M.P. for Flint, is about to form a matrimonial alliance with the Lady Augusta Nevill, daughter of the Earl of Abergavenny.

The Right Hon. E. Horsman (Chief Secretary for Ireland) entertained at dinner on Saturday evening, at his residence on Richmond-terrace, the Attorney-General and Solicitor-General for Ireland, Sir Robert Ferguson, and other Irish members of the House of Commons.

SEAMAN'S HOSPITAL ANNIVERSARY DINNER.—On Wednesday evening the 24th anniversary of the Seaman's Hospital Society was celebrated by a sumptuous dinner at the London Tavern. Much additional interest was given to the festival by the presidency of Viscount Palmerston, who arrived punctually at six o'clock. There were also present Sir C. Wood, Sir C. Napier, Admiral Bowles, Mr. Buchanan (the American Minister), Admiral Tyler, Mr. Sheriff Crosley, &c. About 200 gentlemen sat down to dinner.

SOCIETY OF ARTS.—Dr. W. H. Smith, of Philadelphia, United States, has recently read to this society a paper on the "Utilization of the Fused Mineral Products of Smelting Furnaces." Dr. Smith produced beautiful samples of a new class of ware—consisting of table-tops, &c.—made of slag, by a new process patented by him, which compared favourably with the best varieties of marble.

ARTISTS' GENERAL BENEVOLENT INSTITUTION.—The Anniversary Dinner of this excellent Institution will take place in Freemasons' Hall this evening, when the Right Hon. the Lord Mayor will preside.

FIRE IN BRUTON-STREET.—At an early hour on Sunday morning a fire broke out in the building in Bruton-street, Bond-street, known as the Berkeley-chambers, which was attended with considerable loss of property. At one time the flames threatened to destroy the studio of Mr. Noble, the sculptor, situated on the ground-floor of the premises, and in which were the colossal statue of the Duke of Wellington to be erected at Manchester, the statue of the Duke of Wellington to be erected in the India House, and the statue of the late Archbishop of York, Harcourt Vernon, about to be placed in the Minster of that city. These and other works of art were fortunately rescued by the exertions of the firemen, but not until considerable damage had been done to the studio. It was some hours before the flames could be entirely extinguished, and not until the upper part of the building had been burnt out, and the furniture and property contained in the different floors destroyed.

TOWN AND TABLE TALK ON LITERATURE, ART, &c.

So very little is said about Literature at this juncture in political affairs, so very little is doing in the publishing world—even papers specially devoted to books and authors are duller than usual—that it is a real pleasure to record any circumstance likely to be of use to letters, though the certain chance is at a distance of at least two years. This is our present gratification, and a very real gratification it is. "And what is it?" said a publisher, rather doubtful of any run of luck, to whom we casually mentioned it "Does it relate to any amendment of the law of copyright? Is any new Sir Walter, any really Great Unknown, on the eve of emerging into life? or, are we to have a grant of public money that is likely to be of service to letters?" Our friend, fresh from his comfortable quarters in the Row, was evidently expecting more than our means of intelligence—or truth—would gratify. "No," we replied, "any liberal Mr. Tomson," we allude, unfortunately, to nothing immediately akin to your suggestive queries; our welcome gossip refers altogether to that great quarter of London in which intelligence is sought for, and is at present sought for imperfectly, because the means of communicating it are so extremely contracted—we allude to the reading-room of the British Museum. In two years, my *present* amiable Mr. Tonson, we shall have a reading-room worthy of your literature and of our nation. We already possess one of the finest libraries in the world—a library that is comparatively of little use, from the narrow space in which it is buried; Mr Panizzi and Mr. Sydney Smirke are busy relieving us from this Balaclava of books, and in two years from March, 1855—this thirtieth of March—the *quad* of the Museum will contain a reading-room of such magnitude and excellence that no city in the world can compare with it for a single moment. Books—such as the members of the Philobiblon Society love to possess, and admire—will be produced as soon as asked for; and the scholar who is now obliged to seek for information surrounded by artificial difficulties, unworthy of letters and of London, will have recourse willingly to the Museum, and will produce you such books, my most amiable Mr. Tonson, that the Row will compete for—and generations of your race to come will strive who shall put forth with the greatest accuracy of text and the greatest luxury of type and paper. *We* have seen this work in progress, my learned friend from the Row, and no sight connected with letters has given us more pleasure than is now to be seen in what was, till now, the useless quadrangle of the British Museum.

There is an Exhibition now open in London to which we wish to direct particular attention. It is an exhibition, in Pall-mall, of works by amateur artists—sent on sale entirely in aid of the Patriotic Fund for the Widows and Children of Soldiers who have served in the Crimea. We were especially pleased with the contributions of the Royal Family. Her Majesty, it is well known, has long been devoted to the arts; and Prince Albert is our modern Prince Rupert (we suspect his Royal Highness is a better artist than Prince Rupert of the Rhine is said to have been); but the children will soon excel their parents—so careful has been their training; so innate, in the case of the Princess Royal, is a feeling for high art in a country so loyal as ours, we can readily believe that the competitors for the purchase of the drawings so generously sent by her Majesty will be very great. And such is the case. By far the best drawing in the room is that semicircular drawing by the Princess Royal, called "The Battle-Field," representing a soldier in the composure of death, attended by his young, his faithful—may we not add his beautiful—wife. The composition is artistic, the sentiment poetic, and the execution spirited. The Prince of Wales contributes a Knight—with rather a comic turn of look and leg; and Prince Alfred has a "Prince Hal"—which evinces a liking for Shakspeare that will additionally endear him to the English people. Mr. E. H. Corbould is the tutor to the Royal Family.

Our correspondents are not tired of "Moredun"—though we confess that we are. Mr. Huntly Gordon, for his own sake, as well as for the sake of Sir Walter Scott, shall have the last say upon the subject. We can never know too much of Sir Walter Scott:—

Your amiable and learned correspondent, Mr. Cole, kindly showed me, among other volumes in his rich collection of autographs, one containing the letters of Sir Walter Scott referred to in his letter to you. The initials are appended to a note of a few lines to one of his most intimate friends, who lived much at Abbotsford—Mr. Scrope, the *facile princeps* of sportsmen, but Scott, I still must tend, would never have signed even a note to so rare a correspondent as Mr Spencer with such familiar brevity. Since I saw Mr. Cole's note I have found a scrap, addressed to myself, signed in the same way; from all which it appears that Scott, when in an unusual hurry, did sometimes sign his initials only: though the instances must have been "few and far between," since Mr. Skene, who was in almost daily habits of communication with him for forty years, never saw one. But the chief sin against probability in this part of the controversy called "Moredun" has been lost sight of. It is not the brevity of the signature, but that it is written in imitation of *printing*, which I feel quite confident Sir Walter never even tried.

The final *t* not *turned up* is only to be found in the signatures to Mr. Cole's letters, which I was not thinking of, the author of "Moredun" not having ventured to write Scott at full length.'

There is only one looped *h* in Mr. C.'s eighteen letters, some of them of considerable length, and it is joined to the preceding word *and*, contracted (&) "The exception makes the rule," and this solitary one only fortifies my position, that a MS. in which few of the small *h*'s are formed *without* a loop could not have been penned by Sir Walter Scott, to say nothing of a dozen other grounds of disbelief as respects the handwriting. *Mene mene tekel*, says Mr. S. Low. We shall speedily see whether the public will read any *more dene* in the style of this "romance of the year 1210." I hope Mr. Low will not be "*done brown!*"—YOURS, &c.,

G. HUNTLY GORDON.

March 28th.

"Moredun" must finally rest, as we have all along contended, on its own intrinsic merits; for, though we are far from being among those "boobies," as Pope calls them, who know men immediately by their style, yet Scott, as a story teller is not to be mistaken.

The Trustees of the British Museum have declined to purchase Mr. Roach Smith's Museum of London Antiquities, and the destination of an important collection is now said to be Liverpool or Manchester. We shall continue to regret this decision. There are curiosities in Mr. Smith's small museum that would shine as curiosities in the British Museum. But did Mr. Smith make any stipulation with the Trustees about maintaining his collection in its integrity? We are among those who think (and the number is increasing) that the Trustees should distinctly refuse to buy even a very choice collection on such terms. It appears to us that the Museum might buy as individual purchasers, select what they want, and sell the remainder by auction or private contract to the highest bidder. It is seldom seen that a collection is so very choice that it is desirable for a nation to retain it intact. Mr. Smith, as Mr. Roach Smith, has done wonders in bringing so many rare things together (neither Mr. Edward Hawkins nor Mr. William Tite will deny you this merit); but, as a whole—that is, to be retained in its integrity— we should question the advisability of its purchase by the British Museum, already overstocked in middling things, though by no means in good things.

Her Majesty's Palace at Newmarket is for sale—that palace, or rather house, so immediately connected with the sports of the Sovereigns of this country from King James I. to King George II. Our Kings have been capricious about their palaces. George I. delighted in Hampton Court and Herenhausen; George II. in Kensington and St. James's; George III. in Windsor and the Queen's House; George IV. in Brighton Pavilion and Buckingham Palace; William IV. hated Buckingham Palace; her Majesty delights in Osborne and Balmoral. If, as a great satirist has it,

Newmarket's glory rose as Britain's fell,

we may expect Britain's glory to rise with the fall of Newmarket's glory under the hammer of the auctioneer.

In a column devoted to Literature and Art, we may notice, with regret, the death of that eminent short-hand writer, Mr. Gurney, to whom the public has been indebted for the preservation of so many important debates. As we read the record of his death, we could not help calling to mind part of a famous epitaph in Westminster Abbey, on a brother of the craft —

Short-hand he wrote; his flowre in prime did fade
And hasty Death short-hand of him hath made.

Our ancesters were fond, even in epitaphs, of these quaint allusions.

The great room at Christie and Manson's has been unusually attractive this week, the treasures of four collections being on view at the same time. In the place of honour (as it deserved to be) was to be seen Mr. Frank Stone's masterpiece, "Bassanio reading the account of Antonio's Losses"; and facing it (on the left as you enter), Constable's masterpiece—a mill-stream," known among artists as "The White Horse." Here, too, were hung the three pictures painted by Mr. Stanfield for the late Captain Marryat (the novelist). Will Mr. Stanfield excuse us for preferring the small "Coast Scene" to the larger "Cologne;" and will Mr. Leslie allow us to think that Constable's "Corn-field" is a better picture than "The White Horse," fine as it is.

One of the attractions of next week will be the exterior of Mr. Sydney Smirke's Carlton Club-house, in Pall-mall. Masons are busy bringing the surface of the older portion to the texture of the new, so as to give the whole one and the same look.

MUSIC.

The two rival PHILHARMONIC SOCIETIES have had concerts this week.

The Old Society—*the* Philharmonic—had its second concert of the season at the Hanover-square Rooms on Monday evening. The following was its programme :—

PART I.

Overture—"Der Freischutz"	.. ..	.. Weber.
Aria—"O Salutaris Hostia," Mrs. Lockey	..	.. Cherubini
Concerto—Violin, Mr Blagrove	..	.. Mendelssohn.
Selection from "Lochengrin"	..	.. Wagner.

PART II.

Choral Symphony, No. 9	.. ..	.. Beethoven.

Here, the musical reader will perceive, there was only one novel feature, the Selection from an Opera by Herr Wagner, the Society's new conductor. Wagner, though in great vogue in Germany, has been little or quite unknown in this country; and this specimen of his powers as a composer, excited great curiosity and interest. The public have been told that he is a musical revolutionist, whose object is the destruction of all existing greatness—who seeks to pull down from their thrones all the recognised sovereigns of the art, that he may raise himself to supremacy in their room. Such, we are informed is the purpose of his critical writings; and, it is added, his extravagant doctrines are illustrated by equally extravagant compositions. He was with no small surprise, therefore, that the public, thus prepossessed, listened to Wagner's music on Monday evening. In place of finding it to be obscure, unintelligible, and studiedly unlike anything ever heard before, they discovered that it was clear, simple, melodious, and not at all hard either to perform or to comprehend. The audience were delighted; their prejudices were overcome by their feelings, and they applauded frankly and warmly; all but the professional "native talent" clique, who comforted themselves by trying to convince everybody who would listen to them that the music was conventional and commonplace. Even from the slight specimen now given, it was evident that Wagner's music is dramatic in the highest degree. Such music suffers greatly by being transferred to the Concert-room; but we felt satisfied, in listening to that, with the scenic action and adjuncts of the Opera-house, it would be as effective as the music of Meyerbeer himself. In regard to Wagner's character as an orchestral conductor, there was not on this occasion a single dissenting voice. His great skill, and its happy results, were felt and acknowledged from beginning to end of the concert.

The New Philharmonic Concert—also the second of the season—was given at Exeter-hall on Wednesday evening. Its programme was as follows :—

PART I.

Overture—"Coriolanus"	.. ..	.. Beethoven.
Selection from "The Ruins of Athens"	..	.. Beethoven.
Aria—"Non temer," Madame Anna Thillon	..	.. Mozart.
Concerto in D Minor—Mr. Lindsay Sloper	..	.. Mendelssohn.
Symphony in C Minor	.. ..	.. Beethoven.
Part Song—"O Hills! O Vales of Pleasure!"	..	.. Mendelssohn.

PART II.

Overture—"Oberon"	.. ..	.. Weber
Selection from "Comus"	.. ..	.. J. B. Horsley.
Fantasia—"Othello" (Violin), Herr Ernst	..	.. Ernst.
Recit. and Rondo—"Arriere, arriere!" Madame Anna Thalon ("L'Etoile du Nord")	..	.. Meyerbeer.
Overture—"Ruler of the Spirits"	.. ..	.. Weber.

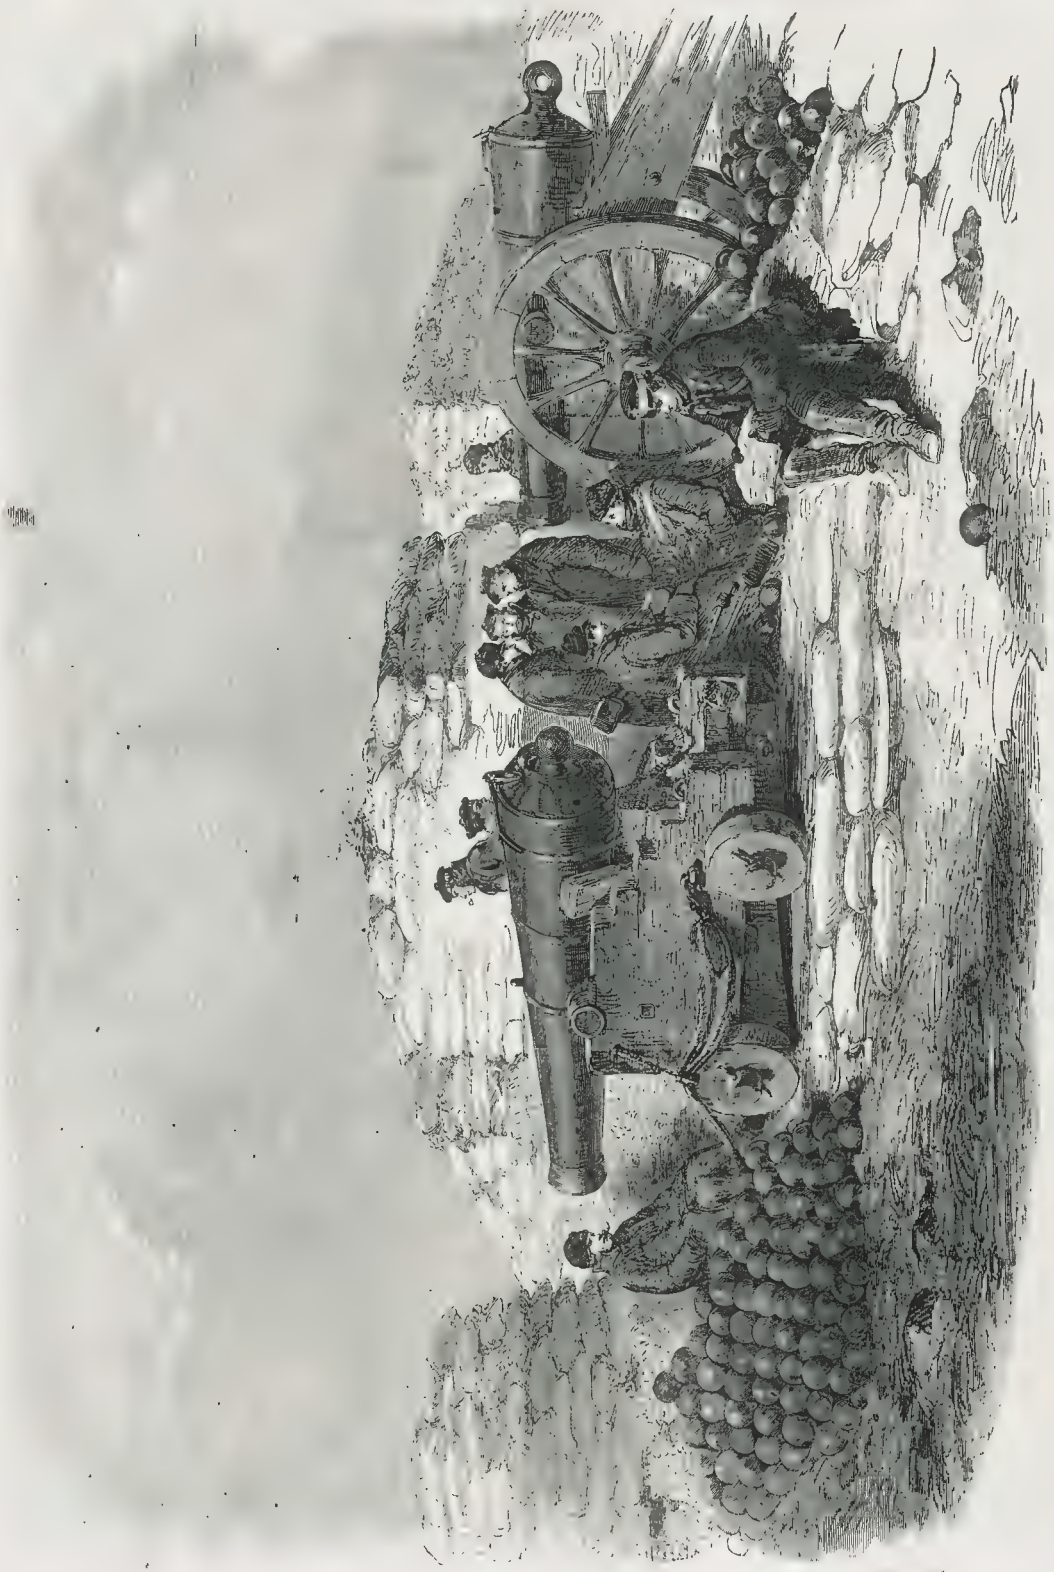
The concert was announced to be in aid of the funds of St. Mary's Hospital; and this charitable object, in addition to the attraction of the programme, drew a great assemblage. There being not a single feature of novelty, there is very little room for remark. Dr. Wyde acquitted himself very ably as Conductor, and the orchestral music—particularly Beethoven's magnificent Symphony in C Minor—was admirably performed. Mr. Lindsay Sloper, too, gained golden opinions by his masterly execution of Mendelssohn's Pianoforte Concerto in D Minor. Other parts of the concert were less satisfactory. The selection from the "Ruins of Athens" was not effective; the most striking part of it, the wild "Chorus of Dervishes," was spoiled by the excessive rapidity with which it was hurried through. Madame Thillon failed to sing Mozart's beautiful air. Mozart is not in her way—it is in the Opéra Comique that she is at home. After Mendelssohn's concerto, another instrumental solo was *de trop*, and it must have been by no means pleasant to Ernst to play amid the bustle of people going away. Horsley's music from "Comus" made no impression. The music is clever, but he erred in taking a subject already treated by such a man as Dr. Arne.

SIR HENRY BISHOP had a crowded and successful concert at Exeter-hall on Tuesday evening. The pieces, with a few exceptions, had already been performed at the Hanover-square Rooms; but their effect was heightened by the addition of a powerful chorus. Several of his most popular songs were sung by Mr. Sims Reeves and Miss Birch, and received with great enthusiasm. We are glad to observe that the success of this concert has led to the announcement of another of the same kind, on the 16th of April.

VISIT OF THE FRENCH EMPEROR AND EMPRESS.—We believe it may be considered as certain that the Emperor and Empress of the French will visit her Majesty in this country during the ensuing month. It is, we believe, a considerable time since it was intimated to their Majesties how agreeable such a visit would be to the people of England; but, with a consideration which will be easily appreciated, it was not thought that the past few months were the fitting time for indulging in the festivities to which the event would naturally give rise. It is hoped, however, that no such causes can be considered as at present existing to prevent such an auspicious event; and, though no final arrangement upon the subject has been made, it is not improbable that, on Saturday, the 14th of April, the Emperor and Empress will arrive in England.—*Globe.* The *Moniteur* of Thursday announces that Queen Victoria has invited the Emperor and Empress to come to England, and that their Majesties will proceed to London about the middle of next month.

LYCEUM THEATRE.—Mr. Allcroft has announced his farewell concert this season at the above theatre, to take place on Monday next, April 2nd; for which he has engaged all the most celebrated artistes, both native and foreign.

POST-OFFICE DIRECTORY OF THE SIX HOME COUNTIES (Kelly and Co.)—In this very useful volume the plan of the "Post-office London Directory" is extended to the Six Home Counties—Essex, Herts, Kent, Middlesex, Surrey, and Sussex; with additional topographical descriptions, and other acceptable information respecting each town and village, grouped for ready reference. The great increase in the inhabitants of these counties, caused by the facilities of railway communication with the metropolis, has caused a corresponding increase of upwards of 200 pages in the volume; and that notwithstanding many suburban districts, such as Clapham, Brixton, Camberwell, Kentish Town, Balsam, Kingsland, &c., have been withdrawn from this work to the "London Directory." The index has been considerably enlarged, references being made to places much more minute than were previously mentioned. The volume has also the advantage of an external index, by means of coloured edges combined with lettering which has been universally approved of in the "London Directory." To this specification of the main features of the "Home Counties Directory," we must add our commendation of the execution of the work. The publishers have likewise just issued their "Parliamentary Directory and Postal Directory," as contained in the March edition of the "Post-office London Directory" for 1855; and a list of the persons who have commenced business since the compilation of the first edition of the work for the current year.



NO. 2, SAILORS' (GREEN-HILL) BATTERY, BEFORE SEBASTOPOL.—(SEE PAGE 304.)

DEPARTURE OF THE FLYING SQUADRON.—(SEE NEXT PAGE.)

ADVANCED SQUADRON OF THE BALTIC FLEET.

An advanced division or "flying squadron" of the Baltic Fleet left Spithead on the 20th, for the Downs, on its way to Kiel. This squadron consisted of the *Impérieuse*, 51, Captain Watson; the *Euryalus*, 51, Captain G. Ramsay; the *Arrogant*, 47, Captain Yelverton; the *Esk*, 21, Captain Birch; the *Tartar*, 21, Captain Dunlop; the *Archer*, 15, Captain Heathcote; and the *Conflict*, 8, Commander Brown. They each got up steam before noon, and made every preparation for weighing; but, as her Majesty had signified her intention of seeing them depart, their starting was delayed until her Majesty's arrival. At about three o'clock the *Fairy*, with the Queen, Prince Albert, the Prince of Leiningen, and the Court on board, with the Royal standard and Admiralty flag flying, was seen advancing towards the fleet from Osborne, when a general Royal salute was fired; and, as the *Fairy* glided into the midst of the "line," the crews of each ship manned the rigging, and some daring spirits climbed to the trucks of the masts to cheer and welcome the august visitors. The Royal vessel lay to off the *Neptune*, and signaled for Captain Watson, commanding the "flying squadron," to repair on board; which he did, and was presented (we believe, by Rear-Admiral Seymour) to the Queen. In a few minutes afterwards the *Fairy* steamed very slowly through the line towards the east, each ship's crew manning the rigging and cheering, even at the malmaison-head tracks. About half-past three the signal was made for those about to leave to weigh and proceed; and at about five minutes to four o'clock all were off, the *Fairy* leading. On steaming ahead to lead them to sea, the *Impérieuse* and *Euryalus* manned their rigging, and their crews gave three rounds of cheers as the Queen passed them. The *Fairy* made the Nab Light at about ten minutes past four, followed by the squadron in the following order: *Impérieuse*, *Euryalus*, *Tartar*, *Esk*, *Conflict*, *Archer*, *Arrogant*; the latter, which was the last to weigh, took the station third on passing the Nab. The whole then presented a very interesting spectacle, which the clearness and beauty of the weather considerably enhanced. At 4.15 the *Fairy* altered her course to the westward, and hoisted a signal of farewell, which was kept flying until the last of the departing squadron had steamed by, each in turn again manning their rigging and cheering. The yacht then put on steam, and returned through the fleet at Spithead to Osborne, arriving about five o'clock, at which time the "flying squadron" was about five miles from the Nab, on their way to the Downs, the *Impérieuse* several miles ahead. The departure of this small instalment of the Baltic Fleet was witnessed by many thousands of spectators, besides those afloat; the walls of Portsmouth, the piers and beach of the Isle of Wight and at Southsea, were thronged with myriads of sight-seers, and the Queen's visit lent additional interest to the movement. The *Vield*, with an Admiralty party on board, and numerous private packets, yachts, and smaller craft were also present. Rear-Admiral Baynes will ultimately command the "flying squadron" of the fleet, but his flagship (the *Retribution*, 28, Captain Fisher) will not be out of the hands of the dockyard artificers until the 7th of April. After remaining nearly a week in the Downs, the whole of the "flying squadron" sailed for the Baltic at 9.30 a.m. on Wednesday morning.

IMPERIAL PARLIAMENT.

(*Continued from page 307.*)

HOUSE OF LORDS. THURSDAY.

The Intramural Burials (Ireland) Bill was read a second time.

The third reading of the Militia (Ireland) Bill was, on the suggestion of the Earl of WICKLOW, postponed until after the Easter holidays.

The Dispatch of Business (Court of Chancery) Bill was read a third time and passed. Adjourned.

HOUSE OF COMMONS.—THURSDAY.

Mr. Antrobus took the oaths and his seat for the borough of Wilton.

Mr. HORSFALL asked the noble Lord the member for Buckingham whether it was his intention to bring in a bill intituled "A bill for an Improved Communication between England and Germany."

Mr. BOUVERIE, in the absence of the Marquis of Chandos, said, the bill would be brought in on the first Friday after the recess.

Mr. MACARTNEY asked the Secretary of the Treasury whether any, and what, sums of money had been expended on behalf of the nation by the officers of the Society of Arts and Sciences in Marlborough-house, and the trustees of the British Museum, in the purchase of articles of vertu, at the sale of the property of the late Mr. Bernal; and, if so, by whose authority such purchases had been made?

Mr. WILSON said that it was first suggested to the Government that they should purchase the whole collection. The question was well considered, and it was ultimately decided that £19,000 should be given to the Society of Arts and Sciences to perfect their collection, and £4000 to the British Museum for a like purpose.

Mr. PELLATT asked the First Lord of the Treasury whether there still exists in Turkey a law which condemns to death a Mussulman convert to Christianity; and, if so, whether this Government or our Allies the French have or intend exercising their influence to abolish so unjust a punishment?

Lord PALMERSTON said that, if the hon. member would refer to papers laid before the House in March, 1844, he would find that Sir Stratford Canning said that he had received an assurance from the Sultan and the Turkish Government that no such execution should take place thereafter

The Convention with Sardinia Bill passed through Committee.

ODESSA.

Mr. F. SCOTT moved an address for copies of the instructions relative to the attack on Odessa, given to the Commander-in-Chief in the Mediterranean and Black Sea; and copies of, or extracts from, all correspondence relating thereto. The hon. gentleman entered at some length upon the reasons why Odessa should have been attacked, and complained that the war was at present costing the country the enormous sum of £110,000 a day, while Sebastopol stood firmer than ever.

Mr. HANKEY seconded the motion.

Sir C. WOOD resisted the motion on the ground of its inexpedency, and of the danger there would be that the production of the papers would put the enemy in possession of our naval tactics.

A discussion then took place, in the course of which Lord PALMERSTON took the opportunity of vindicating Admiral Dundas from the aspersion that had been cast upon him.

The motion was withdrawn.

LORD LUCAN AND THE CAVALRY AT BALACLAVA.

Mr. H. BERKELEY moved that an humble address be presented to her Majesty, praying that she will be graciously pleased to order that an inquiry by Court Martial be held on Lieut.-General the Earl of Lucan, for ordering a charge of the Cavalry at the battle of Balaclava.

The hon. member said, his object was to ascertain under what circumstances 300 of our finest and most gallant men had been wantonly sacrificed. Having read copies of the orders given by Lord Raglan, and extracts from several documents bearing upon the subject, Mr. H. Berkeley observed that although he thought it was impossible that Lord Lucan could offer any excuse for his fatal misconception of Lord Raglan's order, yet in justice to the relations of those who had fallen upon that bloody field, as well as in justice to Lord Lucan himself, he was of opinion that an inquiry should be instituted.

Lord ELCHO seconded the motion from a thorough conviction that his relative, Lord Lucan, would be able to show that he could not have acted otherwise on the unfortunate occasion.

The JUDGE ADVOCATE opposed the motion. He did not think that the House should be made a Court of Appeal from the decision of the Commander-in-Chief and the House of Lords.

After some discussion, Mr. DISRAELI expressed a hope that the motion would not be pressed to a division, and that Lord Lucan would be satisfied with the appeal which he had made to public opinion. He thought, however, that the Government had not acted fairly to the House of Commons in proposing the vote of thanks to Lord Lucan for his conduct in the Crimea, at a time when they were in possession of information which they thought justified them in recalling him from the army.

Lord PALMERSTON, in opposing the motion, did not wish to cast any imputation upon the military reputation of Lord Lucan. The Crown could not grant a Court-martial, and no precedent in point had been quoted to justify such a motion. The only reason for the recal of Lord Lucan was the differences between him and Lord Raglan, which induced the Government to think that they could not act cordially together.

Mr. BERKELEY ultimately withdrew his motion.

CHURCH RATES.

Sir W. CLAY moved for leave to bring in a bill for the abolition of Church-rates.

Lord STANLEY supported the motion, being of opinion that the only way of settling this vexed question was to abolish Church-rates altogether.

Lord PALMERSTON admitted that the general subject was surrounded with difficulties. He would assent to the introduction of the bill, intimating, however, the probability of the Government introducing a bill themselves that would effect a compromise.

Mr. Henley, Mr. Spooner, and Colonel Sibthorpe, opposed the motion.

The House having divided, the numbers were.—For the motion, 155; against it, 76. Majority, in favour of the motion, 79.

Mr. M. GIBSON obtained leave to bring in a bill to establish schools in England and Wales

Lord DUNCAN obtained leave to bring in a bill to limit the time for county elections in Scotland.

HOUSE OF LORDS. FRIDAY.

The Ecclesiastical Courts Bill passed through Committee.

The Earl of ELLENBOROUGH reopened the whole question of the war, and complained of the conduct of the Government in respect to its management.

Earl GRANVILLE defended the Government, and deprecated any discussion at so critical a time, when negotiations of so important a character were pending

After some discussion their Lordships adjourned.

HOUSE OF COMMONS.—FRIDAY.

GOVERNMENT APPOINTMENTS.

On the motion of Mr. HAYTER new writs were ordered to issue—for Kilmarnock, in the room of Mr. Bouverie, who has accepted the office of Vice-President of the Board of Trade; for the borough of Lewes, in the room of Mr. Brand, who has accepted the office of a Lord of the Treasury; and for the county of Cork, in the room of Mr. E. B. Roche, who has accepted the stewardship of the Chiltern Hundreds.

Mr. PEEL in reply to Mr. G. Dundas, said that instructions had been sent to the Commissariat in the Crimea to abolish, as far as possible, the system of check and counter-check, which had become so multiplied in time of peace as to lead to great delay in time of war.

THE FINANCIAL STATEMENT.

The CHANCELLOR of the EXCHEQUER gave notice that on Friday, the 13th April, he would bring forward his Financial Statement

On the motion that the House at its rising should adjourn until Monday the 16th April,

Sir J. PAKINGTON once more adverted to the impropriety of going from the continued absence of the noble Lord the Secretary for the Colonies, and gave notice that, if Lord J. Russell should not have returned to the country at the close of the recess, he would feel it to be his duty to bring the subject, by way of motion, under the consideration of the House.

Sir DE LACY EVANS called attention to the necessity of sending reinforcements to the Crimea, where the Russians were no doubt strengthening its army to the utmost of its power. This was far more important than alluding to the Militia, and more important also than sending such an apparently unnecessary large force to the Baltic. The real struggle would be in the Euxine, to all of despatch of troops should be concentrated there. He was glad to hear Sidney to the improvement which had taken place in the condition of the troops and the management of the hospitals. It would have required 20,000 men to occupy Odessa; and that enterprise, probably, would explain why a step was not taken. It was a mistake to suppose that the possession of Odessa had facilitated the operations of Russia in throwing troops into Sebastopol, as their troops were brought from an entirely different direction. However, no time should be lost in reinforcing the army in the Crimea to the fullest possible extent, while every available steamship and gun boat should be sent out to the Black Sea to co-operate with the army against the enemy, and he still hoped this suggestion would not be lost sight of by the Government during the recess.

The subject then dropped, and the motion for the adjournment was agreed to.

WILLS AND ADMINISTRATIONS.

The SOLICITOR-GENERAL obtained leave to introduce a Bill to abolish the Jurisdiction of all the Ecclesiastical and Peculiar Courts in England and Wales respecting Wills and Administrations, to establish a distinct Court of Probate and Administration, and otherwise amend this law in relation to matters testamentary. He proposed to effect those objects by the bill—first, to abolish the present Ecclesiastical Courts; secondly, to erect a new tribunal connected with the Court of Chancery, and in which *viva voce* evidence would be received; and, lastly, to give a liberal compensation to those who would suffer by the new measure

CHURCH, UNIVERSITIES, &c.

PREFERMENTS AND APPOINTMENTS. *Rectories:* The Rev. J. T. Johnston to Beeches, Suffolk. The Rev. E. C. Swainson to Winstanslow, near Shrewsbury: Rev. E. Hull to Mylland, Essex; Rev. J. Thwaytes to Colwick, Cumberland. Rev. T. A. Vibe to complete set, in the county of Wexford. Rev. S. Hucknall to Little Ford, Herefordshire. Rev. G. Coulcher to Wattesfield, near Bury St. Edmunds; Rev. H. P. Cooke to Nuneham Courtenay, Oxfordshire; Rev. W. Bevin to North Pakenham, near Swaffham. *Vicarages.* The Rev. R. J. F. Thomas to Yeovil, Somerset; Rev. E. Evans to Llanasph, near Holyhead, Flintshire. Rev. J. Fitzgerald to Borden, near Sittingbourne. *Incumbencies:* The Rev. L. W. Heath to St. John's Church, Clapham; Rev. A. F. Sheppard to Flaenby, near Maryport; Rev. W. P. M'Farquhar to Bengeworth, near Easham; Rev. R. Nicholson to St. Clark's, Easton, near Bristol.

TESTIMONIAL PRESENTED TO THE REV. DUDLEY SOMERVILLE. The parishioners of Shenton, in Leicestershire, have presented their late Curate with a parting testimonial of respect, on his being appointed a Chaplain of the Forces in the Crimea. The gift consists of a handsomely-chased Silver Coffee-pot.

LIVERPOOL ELECTION.—The nomination of candidates for the representation of Liverpool took place in front of the Town-hall on Tuesday. The candidates were—Sir George Benham, who was described as a Tory, and great commercial experience, a hard worker, a sound Protestant, and a staunch supporter of the Constitution in Church and State; and Mr. Joseph Christopher Ewart, "a gentleman of the name of Ewart, brother to Sir Gregory Benham, but who would not join in persecuting those who were opposed to his views." The show of hands was in favour of Mr. Ewart, who was returned on Wednesday by a majority of 1469.

DESPATCHES FROM LORD RAGLAN.

War Department, March 24.

Lord Panmure has this day received a despatch and its enclosures, of which the following are copies, addressed to his Lordship by Field-Marshal the Lord Raglan, G.C.B.:—

Before Sebastopol, March 10

My Lord,—I have really nothing to report to your Lordship this day.

I am happy, however, to be able to inform you that the weather is exceedingly fine, and that I entertain great hopes, derived from the reports of the Principal Medical Officer, that the sick will materially benefit by the improvement in the temperature.

Our advanced batteries are making great progress.

Every effort is directed to the maintenance of the camps in a healthy state, which, as the warm weather approaches, becomes daily more important.

I enclose the return of casualties to the 8th inst.

I received on the evening of the 6th inst. a telegraphic despatch from Lord John Russell, dated Berlin the 2nd, announcing the death of the Emperor of Russia at twelve o'clock on that day.

According to the information of deserters, the event has not been promulgated at Sebastopol.—I have, &c.,

RAGLAN.

The Lord Panmure, &c.

NOMINAL RETURN OF NON COMMISSIONED OFFICERS AND PRIVATES KILLED AND WOUNDED FROM THE 5TH TO THE 8TH OF MARCH, INCLUSIVE.

1st Foot: Private Edward Jackson, severely. 30th Foot: Private John Herson, slightly.
9th Private Peter Mahoney, slightly. 34th Sergeant B. Willett, slightly.
17th. Corporal Thomas Swain, severely.

J. B. BURNALL ESTCOURT, Adjutant-General.

War Department, March 28, 1855

Lord Panmure has this day received two despatches and their enclosures, of which the following are copies, addressed to his Lordship by Field-Marshal the Lord Raglan, G.C.B.:—

Before Sebastopol, March 18, 1855.

My Lord,—The enemy commenced working upon the mamelon in front of the tower of Malakoff in the night of Friday; but the nature of the work, from the thickness of the atmosphere, could not be distinguished

Great progress, however, had been perceived on Sunday, and that night a strong working party of the British troops was occupied in commencing a parallel from the advanced point of our right attack, with a view to form a junction with the corresponding parallel to be made on their side by the French, who began it on the following evening; and much was done to forward the operation before daylight that morning, and it is hoped that the object will be completed to-night.

The weather is generally fine in the early part of the day; but towards evening heavy sea-fogs come rolling in, and wholly obscure the view of the place

The enemy have shown a battalion and some Cossacks on the heights above Baidaroa, and towards Kamara, probably with the view to interrupt the French and English wood-cutting parties, for the construction of gabions, in the immediate neighbourhood, but the Allied detachments have not been obliged to discontinue their work

I enclose a return of casualties to the 16th inst.—I have, &c.,

RAGLAN.

The Lord Panmure, &c.

NOMINAL RETURN OF NON COMMISSIONED OFFICERS AND PRIVATES KILLED AND WOUNDED, FROM 9TH TO 17TH MARCH, 1855, INCLUSIVE.

KILLED—97th Foot: Private John Widows. 56th Foot: Private John McGuire. 34th Foot: Private William Collard (2).

WOUNDED—4th Foot: Private Thomas Saddler, severely. 18th Foot: Private John Conners, severely. 77th Foot: Private Timothy Connell, severely, James Clarke, dangerously.

J. B. BURNALL ESTCOURT, Adjutant-General.

Before Sebastopol, March 17, 1855.

My Lord,—The progress of the parallel, which I reported to your Lordship in my despatch of the 13th inst., has not been as rapid as was anticipated, the ground being extremely rocky, and the difficulty of procuring over consequently excessive, and rendering it almost impossible to carry on the operation during the day

Both the English and the French have now, however, succeeded in establishing the communication between them. Her Majesty's troops have not been massed; but our allies have been kept constantly in action, and they have succeeded in driving the enemy from the rifle-pits, in which they had established themselves in their immediate front, with distinguished gallantry and great perseverance. They, however, have sustained some loss, though not equal to that which they have inflicted upon their opponents

A steady fire has been maintained upon the mamelon in the occupation of the enemy, from the guns in our right attack; and the practice of both the navy and the artillery has been conspicuously good, and reflects the highest credit on those branches of her Majesty's service.

Although no positive attack had been directed against our works, our approaches are carried so close to the enemy that the casualties are greater than they have lately been, as your Lordship will be concerned to remark in examining the returns I have the honour to enclose; and it is my painful duty to announce to your Lordship the death of Captain Craigie, of the Royal Engineers, whose zeal and devotion to the service could not be surpassed, and who was killed on the 13th, after he had been removed from the trenches, and was on his way to the Engineer-park, by a splinter from a shell, which burst close to him.

I have the honour to report the arrival of Lieutenant-General Simpson, who joined my head-quarters yesterday; and that of Sir John McNeill and Colonel Tulloch, who reached Balaclava a few days before.—I have, &c.,

RAGLAN.

The Lord Panmure, &c., &c.

NOMINAL RETURN OF OFFICERS WHO HAVE BEEN KILLED AND WOUNDED, FROM 10TH TO 15TH MARCH, 1855, INCLUSIVE.

KILLED.—Royal Engineers: Captain A. D. Craigie.
WOUNDED.—62nd Foot: Captain J. B. Forster, slightly.

J. B. BURNALL ESTCOURT, Adjutant-General.

NOMINAL RETURN OF NON COMMISSIONED OFFICERS AND PRIVATES KILLED AND WOUNDED, FROM 12TH TO 15TH MARCH, 1855, INCLUSIVE

KILLED.—18th Foot: Corporal Owen Whelan. 34th: Privates Thomas Gately and William Heritage. 41st: Private Patrick Cunningham. 77th: Private Francis Burton.

WOUNDED. Royal Artillery, Gunner and Driver Hugh M'Bride, severely (omitted in the return of 5th March). Rifle Brigade, Second Battalion: Privates James Hornsby, severely; Thomas Stephens, slightly. 7th Foot: Private William Bawdrey, severely. 30th: Privates John Flintoft, severely; John Callaghan, Patrick Kavanagh, slightly. 38th: Privates Francis Hagan, severely; Joseph Perrott, slightly. 41st: Corporal Michael Ivers, slightly; Privates John Evans, John Nevin, James Downes, slightly. 55th: Privates Michael Farrel (since dead), John Stephens, severely; James Lawrence, George Miller, Patrick Gurnan, slightly. 62nd: Private Joseph Smith, slightly. 77th: Private William Grange, dangerously. 88th: Private Michael Keane. 97th: Private William Hartley, Daniel Quinn, slightly. 88th: Private Jeremiah Warren, severely; Daniel Healy, slightly. 97th: Private Peter Carty, James Hargreaves, slightly.

J. B. BURNALL ESTCOURT, Adjutant-General.

DESPATCHES FROM SIR E. LYONS.

Admiralty, March 23, 1855.

Despatches, of which the following are copies, have been received from Rear-Admiral Sir Edmund Lyons, Bart., G.C.B., Commander-in-Chief of her Majesty's ships and vessels in the Mediterranean and Black Sea.

DESTRUCTION OF THE TOWER OF DJIMTEIA BY HER MAJESTY'S STEAM-VESSEL "VIPER."

Royal Albert, off Sebastopol, March 17, 1855.

SIR,—I have the honour to enclose, for the information of the Lords Commissioners of the Admiralty, a copy of a letter that I have received from Captain Giffard, of her Majesty's ship *Leopard*, enclosing one from Lieutenant Armytage, reporting his having destroyed, in her Majesty's steam-vessel *Viper*, under his command, the martello tower and barracks of Djimtei a which had been recently erected for the defence of the direct communication between Anapa and Kertch.

This very useful service has been performed by Lieutenant Armytage in the manner that might have been expected from an officer of his acknowledged merit. I am, &c., (Signed) EDMUND LYONS.

Rear-Admiral and Commander-in-Chief.

To the Secretary of the Admiralty.

[Enclosure.]

Her Majesty's ship *Leopard*, off Kertch, March 3, 1855.

SIR,—The wind being off shore this morning, I sent her Majesty's ship *Viper* to examine the Boghaz of the Kouban Lake, and also the coast as far as the Tower of Djimtei a, and have the honour to enclose a letter from Lieutenant Armytage, reporting his having, in the latter place, destroyed the new tower, with two guns, also the barracks and other buildings.

Lieutenant Armytage deserves great credit for the able manner in which he has performed this service with the small vessel.—I have, &c.,

(Signed) GEO. GIFFARD, Captain.

Rear-Admiral Sir Edmund Lyons, Bart., G.C.B., Commander-in-Chief.

[Sub-Inclosure.]

Her Majesty's steam-vessel *Viper*, off Kertch, March 8, 1855.

SIR,—I have the honour to report, for your information, that, in obedience to your instruction, I left this anchorage at 5.30 this morning, for the purpose of examining the mouth of the Kouban Lake. I arrived off there at nine, and, observing a small force of Cossacks on the north spit, opened fire and dispersed them; then examined the lake in the whale-boat of the ship, but, observing nothing of consequence, proceeded along the coast to the south-eastward.

I had just previously taken possession of a small vessel laden with charcoal and other goods, which I have brought in with me, with three prisoners on board. I enclose you her papers, &c., as they may be useful to his Excellency the Commander-in-Chief, and request your directions in reference to the prisoners.

At 1.50 p.m. I arrived off the Martello Tower at Djimtei a, anchoring bow and stern at a distance of 500 yards from the beach, and at 2 p.m opened fire upon the fort, dispersing the few Cossacks that remained.

It is now my pleasing duty to inform you that I have effectually destroyed the fort, barracks, and granaries (having set fire to the latter), spiked and disabled the two guns, destroying the ammunition; and all I am happy to say, without any casualty on board the *Viper*

I beg to bring under your notice the conduct of Mr. James Rabe, Second Master, who commanded the landing parties; and Mr. J. R. Mose, Master's Assistant, who aided him destroying the guns; both having performed their duty much to my satisfaction. I have, &c.,

(Signed) WM. ARMYTAGE, Lieutenant and Commander.

Captain George Giffard, R.M.S. *Leopard*, Senior officer.

AN ATTACK UPON SOUJAK.

Royal Albert, off Sebastopol, March 17, 1855

SIR,—I have the honour to enclose, for the information of the Lords Commissioners of the Admiralty, a letter which has been addressed to me by Captain Giffard, stating, that while making a reconnaissance near Soujak-Kale, with her Majesty' ship *Leopard*, under his command, and accompanied by Her Majesty's ships *Highflyer*, *Swallow*, and *Viper*, and also by his Imperial Majesty's steam-vessel *Fulton*, he was informed by the Circassians in the neighbourhood, that the enemy had so reduced the strength of that fortress, by the removal of men and guns to Anapa, that they were ready to attack it by land, if he would do so by sea; and that he, wishing to encourage the natives and to annoy the Russians, had assented to the proposal, and moved the ships to within 1000 yards of the south face of the fort, where he performed his part; but that, on finding that the Circassians did not perform theirs, he withdrew, after having driven all the garrison out of the place, with the exception of a few gunners in the eastern batteries, and having also dismounted several guns, and done considerable damage to the arsenal and public works; leaving the garrison about a mile from the place, surrounded by Circassians, who were collecting reinforcements.

The ships appear to have been well placed, and to have fired with great effect; and Captain Giffard expresses his thanks to Captain Le Bris, his able coadjutor on former occasions, as well as to Captain Moore, Commander Crauford, and Lieutenant Armytage, and their respective officers and ships' companies, for their support.

Of Captain Giffard himself, I may perhaps be permitted to observe that this is not the first time that his zeal and gallantry have been conspicuous since he has been under my command.—I am, &c.,

(Signed) ED. LYONS,

Rear-Admiral and Commander-in-Chief.

To the Secretary of the Admiralty, London.

[Inclosure.]

Her Majesty's ship *Leopard*, Soujak Bay, March 13, 1855.

SIR,—I have the honour to acquaint you, for the information I had received from the Circassians, at Gheleghic, and also from the observations of M. Le Bris, of his Imperial Majesty's steam-vessel *Fulton*, as well as my own on the 6th inst. in Soujak Bay, I was led to believe the Russians had sent many guns, stores, &c., away from that fort, and would probably leave if a force appeared off it.

Wishing to have more certain information for you, on my return to your flag, I, on the evening on the 11th inst., when the *Highflyer* joined me, proceeded with the vessels named in the margin* to Soujak Bay, where we

* *Leopard*, *Highflyer*, *Swallow*, *Viper*, and *Fulton*, French steamer.

anchored on the morning of the 12th; but a fresh gale, with heavy swell, prevented our closing the batteries. I, therefore, threw some shells into the place; and the Circassians, who soon appeared in numbers, at the same time attacked the small fort at the head of the bay, opposite the town, drove out the garrison, and burnt it, at eight a.m. This morning the Circassians informed me they had a sufficient force, and would attack Soujak Kalé by land, if I would do so by sea, and wishing to encourage them and embarrass the enemy, I immediately moved the squadron to within 1000 yards of the south face, and opened fire on it. From this point the enemy only had ten guns to bear on the ships, but the light wind and damp weather made the smoke hang over and conceal them from our fire, while our masts above were conspicuous to them.

We soon drove all the inhabitants and troops out of the place, except those in the earthen batteries; but I was much disappointed to find that the Circassians did not choose to attack them when out of the town, having, as they had promised I, therefore, moved out again, as with our small force of men, it would have been too great a risk to land, the main body of the garrison being close at hand.

The arsenal and public buildings are much injured, and several of the guns were silenced and dismounted. Our loss, I am happy to say, has been small; and some injury has been done to the masts and hulls of the ships

I was much pleased with the able way in which all the ships took up their assigned positions, and have to thank Monsieur le Bea, of the *Fulton*; Captain Moore, Commander Cranfurd, and Lieutenant Armytage, commanding the *Viper*, for their able support, as well as all the officers and men.

The Russian force, apparently 1500 or 2000 men, and the other inhabitants, are now encamped about a mile north of the town, having left a few men in the batteries; they will have great difficulty in communicating with Anapa, being surrounded with the Circassians (who were collecting reinforcements), and should they return to the town, a small naval force can at any time have them cut again.

I enclose a list of casualties among the ships -I have, &c.

(Signed) GEORGE GIFFARD, Captain.

Rear-Admiral Sir Edmund Lyons, Bart., G.C.B.

CASUALTIES ON BOARD HER MAJESTY'S SHIP "LEOPARD," RECEIVED DURING THE ATTACK AT SOUJAK, ON THE 18th MARCH, 1855.

KILLED – David Marchmont, gunner, Royal Marine Artillery
WOUNDED.–George Davis, A.B., severely; William Brewerton, private, Royal Marine, slightly. (Signed) J. ACHESON, Surgeon

RETURN OF WOUNDED ON BOARD HER MAJESTY'S SHIP "HIGHFLYER," AT SCHUMLA-KALE, MARCH 14, 1855.

WOUNDED.–James Rickard, A.B., Jeremiah O'Brien, ordinary, slightly
(Signed) W. D. KERR, M.D Surgeon '

The *Gazette* of yesterday (Friday) contains a despatch from General CANROBERT, making favourable mention of the British officers serving under his orders in the passage of the Danube at Rustchuk, on the 7th July, 1854; also a letter from Captain Brock to Admiral Dundas, detailing the gallant repulse of the Russians at Eupatoria, on the 15th Nov., 1854, and the following Amended Return of Officers Wounded at Alma and Inkerman, (in a despatch from Lord Raglan). At *Alma*:–Major Gough, severely; Captain Fitzgerald, slightly; Lieutenants Wallis and Worthington, severely; Ensign Siree, severely, Ensign Greenwood, slightly—all of the 33rd Foot. At *Inkerman*: Lieut.-Col. and Brevet-Col. Warren, severely; Major and Brevet Lieut. Daubeney, slightly—of the 50th Foot.

NAVAL AND MILITARY INTELLIGENCE.

COLONEL MICHELL, who commanded the 6th Foot throughout the Kaffir war, is appointed Chief of the Staff to General Vivian, with the Turkish Contingent.

THE first detachment of cavalry to embark for the Crimea will number 600 men and 1150 horses.

THE total rank and file now proceeding from the dépôts of the three regiments of the Guards and 40 battalions of the line, to form the provisional dépôt to the army in the Crimea at Malta, will number 3984.

The *Sylades*, 20 guns, screw steam corvette, will leave Sheerness in a few days direct for the Baltic. On Saturday last, she completed taking in ammunition, shells, rockets, &c

THE *Volage*, 22 guns, is fitting in dock at Sheerness for an extensive floating magazine for powder, with shell and rocket-rooms, for the use of the Baltic fleet.

ON Monday a large quantity of bale goods, consisting of upwards of 8000 suits of the new tunic regimental coats, trousers, blankets, shirts, &c., for the use of the army in the Crimea, were shipped from the Tower-wharf for conveyance to the seat of war A large quantity was also sent viâ the South-Western Railway to Portsmouth for the same destination

DR. ANDREW SMITH is no longer Director-General of the Medical Department of the ARMY. Among the reforms in course of preparation in the several departments of the War-office, it is contemplated to place the Army Medical Department, as well as the Ordnance and other Boards, under the more direct and immediate control of the responsible Minister for War. The Army Medical Board will, among other changes, be reinforced with an accession of civilians, who will be men of business, acquainted with the general conduct of its executive affairs, apart from mere professional duties.

IT is the intention of the Government to erect new fortifications, and to strengthen and put into a state of defence the existing forts, towers, and batteries on the eastern coast of the kingdom, and on the coasts of Kent, Sussex, and Hampshire, for which purpose the line of coast will be surveyed by competent officers of the Royal Engineers and Royal Navy, assisted by the corps of Sappers and Miners, with a view to have the contemplated forts constructed on the most commanding points. The works will be done by contract; and it is stated that the batteries, when completed, are to be garrisoned by the Coast Volunteers, enrolled Chelsea Pensioners, and Militia regiments—the men belonging to which will be instructed in the great gun exercise. In order to guard against any surprise by an enemy, a cordon of telegraphs, on a similar system to that adopted by Captain (now Admiral) Sir H. Pigot, R.C.B., when in command of the Coast Blockade, is to be established.

IT is not intended, for the present, to send out the detachments that have been told off from the Household Brigade of Infantry to reinforce the two battalions in the Crimea. Those named from the First Battalion of the Grenadier Guards who volunteered for active service will, until required, do garrison duty at the Tower and Royal Mint; and the men belonging to the Coldstream and Scots Fusiliers will continue to do the duty at the Royal Palace and West-end. Detachments for infantry regiments of the line before Sebastopol will be the first to embark for the seat of war, viz.—1st Royals (First Battalion), 3rd Buffs, 7th Royal Fusiliers, 18th Royal Irish, 19th Foot, 21st Royal North British Fusiliers, 23rd Royal Welsh Fusiliers, 33rd (Duke of Wellington's Own), 42nd Highlanders, 50th Foot, 57th Foot, 68th Durham Light Infantry (Second Battalion), 71st Highlanders (Second Battalion), 88th Connaught Rangers, 93rd Highlanders, and the First and Second Battalions of the Rifle Brigade. The following regiments will proceed to the Crimea as soon as relieved by regiments of militia, viz.:—Second Battalion 1st Royals, from Cephalonia; 31st Foot, from Corfu; 46th ditto, from Corfu; 56th ditto, from Gibraltar; 77th ditto, Light Infantry, from Malta; 82nd Foot, from Corfu; and 92nd ditto, from Gibraltar. The 94th Foot is to be held in readiness for embarkation. The Cavalry draughts for the Crimea will proceed during the ensuing month. It is estimated that the horse transports already in the service, exclusive of those employed in the conveyance of artillery, are capable of transporting 3000 horses and nearly 4000 men.

ONE hundred and fourteen civil artificers, collar makers, wheelers, and blacksmiths embarked at the Royal Arsenal, at two p.m., on Monday, on board one of the transport vessels ready to leave Woolwich for the Crimea.

THE CAMP ON THE CURRAGH OF KILDARE.—The Commissary-General has issued a notice inviting tenders for the supply of bread and fresh meat for the troops intended to be butted on the Curragh of Kildare. The number of the troops "is expected to be about 10,000, more or less, and to be assembled towards the end of May next." The supply is to be continued from that time to the 30th of November next inclusively.

A NUMBER of young men of the Royal Sappers and Miners are now attached to the field battery stables, to learn to ride and drive and to groom horses, for the purpose of forming a pontoon brigade as soon as possible

CAPTAIN MAUDE, of the Royal Horse Artillery, who was wounded while serving with his troop in the Crimea, and subsequently appointed Brigade Major of the Royal Artillery at Woolwich head-quarters, on the promotion of Brigade-Major Bingham to be Lieutenant-Colonel, has arrived in the garrison, and commenced his duties as Brigade-Major on Monday.

THE Royal East Middlesex, Colonel Thomas Wood, embodied at Hampstead; the Royal Westminster, Colonel Viscount Chelsea, embodied at Turnham green; the Royal 1st Surrey, Colonel W. Holme Sumner, embodied at Richmond; the 2nd Surrey, Colonel Lord Lovelace, embodied at Guildford; the King's Own Tower Hamlets Militia, Lieutenant-Colonel Grant, Commandant, embodied at Hackney, are all under orders to proceed to the encampment at Aldershott.

GOVERNMENT have called upon a number of the most distinguished officers now in England—both of the Queen's and the Indian armies—to state, in writing, their opinions as to the advisability of amalgamating the two services.

CHESS.

TO CORRESPONDENTS.

MILOR W. G. K., T. R., Melrose, G. Mc A., E. H.—Your solutions of the Indian Problem and that by Mr. Folson are correct.

T. G. R., Tulse-hill.—The Problem of the Caliph, Mussulm Billah, may be solved in fewer moves if you give the Pawn the powers they possess in our modern game. This, however, is not allowable. For a description of the moves of the Chessman in olden times, see our Answers to Chess Correspondents in the Number for February 24th.

"100," Much too obvious

T. B., of Melrose, MILOR.—Your Problems are under consideration.

CUTHBERT.—Neither of the Indian Problems, nor of Mr. Bolton's enquiries into the Chess Encyclopædia, have we received the correct solutions from more than some half dozen of our correspondents. We expected that at least a hundred would have mastered the Problems. Your attempt in each case is a failure. Try resolutely once more. Success will be the reward of trouble.

ARAGUS.—The Indian Problem is undoubtedly one of the finest four-move strategems known, but that the intentions of Caliphs, at some affairs, are obscure is admitted. The following, by a German author, named Eichstedt, is at least as difficult.—White: K at K B 5th, Q at K B 3rd, Kt at K 3rd and Q 3rd. Black: K at K B 5th, Q at Q Kt 3rd, Bs at K B 7th and Q Kt 7th, Kt at Q Kt 6th, Ps at K 3rd, K B 3rd, K B 5th, Q 5th, Q B 6th, and Q Kt 2nd. White plays first, and mates in four moves.

1. The key move to the solution is K to Kt 6th

INVARIABLE.—Yes, here is room for the conditions. White is not limited to any number of moves, he is simply required to checkmate his opponent without capturing the Pawn.

E. F., Norwood.—It shall have immediate attention.

J. H. K., Bath.—You forget that the powers of the pieces (or three of them, at least) were much more restricted a thousand years ago than they are now. See our Paper for Feb. 10.]

T. K., St. Mary's, CHELSEA.—Your solutions are correct.

C. W., Sunbury Impracticable, we believe, if Black for each opening move play Q to Q 5th and follow that by K to Q 4th.

ELTON.—The Notation, which is that commonly adopted, the squares of each file are numbered from one to eight, whether you reckon from White's side of the board or from Black's. Thus the square on which the White King stands at the beginning is called the 1st, the next square on the same file his 2nd, the next his 3rd, &c. So, if you count from the other side, the square on which the Black King stands originally in his 1st, the next his 2nd, &c., &c. The White King's 8th square is therefore the Black King's 1st, and vice versâ.

A 11. There is no illegality in the Solution you propose. Black is bound to defend his K as from checkmate as soon as possible; and, to do this, he advances his Pawn to the King's 4th, leaving you the option of taking it in passing or letting it remain.

J., Stockholm.—They shall be examined and reported on in their turn

A. F., Florence.—We are still without news of the long-expected despatches Have the good ness to communicate again with us as soon as possible

ALPHA.—Quite right in both. Now try—without moving the pieces, remember—to solve the admirable stratagem by Eichstedt, which is given above, and the hardly less clever Indian Problem below, by Mr Grimshaw

ST. DAVID.—The Great Chess Meeting of the Northern and Midland Counties Association, at Leamington, takes place on the 3rd, 4th, and 5th of June.

M. P., Lowestoft.—1. The elegant little Gambit "The Muzio-A Pawn" &c., is published by Hayward. 2 Pal-Mall. 2 The "Canon Stelvina," by the Rev. A. C. Harley, has long been out of print

SOLUTIONS OF PROBLEM No. 578, by S. J. Falmouth; T. J. of Harsworth; James Nisbet, Leglen, T. R., Melrose, R. L., Sabphinda, J. L., Guernsey, Annette to Mrs. E. P., Norwood, E. Lambert, T. K., R. M., H. W. H., Saunfield, J. S. A., Court Leaf, Mrs. Pilbeddy, C. M., Ancaster, W. G., M. Tiffin, all correct

SOLUTIONS OF PROBLEM No. 579, by Gregory, P. of, Medicus, F. R., of Norwich, A. Z., J. A. M., Falkirk, L. P., Mrs. Pilbeddy, Mrs. McAlpine correct

SOLUTIONS OF ENIGMAS by CUTHBERT, Miles, Philo-Chess, F. R., Sigma, Mus. Doc., Omega, Mrs. Pilbeddy; R. B., Barton, are correct

SOLUTION OF PROBLEM No. 573.

26. Kt to K 4th	K to B 2nd	53. Kt takes R	P to Q Kt 4th
27. P to K Kt 4th	R to K B sq	54. Kt to K 4th—	

The game was declared a drawn battle.

(c) By this ingenious coup, which was evidently unforeseen by Black, M. Journoud wins an exchange.

(d) The best move to compare, or weaken Black's centre, but it would perhaps have been more prudent to recall the Rook to K Kt sq, or play P to K R 3rd, beforehand.

(e) Ingenious and quite sound.

(f) In Black's place, we should now have preferred playing R to K R 8th, with the object of exchanging the Rook for the Kt, and then depending on our Pawns and King to win against the adverse Rook. We doubt in that case the possibility of White's saving the game.

CHESS ENIGMAS.

THE SILENT MEMBER. No. X.

As the Easter recess approaches, when every member must of necessity become a silent member for at least a few days, the propensity to talk seems to increase in both Houses of Parliament. To talk for mere talking's sake is, unfortunately, the characteristic of many of our cleverest men; and during the last few days we have seen two instances of this objectionable practice—one in the Lords and the other in the Commons. It may be easily surmised who has been guilty of speech-making in the Peers; for, if eloquence can be an offence, the culprits would, in all probability be no other than Lord Brougham. True it is that this distinguished orator and statesman haranged the House of Lords for the best part of an evening sitting, on the subject of certain propositions which nobody had any wish to deny, and which the noble Lord himself had no desire to make the subject of a motion. He had drawn up some resolutions which he asked nobody to agree to, and from which no one had the smallest intention of dissenting. The propositions being obviously true, were so far entitled to respect. But his Lordship might just as well, for all practical purposes, have talked for an hour on the fact that one and one make two, and sat down with a request that certain resolutions embodying that conclusion may be allowed to lie on the table. Though it may be sometimes allowable to talk for the purpose of pastime in the Lords, it is hardly excusable to do so in the Commons, where want of time is almost always made an excuse, when the Session draws near the end, for neglected legislation. While, therefore, I agree with Mr. Phinn, the talented and promising member for Bath, in his liberal views with regard to Poland, I regret that his speech should have been made with so little practical purpose, that he consented at once, on the report of Lord Palmerston, to withdraw the motion on which his speech was founded. Lord Palmerston got the Government and the House very cleverly out of the difficulty in which they might have been placed if the member for Bath had been sufficiently in earnest to have pressed his motion. The independence of Poland is a question on which the Premier is quite prepared with his liberal sympathies, on the understanding that he is not to be asked for his vote; for statesmen can reconcile a theoretical enthusiasm with a practical indifference.

It seems rather hard that we should have suffered, and be still suffering so heavily on account of the war, when we have an Admiral in the service, or rather in the pay of this country, who has for some time professed to be possessed of a plan for taking Cronstadt, or anything else we feel disposed to take, from the Russians. After the experience we have had of the Warner invention, it would be hardly justifiable of the Government to give a very great price for a pig in a poke, and, without any disrespect to Lord Dundonald, we cannot compare him and his secret to anything better than a pig and a poke until we have some further enlightenment, although he has patriotism sufficient to require no payment for the plan by which the honour of his country might at once be saved. As he has expressed his determination to impart his valuable secret to our ally, we may expect that the efficacy of the invention will soon be put to the test, and, if successful, we shall have the mortification of feeling that the French have done what we might have done ourselves.

The protracted miseries of war are crying aloud, in various shapes, for sympathy. This quality has been brought out from all quarters and all ranks, and from none has it been more genuinely elicited, than from the highest rank of all, which has set a noble example, that the others have nobly followed. One of the most recent instances of the many that have been given by the Royal Family, of the sympathy of its members with the sufferers by the war, is an amateur exhibition of pictures, to which some of the Royal children and the Duchess of Gloucester have contributed. Some of these sketches have merit, independent of the feeling by which they have been prompted, and the execution is worthy of commendation, as the design is excellent. It does not appear to be generally known, that the works supplied by the Royal Family may be purchased by any one who is willing to bid above the highest price that may have been last offered, and it is certainly a legitimate opportunity for giving what may be called fancy prices for articles of small intrinsic value.

The disclosures before the Sebastopol Committee proceed with a sort of *crescendo* movement as the first part comes to a conclusion, at the approach of the Easter holidays. The evidence of the medical men is remarkable for showing how doctors, who often disagree in treating their patients, can sometimes agree in neglecting them. Some amusement has been caused by the simple avowal of Dr. Andrew Smith, that, during an official experience of many years, he had been accustomed to look upon spending money as a thing to be avoided; and as, of course, he could do nothing without spending money, the aim of his official life would seem to have been to do as little as possible. According to his own evidence it took him "months" to realise the fact that he had any money to spend; and, of course, while this truth was being worked into his official head –which it was not very easy to penetrate—all the suffering went on, which the spending of the money at his command would have remedied. The shameful mismanagement of the purveying department is explained by the fact that the Purveyor-General was incapable of his duties on account of old age; but though this fact was declared by the "proper authorities," some improper authority was exercised to prevent the incapable official from being called on to retire. Lord Raglan "thought it hard to send him away, as he did not wish to leave;" and, accordingly the wishes of an incompetent veteran were allowed to prevail over the requirements of the public service. Perhaps if the wishes of those who were being sacrificed by the incapacity of the Purveyor had been consulted, it might have been found that they were quite as unwilling to perish for want of proper care as the worn-out official was unwilling to resign his situation. It was, however, no violation of official routine that hundreds should lose there lives, though it would have been against "the rules of the service" to send a high official home before he had quite made up his own mind to retire.

The Criminal Courts seldom fail to supply the Silent Member with something to talk about; and the acquittal of Elizabeth Law, charged with the murder of her mistress at Rochester, is a theme for many remarks. If this person was properly acquitted, many have been improperly condemned; and, if report speaks truly, the girl herself is of the same opinion, for it is rumoured that she has confessed the crime of which the jury declared her innocent. The verdict is said to have been the consequence of the "conscientious scruples" of one juryman against the punishment of death; but, if this be true, it would be curious to see how his conscience dealt with the obligation of the oath he must have broken if he was influenced by the motive to which his conduct has been attributed. Any man having scruples against the punishment of death has no right to trifle with the laws of his country, or with the solemnity of an oath; but, if any sacrifice is to be made, it should be a sacrifice of which he himself should be prepared to bear the consequence. It is mere cant to pretend that there must be some compromise of conscience, either by the violation of his oath, or by subjecting the accused to a punishment which his principles disapprove; for he may escape both alternatives by refusing to serve on a jury, and paying the fine, which is the heaviest penalty to which he can be subjected. There can be no respect for the motives of one who, while professing to act on conscientious motives, violates an oath rather than part with a sum of money, and had rather sacrifice his truthfulness than his pocket. If the punishment of death is to be opposed on the ground of high morality, the cause will be only retarded by men who are base enough to resort to perjury in pursuance of their object. The end can never justify the means; but the baseness of the means will often throw discredit on an end which, for its own sake, might be respected and desired.

GROUP OF GRIS DE FLANDRES.

THE BERNAL COLLECTION.

Rarely has the dispersion of any assemblage of Works of Art realised such high prices as the first portion of Mr. Bernal's Collection; the sale of which closed on Thursday last, the twenty-second day. In neither of the sales of Mr. Beckford at Fonthill or Bath, at the Strawberry-hill sale (in 1842), or at that of Stowe (in 1848), were there assembled so many articles of rare excellence, and that of an age rich in ornamental art, as in the Bernal Collection—extending from the Byzantine Period to that of Louis Seize. Fonthill, Strawberry-hill, and Stowe included many treasures of historic repute, more valuable for having been possessed by celebrated personages than for their perfection as works of art. Mr. Bernal's Collection, however, presented higher claims, inasmuch as his judgment was acknowledged over Europe; and the page which Mr. Planché has prefixed to the Catalogue attests with graceful truth the value of these Art treasures. "Distinguished among English antiquaries by the perfection of his taste, as well as the extent of his knowledge, the difficulty of imposing upon him was increased by the necessity of the fabrication being fine enough in form, colour, and workmanship to rival the masterpiece it simulated—to be, in fact, itself a gem of art, which it would not *pay* to produce as a relic of antiquity. Mr. Bernal could be tempted by nothing that was inferior." This is high warranty; but its truth is as well known to the amateurs of St. Petersburg as to the dealers of Wardour-street and Hanway-street. Hence the high prices realised by the sale of his Collection are to be attributed rather to the artistic character of the articles themselves, than to their pecuniary value as historic relics; and frequent have been the contests between wealthy collectors and the heads of Art institutions for the acquisition of these treasures.

Accompanying our previous Illustrations of this memorable sale will be found a glance at the most rare and remarkable objects; and, as the articles already disposed of extend to nearly 3000 in number, we cannot do more, upon the present occasion, than quote a few of the results.

The first five days were devoted to *Oriental, German, Dresden, Chelsea, and Sèvres Porcelain*—601 lots. The first three days produced upwards of £2000. A Sèvres cabaret, purchased by Mr. Bernal for 65 guineas, was knocked down to the Marquis of Bath for £465: it is of the finest gros bleu, with wreaths of gold; and consists of a plateau, exquisitely painted, with two figures dancing to the music of two shepherds, seated on a bank, in a landscape; and the teapot, sucrier, milk-pot, and cups and saucers, are painted with peasant children and pastoral landscapes. The Marquis of Bath also purchased the pair of Dresden candelabras, with female figures and Cupids, for £231. A pair of oviform vases, the ground incrusted with forget-me-nots, and painted with "conversations" after Watteau, on gold ground, and mounted in excellent taste, were sold for 95 guineas. We have engraved three of the rarities of the porcelain—a group of Sèvres Gros Bleu Vases, for which Prince Demidoff is said to have once offered Mr. Bernal 3000 guineas. The two front vases are in pairs, the taller vase behind forming the centre. The latter is eighteen inches high; the handles and body are festooned with raised and gilt leaves: the centre is exquisitely painted with a peasant and two girls gathering cherries; and, on the reverse, with a group of flowers. The two other vases are similarly decorated, and are exquisitely painted with Bacchanal subjects and groups of flowers.

The Pictures occupied the three next days. "They," M. Planché remarks, "though avowedly not selected for their value as paintings, but for their illustration of costume, have probably, taken as a whole, more merit in them than any similar collection in Europe." The correctness of this estimate may be gathered from the fact that the pictures sold on Saturday produced as nearly as possible the amount at which the whole gallery had been valued by the auctioneers. We have only space to mention that the three days' sale realised nearly £6000.

The Portraits and Miniatures occupied the next day.

The Mediæval Metal-work and Ecclesiastical Silver occupied the next day, and included the dishes and locks, and some relics of exquisite workmanship. King Lothaire's Magic Crystal, circular, engraved with the history of Susannah, and Latin inscriptions above; over the central subject is inscribed, "Lotharius Rex Franc fieri jussit;" in copper-gilt Gothic frame, set with imitations of precious stones, several of which are wanting, and open-work flower edge—the crystal 4½ in. diameter. This curious relic, which was bought by Mr. Bernal for ten guineas, is said to have been once sold in Paris for twelve francs. After an active competition between Mr. Webb and Mr. Fairholt (the latter bidding for Lord Londesborough), the hammer fell at the enormous price of 255 guineas. Sir Thomas More's Candlesticks, of brass, with flowers and leaves enamelled in blue and white, the stems of globular form. Under the foot is inscribed, "Sir Thomas More, Knight, 1532"—5¼ in. high. Mr. Bernal is said to have purchased these candlesticks of Mr. Chaffers for £12. They were now sold for 220 guineas. A Pair of tall Candlesticks of the same period, 9¾ in. high, realised only £24. "The celebrated reliquaire of the Kings;" a coffer-formed reliquaire, copper gilt, enamelled with blue and turquoise, elaborately ornamented, presented by Pope Eugenius IV. to Philip le Bon, Duke of Burgundy, containing at that time the relics found in the Chartreux, at Dijon, in 1460. This was purchased by Mr. Bernal for £28, and now realised 63 guineas. A metal-gilt dish, with moresque ornaments and medallions of figures, a processioni round the border, and curious landscape border within, inscribed "Nicolo Rugina," 17 in. diameter—£57 15s. A curious steel lock, for a shrine, with the Saviour kneeling under an archway, surrounded by trees, in high relief; St. Peter and another below; a mask over the keyhole, and pierced borders—£32.

Among the ecclesiastical plate we can only mention the Thomas A'Becket reliquaire, a small coffer of copper gilt, richly enamelled with blue: on the front is represented the martyrdom of the Saint—57½ guineas. Colonel Sibthorp. A gilt sacramental cup, shaped like a wine-glass, on thin stem, curiously chased, 7¾ inches high. This was found in pulling down an old house near Dorking, when it fell out of the inner roof, probably concealed there during the Parliamentary War. It is evidently English, and of the time of Charles I. 11 guineas. The receipts of this and the next day (also of metal-work) exceeded £4000. Among the lots was a tall silver drinking-cup, of English work, plain flat chased, engraved "The gift of Christopher Pym on his admission to the place as clerke of this company," with a coat of arms apparently relating to the Blacksmiths' Company, supported on stem, with a figure of an old warrior holding a smith's hammer and anvil, on which is engraved, "By the hammer and hand all arts do stand," 11½ in. high—£37 10s.

GROUP OF ARMOUR.—JESTER'S STEEL HELMET; RUSSET STEEL BREAST-PLATE, SWORD, AND HALBERD.

The Limoges, Dresden, and Oriental Enamels occupied the next day, and realised £3160. The sale derived increased interest from a well ascertained rumour that the French Government had an agent in the room—M. Kuyck whose instructions were to secure some of the most valuable lots for the Louvre. This gentleman was probably successful in the main object of his errand: one of the choicest subjects in the day's sale an upright oval portrait of Catherine de Medicis, in colours, 18 in. by 12 in., falling to him, after an active competition for 600 guineas.

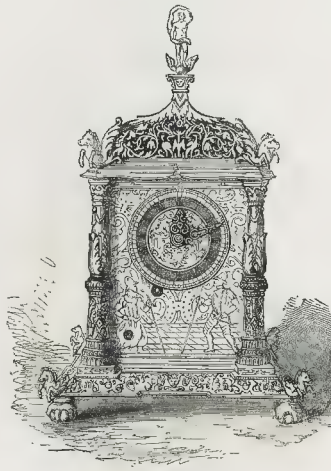
The sale set down for the next day (*Carvings in Ivory and Curiosities*) was of necessity postponed. We have engraved one of its items—a very fine Powder-Flask, of ivory, carved in high relief, with figures hunting wild animals.

CARVED IVORY POWDER-FLASK.

The Faenza and Palissy Ware occupied the three next days. Of the Faenza, or Majolica Ware, Mr. Bernal was known to have possessed one of the finest collections in England. One of its choicest specimens was a plate, in strong colours, the subject believed to be Raphael and the Fornarina in the Studio of an Artist, who is painting a Plate. This was described in the Stowe Catalogue as "An Interior, with an Artist painting the Majolica Ware." In Mr Forster's Annotated Catalogue it is entered as sold to Mr. Forrest, of the Strand, for £4; of whom it was purchased by the late Mr. Bernal, who appreciated its real value, and hence Messrs. Christie and Manson had fully described it in the Catalogue. From a small sum, at which the lot was put in, the price rapidly increased, until it reached 99 guineas. From that amount Mr. Webb and Mr. Campagnelli were the chief competitors, and the hammer ultimately fell to the former at the enormous sum of £120. Here was an instance of a lot realising thirty times the amount it was last sold for; and if the report be true, the British Museum and Marlborough House, through their respective agents, were bidding against each other for its possession.

The sale of the remainder of the Majolica Ware occupied the two next days, Friday and Saturday last. There were in the Catalogue about 400 lots of this *matériel*, the whole of which Mr. Bernal is said to have purchased for less than £1000. The result of the three days' auction realised at least £7000, thus affording another proof of the remarkable skill of Mr. Bernal as a collector, and showing that the purchase of articles of *vertu*, guided by good taste and judgment, may prove an admirable means of investment.

A few lots of the "Bernard Palissy" ware were included in Saturday's sale; and one fine subject—a circular dish, on a foot, with a lizard in the centre, and a rich border, twelve inches in diameter—after exciting an active competition between Mr. Franks, Mr. Webb, and M. Kuyck, fell to the latter at the large price of £162.



GILT CLOCK.

The Armour, Arms, and Stained Glass were sold on Monday, Tuesday, Wednesday, and Thursday last.

We have only space to enumerate a few of the items; among which are a pair of gauntlets, richly engraved and gilt, the wrists embroidered with figures of fine work 51 guineas. A pair of small gauntlets, chased all over with guns and other weapons, and parly gilt—£50. Two rapiers, with cup hilts, pierced and chased—£15 10s. A curious sabre, or executioner's sword, with very broad blade, the steel grip notched for the fingers—£15 10s. A wheel-lock gun, the barrel and lock chased with masks and flowers, and ornamented with silver and gold, the stock inlaid with ivory; in the butt is a silver medal, with a Bishop, and inscribed "Sanctus Rudbertus Epis. Salisb. 1623—£37. A warder's horn, formed of a very large piece of ivory, carved with animals and figures—£56. A round buckler of wood covered with leather, and the original velvet straps; it has a lantern at the top, and is painted inside with the history of Camillus, after G. Romano (22 in. diameter)—£21: the first bidding for this lot was 10s. 6d.

We have engraved a group of Armour and Arms. In the centre is a beautiful specimen—a Spanish Breast-plate of Russet Steel—it is of small size, damascened, and inlaid with gold and silver, and chased and embossed with figures, trophies, &c.; the date is about 1560; it realised £165. The Sword is a powerful fighting sword, the cup chased and pierced with flowers, the pommel chased with figures, with swept hilt and chased guards; the blade is inscribed "Pace porto Guera Cercho." The Halberd has an engraved blade, and richly-chased head. The Helmet, which surmounts the group, is a singular Tilting Bourguinet, fluted: the outer visor has a grotesque nose and moustache; the inner visor is of open work, the comb twisted: the date is from 1480 to 1490.

The Sale will be resumed on April 17, with *Venetian and German Glass, and Gris de Flandres*. Of the latter we have engraved two fine specimens—a blue and white Gris de Flandres Jug, of very curious three-sided form, circle and half circle, with figures dancing under the handle: masks and ornaments at the top; under lip, a cipher and G. B.; dated 1602, with long inscription; 17½ inches high. Next is a singularly beautiful Gris White Jug, with elegant handle terminating in a mask; the ornamentation including stags, birds, and flowers, in high relief; besides subjects of field sports, and an angel holding a shield, with devices and inscription; height, 9¾ inches; presumed date, 1570.

The *Watches, Clocks, and Compasses* will occupy one day. From among the twenty clocks we have engraved the most elegant specimen—a clock, in elegant case of metal-gilt, in the form of a temple; it is elaborately chased, and engraved with figures and arabesques, surmounted by a figure standing on a globe, on ball and claw feet, with winged horses at the angles, and dial on each side.

We shall return to this very interesting Sale. Meanwhile it may be interesting to announce that a *priced* Catalogue is in preparation for publication, by Mr. J. H. Burn, the author of the annotated Catalogue of the Beaufoy Collection of Coins, bequeathed to the Corporation of London.

GROUP OF SEVRES VASES.

"THE FAIRIES' GLEN, ON THE CONWAY, NORTH WALES—MIDSUMMER NIGHT."—PAINTED BY J. P. PETTITT.—EXHIBITION OF THE SOCIETY OF BRITISH ARTISTS.

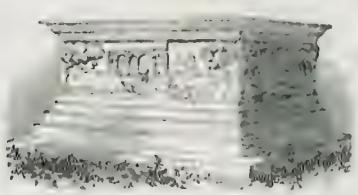
EXHIBITION OF THE SOCIETY OF BRITISH ARTISTS, IN SUFFOLK STREET.

This, the Thirty-second Annual Exhibition of a Society that has experienced the many strange vicissitudes of uncertain support and of yearly caprice in more than one of its members, is by very far the best that we remember to have seen for several years within its walls. All the twenty-five members but one (Mr. Josi is the exception) have come forward, ay and ably, to strengthen the claims of the Society to public support. The strength of our school in landscape-painting has never been shown here to such advantage since Mr. Creswick deserted the retired air of Suffolk street for the more open breezes of Trafalgar-square. Mr. Pettitt delights in scenes on the river Conway, rendered immortal by Gray; Mr. West conveys us to Norway, and detains us there by the force and truth of his delineations; Mr. Pyne (he has only two pictures) holds us in an uncertain balance of choice between Chelsea and Sorrento; Mr. Alfred Clint delights us with choice scenes, most carefully rendered, from North Devon and North Wales. Mr. G. Cole make us hesitate between the banks of the Wye and the braes of Balquiddar; the two Wilsons give ample proofs that their residence at Folkestone has increased (certainly has not diminished) their innate and cultivated knowledge of sea-shores and distant scenes at sea; Mr. Boddington delights to retire with his canvas and colours

To where the silver Thames first rural grows,

and there, following the stream upwards, to carry away with him most truthful studies of English river scenery; while Mr. Gosling retires at times, like Mr. Boddington, to the beautiful banks of Father Thames (witness his "Church Pool at Wargrave"), but is oftener to be found in the depths of a plantation, or the inmost recesses of a forest.

In figure subjects (there are no large or ambitious attempts at History, or the Grand School) the President (Mr. Hurlstone) and the Vice-President (Mr. Salter) will be found fully to sustain their reputations. Mr. Salter is firmer in his colour (he was always rich), and more certain in his drawing than he has been for some years past. But in this [illegible] subject Mr. C. Baxter excels all competitors about him. His "Sunshine (159)—a half-length of a Nymph such as Milton and Spenser loved to describe—is a vision of beauty exquisitely embodied and most delicately rendered. Mr. Baxter is as chaste in his conception and execution as Stothard or Mr. Frost. We long to see him—and soon too—on subjects wherein he can more fully display the resources of his mind and the skill of his pencil, than in single figures, however gracefully conceived or delicately executed. He should find a subject in a great poet, and identify himself with the poem by his skill in treating it.



TOMB OF THE TRADESCANTS, IN LAMBETH CHURCHYARD.

R. M. WARD, ESQ., R.A.—FROM A DAGUERREOTYPE BY BEARD.

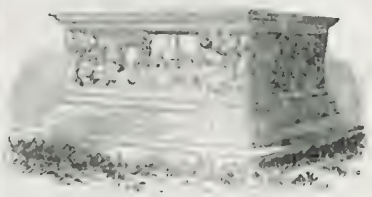
The leading novelty of the Exhibition is the appearance in full strength of two portrait-painters, who were thought to be seeking Trafalgar-square rather than Suffolk street. We allude to Mr. Swinton and Mr Buckner. Both gentlemen are fashionable portrait-painters, skilful in their art, and in large practice. Mr. Swinton introduces the visitor to the Countess of Verulam and Lady Claud Hamilton; and Mr. Buckner arrests us as we pass by his small full-length of the Duchess of Hamilton (in every respect an excellent portrait) and his clever likeness of the Marquis of Douglas. Portrait-painting, now at a discount with the members of the Royal Academy, seems likely to revive in the Society of British Artists! Our future Lawrences and Hoppners—perhaps our Sir Joshuas—may be draughted hereafter from Suffolk-street to Trafalgar-square.

We have said that Mr. Pettitt has been rambling of late in North Wales, and that the banks of the Conway have supplied some admirable subjects for his pencil. We have now to add that he has thrown the rich resources of poetry into his art, and, in a scene called "The Fairies' Glen on the Conway, North Wales—Midsummer Night" (157), has given fresh proof of his excellence as a painter. We have here (as our readers will in part see, for we have engraved the picture) a most careful study of nature peopled with a poetic race, and invested with a beauty of effect in keeping with the whole scene

We shall have occasion to return to the Exhibition, both by way of criticism and pictorial illustration; but, at present, we cannot refrain from directing particular attention to the contributions in the Water-colour Room by Mr. S. Read—"The Chapel in St. Jacques, Antwerp" (No. 614), and "The Haunted House" (No. 640). We have already engraved the latter picture (as many of our readers will remember), and are under other obligations (in common with our subscribers) to Mr. Read's pencil.

ROYAL ACADEMICIAN.

The newly elected Royal Academician, Mr. Edward Matthew Ward was born at Pimlico, in 1816, and is related to the veteran Academician Mr. Ward, by having married his grand daughter. When a boy [illegible] M Ward evinced a taste for art, and a desire to become a painter, which his parents lost no opportunity to foster. In a communication addressed by Mr. Ward to the Editor of the *Art Journal*, he thus feelingly writes of his early artistic career:—"I cannot forbear paying a tribute to the memory of my dear departed mother; to whose devoted tenderness, sound



TOMB OF THE TRADESCANTS, IN LAMBETH CHURCHYARD.—NORTH.

judgment, and natural good taste, though unacquainted with the practical part of art, I am chiefly indebted for much of whatever success he has accompanied my professional efforts; and it is a great source of happiness to me to know that she lived long enough to find her many hours of anxious solicitude were not without their ultimate reward: she witnessed the approbation which critics and the public were pleased to bestow on many of my first exhibited pictures

A few of the young Ward's early productions being shown to his father led to the education of his son for the profession of painting He began by receiving lessons in oil-colouring, without acquiring a knowledge of the principles of Art—a mistake which was corrected by the advice of Chantrey, who recommended that the youth should first attempt to make himself to an educational course of drawing from the antique and anatomical subjects Accordingly, in 1834, he was introduced, through Wilkie, to the schools of the Royal Academy. In the same year, at the age of eighteen, he exhibited at the Academy his first picture—a portrait of Oxmith, the comedian, in the character of *Don Quixote*. In the following year he sent to the Academy a small picture of a scene from Sterne's "Sentimental Journey" it was marked "accepted" but not hung from want of space. In the following year he went to Rome, where he remained three years, occupying himself mostly in studying at the living model schools, drawing from the antique, and in copying choice old pictures In Rome he obtained the silver medal from the Academy of St Luke, in the class of Historical composition. He likewise painted a picture of "Cimabue and Giotto," which was exhibited at our Royal Academy the year after the return of the artist to England, in 1839. He accomplished little for two or three years, if we except his picture of "Napoleon in the Prison of Nice," exhibited at the British Institution, and bought by the Duke of Wellington In 1843 he became more successful in a less ambitious class of Art exhibiting at the Royal Academy his picture of "Dr Johnson Reading Goldsmith's Manuscript 'The Vicar of Wakefield;'" and in 1844, "Goldsmith as a Wandering Musician," and "La Fleur's Departure from Montreuil" In 1845 Mr. Ward exhibited at the Royal Academy his fine picture of "Dr. Johnson in the Ante-room of Lord Chesterfield, which was bought by Mr Vernon, now forms a portion of our National Collection. with the 'Fall of Clarendon,' painted in 1846—a reduced copy made for Mr. Vernon from the larger picture, which Lord Northwick had purchased from the easel of the artist and the 'South Sea Bubble' a fine work in every quality of Art, painted and exhibited in 1847 the preceding year Mr. Ward was elected an Associate of the Academy.—*Art Journal.*

Our space will only allow us to enumerate Mr. Ward's other principal pictures—"The Highgate Pilgrim Father," "The Great Fire of 1666," "Interview between Charles II. and Nell Gwynne," "De Foe and the Manuscript of Robinson Crusoe," and "Young Benjamin West Drawing the Baby in the Cradle." In 1850 he exhibited "James II. Receiving the Intelligence of the Landing of the Prince of Orange;" and in the following year "The Royal Family of France in the Prison of the Temple," and "Charlotte Corday Led to Execution."

Mr. Ward has carried off prizes at many of the chief provincial exhibitions, namely: at Liverpool, for the "South-Sea Bubble" at Glasgow, for his "James II." at Manchester, for "The Royal Family of France," and at Birmingham, for his "Charlotte Corday."

Mr Ward, about two years since, undertook to paint, for the corridor of the House of Commons, a series of eight pictures illustrative of British history. Two of these have been completed and exhibited—"The Execution of Montrose," and "The Last Sleep of Argyll," and have been engraved in the ILLUSTRATED LONDON NEWS; together with the greater number of Mr Ward's pictures enumerated above. Having, therefore, upon the appearance of each of these engravings, spoken of Mr. Ward's high rank as an historical painter, in conclusion, we congratulate Mr. Ward upon his election, a distinction to which he is fully entitled by the many fine works which he has already contributed to the British School of Painting

NOOKS AND CORNERS OF OLD ENGLAND.

TOMB OF THE TRADESCANTS, RESTORED, IN LAMBETH CHURCHYARD.

THE extension of the study of archæology has, of late years, led to the preservation of the memorials of many eminent persons who deservedly rank as benefactors to mankind: and much love of the Past can scarcely be directed to a more useful purpose than by keeping in mind how much we owe to the source the enjoyments of the Present The Tradescants deserve to be placed in this collection of worthies They were Dutch Landsfolk, and their name (which is figured in the ILLUSTRATED LONDON NEWS for March 7, 1846, at which period an interesting discovery illustrative of the history of the elder Tradescant was made by Dr. Hensel. Since this date much light has been thrown upon the personal history of the three Tradescants by Correspondence of Dr Rimbault's *Notes and Queries*, vol. viii., among whom Dr. Rimbault and Mr. S W. Singer take foremost rank. The latter has satisfactorily proved the elder Tradescant to have been, not a native of Holland, had been hitherto supposed, but born in Wopersenhire. The younger Mr. Singer says Mr. Shire, on these grounds, place him in the list of English worthies to whom we owe a debt of gratitude. The three Tradescants are buried in Lambeth Churchyard, beneath a handsomely-sculptured table monument, which having fallen into decay in 1853, it was proposed to restore this Town, according to its original form, as represented in two drawings preserved in the Pepysian Library, at Cambridge. At the same time, it was proposed to renew the epitaph upon the grave-stone of Elias Ashmole, who was buried in Lambeth Church. A fund was raised for these purposes, and the tomb by W. and J. Hooker, K.H., the distinguished botanist, of Kew Gardens, &c. Sir Charles G. Young, Garter, the Rev. B. Dalton, Rector of Lambeth, &c. It was an old debt to the memories of these first of English gardeners and botanists, and one which a less recent but tardy payment; still, the requisite fund, about £100, was raised, and the good work completed.

Pennant has well described the Museum and Garden at Lambeth, and the Tradescants' tomb. "It is no natural scholastic eulogy," says Dr. Rimbault's paper in *Notes and Queries*, No. 79, is, however, full of its details. The monument was built by Mrs. Hester Tradescant, in 1662. She was buried in the vault where her husband and his son John (who "died in his spring"), had been formerly laid. The sculptures on the four sides of the tomb are curious. On the *west*, a crocodile, shells, &c., and a view of some Egyptian buildings; on the *south*, broken columns, Corinthian capitals, &c. supposed to be ruins in Greece, or some Eastern country; on the *east*, Tradescant's arms, on a bend three dexter-handed couped at the wrist a hydra, and under it a skull; various figures of trees, &c., adorn the four corners of the tomb: over it is placed a handsome tablet of black marble The monument, by the contribution of some friends to their memory, was, in the year 1711, repaired, and according to Sir John Hawkins) the following lines, "*formerly* intended for an epitaph, inserted thereon Other authorities say that they were merely *restored*." The beautiful drawings of the monument preserved in the Pepysian Library, were engraved for the *Philosophical Transact ons*, vol. lxiii., p 88; and are printed from the same plates in the "Bibliotheca Topographica Britannica," vol. iii.; and these authorities have been strictly followed in the recent restoration The inscription is as follows:—

JOHN TRADESCANT
DIED A° 1638 ÆTATIS SUÆ
JANE TRADESCANT his Wife,
DIED A° 1 6 CXXIV
JOHN TRADESCANT his Sonne,
Died 18th September, A° DOMINI 1662
HESTER, Wife of JOHN TRADESCANT Younger,
Died A° 1678. A.D. MDCLXVII

Know, Stranger e'er thou pass, beneath this stone
Lye John Tradescant, grandsire, Father and Son
The last died in his spring. The other two
Lived, till they had travelled Art and Nature through,
As by their choice collections may appeare,
Of what is rare in land or sea or aire;
Whilst they (to Honour a libitum) soon
Were both Gardners to the King of Throne
Three famous antiquarians that had seen
Both garden'd and ransack'd the world clean
Transplanted now themselves sleep here: and when
Angels shall with their trumpets waken men,
And fire shall purge the world, these bones shall rise,
And change their corpses for a Crown

This tomb, originally erected on this spot in year 1662,
By Hester, relict of John Tradescant the Younger,
Being in a state of decay
Was repaired by Subscription in the year 1773

After lapse of nearly two centuries and a quarter, it was considered necessary to make this tomb secure.

Surely it were meet to renew our memorials of men who did so much to minister to "the inclination of kings and the choice of philosophers" as did the early English gardeners who rest in Lambeth Churchyard.

MORE TROOPS FOR THE CRIMEA.—Before the month of April is a week old, another 10,000 of the *élite* of the French army will have left for the seat of war. The latest official intelligence from the Crimea informs us that General Canrobert would lombard sud storm a portion of the town of Sebastopol as soon as the English army was ready to do so, which it would be within a week, at the latest.—*Paris Correspondent of the Morning Post.*

Note.—The sign denotes below the average

The reading of the barometer increased from the lowest reading, 29.02 in. at the beginning of the week, to the highest reading, 30.4 in., by the end of the week. The mean for the week, at the height of 82 feet above the level of the sea, was 29.575 inches.

The mean daily temperatures have now been below their average values since the 21st, varying from 2½° to 9½°—the mean defect for the period being 6·9°.

The mean temperature of the week was 38·4°, being 7·2° *below* the average of the corresponding week in thirty-eight years.

The range of temperature during the week was 25·8°, being the difference between the lowest reading of the thermometer (23·2°) on the 26th, and the highest (49·1°) on the 27th.

The mean daily range of temperature during the week was 14·7°. The least was 5·8°, on the 23rd; and the greatest 21½°, on the 26th.

The weather during the week was generally dull and cold; the sky almost covered with clouds; and the sun only occasionally seen for a short time, till the afternoon of the 29th. *Snow* fell for some hours on Wednesday, March 28th

Lewisham, March 30, 1855. JAMES GLAISHER.

HEALTH OF LONDON.—Within the week ending March 24th the births of 1658 children were registered within the metropolitan districts: of these 836 were boys, and 758 were girls. The average number in the twelfth week of the first quarter of the preceding ten years were 780 boys, and 745 girls. Within the week the deaths of 1277 persons were registered; 698 were males, and 579 were females The number of persons who died last week in the districts of the Registrar-General thus indicating a slight improvement in the public health; but still the number exceeded the average for the twelfth week by 117.

EARLY CLOSING.—The Booksellers in Paternoster-row have all agreed to close at five o'clock on Saturday evening succeeding the 7th of April, and will continue to close at that hour on Saturday through the spring and summer months.

MONETARY TRANSACTIONS OF THE WEEK.

(From our City Correspondent.)

Compared with several previous weeks the sales of stock, since we last wrote, have increased to some extent. The Market, therefore, in the absence of large purchasers, and in the present uncertain position of affairs, has been rather less extremely inactive In prices, however though the fluctuations in them have been numerous, no change of importance has taken place—the leading figure for the Three per Cents being ⅛.

The present large reduction of unemployed capital, and the immense amount of notes now held by the Bank of England, under the head of "reserve," lead us to conclude that money will be cheaper At present, however, no actual reduction has been made in the interest; but most of the bankers refuse to take money on "call" at the old rates.

As the foreign exchanges continue favourable, the shipments of bullion to the Continent have been very small; but about £70,000 has been forwarded to Spain. The imports have been confined to £400,000 from New York and £3000 from Africa. Several vessels must be close at hand, from Australia; but it is known that they have only a small amount of bullion on board

There was a steady market for Consols, on Monday, at full quotations. The Three per Cents were 92¾ to 93 for Money, and 92¾ to 93⅛ for the Account. Long Annuities were done at 4⅛ Indian bonds, 10s. to 15s.; and Exchequer bills 5s. to 9s. prem. Exchequer-bonds marked 99¼. The transactions in money on Tuesday were trifling, and some sales of Stock—to the extent of £70,000—were made by the Government broker The Three per Cents realised 92¾ 92½, and 93 for Transfer. The Account prices were 93¼ to 93. India-bonds, 8s. to 10s.; Exchequer-bills, 6s. to 9s. prem. On the following day, the purchases and sales of Stock were trifling. The Three per Cents were 92¾ ⅝ for Money, and 92½ ⅝ to 93 for the Account: India Bonds, 10s.; Exchequer-bills, 6s. to 8s. prem. Bank Stock for the Account was 214. On Thursday the transactions in Consols were very moderate. The Three per Cents were 92¾ to 93 for Transfer, and 92⅝ to 93 for Account. Exchequer Bills were 6s. to 8s., and India Bonds, 10s. to 13s. prem. India Stock, 226; and Bank Stock for account, 214½ to 216.

The following return shows the extent of the note circulation in the United Kingdom during the four weeks ending the 17th ult

Bank of England	..	..	£19,678,842
Private Banks	..	..	5,512,785
Joint-Stock Banks	..	..	3,967,141
Scotland	..	..	3,029,761
Ireland	..	..	6,778,000
Total	..	..	£37,966,529

Compared with February 1854, the above return shows a decrease of £2,777,837 in the circulation of the United Kingdom.

The railway "calls" for April amount to £705,575 During the first four months of the present year they have been £3,587,398 against £4,717,140 in the corresponding period of 1854, and £2,051,908 in 1853. For most Railway Securities the market has been inactive, yet we have very little alteration to notice in the quotations. The following are the official closing money prices on Thursday:—

ORDINARY SHARES AND STOCKS.—Caledonian, 83¾; Eastern Counties, 11¾; East Lancashire, 73; Great Northern, 88½; Ditto, B Stock, 124; Great Western, 59¾; Ditto, Stock for Valley, 103; Lancashire and Yorkshire, 76½; London and Brighton, 97½; London and North-Western, 99⅝; London and South-Western, 85¾; Manchester, Sheffield, and Lincolnshire, 34½; Midland, 69½; Norfolk, 43¾; South-Eastern, 79½; South Wales, 47.

LOANS LEASED AT FIXED RENTALS.—Midland, Bradford, 91; South Staffordshire, 7⅞; Wilts and Somerset, 90.

PREFERENCE SHARES.—Aberdeen, 104; Great Northern Five per Cent, 114½; Ditto Four-and-a-Half per Cents, 103½; Ditto Five per Cent Scrip, 2¾; Great Western Birmingham Guaranteed Stock, 73½; London and Brighton Five per Cent, 113; Manchester, Sheffield, and Lincolnshire, 4¾; Midland Four-and-a-Half per Cent, 1⅞ dis.

FOREIGN.—Arbitrated with Egypt, 6½; Bombay, Baroda, and Central India Scrip, ¾ prem.; East Indian Five per Cent, 99¾; Ditto Extension, 11¼; Paris and Lyons, 13; Sambre, ¾ prem.

Mining Shares have been dull, and prices have been barely supported.—Agua Fria have realised ¼; Australian Imperial, 2¾; Santiago de Cuba, ¼; South Australian, 1; United Mexican, 6¼.

Friday Morning

The Consol-market has been by no means active to-day, yet prices have ruled firm The Three per Cents, for Money, have been 92⅞ ⅝ 93; and for the Account, 92¾ 93 to 93⅛. All Foreign Bonds and Railway Shares have been steady.

THE MARKETS.

CORN EXCHANGE (Friday).—There has been a moderate arrival of English wheat up to our market this week, coastwise and by land carriage; nevertheless the show of samples in to-day's market was small. For all kinds of wheat the trade was rather inactive, at Monday's currency. There was very little inquiry for foreign wheat, the supply of which was but moderate, at unaltered quotations. The inquiry for barley was steady, on former terms, but malt was much neglected. The business doing in oats was comparatively restricted; however, were well supported. Beans and peas were quite as dear as on Monday, but present a dull inquiry

ARRIVALS.—English wheat, 2,600 qrs.; barley, 3410; malt, 3680; oats, 660; flour, 1970. Foreign: wheat, 810 qrs.; barley, 6,200 qrs.; oats, —

Essex and Kent, red, new, 42s. to 44s.; ditto white, 44s. to 46s.; *Norfolk and Suffolk* red, 44s. to 48s.; ditto white, 44s. to 48s.; grinding barley, 27s. to 28s.; distilling ditto, 29s. to 30s.; malting ditto, 32s. to 35s.; Lincoln and Rye oats, 21s. to 23s.; brown ditto, 20s. to 22s.; potato ditto, 22s. to 23s.; Yorkshire and Lincolnshire feed oats, 21s. to 22s.; potato ditto, 23s. to 24s.; grey peas, 34s. to 36s.; maple, 37s. to 38s.; white, 39s. to 42s.; boilers, 36s. to 43s.; tick beans, 37s. to 38s.; harrow ditto, 39s. to 40s.; winter tares, 38s. to 40s.; Spanish, 40s. to 42s. per quarter.

Seeds Most kinds of seeds have arrived steadily for sale this week, and in fair demand, at unchanged prices.

Linseed, English, sowing, 66s. to 70s. Baltic crushing, 56s. to 62s. Mediterranean and Odessa, 60s. to 62s. Hempseed, 34s. to 36s. per quarter. Coriander, 20s. to 22s. per cwt. Brown Mustard seed, 12s. to 14s.; white ditto, 8s. to 10s. Tares, 10s. to 12s. per bushel. English rapeseed, 42l. to 44l. per last of ten quarters. Linseed cakes, English, 11l. to 11l. 10s.; ditto foreign, 10l. 10s. to 11l. 5s.; rape cakes, 6l. 5s. to 6l. 15s. per ton. Canary, 40s. to 52s. per quarter. Red clover seed, 52s. to 62s.; white ditto, 72s. to 80s. per cwt.

Flour The prices of town-made flour are from 60s. to 65s. per sack.

Wheat, 68s. 2d.; barley, 37s. 9d.; oats, 25s. 6d.; rye, 40s. 10d.; beans, 41s. 7d.; peas, 39s. 8d.

English Grain sold last week. Wheat, 82,995; barley, 60,943; oats, 38,404; rye, 419; beans, 5091; peas, 1359 quarters.

Flour.—We have to report a very dull sale for all kinds of ton, the prices of which are a shade lower. Country sound cargoes may be purchased at 2d per bbl.; ends.

Sugar.—Raw sugars have sold heavily, this week. In fine qualities, how ever, very little doing. Low to mid. brown Mauritius has realised 24s. 6d. to 28s. 6d. per cwt.; fine ditto, 28s. 6d. to 30s.; low to mid. yellow, 31s. to 32s. 6d.; low to mid. white Bengals, 33s. 6d. to 36s. 6d.; good bright yellow Madras, 36s. 6d. to 37s. 6d.; native ditto, 26s. to 28s. 6d. per cwt. Refined goods move off heavily, at from 42s. to 48s. per cwt. The total clearances to the 24th inst. were 1,527,71 cwts., against 1,426,44[illegible] ditto, in 1854

Coffee. Good ord. native Ceylon has changed hands at 47s. to 47s. 6d. per cwt. Other kinds of coffee have realised full quotations

Tea. The business doing in our market is by no means extensive, yet holders refuse to accept lower rates

Provisions. Irish butter is very slow in sale, and somewhat cheaper. Foreign qualities move off heavily, on easier terms. English support last week's currency. Tan bacon market is firm, at a further advance of 4s. per cwt. Other kinds of provisions are dull

Spirits.—We have a slow sale for rum. Proof Leewards, 2s. 3d.; East India, 2s. per gallon. Brandy moves off slowly, at late rates Malt spirit, 10s. 6d. per gallon

Hay and Straw, Monday, Smithfield Market.—Meadow hay, £3 15s. to £4 15s.; clover, £4 5s. to £5 15s.; and straw, £1 8s. to £1 16s. per load

Wool.—All kinds of wool continue very dull, and, in some instances, the quotations are rather easier

Hops (Friday).—No change has taken place in our market this week; but the business doing is limited. The imports into London were reported, on the 27th inst., from Antwerp, 241 bags; from Hamburg, 1151 and East Kent Pockets, £14 14s. to £20 0s.; Weald of K. nt, £14 0s. to £15 0s.; New Sussex, £14 0s. to £15 0s.; Yearlings, £—

Coals (Friday).—Carr's Hartley, 19s.; Hetton, 20s. 6d.; Tees, 19s.; Hetton Wallsend, 19s.; Hetton, 18s. 6d.; South Hetton, 20s. 3d.; Heath Hall, 19s. 6d.; Adelaide, 20s.; per ton.

Smithfield (Friday).—We had a very large supply of beasts on offer in the cattle market. Most kinds came off slowly, yet Monday's prices were well supported. Prime sheep were sold at full prices; but all other breeds of sheep were dull and rather low. There was a large supply of calves, which are tending steadily, at from 5s. to 6s. per 8lbs. The supply of pigs was rather large, the best trade was heavy, at a decline of 6d. per 8lbs. Pigs were dull, at late rates. Milch cows ruled heavy, at from £14 to £19 each, including the best.

Per 8lbs to sink the offals.—Coarse and inferior beasts, 3s. 4d. to 3s. 8d.; second quality ditto, 3s. 8d. to 4s. 2d.; prime large oxen, 4s. 4d. to 4s. 6d.; prime Scots, &c., 4s. 10d. to 5s.; coarse and inferior sheep, 3s. 4d. to 3s. 8d.; second quality ditto, 3s. 10d. to 4s.; prime coarse-woolled sheep, 4s. 6d. to 4s. 8d.; prime Southdown ditto, 4s. 10d. to 5s.; large coarse calves, 3s. 8d. to 4s. 6d.; prime small ditto, 4s. 8d. to 4s. 6d.; large pigs, 3s. 10d. to 4s.; small porkers, 4s. 2d. to 4s. 4d. Suckling calves, 18s. to 24s. each; and quarter-old store pigs, 20s. to 30s. each. Total supply: beasts 620 scores, 120 sheep, 200 calves, 270 pigs, and 150 cows, from Lincolnshire, Yorkshire, Herefordshire, Norfolk, and Scotland.

Newcastle and Leadenhall (Friday) The trade ruled heavy, and prices were barely supported.

Newgate and Leadenhall.—Inferior beef, 3s. 2d. to 3s. 4d.; middling ditto, 3s. 6d. to 3s. 8d.; prime large ditto, 3s. 10d. to 4s. 0d.; ditto small, ditto, 4s. 2d. to 4s. 4d.; large pork 3s. 4d. to 3s. 6d.; inferior mutton, 3s. 2d. to 3s. 4d.; middling ditto, 3s. 6d. to 3s. 8d.; prime ditto, 4s. 2d. to 4s. 6d.; veal, 3s. 6d. to 4s. 4d.; small pork, 3s. 10d. to 4s. 4d

THE HONOURABLE ARTILLERY COMPANY of LONDON, the most ancient Corps of Volunteers in England, is OPEN for the ADMISSION of GENTLEMEN who are willing to give a portion of their time to Military Services

The Corps is empowered by Royal Patents and Warrants from her present Most Gracious Majesty, and her Majesty's Royal predecessors, to train persons in the use of arms, and in the practice of military evolutions and exercises

The Corps possesses a Parade-ground of several acres, a Ride-way, an Armoury-house, Arms, and every facility for effective military training

The Officers are selected from the Corps, and hold her Majesty's Commission

Candidates, under twenty-one years of age are admitted as Cadets, but must produce the consent of their parents or guardians

Members have to provide themselves with the Uniform of the Corps

The expenses of the Band, Arms, Ammunition, &c., are defrayed out of the funds of the Company.

Gentlemen desirous of joining, can obtain any further information on application, by letter, to Mr. William H. White, Secretary, 18, Artillery-place, Finsbury

THE ROYAL EXCHANGE ASSURANCE CORPORATION

(Established A.D. 1720, by Charter of King George the First.)

Office in the Royal Exchange, London: Branch, 29, Pall-mall.

The Life Assurance business may be effected in this Corporation on fair and liberal terms.

The Annuities do not exempt from liabilities of Partnership, and payment of their claims is guaranteed by a large invested Capital, Stock. They enjoy the advantages of modern practice, with the stability of an office safely constituted under Royal Charter and special Acts of Parliament, and tested by the experience of nearly a century and a half

Prospectuses, with Tables of the Premiums and of the Bonuses declared in the Life Department, may be had at the Office.

JOHN A. HIGHAM, Actuary and Secretary

THE NORWICH UNION REVERSIONARY INTEREST COMPANY

Office, 33, Lincoln's-Inn-fields. Established 1836

This Company has for its object the purchase of every description of reversionary property, whether absolute or contingent; also to advance upon principal sums, at present insecure and unsalable, on the security of reversionary property and life interests

The remuneration of investing their capital; the Company offer by the peculiar advantages of paying a liberal rate of interest, and secure them from all personal liabilities

The Shares are £10 each (paying a dividend of £5 per cent per annum, payable half-yearly, free from all deductions on account of income-tax), and may be paid for either in full, or by instalments of £1 at the time of application, and £4 when the Shares are allotted

Every information may be obtained upon application at the Company's office.

By order of the Board,

March, 1855. H. NORRIS, Secretary

SCUTARI. Benevolent individuals are respectfully informed that RINDSKOPF'S WORK has been ordered to be sent to Miss Nightingale, for the use of the sick soldiers at Scutari, and has received the highest praise from the Press of all parties for its merits as a work of fiction. It is to be had from all Perfumers and Chemists, and from the Inventor, E. RIMMEL, 39, Gerrard-street, Soho. In Book, for Binding, at a reduced price.

IMMENSE LABOUR SAVED.—BY HER MAJESTY'S ROYAL LETTERS PATENT. This Article, for security and portability, surpasses the most scientific inventions of the age. It can not only write any number of COPIES, but Jour Pennamm, Oil, or Dye can be applied to the Hair at the same time without injury to the hand, by rolling the hands May be had of all respectable Perfumers throughout the Kingdom. Price from 7s. 6d. to —Manufactures, J. BURGESS and SONS, London and Birmingham.

PATRIOTIC JUG. — SAMUEL ALCOCK and CO., Hill Pottery, Burslem, Staffordshire, being desirous of putting it within the reach of all to possess a memorial both of the present War and of the noble and generous sympathy displayed by all classes towards our true friends and allies, have issued a PATRIOTIC JUG, illustrative alike of the horrors of war as well as of the nation's grateful efforts to alleviate them, evidenced by the Royal Patronage and Example of the Distressed Work can be had at all China and Glass Warehouses in the kingdom.

DR. ARNOTT'S SMOKE-CONSUMING FIRE-GRATE is manufactured by F. EDWARDS, SON, and CO., 42, Poland-street, Oxford-street, where it may be seen in daily use. The advantages of this Grate consist in the smoke being perfectly consumed, the chimney-shawl being rendered, by a saving of from 42 to 56 per cent being effected in the cost of fuel. Prospectuses, with Testimonials, sent on application.

DARING ATTEMPT to FORCE OPEN one of CHUBB'S FIRE and THIEF-PROOF SAFES at Wadham's Hill, Wolverhampton, Feb. 9 1855

"Gentlemen,—Last night some thieves broke into our office, and made a violent attack upon our iron safe, which is one of your first and very smallest, and consequently weakest safes. They used with other valuables. From the disfigured condition of the safe, and the appearance of several very strong housebreaking instruments which they had broken in their attempts, and left behind them, it is certain that the thieves spared no efforts in their endeavours to force it open, but we have much satisfaction in informing you that, owing to the great strength of your safe, their object was entirely defeated.

"We are, gentlemen, your obedient servants,

T. and W. JONES.

"Messrs Chubb and Son, 57, St. Paul's Churchyard, London."

CHUBB'S LOCKS, with all the newest improvements Complete Illustrated lists, with sizes and prices, will be sent on application.

Chubb and Son, 57, St. Paul's Churchyard, London; 28, Lord-street, Liverpool; 16, Market-street, Manchester; and Horsely-fields, Wolverhampton.

BY HER MAJESTY'S ROYAL LETTERS PATENT.—For a valuable and extraordinary improvement in the most powerful and useful TELESCOPES, Camp, Race-course, Opera, and Perspective Glasses, to know the distances, at Messrs. R. and H. SOLOMONS'S, Optician, 42, Cornhill, exactly opposite the York Hotel. They possess such extraordinary power that at one focus, 2 to 3 inches, with an extra eye-piece will show distinctly the Georgium with his six satellites, Jupiter's moons, Saturn's ring, and the double stars. With these Telescopes can be seen a person's countenance from three and a half to six miles distant, and an object from sixteen to twenty-five miles, for the waistcoat pocket, and of larger and all sizes, with increasing power. The Royal Exhibition, 185.—Admirable very small powerful waistcoat-pocket glass, the size of a walnut, by which a person can be seen and known one mile and a half distant, country scenery and ships are clearly seen at twelve to fourteen miles. They are the best for the army, dear-stalking, yachting, to sportsmen, gentlemen, gamekeepers, and tourists. A very-choice and useful Issue of the greatest transparent power The valuable advantage derived from this invention is, that vision becoming prepared in powerful and strengthened, a very aged person are enabled to employ their sight at the most minute occupation without spectacles, instead of a small less magnifying power and they do not require the frequent changes to the dangerous effects of further powerful assistance.

DEAFNESS.—THE ORGANIC VIBRATON, an extraordinarily powerful small, newly-invented instrument, for deafness, entirely different from all others, to surpass anything of the kind that has been, or probably ever can be, produced. Being of the same colour as the skin, it is not perceptible. It enables deaf persons to hear distinctly at church and at public assemblies. The unpleasant sensation of singing noises in the ears is entirely removed, and it affords all the assistance that could possibly be desired.—39, Albemarle-street, Piccadilly Observe, opposite the York Hotel.

THE RAILWAY WORKS AT BALACLAVA, BY NIGHT.

THE BALACLAVA RAILWAY.

One of the recent accounts received from Balaclava opens thus:—"The navvy, his barrow, and pick-axe, are in possession, and he is 'master of the situation.' The noise of 'blasts' in the rock, the ring of hammers, the roll of the train, the varying din of labour, sound all around the harbour. The railway has crept up the hill, about three miles outside the town, and two engines have been dragged up to the top of the greatest elevation which the engineers will have to surmount, and will speedily be at work moving the drum to drag up the heavy trains laden with shot, and shell, and provisions.

Another account states:—"The progress which this tramway is making is perfectly marvellous. It is now progressing at the rate of a quarter of a mile per day, including all the delays which arise from bridging small streams, levelling and filling up inequalities, &c. Half the men are employed in laying down the rails and sleepers during the day, and the remainder work all night in boxing up with earth and stones the spaces left between each sleeper. As an instance of the rapidity with which the work proceeds, a pile-driving machine was landed one evening, and carried piecemeal up to where it was necessary to sink piles for a stout wooden bridge across a small, but very muddy stream, which runs into the harbour. The machine was erected early the following morning, and before that evening the piles were all driven, the machine removed, the bridge finished, and the rails laid down for the space of 100 yards beyond."

A Correspondent in the Royal Artillery, who writes from the "Balaclava Lines," has enabled us to present the accompanying Scene of the Railway operations by night.

THE SAILORS' BATTERY.

THE Sketches which our Artist has given of the Sailors' Battery, do not give the impression of much working going forward; but, as they were taken some weeks ago, before the weather had improved, we may reasonably conclude that the men whom he has represented as so very much at ease, have had to bestir themselves somewhat more actively since he was in the trenches. The sailors in the Crimea seem to have got through the winter much more easily than the regular troops; partly, no doubt, from their having been pretty well seasoned to a life of hardship and privation:—

As to Jack (says a recent letter from the Camp) he is happy as he will allow himself to be, and as healthy, barring a little touch of scurvy now and then, as he can wish; but it must be remembered that he has had no advanced trenches, no harrassing incessant labour to enfeeble him, and that he has been most successful in his adaptation of stray horseflesh [illegible] tion to which he has had a peculiar [illegible] of the fleet to rely upon. It is a little out of [illegible] extraordinary notion Jack has imbibed concerning the ownership of chattels, and the distinction between *meum* and *tuum*, but I may not have a better chance hereafter. A mild young officer went up the other day to the sailors' camp, which he heard was a very good place to purchase a horse, and on his arrival picked out a likely man, who was gravely chewing the cud of meditation and tobacco, beside the suspension-bridge formed of the staves of casks which leads across the ravine to their quarters. "Can you tell me where I can get a good horse to buy, my man?" "Well, sir, you see as [illegible] perhaps ain't come in yet, and we don't know what we may have this evening, if your honour could wait." "Then you haven't got anything to sell now?" "Ah! how I does wish your honour had a coned up yesterday, we had five regular good 'uns—hurabs some on 'em was, but they was all bought up by a speckulator from Sallycumpaign." "So they're all gone?" "All, your honour. But (with his face brightening up suddenly), if you should happen to want a sporting out-and-out dromedarey I've got one as I can let you have cheap;" and as he spoke, Jack pointed in great triumph to the melancholy-looking quadruped, which he had "moored stem and stern," as he expressed it, to the ground, and was much disappointed when he found there was no chance of a sale in that line.

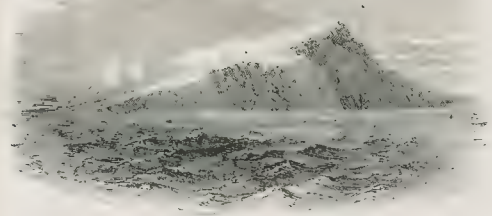
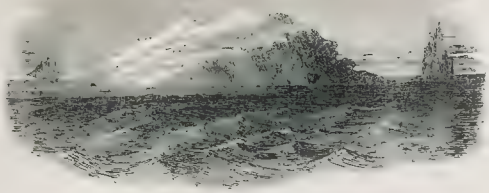
VISIT OF PRINCE ALBERT TO THE SAILORS' HOME.

His Royal Highness Prince Albert, accompanied by the Prince of Leiningen, and attended by Colonel Phipps and Captain Du Plat, paid a visit to Portsmouth Dockyard on the 19th inst., for the purpose of inspecting the new Royal yacht, and also to pay a visit to the Sailors' Home in that town. The Royal visitors landed from the Queen's barge at the north landing-stairs of the steam basin where a guard of honour composed of 100 men of the South Lincoln Militia, were drawn up His Royal Highness was received at the gangway of the *Victoria and Albert* by Captain Sir Baldwin Walker, K.C.B., Surveyor of the Navy, and Captain Denman, with whom Prince Albert made a minute survey of

VISIT OF PRINCE ALBERT TO THE SAILORS' HOME, PORTSMOUTH.



GREY'S ISLAND, SOUTHERN INDIAN OCEAN.



PENN'S ISLAND, [illegible] NEW ZEALAND.

...ompanied through the Admiralty ... to the sailors' Home, in ... the Board of Directors ... Captain Gambier, Admiral ... Lennox, and Commander Johnstone, the Superintendent. After spending half an hour in going over the institution, ... the men at mess, and making himself acquainted with the details ... Albert and his friends left. His Royal Highness, before leaving, expressed to Captain Gambier how much he was pleased with all he had seen and heard, and his hope that the Home would extend its usefulness rapidly. Prince Albert and the Prince of Lehingen, on leaving Portsmouth, went on board the *Fairy* steamer, in which the Queen was. On their way home to Osborne they passed through the fleet.

The following letter has since been received by the Chairman of the Directors of the Portsmouth Royal Sailors' Home, from Colonel the Hon. C. B. Phipps:—

Osborne, March 1, 1855.

"I have received the commands of the Queen and his Royal Highness the Prince to inform you, that, feeling deeply the importance of the present time, when so many seamen are employed in her Majesty's service, of providing a much larger extent of accommodation in the Portsmouth Sailors' Home than at present exists, it is the intention of her Majesty and his Royal Highness to contribute a joint donation of £100 towards the expense of the present proposed increase of available room.

"I am further directed to inform you, that, in the event of so considerable a sum being collected as to give an early prospect of your being able to make use of the next house belonging to the establishment, for the purpose of affording a still larger number of seamen a clean, safe, and respectable lodging, when on shore, her Majesty would be willing, in addition, to give £200 more, to ensure so desirable a result.

"I have the honour to be, Sir,
"Your most obedient humble servant,
"C. B. PHIPPS.

"Captain Gambier, R.N."

H.M.'S LIGHT-DRAUGHT SCREW GUN-BOAT TENDERS.

SEVERAL of these vessels, built at Northfleet, Deptford, and elsewhere, for tenders to ships of heavy draught of water, are now being fast completed for sea, and some have already joined the fleet at Spithead: their draught of water being about ten feet they will be enabled to go into water unapproachable by the vessels they accompany. In length they are about 100 feet, and are propelled by engines of 60-horse power, and have for their armament two of Lancaster's long-range guns. Each of her Majesty's ships having one of those gun-boats attached as tender is to bear on her books thirty-three supernumeraries for service in such tender, which is to have the following complement:—1 lieutenant or mate, 1 gunner, boatswain, and carpenter, 3 assistant engineers, 1 leading stoker, 12 seamen, A.B.'s, or ordinary, 2 boys of first and second-class respectively, and 4 privates of the Royal Marines.

They are smart-looking little vessels, and their performances have given the greatest satisfaction: they reflect the greatest credit on all engaged in their design and construction.

NEW ISLANDS IN THE SOUTHERN INDIAN OCEAN.

(From a Correspondent.)

WE have been favoured by Captain Hyde, of the Royal Mail Steam-ship *Arno*, with the accompanying Views of two recently-discovered Islands in the Southern Indian Ocean, regarded at Melbourne, by Captain Rees of the ship *Lincluden Castle*; Captain Hatton, of the ship *Earl of Eglinton*; and Captain Attenage, of the ship *Herald of the Morning*, who states as follows:—"On the 3rd instant (December) I discovered an Island, and sounded in 72 fathoms on black sand, in harbour, then about ten miles distant, good to view, but exposed to westerly winds. On the next day (4th) a small island, distant from the large one about ten miles, and a deep rock about a mile from it. The large island about forty miles, and the small about nine miles long. I had good observations when close to, and sailing along two sides of the Island. I give the middle of the large Island lat. 53 10 south, lon. 74 36 east: longitudes deduced from chronometers which, leaving the Cape of Good Hope on the 18th Nov., and making this port on the 18th Dec., were found to be correct."

... the banks of ... Namaqualand, when close to, and sailing along two sides of the Island. I give the middle of the large Island lat. 53 10 south, lon. 74 36 east: longitudes deduced from chronometers which, leaving the Cape of Good Hope on the 18th Nov., and making this port on the 18th Dec., were found to be correct."

... Copper Mining Company in this town, and during that ... perhaps very known, and many unknown, varieties of ... one occasion, when about one hundred miles from ... south of the river, and within eighty yards of a high mountain range, I ... to find the road strewed with smooth, well-formed balls, of various ..., but mostly of the size of a large cricket-ball, but more perfectly formed, and smoother on the surface; these were easily broken, consisting not of granite but of greenish flint. In the immediate vicinity of the place is a peculiar formation of red sandstone, consisting of large block, which appear to have been upheaved and disturbed from their original horizontal position, and now resemble well-formed arches or bridges. The low sandy hills on which the balls were found do not exceed half a mile in breadth; the character of the country (seaward) then changes, no red sandstone being found, but a jumble of hills ... resemble soft-red slate, trap, ridges of very white and pink quartz, and silicious formations of various hues. Between two ranges of these hills is a wide and exceedingly fertile plain, perfectly free from boulderstone; and the greater part of this is strewed with natural tiles of beautiful form and workmanship: these are invariably smooth on the lower surface, vary from ½ to 1½ inch in thickness; presenting on the upper part various patterns, arising, it would seem, from crystallisation; but having rather the appearance of having been run into moulds. When the first sample was picked up we imagined it to be a piece of agate, being of the same colour and thickness; but, on examining this and other pieces attentively, the specimens were found to be more regular and attractive than in the case of agate, and affording greater variety of form.

The weather being exceedingly hot, and food and forage unobtainable in these parts, when our party passed through, we could afford no time for ... Before good specimens. The largest piece was about eighteen inches ... by six broad.

I remain, &c.,
J. T. POCOCK.

CATCH AS CATCH CAN.—About three this afternoon there was a splendid bit of manœuvring. A Russian officer, accompanied by a dragoon, determined to steal on a vidette. They came quietly towards the hill, upon the summit of which was one beautiful soldier. In order to avoid all suspicion, the two approaching strangers allowed their horses a gentle gallop-aways, of course, in direction of their prey. All seemed to promise well: but, ... were being closely watched by a very small cavalry picket, and just as the vidette's kill was about to be mounted, out darted three or four of our dragoons ... the heads of the Russian horses were turned, and Russian spurs applied by Russian heels, but the steeds of British breeds was too much for the now ... enemy, and in a few moments the daring pair were marched into Balaclava as prisoners—a Turcoman, and not a vidette, had been caught. An eye-witness tells me that the whole thing was as nearly a fight as I ever saw, and infinitely exciting.—*Letter from Balaclava, Jan. ...*

IMPERIAL PARLIAMENT

HOUSE OF LORDS. MONDAY

THE SARDINIAN TREATY.

The Message from the Crown respecting the convention concluded with Sardinia was taken into consideration.

The Earl of CLARENDON recapitulated the heads of the treaty, and pointed out the advantages which it secured to the Allied Powers in carrying on the war against Russia. The King of Sardinia had acted in the most generous manner, and joined the Western Alliance without reserve or delay as soon as the proposition was made to him. Sardinia intended to pay her full share in carrying on the war, but her finances were not at present in a condition to bear the strain of the immediate outlay, and it was therefore proposed that advances, by way of loan, should be made to her by this country. British vessels were already on their way to transport the 15,000 troops to the Crimea.

The Earl of HARDWICKE and the Earl of SHAFTESBURY congratulated the country upon this arrangement, and paid compliments to Sardinia for the enlightened and liberal policy she had adopted in this and in other matters.

The Address in answer to the Queen's Message was agreed to.

HOUSE OF COMMONS. MONDAY.

Sir C. WOOD, in replying to Mr Sandars, stated that an effectual blockade of all ports in the Baltic and White Sea would be established as soon as the ice had broken up.

THE SARDINIAN TREATY.

The House having resolved itself into Committee, in order to consider the Royal Message respecting the Sardinian Treaty,

Lord PALMERSTON moved an Address in answer to the Crown; and, after briefly recapitulating the terms of the convention, went on to explain the advantages which he anticipated to arise from it both to the Allies, in carrying on the war with Russia, and to Sardinia itself, by bringing that country into cordial union with the great Powers of Europe.

A resolution sanctioning the conclusion of the treaty, and authorising the advance of money to Sardinia under the terms specified therein, was put from the chair.

Mr. DISRAELI would not assume the responsibility of opposing the resolution proposed to them, but would call the attention of the House to the mode of the proceeding. Financial operations at home, he declared, had lately assumed the character of loans in disguise, and the advance now to be granted to Sardinia might turn out to be a similar transaction. By pressing his fear that the transaction would serve as the precedent for a wholesale system of subsidies, he nevertheless admitted the value of the co-operation which Sardinia promised to afford us, that assistance being ... peculiarly important by the neglect and want of foresight of the Bon Gouvernement.

Lord PALMERSTON ... to protest Mr Disraeli to confound a loan with a subsidy, and ... to the charges he had urged against the Government of want of foresight.

Mr EVELYN DENISON regretted the course taken by Mr. Disraeli, and the expressions he had made use of in giving effect to his opinions. Mr Denison trusted that the discussion as honourable to all parties, and hoped the free conversation of Parliament would long flourish.

Mr BRIGHT ... that such loans were generally "shuffled" out of as often as opportunity presented. With regard to the security, he would have liked it all the better had it not been accompanied with 15,000 men Sardinia had no interest whatever in the struggle in which England and France were engaged; and it was one of the great misfortunes of the existing war that it led to endeavours to induce other countries to embark into it—the larger States by coaxing, and the smaller by bullying.

Mr. BOWYER had no fear ... opinion of the financial resources of Sardinia, and had little expectation ... of the loan being repaid.

Mr. GLADSTONE remarked that it was satisfactory to find that, although different views of the proposal had been expressed, not a word had been spoken which tended to give a false impression of the feeling which existed in this country towards Sardinia. Adverting to Mr Bowyer's insinuations and imputations," Mr. Gladstone put the question, "Is Parliament to consider the honour of her financial engagements ... sacred not. He believed that the loan was a *bonâ fide* loan, and that Sardinia would honourably fulfil her engagements. With regard to ... of the loan being repaid ... in the opinion that they ought to be narrowly watched.

Mr. ADDERLEY ... that the House ... necessity of guarding against subsidies, and objected ... Government to use all diligence in developing the military ... sources of our own country.

Lord JOHN RUSSELL expressed his high admiration of Sardinia, and referred with regret to the effect which the language made use of by Mr. Disraeli and his party, in reference to them, might exist under the Foreign Enlistment Act had produced upon the minds of foreigners.

Mr. DISRAELI, being able, as the House was in Committee, to make two speeches on one question, took advantage of that circumstance to repeat his censure of the convention with Sardinia, extending his strictures to the general war policy of the Government.

Lord PALMERSTON replied to this attack, and very another vindication of the treaty and the Ministry.

Mr. WALPOLE thought Mr. Disraeli had done good service in drawing forth explanations on the ... of the projected loan.

Mr. J. BALL spoke ... ce of the financial condition of Sardinia.

Mr. GRIFFITH ... ich whether Sardinia had consulted her best interests in entering upon the war, and whether Austria have been called upon to fire the first shot? He was very much surprised that the advance should have been proposed at a time when negotiations for peace were going on, and when the question of the cessation of hostilities and the restoration of peace or war. Would it not be well, therefore, to take that contingency into account as regarded the present vote?

In answer to Mr. MOFFATT, Lord PALMERSTON said, that if peace should be concluded before the loan was expended in the military preparations of Sardinia, the payment of the balance would become a matter of arrangement.

NEWSPAPER-STAMP DUTIES BILL.

On the order of the day for the second reading of this bill, petitions were presented by Mr. Cowan, from inhabitants and from letterpress printers of Edinburgh, praying the House to repeal all restrictions on newspapers, and to admit all printed matter to postage at the rate of 1d for four ounces; by Sir J. V. Shelley, from Westminster, and other parts of the metropolis, and by Mr. G. Hudson, from booksellers and newspaper proprietors at Sunderland, to the same effect; by Mr. M. Gibson, from the proprietor of the ILLUSTRATED LONDON NEWS, praying that the bill may be passed, and stating that very great inconvenience and injury would arise to newspaper proprietors if the arrangement between Austria and Sardinia were delayed; also from the proprietors of the *West Cornwall Gazette*, in favour of the bill; from Spalding, Canterbury, and other places, in favour of the bill introduced by the late Mr. Scholefield; and from a very large petition signed by Messrs. Longman and Co., and all the principal booksellers, publishers, and musical publishers in Paternoster-row, praying that printed matter may be admitted to postage at the rate of 1d. for four ounces.

On the question that the Newspaper-stamp Duties Bill be read a second time, Mr. DEEDES rose and said he should not hesitate to say that he could not ... till after the Chancellor of the Exchequer has made the Financial statement. In addition to financial considerations, Mr. Deedes urged objections to the proposed alterations. The measure was extremely inopportune for deciding so important a question; and his belief was that, if the people of this country were polled, their opinion would be in opposition to the Ministerial proposal.

Sir E. B. LYTTON could not consent to argue the question upon the narrow basis of money. Many years ago he had proposed the abolition of the taxes on knowledge, including the newspaper-stamp, and nothing had occurred since to induce him to alter his opinion. A great increase had taken place in the intelligence of the people; and how had that arisen? Just because knowledge had been placed within the reach of cheap publications. Those who formerly entertained a fear of the results of cheap literature ought now to take courage, and support the proposed measure. He (Sir E. Lytton) could not agree with Mr. Scholefield that ... of the bill introduced by the late Member for Bolton ... petition signed by Messrs. Longman and Co., and all the principal booksellers, publishers, and musical publishers in Paternoster-row, praying that printed matter may be admitted to postage at the rate of 1d. for four ounces.

On the question that the Newspaper-stamp Duties Bill be read a second time, Mr. DEEDES rose and said he should not hesitate to say that he could not ... till after the Chancellor of the Exchequer has made the Financial statement. In addition to financial considerations, Mr. Deedes urged objections to the proposed alterations. The measure was extremely inopportune for deciding so important a question; and his belief was that, if the people of this country were polled, their opinion would be in opposition to the Ministerial proposal.

Sir E. B. LYTTON could not consent to argue the question upon the narrow basis of money. Many years ago he had proposed the abolition of the taxes on knowledge, including the newspaper-stamp, and nothing had occurred since to induce him to alter his opinion. A great increase had taken place in the intelligence of the people; and how had that arisen? Just because knowledge had been placed within the reach of cheap publications. Those who formerly entertained a fear of the results of cheap literature ought now to take courage, and support the proposed measure. He (Sir E. Lytton) could not agree with Mr. Scholefield that ... of the bill introduced by the late Member for Bolton ... from the details. The latter would have to be carefully considered in Committee; and on that point he would say that a simple and efficient law of copyright should be established, so as to enable any one to print ... papers formed public opinion; it was the public who gave the tone to the newspapers. The principle of the proposed measure was this—that you ought not, in a free country, to lay a tax on the expression of political opinion, or upon the diffusion of information upon public affairs. As long as such a tax existed, no man, be his talent and character what they may, could establish a newspaper for the expression of his views without a capital unfairly enhanced by the amount of the tax. One effect of the emancipation of the press would be to induce persons to throw off the veil which ... and to ... their own name. With regard to the corrupting influence of a corrupt press, it was worthy of remark that the bad influence reached the higher classes first; and, reasoning upon this fact, Sir Edward's belief was that any inflammatory ... which may be established in consequence of the removal of the newspaper-stamp, would not last six months. He entreated the Conservatives to avail themselves of the opportunity now presented of ... their conservative opinions the chance of reaching the eye of the working-classes. He knew of no Conservative ... which reached ... class.

The ATTORNEY-GENERAL ... himself to the state of the law, showing that it was ... to render one of two courses absolutely necessary—that ... of the present law, or the enforcement of the penalties on ... ses of periodicals which had been exempted for many years. He did not think that a law of copyright would be necessary; but, if unprincipled parties should steal the matter from the morning papers in order to bring out their publications at a somewhat later ... would become the duty of Parliament, if juries failed to convict, ... a law of copyright than now existed.

Sir F. BARING ... that the financial objection to the measure ... loss of £200,000 of revenue without a substitute being named—and not being satisfactorily answered. No sufficient case had been made out to justify the ... loss of so much revenue.

Mr. ... ...

Colonel LINDSAY and Colonel NORTH also opposed the motion

Mr. W. WILLIAMS urged the necessity of a total change in the present system, declaring that the public would never be satisfied until all barriers to promotion from the ranks had been removed.

After some remarks from Colonel KNOX,

MR LAING insisted on the advantage of throwing the career open to talent and merit in the military profession.

Lord LOVAINE defended the British Army, and the system by which it is organised

Lord SEYMOUR followed, with some additional remarks in vindication of the military *status quo*

Mr LOWE remarked that our Army promotion was regulated by three systems—of purchase, seniority, and selection—all which had their good and their evil qualities; but the whole, in the British service, were all in turn adopted in the wrong proportion to their value

Colonel DUNNE having spoken in favour of the motion,

Colonel PALMERSTON observed that the proposed changes in the system were urged in the interest of the private soldiers and the regimental officers, the very departments of the Army which at present were most efficient, and whose members evinced the most admirable courage and capacity. Eulogising the performances of the Army during the pending war, he argued that while such were the results of an existing system, there was no true ground for abolishing it. Promotion by purchase might be indefensible in the abstract, but had for generations been rooted in the military organisation, could not now be superseded without much expense and disturbance, and offered many counterbalancing advantages in practical working. The reward of merit was admirable in principle, but in execution inevitably degenerated into promotion by favour. After reviewing to the motion before the House, the noble Lord declared that he saw no utility in appointing the Select Committee; and, on the constitutional question, apprehended the adoption of such a step would involve the House in something approaching to a usurpation of the prerogative of the Crown

Mr. RICH denounced the continuance in the military profession of a system which would be regarded as simony in the Church, corruption in the Government, and venality on the Bench

Mr. F. O'BRIEN briefly supported the motion

Viscount PALMERSTON replied, reasserting to omit from the subjects to be investigated by his proposed Committee the promotion for merit and long service.

On the motion being put a division took place, when there appeared—Ayes, 7; Noes, 104; majority against the motion, 34.

Lord LYVEDEN subsequently moved the following resolution, in order to its being placed on the Committee's Report:—

"That it be the opinion of Mr. Roebuck's Committee that the system of promotion by purchase should be abolished."

The report from the Committee of Supply has also been brought up

Mr. MACAULEY complained of the rapidity with which the votes on the Estimates had been hurried through the House at a late hour on the previous evening.

Mr. WILSON defended his conduct on the occasion, on the plea of necessity. The whole Civil Service must have stood still if the votes had not been duly passed before the end of the month

Some further conversation took place; after which the report was agreed to

HOUSE OF COMMONS. WEDNESDAY

The Bills of Exchange Bill was read a second time, by a majority of 54 after long discussion

The Union of Benefices Bill, moved by Mr. Frewen, and supported by Mr. Spooner and Mr. R. Phillimore, was thrown out, on a second reading, by a majority of 83

The Ecclesiastical Property (Ireland) Bill was read a second time

The Vacating of Seats in Parliament Bill was thrown out, on the second reading, by a majority of 4

The Convention with Sardinia Bill was, on the motion of the CHANCELLOR of the EXCHEQUER, read a second time, and ordered to be committed on Thursday

(*Continued on page* 298)

DISTRESS AMONG THE RUSSIAN STEAMERS. On the morning of Tuesday the 6th inst., one of our new batteries on the right opened fire against two Russian vessels lying at the upper part of the harbour. This battery so close to the edge of the cliff, that a stone could be cast from it into the water below, without much difficulty, was traced out some time ago by Major Gordon, R.E., but had remained masked until the date mentioned. The chief objects against which its fire was to be directed were, a paddle-wheel steamer constantly employed in transporting troops and stores across the harbour, and another steamer armed with a heavy mortar, which has been a source of annoyance by its facility of changing its position, and obtaining shelter under the guns of Konn-burnaia, to protect from the southern shore. On Monday evening these two vessels were seen to be lying out from the land, east of the entrance to Careening Bay, about one third of the distance across the harbour to the north side. They were calculated to be about 1600 or 1700 yards from the battery in question, and within range of several of the guns within the work which were now in readiness. A couple of mortar batteries connected with it. The latter five battery would only admit of a limited number of its guns being brought to bear upon the steamers. Shortly before day broke before the masts of the vessels themselves were visible from the top of the cliff, from one of them all were that they had not quitted their position. The firing commenced. It was not possible for some time to perceive with any accuracy where the shot fell; but when the mist had cleared away, the effect of the two vessels became visible; it was evident that she had been struck. There seemed to be no doubt, judging from the abortive efforts which were observed to set it in motion, that the paddle-wheel looking towards the battery had been injured. In spite of all endeavours to get steam up, thirty-five minutes elapsed before the vessels had quitted their berth, and during this time above sixty rounds of shot and shell were fired against them. It was calculated that eight or ten of these at least had been effective. The nearer steamer was seemingly warped off, and, as she disappeared round a projecting point to the westward of Lefortovo anchorage, it was feared some time supposed that she had even escaped. This supposition was chiefly caused by the sudden appearance in the course of her track of two boats crowded with sailors; but subsequently she was seen passing the entrance to Careening Bay, with masts and sides considerably damaged by the fire to which she had been exposed, but still floating on toward the Dockyard. A very short time was permitted, after the battery had been unmasked and the fire opened against the ships, before the Russian guns in turn opened their fire against the new work. A constant discharge was kept up from the two batteries near the west Inkerman lighthouse, from the battery on the edge of White Cliff, and from the work westward of the entrance to Careening Bay; but, whether the guns were badly served, or whatever might be the cause, they failed altogether either in damaging our work or injuring any one within it.—*Letter from the Camp*

AMUSEMENTS AT EUPATORIA.—The time is beginning to hang heavily enough upon everybody's hands, except those engaged at the fortifications, which will now very soon be completed, and will make Eupatoria not simply an intrenched camp, but a fortress which can only be taken by a regular siege. Troops and artillery still continue to arrive from Varna and Baltchik in large numbers; the weather is passably fine, and the disembarkation goes on swimmingly. The north winds which prevail come sweeping over the steppe from Perekop, laden with frost and snow, and cause a good deal of suffering; but, as the roadstead is sheltered from them, the sea is calm as a mill-pond. When it shifts to the west or south, we pay for the warmth by a huge surf and heavy swell, which retards or puts a stop altogether to all work on the quay. The pier has now become the general rendezvous of all the Europeans in the place, who repair thither every morning after breakfast on horseback, smoke, and exchange or retail the various rumours that are afloat, and make considerable purchases; I am persuaded that the majority go away almost concluding with David's opinion, that all men are liars, as the love of the marvellous and improbable seems to be developed here to an extent almost unparalleled in the history of the human mind. This sort of diet over, the greater number wend their way to their quarters, take up their position in front of a stove upon a three-legged chair, and try to work themselves into the belief that they are sitting before a fire; or stretch themselves full length upon an aged sofa, once the property of some Russian, who is doubtless devoting us to the infernal gods at Odessa or Perekop, and occupy themselves in gazing at the ceiling or whistling paper cigarettes. In the whole town there are perhaps eight or nine French novels, which have long ago gone the rounds; and, in the absence of all other mental food, the reading world is obliged to fall back upon reflection. In the stores of a few Greeks, who pillaged the houses after the flight of the inhabitants, and in retail dealers' shops, great numbers of Russian books are to be found, mixed up with pots, pans, looking-glasses, and portraits of generals all covered with stripes and stars; but the majority seem to be dictionaries and manuals of arithmetic. Reading being, therefore, a luxury not easily to be had, writing is the only intellectual employment which remains; but one is restrained from indulging in this by the scarcity of ink and paper. Those who, like myself, are so fortunate as to live on the sea-shore, have an unfailing resource in looking out of the sea-window at the ships, speculating which steamer it is that last came in, what vessel she towed, when she will go away, whether she has cheese, or butter, or beer, to sell on board; what the signals are about, fancying the wind being favourable, that they hear firing at Sebastopol; or, if of a sentimental turn of mind, wondering "What the wild waves are saying," as they lie on their beds at night-fall, listening to their eternal roar as they break on the strand; and guessing how all the fortifying, and marching, and embarking and disembarking, and cannonading and warring will end; and whether they will ever get out or clear of the territories of his Majesty the Czar, and sleep quiet nights under the safeguard of a policeman, in no fear whatever of being attacked, assaulted, shelled, peppered with Minié rifle balls and 24-pound shot before morning. But the waves go on roaring as lordly as if saying thus—and I am persuaded would reply to any one sceptical in getting talk out of them—that it would be a long while yet, and that a vast number of those who pour on shore every day will never more return.—*Letter from Eupatoria, March* 6.

The value of the exports of the United States for 1854 is given at 275,000,000 dollars. Compared with 1850, the increase in the exports is 118,000,000 dollars. Canada contributed 5,000,000 dollars.

NOTES OF THE WEEK.

THE interest felt by the public in the revelations extracted by Mr. Roebuck's Committee of the needless sufferings endured during the last autumn and winter by our soldiers in the East increases from day to day. Always the Committee-room is crowded; and the first thing read at the breakfast table, after the telegraphic despatches have been glanced at, is the newspaper report of the last day's proceedings. We were told that all sorts of inconveniences were to arise from these examinations—injustice to the commanders of our army, who, attacked without the means of defending themselves, were to throw up their commands *en masse*, or at least to retire to their tents, like Achilles, in sulky inaction; encouragement to the enemy; and destruction to the cordiality of our alliance with France, if not to the alliance itself. As yet none of these misfortunes seem likely to occur. On the other hand, we are now for the first time learning the truth; or, at least, we for the first time know to a certainty that we might all along have put faith in those popular accounts, the correctness of which, under the pressure of official mis-statements and prejudged contradiction, many were inclined to deny. And it is a great thing to know the truth, however disagreeable we may be sure that, in one way or another, good always results from it. This week, besides the examination of Mr. Osborne (S. G. O. of the *Times*)—the most remarkable of all—we have had that of Doctor Andrew Smith, and of Dr Menzies. The former had resigned his office (having been recommended thereto) before he faced the Committee, and to this we must attribute what he was, on the whole, let down easily by the Examiners. Doctor Menzies, I believe, has not yet resigned his office (Deputy-Inspector General of Hospitals): therefore the Committee had no delicacy with him. Mr Drummond, Mr. Layard, and others cross-examined him; and never did Tipperary witness show more determination not to be pressed into giving a direct answer

The charming Lyceum Theatre, one of the most pleasant places of evening amusement in London (and which, but for the absence of stalls, which, from some crotchet, the manager never would allow, would have been still pleasanter), closes its doors. Charles Mathews has given up the game at last. Hard times, want of capital, the ill health of his wife—such are the causes which, in a farewell advertisement, he assigns for his retirement. As an admirable actor, sure always of a large salary, he could not do a wiser thing for his own interest. It is only a pity that he did not take this step years ago—and that he has been so long in discovering that a man without capital has no more business with a theatre than he has with a grocer's shop. A popular actor, with a turn for speculation, hires a theatre—there is little difficulty with the proprietor, for, whoever else suffers, he is pretty sure to get his rent; there will always be money enough in the theatre to satisfy his claim, which is of the nature of a first mortgage. For a time all goes well: the play, or the pantomime, or the burlesque, is a "draw"—the salaries are paid regularly, and give food and lodging to a hundred families—but the weather does not last for ever wax, taxation, or a bad harvest arrives the middle classes have less money to spend on amusements—the dress circle is half full, the pit half empty. With a competent capital, the manager is able to tide over the difficulties in his way, which are not likely to last for ever; without capital he cannot. Of course he hopes for better times, and does not shut up at once. Nobody ever does. So then begins the descending scale of payments—three-quarter salaries, half salaries, no salaries. The carpenter or the dancing girl's pound a week dwindles to fifteen, to ten shillings to nothing. They cannot go elsewhere, for the theatrical season has begun, and all the other companies are complete; so in Bow or Lisle street, in the courts of Drury-lane and Long-acre, there is great poverty, and, it may be, starvation. With all their little follies and conceits, a more uncomplaining, industrious, yet ill-requited, set than the small theatrical people does not exist. Who that has not been mixed up in these matters, would think that the old lady whom but the other day we saw pacing the stage resplendent in brocade—now preserved from absolute want by a half-crown subscription?—this is *a fact*, and is probably no singular case. As for the great actor, the unsuccessful manager, possibly he has to make a mere promenade through the Insolvent Court. The process is barely unpleasant, for what Judge can be hard upon the possessor of talents which have so often moved him to tears or laughter? Then the very worst that can happen to him is that he must content himself with his twenty or thirty pounds a week—for good actors are scarce, must be paid, and can always get security for the payment. *Hamlet* flourishes, but *Laertes* or *Guildenstern* are very likely to come upon the parish. They manage these things differently in France, where no one is allowed to open a theatre without he can previously give security to a reasonable amount that his payments shall not depend on the problematical chances of a run.

Jenny Lind has returned to the concert room, her *locus in quo* being Amsterdam, and the motive assigned a charitable one. Her first concert appears to have been successful, the profits having amounted to £400, which will be applied to the relief of the sufferers from the recent inundations in Guelderland and North Brabant. What is not so well is that, *apropos* to this charitable action, we hear the first notes of a repetition of that ridiculous rhodomontade with which we were sickened a few years ago. We are told that the Dutch audience was "beside itself," that her "wonderful powers moved tears and smiles in one breath," &c. I have seen a Dutch spectator laugh till he cried at some broad farce; but the idea of a whole audience, especially of Dutchmen, crying and laughing simultaneously at one of Jenny Lind's, or any other Jenny's, ballads, is too absurd. Madame Goldschmidt is no doubt a very charming singer, and a very kind-hearted woman besides; but the continual deification of her which used to go on in the papers was too ridiculous, and, it is to be hoped, will not be permitted to recommence.

We have got the very man for a melodrame—a first-rate character for Mr. N. T. Hicks—in prison. Henry Garrett—whose "personal appearance is formidable, a huge pair of whiskers and a thick moustache adding greatly to the natural ferocity of his countenance"—has been "nabbed" by four policemen, in Oxford-street. Garrett, accompanied by three friends, walked one fine afternoon into the Victoria Bank, at Melbourne, tied and gagged the manager and clerks, and walked off with the till, containing some £26,000. There is something really grand in the business, which gives one a kind of sympathy for the offender. There was nothing petty or larcenical in it. There is a largeness of idea even in the manner in which the robber invested his capital. He did not tie it up in a series of stockings, or hide it under his mattress; a Peer of the realm could not have dealt with his savings more methodically or respectably than Garrett with his stolen gold.

A public meeting, attended by men of all politics, has been held at Willis's Rooms, for the purpose of raising subscriptions towards a testimonial of respect for the memory of the late Lord Dudley Stuart. Few reputations stand less in need of a memorial—none deserve one more—than that of this excellent man. As an orator or a politician he was, indeed, not much; he was apt to prose in the House of Commons, and tediously to detail things out of place and out of season—so that his name is associated with many a "count-out"—but his whole life was one act of benevolence and unselfishness; and, to use a trite old phrase—which, in his case, is literally true—"he never lost a friend, or made an enemy."

In consequence of the intervention of Good Friday and of Sunday, a delay of two days will be caused in the payment of the dividends this quarter, which will not take place until the 10th, instead of the 8th of April

The French Government, having determined the value of the article of salt will be henceforth [illegible] Paris, with power to add [illegible] to the prices of the Exhibition Palace have been insured with [illegible]

EPITOME OF NEWS FOREIGN AND DOMESTIC

His Royal Highness Prince Albert honoured Mr. Bacon on Tuesday last, by visiting his studio in Lower Belgrave-place, Pimlico, and inspecting his model for the statue of Mendelssohn

The *New York Herald* notices the production of a blue rose at Paris, by artificial crossings; and also of a green rose in North Carolina

A return to Parliament shows a great increase in the importation of guano. In 1852 the importation was 120,589 tons; in 1853, 123,166; and last year, 235,111 tons.

The number of Piedmontese troops ordered to proceed to the Crimea has been raised from 15,000 to 17,000

The State apartments of Windsor Castle will be closed until further orders.

The *Ost Deutsche Post* of Vienna announces that Spain and Portugal have acceded to the European Coalition, and that the treaty was signed at Paris on the 21st

The Earl of Carlisle has issued instructions to the Comptroller of his household to see that every sick and wounded soldier, arriving in Dublin from the Crimea, shall be provided with a bed, breakfast, dinner, and tea, at his Excellency's expense

The Danish Volksthing has refused the second reading of a bill to cover the sum of 58,000 dollars spent last year without authority by the Minister of War and Marine

Eight waggons filled with Chinese articles intended for the Universal Exhibition have been sent from Rouen to Paris

Lynch law prevails more than ever in California: twenty offenders were lately hanged there without any legal trial

Her Majesty Commissioners of Emigration have given notice that they require two ships to convey ten grooms to Adelaide and Geelong, to be ready to embark them between the 10th and 15th May next.

Letters from Zurich state that a very active Socialist [illegible] are organising [illegible] to the doctrines of Fourier every day more [illegible]

The coal-owners at Wigan have determined on giving notice to their colliers of a reduction of wages, in consequence of the decreased demand for coal, amounting to 2s 10 per cent, or a reduction of employment to five days per week.

The French Government has treated for the conveyance to Quebec of 600 free Americans [illegible]

The looking-glass manufactory of St. Gobain, has just established for the Universal Exhibition, a mirror, eighteen metres 21 square

All the Russian prisoners who are so wounded as to be incapable of bearing arms, are to be sent from the Crimea to their people and friends at Odessa, [illegible] out any conditions, and at the expense of France

The greatest work yet accomplished in Victoria is the Melbourne and Hobson's Bay Railway, opened on the 12th of September. This is [illegible] in the colonies, is about four miles long. The entire distance [illegible] level!

The large bell of the tower of Ivan-Veliki, in the Kremlin, at Moscow, fell to the ground at the moment when the ceremony of swearing allegiance and fidelity to the new Emperor was going on, and by its fall crushed nearly a hundred persons

Letters from Athens announce the discovery of antique statues, or fragments of sculpture, recently brought to light by excavations [illegible] the site of the Temple of Juno. These precious remains [illegible] covered by the Greek Government.

The number of bankrupts in Berne in the last [illegible] amounted to 4255, of whom only about 600 have been rehabilitated.

The works for the embellishment of the Bois de Boulogne are nearly completed; but extensive plantations of shrubs are now being made on the southern island, and in the avenue which leads from Madrid to the village of Neuilly.

The Queen has been pleased to excuse the Duchess of Sutherland, Mistress of the Robes, from [illegible] residence at Court, on account of mourning for the late Lord Frederick Leveson Gower, shall have expired.

The King and Queen of Prussia returned on [illegible] the Chateau of Charlottenhof from Dresden.

The Count de Chambord left Trieste on the 17th, with the Duc de Levis, on his return to Venice.

The Earl of Carlisle arrived in town on Monday last from Yorkshire. After a brief stay in London, his Excellency returned to Ireland, upon the 11th of April, he will make his public entry into the capital.

The *Journal de St. Petersburg* of the 14th announces the death at the Russian capital of the Grand Dukes Nicholas and Michael Nicolaievitch.

The King of Prussia is said to have charged his brother, Prince Charles, whom he despatched to St. Petersburg, to present the condolence of the Court of Berlin, to be also the bearer of pacific counsels.

The Duke and Duchess de Brabant returned to the Hotel Alexandra, from their excursion to the Nile. Their Royal Highnesses were not out on the day or two for Dunkirk.

Prince Albert of Saxony left Turin on the 17th, having paid a visit of condolence to his sister, the Duchess of Genoa.

Lord Dundonald has announced his intention to communicate to the Emperor of the French the means not only to spare the immense [illegible] the French army, but to ensure that of France, by the speedy destruction of the defences of Sebastopol

The Archduchess Mary-Dorothy, mother of the Duchess de Brabant, is seriously ill in Pesth.

The anniversary dinner of the Literary Fund is announced for May the 22nd, with the Bishop of Oxford in the chair

King Victor Emmanuel will proceed to Genoa in a few days, to be present at the embarkation of the Sardinian troops for the Crimea.

Professor Simpson of Edinburgh, has been requested by Lord Panmure to provide the medical officers requisite for the formation of an additional hospital in the East.

The French Emperor has recently extended his clemency to a great number of soldiers undergoing punishment, either of imprisonment or hard labour. Of these men, 299 have received a free pardon, and 188 a commutation of punishment.

A dinner was given before Sebastopol the Welsh Fusiliers gave a large dinner party to celebrate St. David's-day.

M. Thiers and General Changarnier persist in denying the truth of M. Veron's statement (backed by M. Morny) as to their complicity in a plot for the violent dissolution of the National Assembly. Changarnier is [illegible] indignant and positive.

Mr. Ralph Waldo Emerson urges his countrymen to purchase the freedom of every slave in the Republic. No tax, he thinks, would be [illegible] cheerfully paid, though the sum exceeds 2,000,000,000 dollars.

M. Soulé has declined the invitation of the Cuban Junta to a public demonstration in his honour.

An Imperial ukase of the 7th appoints the Grand Duke Constantine to the head of the Ministry of Marine and at the same time to the command of the fleet, as Grand Admiral.

When Mr. Thackeray finishes his "Newcomes," he will [illegible] Americans with a new set of extracts.

General De Marmora is to be placed in the same position as Omer Pacha. He will exercise supreme, but prudent command, and have a seat in the Council of War, but be bound by decisions of the majority of the council.

Mr. Ewart has obtained leave to bring in a bill to promote the establishment of free public libraries and museums in Ireland

Baron Tecco has been appointed Minister Plenipotentiary of Sardinia for the conclusion of the military convention with the Porte, now necessary by the sending of the Sardinian troops to the Crimea

Alboni, after an absence of five years, is about to return to England. She is engaged by Mr. Bunn, for a tour in the provinces, during the months of April and May. Ernst is at the head of the party

Baron von Lieven had his farewell audience of the Emperor of Austria on the 15th, and was to leave the same evening for St. Petersburg

Mahmoud Bey, Mustachar of Foreign Affairs, has been raised to the dignity of Pacha, and appointed Governor of Beyrout

An exhibition has been opened in Dublin, in aid of the Patriotic Fund. It contains several valuable works of art, and some interesting relics of the war.

Two slight undulatory shocks of earthquake were felt at San Remo (Piedmont) on the 16th. They were both preceded by a loud rumbling subterranean noise.

From the present time to the 15th of April, between 5000 and 6000 horses and mules are expected at Marseilles for the [illegible]

VICTOR EMMANUEL II. KING OF SARDINIA.—FROM A PICTURE BY L. V. [illegible]

THE KING OF SARDINIA.

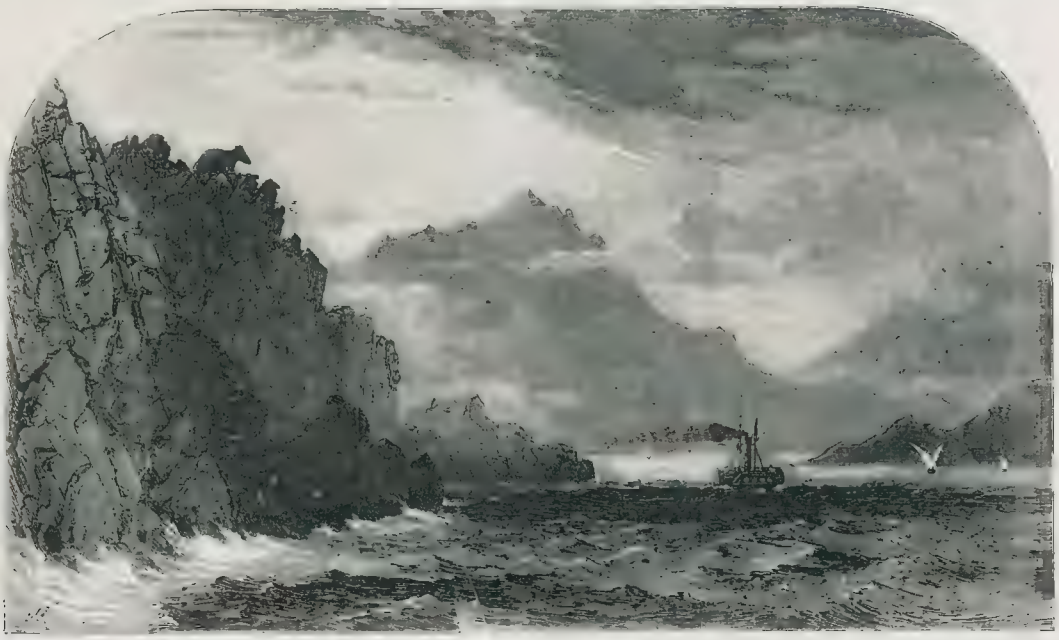
The vicissitudes through which the Kings of the House of Savoy have passed, even during the last half-century, have invested their history with a degree of romance not common among the minor European Sovereigns. After a long period of dynastic struggle and domestic turbulence, the kingdom of Piedmont and Sardinia has at length fallen under the sway of a Monarch who falls not short of any Italian Prince in patriotism, but who sees the advantage which a system of Constitutional Government, well administered, gives to a country over theories of Democratic liberty, or of Absolutism, or of Nationality. By taking a bold initiative in the great dispute now agitating Europe, the present king of Sardinia has raised his State to a higher rank than that enjoyed by any secondary kingdom. While Bavaria, for instance, is either paralysed by Russian influence, or absorbed in the general self-seeking policy of the minor States of Germany, Sardinia rises to the position so inexplicably abandoned by Prussia; and, by her declaration of war, and her magnificent contingent, acquires a right to share in the honours and advantages which may fall to the lot of the Belligerent Powers at the close of the struggle. Although the King of Sardinia has the aid of wise and accomplished Ministers, there cannot be a doubt that much of the prosperity and growing importance of his kingdom is due to himself, and that his personal character is destined to exercise no inconsiderable influence on the affairs of his country perhaps on those of Italy.

Victor Emmanuel-Marie-Albert-Eugene-Ferdinand-Thomas, King of Sardinia, Piedmont, and Savoy Carignan, was born on the 14th of March, 1820, and became at once the Prince Royal, with the title of Duke of Savoy. Carefully trained for the responsible duties he was afterwards to fulfil, his talents and amiable qualities endeared him to his father's subjects. Although well versed in the art of war—as far as the usual routine education of a soldier could give him that knowledge—he also early developed a taste for pursuits of a more peaceful order; and in him art, science, and literature have ever found a patron. When he had attained his twenty-second year he married the Archduchess Adelaide, the second daughter of the Archduke Renier of Austria, whose rule in Lombardy had so much contributed to soften the rigour of the Austrian sway. At the period of their marriage this Princess was two-and-twenty years of age and it is only within the few weeks that he has been deprived of her, in her three-and-thirtieth year.

When the French Revolution of 1848 sounded the tocsin to the Democracy of Italy, the young Duke of Savoy was called to the defence of his father's interests. He was then scarcely twenty-eight years old, and already he was looked up to as the hope of the country. Sardinia was at that time placed in a position of peculiar difficulty, between the revolutionary excitement of the Italians on the one hand, which extended to the Sardinian people, and the permanent interests of the Monarchy—indeed, of the State—which demanded that Austria should not be provoked to an international war. The Duke of Savoy became a prominent actor in the military operations which were forced upon his father, Charles Albert, by the madness of the revolutionary portion of his subjects, and his fear of for ever alienating the affections of the Italian people. At the opening of the campaign of 1848 the Duke commanded the Sardinian reserve at Vercelli. On the 23rd of March he attacked Radetsky and the Austrians at Moriava. He was driven back; and, on the 24th of the same month Radetsky, in his turn, advanced between Malava and Novara. Then took place the fatal and decisive battle of Novara, wherein the Sardinian army was defeated. The Duke of Savoy, with his division, was driven back to Bielle at the foot of the Alps, when an armistice was concluded between him and Radetsky. Austria well knew the circumstances under which the King of Sardinia had been in a manner forced into the war, however much his own dynastic ambition might have been furthered by its success. The Duke of Savoy, therefore, did not find in Radetsky so hard a negotiator as he might have expected; and the armistice was concluded on terms by no means degrading to Sardinia. Nevertheless, the pseudo-patriotism of the people had been wrought to such a pitch of exaltation, that the Throne was endangered from the reaction created by defeat. Charles-Albert, therefore, abdicated in favour of the Duke of Savoy, now Victor Emmanuel II., who immediately ascended the throne.

At the very outset of his reign he had to contend with domestic faction. A new Ministry was formed, which met the Chamber; but the fanatical partisans of Italian nationality were very strong and very violent. With the Austrians at their gates they refused to sanction the armistice. A rebellion broke out at Genoa on the receipt of the news of Novara and its consequences; nor was it put down till General de la Marmora (the same who is Chief of the new contingent) had marched on that city at the head of a strong body of troops. The violence of the opposition in the Chamber compelled the King to dissolve the Parliament—an act which he accompanied by a manifesto, in which he declared to the nation his determination to adhere, as King of Sardinia, to the engagements he had contracted as Duke of Savoy. A new Parliament showed more sense than its predecessor, and the Crown was no longer menaced with the same species of disgrace. Since that epoch, however, the king has had to contend with difficulties of another kind. In all States where party spirit runs high, the excesses of the one call invariably produce counter excesses on the other. In this way the troubles that had been commenced by the revolutionists were continued by the reactionists. A great struggle has been maintained by Sardinia against ultra-montan-

THE LATE QUEEN OF SARDINIA. FROM A PAINTING BY L. W. DESANGES.



THE BEA[illegible] MADDALENA STRAITS, SARDINIA.

ism, but it has been satisfied with the absence of constitutional government to show well that as long as we allow the storm in Sardinia

The conduct of the King of Sardinia with reference to the present war demands the admiration of Europe. While greater Monarchs have held aloof or have played a game of cajolery, the King of Sardinia has braved the anger of Russia by a declaration of war, by a treaty with the Allies, and by furnishing a brave and compact army to the common cause. The ancient possessions of the Genoese are the actual subjects of contention in the Crimea; and if the same people of the present day should play a distinguished part on the scene of the conquests and colonisations of their ancestors, the world may set on the "greatest difficulty" of the question disposed of by a conjunction of the revised claims of Sardinia with military success.

The accompanying Portrait is engraved from a gallery picture painted by Mr. T. W. Desanges, for which his Majesty sat to the painter.

The King of Sardinia ascended the throne on the 24th of March, 1849. His eldest deceased Queen bore him seven children. The public will remember that but recently this Monarch was afflicted with a quick succession of domestic calamities. The Queen Dowager, the Queen, and the King's younger brother the Duke of Genoa, all died in quick succession. It is seldom that a Royal race is so stricken. In this case the calamity was the more severe, as the family were united in the bonds of strong affection.

THE LATE QUEEN OF SARDINIA.

The late Queen Adelaide of Sardinia, whose premature death we narrated in the ILLUSTRATED LONDON NEWS, was in the female line, a daughter as well as a consort of Royal Sardinian race. Her mother, the Princess Maria Elizabeth, the eldest daughter of King Victor Amadeus, was sole sister of the gallant Sardinian Monarch Charles Emanuel, and widow of the Archduke Maria Ferdinand, Archduke of Austria, and was the only daughter. In consequence, her loss is also felt by the Imperial family of Austria, and by her own children. The recent numerous deaths in the Royal family of Sardinia are of the more moment when it is considered that the house should especially flourish, as Sardinia is the only Italian State which has preserved, or is the male representative of its ancient hereditary sovereigns.

The accompanying Portrait of the late Queen is from a picture painted by Mr. T. W. Desanges.

THE BEAR ROCK, MADALENA STRAIT.

The north coast of Sardinia [illegible] dangerous shoals, or islands, rocks, [illegible] between which and the mainland is a narrow passage, called the Bocche of the Madalena, which is frequently taken in the voyage between Leghorn and Malta, [illegible] route through the Strait of Bonifacio, [illegible] and daylight, how ever, is necessary to [illegible] the difficulties of the navigation. It was to improve the pilot's sketch, the [illegible] dangerous and insidious, of the coast on either side a successful [illegible]

We have [illegible] the careful [illegible] on the above plan, in the hope that the good old steam [illegible]. The three principal officers [illegible] two men were at the wheel, and a mate was stationed midway [illegible] and accurate attention to the [illegible] the [illegible] [illegible] [illegible] before them. During the passage, in spite of a slight [illegible] consequence [illegible] danger, or of [illegible] which [illegible] the [illegible] the [illegible] [illegible] [illegible]

Baker has also accumulated instances from the Common Prayer Book, from Chaucer, Drayton, and Shakspeare. Shakspeare, she observes, implies the identity of "teach" and "learn," by using them in the same sentence, apparently to vary the expression. "Unless you could *teach* me to forget a banished father, you must not *learn* me to remember any extraordinary pleasure" ("As You Like It," act 1, scene 2). Todd says, this sense is now perhaps obsolete; but Miss Baker states that it is still in common use in Northamptonshire, and quotes the following amusing epitaph on a village singing-master in the churchyard of the village of Harpole, near Northampton, dated 1729:—

He learned singing for and near,
Full twenty years and more;
But fatal death hath stopped his breath,
And he can *learne* no more.

His scholards all, that are behinde,
Singing he did unfoid;
Exhorting all their God to minde
Before they turn to molde

These instances are taken at random: the volumes abound in matter equally curious and illustrative. Miss Baker has pursued her task *con amore*, and the result of her painstaking is a valuable and interesting addition to the library of the philological student. The volumes are abundantly illustrated with quotations, among which the rural couplets of poor John Clare, the Northamptonshire peasant poet very frequently occur. Miss Baker has been peculiarly fortunate in an authority so wholly unquestionable. The genius of that remarkable man pastured itself in places where innovation had not found its way, and no modern writer so abounds in localisms, with this additional advantage, that a mind so thoroughly poetical was sure to apply them so as to convey their strictest and intensest meaning. Many of the quotations, too, appear to be from MSS.; and we should infer that Miss Baker had had the privilege of a personal intercourse with the poet. She has also, we find, upon reference to her list of book authorities, had access to works of extreme rarity.

NEW MUSIC

SIX VOCAL PIECES. The Poetry and Music by CHARLES MACKAY. Published by Messrs. Boosey and Sons.

The words of these pieces are included in a volume of lyrical poems now in the press and on the eve of publication. They form an interesting specimen of the contents of the book.

It would be superfluous, at this time of day, to entertain the public, and especially the readers of this journal—in the columns of which so many of Dr. Mackay's pieces have first seen the light—with any lengthened eulogy on his genius as a lyrical poet. His writings are in the hands of all the world, and speak for themselves in a language which all the world understands and feels. Mackay is, in England, what Béranger has been, a little before him, in France—the *chansonnier par excellence*, the song-writer of the time. He speaks to the people in a language familiar to them, but purified and refined; he echoes their feelings, exalting and embellishing every thought, every sentiment, that is good, and beautiful, and noble. He cherishes the sweetest and holiest affections of domestic life, and the free and manly aspirations of the citizen, the patriot, and the lover of mankind. Hence it is that the verses of Mackay, though only of yesterday, have already become household words in the mouths of the people of England, as if they had descended by long tradition from a distant age. Versatility, too, is a feature of his genius. He has the rough energy of Ebenezer Elliot; while he has also, if not the voluptuous epicurism, the airy grace of Thomas Moore.

Like Moore also, Mackay is a musician; and we believe that no poet who was not in some degree a musician has ever written a good song. Henry Carey, Dibdin, Burns, Moore, wrote real songs, because their lines, in the act of formation, were associated with beautiful melodies; while the so-called songs of Scott, Campbell, and numberless other poets, are not songs at all: they are read with pleasure and only spoiled by singing, because their authors produced them without any musical associations. Mackay, in his song-writing, has always shown a delicate perception of melody; but it is only now that he has evinced the power of creating melody. The music of the vocal pieces before us, as well as the poetry, is his own; and it shows that he not only possesses the inventive faculty, but no small skill in the art of composition.

These vocal pieces are six in number—five songs and a glee for three voices. We cannot give an idea of their character in any way so well as transcribing two of them; one of the songs and a glee:—

SONG. "BELIEVE IF YOU CAN."

Hope cannot cheat us, or fortune betray,
Tempests never scatter the blossoms in May;
The wild winds are constantly rifling and toying—
Oh! believe me, believe me, believe if you can.

Young Love, who shows us his midsummer light,
Sped, last night, same also over winter's dark night;
And Fame never dazzles to lure and to ruin;
Oh! believe me, believe me, believe if you can!

Friends of the sunshine endure in the storm,
Never they promise and fail to perform;
And the eye, once in the mind, ne'er can
Oh! believe me, believe me, believe if you can!

Words softly spoken to guide ever love,
Pen has never harbour a wasp at the core,
And the ground never slipp'd under high-reaching man;
Oh! believe me, believe me, believe if you can.

Seas undivided, alike smiling at morn,
Wreck not ever night the value finding;
And go, I makes a bridge every river to span,
Oh! believe me, believe me, believe if you can,

GLEE FOR THREE VOICES.

What joy attends the fisher's life!
Blow, winds, blow!
The fisher and his faithful wife;
Row, boys, row!

He drives no plough on stubborn land,
His fields are ready to obstruct,
No ripping frosts his orchards fear,
He has his autumn all the year:
Yeo! heave, ho!

The husbandman has rent to pay,
Blow, winds, blow,
And seed to purchase every day,
Row, boys, row.

But he who farms the rolling deeps,
Though never sowing, always reaps
Ocean fields are fair and free,
There are no rent-days on the sea
Yeo! heave, ho!

Then joy attend the sailor's life!
Blow, winds, blow!
The sailor and his faithful wife!
Row, boys, row!
May fortune's breezes fill his sail,
His treasure harvest never fail;
And, from his cottage on the strand,
Come to old friends of our land!
Yeo! heave, ho!

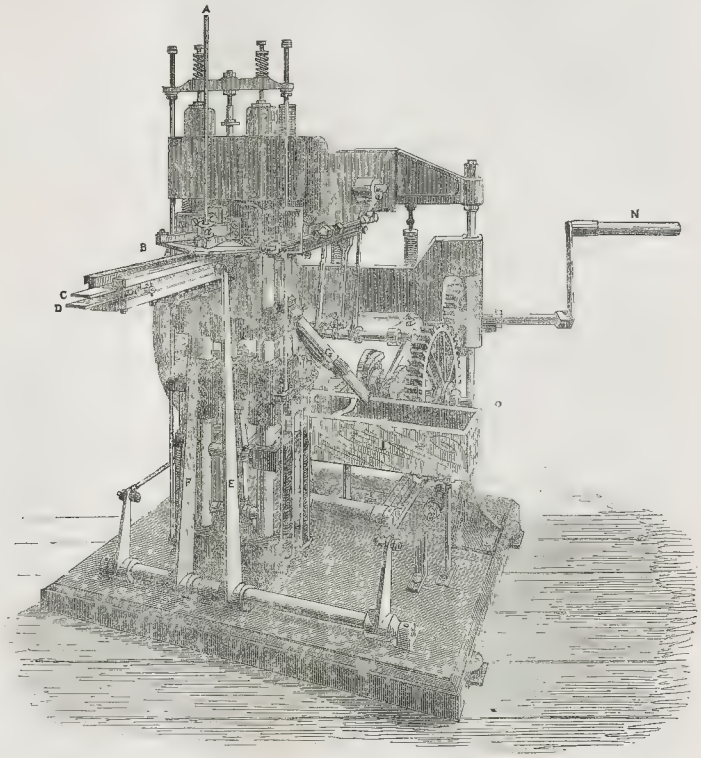
Verses such as these are essentially musical. You feel, in reading them, that they are made to be sung, and that the completeness of their effect demands appropriate melody. No melodies can be more appropriate than those which the author of the poetry has himself contributed. They are exceedingly tuneful, and in every instance echo with truth and fidelity and sense and feeling of the words. They are faultless in all the technical requisites of the art—in regularity of rhythm, symmetry of form, sweetness, and variety of expression: and (what is of the greatest moment) they admit of the clear and emphatic utterance of every syllable. The arrangement of the vocal parts in the glee, and the simple but elegant pianoforte accompaniments, are skilful and musicianlike; and these compositions cannot fail to give great pleasure to every lover of genuine English song.

NAPIERS' PATENT BULLET-COMPRESSING MACHINE.

NOT many years ago the sphere was, as by common consent, regarded to be the best form of bullet; and whether for musket or rifle smooth or grooved bore, the *ball* of lead monopolised every barrel. Perhaps the simplicity of the sphere forbad ordinary minds to seek further; it seems to have been adopted as a matter of course. However, science and experiment, hand in hand, have realised the fact that air offers less resistance to a more pointed projectile. As in ships of late years, the lines have increased in fineness, the old round, bluff bow being supplanted by the sharp entwater of the present day, which like a fine wedge divides the wave with ease, and the vessel ploughs on her way at railroad speed, so has the bullet elongated to a cone, with slightly-rounded point, and the result is a much longer range and greater accuracy.

The use of the conical bullet is necessarily confined to the rifled barrel—that is, to those barrels which have not smooth bores, but a number of small grooves passing from end to end having a spiral direction to the extent of about one-third of a turn round the bore in their length. A portion of the lead forming the bullet being forced into these grooves, either by the shock of the explosion, or by other means, according to the particular class of bullet used, the spiral character of the grooves imparts to the bullet a rotating motion on its axis as it passes along the barrel in its flight; it makes one third of a turn in its passage to the mouth of the barrel, and so continues to spin until arrived at its destination. Without this spinning action the conical bullet would be of no value, as it is thus kept in its true direction point foremost. There are many varieties of the conical bullet, and various plans adopted to cause the lead to enter the grooves of the barrel, whereby to obtain the spinning motion. Each foreign Power which has adopted the conical bullet has its own approved form, but we believe all agree in the propriety of leaving the hinder end of the bullet cylindrical, and grooving this portion with two or three deep recesses at right angles, to the axis of the ball, so as to form an appearance of so many rings. It is found that the action of the air upon these rings tends to retard the back end of the bullet, and so assists in preserving it point foremost in the same manner as the feather attached to the shaft of an arrow. Different opinions have, however, arisen in this country as to the value of these rings, perhaps from the difficulty of forming them perfectly, for by the common process of casting, the bullet is turned out so irregular in form, unequal in density: and the rings, which should present a cutting edge so rounded and incomplete, that, in practice, the value of the idea has been to a great degree lost. If the feather preserves the direction of the arrow which is unquestioned it appears to us most reasonable that the same principle applied to the bullet should have the same effect; but, destroy the balance of the arrow, by displacing the feather on one side—leave the bird as it were with one wing—and you have the same effect or defect as is inseparable from cast bullets, the edges of the rings not being all round alike. The weight of evidence is, however, as we think it should be, in favour of the use of bullets with rings, or, which is the same thing, with "cannelures," the French term for the grooves: our own Government only having dispensed with them while they are considered of great value by all the Continental Powers. Our opinion is that the question can alone be set at rest by a course of experiments with perfectly-formed bullets of each kind; but there have been many serious difficulties in the way of obtaining the necessary material, namely, perfect bullets of the required forms. The old process of casting has been found imperfect, and must be discarded, and in its place compression must be employed. This principle was introduced into the Royal Arsenal, Woolwich, by Mr. Napier, and has been employed for the last sixteen years in the manufacture of the spherical ball, and belted rifle-ball; but, upon the adoption of the elongated bullet, after the Minié plan, new machinery became necessary, which was arranged and most successfully carried out by Mr. John Anderson, the able engineer of the Royal Arsenal; but, as our Government had decided upon the suppression of the Cannelures, the contingent difficulties in the manufacture were left unsolved.

The annexed Engraving introduces to our readers a machine just completed by Messrs. Napier and Son, engineers, of London, to the order of his Excellency the French Minister of War for the manufacture by compression of the "Balle à tige" used by the celebrated Chasseurs de Vincennes in their "Carabines à tige." Fig. 3 represents the bullet, full size; it is solid, having a flat bottom, and, rising with three cannelures, terminates in a fine pointed conical head. The manner of its use may be described thus:—The soldier breaks open the cartridge and pours the powder into the barrel, which surrounds a small plug or "tige," standing

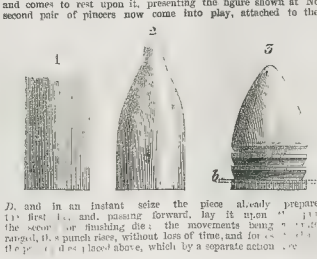


A Rod of lead
B Cutting lever or shear
C Fixed slide for receiving rod
D Second slide, for receiving from C the cut piece
E Lever for working the last slide
F Ditto, second ditto
G Delivery tube, through which perfect ball passes into receiving box
H Wooden box for perfect balls
I Wooden box for refuse
K Hopper
L Handle for working the machine
M Fly-wheel
O Crank shaft

NAPIER'S PATENT BULLET COMPRESSING MACHINE.

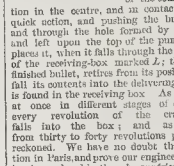
in the centre at the bottom of the barrel, and fills up nearly to the top of the "tige," the bullet is then introduced, and passes easily down until it rests upon the top of the "tige," when, by a smart blow or two of a heavy ramrod formed concave to fit the point of the bullet, the bullet is forced on to the "tige," and the lead thus expanded enters the spiral grooves in the barrel. The principal difficulties encountered in the compression of this bullet were—first, the cannelures; second, the sharp joint. These are to overcome by Messrs. Napier in the machine which we will now attempt to describe.

A represents a rod of lead, the lower end of which passes through a guide (*a*). *B* is a cutting lever, or shear, which, at each action of the machine, cuts off a portion of the rod, as shown at Fig 1. The operation completed, the detached portion falls into a pair of pincers, and by the slide *C* is conveyed under the first die, a punch below, rising immediately upon its arrival, pushes the piece of lead up into the die, and obliges it to take its form; the punch then descends, and the lead being pushed out by a small plug at the top, acted upon by two springs, follows the punch, and comes to rest upon it, presenting the figure shown at No 2, a second pair of pincers now come into play, attached to the slide



D, and in an instant seize the piece already prepared by the first die, and, passing forward, lay it upon "tige" of the second or finishing die: the movements being so rapid, the punch rises, without loss of time, and forces the piece into the upper die, placed above, which by a separate action [illegible] and

in readiness to receive it. Here the bullet receives its final figure; and as the punch has attained the extent of its upward travel, the dies soon as the punch has attained the extent of its upward travel, the dies soon as the punch has returned to its first position, holding the bullet by its lower belt. It is now found that a fringe of surplus metal (Fig. 4) has been expressed between the dies and the punch, and remains round the bullet at the line indicated by *b b*, Fig. 3. To get rid of this is now the object of our attention. As soon as the punch has come to rest with the bullet standing in a recess formed in the punch to the depth of the lower band on the bullet, the film-cutter comes forward, open like a pair of nippers, and, closing round the bullet just above the film or fringe of lead, forms a round hole exactly fitting the diameter of the bullet. This is accomplished, a small punch in the interior of the compressing punch, and occupying a position in the centre, and in contact with the bullet, is forced up by a quick action, and, pushing the bullet out of its recess in the punch, and through the hole formed by the film-cutter, the film is separated and left upon the top of the punch, and the next oncoming bullet displaces it, when it falls through the waste tube *H* into the compartment of the receiving-box marked *L*; the film cutter, which still contains the finished bullet, retires from its position over the punch, and, opening, lets fall its contents into the delivering tube *G*; and thus the perfected bullet is found in the receiving box. As three or four bullets are in the machine at once in different stages of completion, no time is lost; but, at every revolution of the crank shaft *O*, a finished bullet falls into the box; and as the machine will be driven at from thirty to forty revolutions per minute, the results can easily be reckoned. We have no doubt that the machine will give great satisfaction in Paris, and prove our engineers to be worthy of the confidence which has been placed in them by our friends and allies. We believe it is the intention of the French Government, as soon as the machine now constructed is set at work in Paris to give Messrs. Napier further orders. We may mention that it has been exhibited in operation at Messrs. Napier's works to many scientific gentlemen who have expressed themselves highly pleased with its arrangement and performance. Lord Panmure, the present Minister of War also honoured Messrs. Napier with a visit and took great interest in the process.



NEW BOOKS, &c.

6th Edition, 18mo, cloth, 1s 6d;
PASSION-WEEK. By the late Professor SCHOLEFIELD.
London: SELLEY, JACKSON, and HALLIDAY, 54, Fleet-street

"Webster's Dictionary is the production of the greatest lexicographer that has ever lived"—English Journal of Education
"We can have no hesitation in giving it as our decided opinion that this is the most elaborate and successful undertaking of the kind which has ever appeared Times
*** The public is respectfully informed that "Webster's Dictionary of the English Language," Royal 8vo, can only be obtained of the present Proprietors, Messrs. Ingram and Co.—no other English house having any interest whatever in this property.

DRAWING.—The ILLUSTRATED LONDON DRAWING-BOOK, comprising a Complete Practical Perspective and Perspective with Instructions for Etching on Copper or Steel, &c Illustrated with upwards of 200 Engravings for Study in every branch [illegible] By ROBERT SCHULTZ. Demy 8vo. Cloth, 2s Second Edition

EUCLID.—The FIRST SIX BOOKS of EUCLID, with numerous exercises. Printed on a New Plan, with accurately-executed Diagrams. Demy 8vo Cloth, 2s
The present work, containing the First Six Books of the Elements of Euclid, or in other words the Foundation of Plane Geometry, is intended as a companion volume to that based with it on Practical Geometry; the one embracing the theory, the other the application. The text adopted is that of the distinguished mathematician, Dr Simson

GEOLOGY.—GEOLOGY for SCHOOLS and STUDENTS; or, Popular Words, their Structure, Condition, and Inhabitants By P. C. BAKEWELL, Author of "Electric science, &c., with copious Illustrations Price 2s., [illegible] cloth

GEOGRAPHY.—The ILLUSTRATED LONDON GEOGRAPHY By JOSEPH HUGHES, of Magdalen Hall, Oxford, Author of numerous popular Educational Works Demy 8vo, with about 400 Engravings of Cities, Customs, and Wonders of the World, &c. Cloth, 2s
"The present volume is beautifully got up, and, being carefully compiled, presents a complete epitome of geographical knowledge."—Tait's Magazine
Thirty-first Thousand

INSTRUCTOR. The ILLUSTRATED LONDON INSTRUCTOR, being a Companion to the Reading-book; consisting of Extracts from English Classical Authors, from the earliest periods of English literature to the present day. With One Hundred and Twenty fine Engravings. Cloth, 2s
The masterpieces of English literature, by the elder authors, have supplied the staple of the volume; although there is an almost equal proportion of graceful compositions by living writers. These impart much novelty, whilst they do not impair the soundness of the papers, many of which treat of the higher branches of study. The illustrations are "tasteful, various, and appropriate."

MECHANICS.—MECHANICS and MECHANISM. By ROBERT SCOTT BURN With about 250 Illustrations. Demy 8vo. Cloth, 2s. Second Edition

NATURAL PHILOSOPHY. The ELEMENTS of NATURAL PHILOSOPHY Double Volumes By JABEZ HOGG, M.R.C.S. Illustrated by upwards of Woodcuts Demy 8vo Cloth, 4s
Fifty-first Thousand

READING-BOOK. The ILLUSTRATED LONDON READING-BOOK, containing a Series of Lessons on the most interesting and instructive subjects, selected with great care from the best English Authors in prose and verse Cloth, 2s.
In contains some hundred fifty lessons, mostly selected from standard authors. The subjects are not of the old "Tom and Harry" class, but of a higher character for the young, full of interest, in many instances describing wonders which are at the moment arising around us
The reading lessons are pretty little narratives, mostly original, and of such incidents of amusing or art instruction as are most likely to attract the attention of a child. Also, the moral tone is not, although the "good seed" is not forgotten to be thrown in the path of childhood.—Literary Gazette
In the illustrations and the pictures, subjects of natural history predominate; and they appear to be a ready means of helping to understand the history of earth and all that therein is, than by well-drawn figures of striking objects in the kingdoms of nature

TESTAMENT.—The ILLUSTRATED NEW TESTAMENT (Authorised Version): with upwards of 120 Engravings, beautifully bound in cloth, embossed and gilt sides, gilt edges In illustrations are from drawings, executed by eminent Artists expressly for this work, with Notes, historical, explanatory, and descriptive and embodied by a novel Panoramic Picture of the Holy Land, and a View of Jerusalem Cloth gilt, 7s
London: INGRAM and CO., Milford House, Milford-lane, Strand

A COMMENTARY of MEDICAL and MORAL LIFE; or, Mind and the Emotions Considered in Relation to Health, Disease, and Religion By WM COOKE, M.D. [illegible] which may be obtained, next to Astley's Amphitheatre, Westminster-bridge-road, and all Booksellers

Just published,

THE ILLUSTRATED LONDON NEWS

No. 735.—VOL. XXVI.] SATURDAY, APRIL 7, 1855. [WITH A SUPPLEMENT, SIXPENCE.

THE CONFERENCES AT VIENNA.

(From our Special Correspondent.)

VIENNA, March 31.

THE *mot d'ordre* at Vienna is "peace." Diplomatists and their secretaries, and men who have access to the sources of information, hold, with few exceptions, the same language, and express confident hopes that the war will be brought to a speedy and honourable close. To hint a doubt of such a result submits a man of little faith to the supposition that he is either an ill-informed or a prejudiced person. A very few weeks will suffice to show whether these hopes are destined to fulfilment; but, in the meantime, the English public may be enabled to judge of the extent to which they are well founded by a short statement of the facts that have led to them.

Prince Gortschakoff II., and M. Titoff, the Russian Plenipotentiaries, are exceedingly able diplomatists. They have studied in the best school. They know how to yield to necessity, and to turn unfavourable circumstances to account. The world was prepared to find in them a spirit of resistance; and to make all possible allowance for any hesitation, or even obstinacy, which they might betray in the course of the negotiations. But no one was prepared for the extreme readiness to meet the Allies half-way, if not more than half-way, which they displayed at the commence-

MILITIA.—(SEE NEXT PAGE.)

ment of the Conferences, and which has since characterised the whole of their proceedings. The mere consent of Russia to treat on the basis of the Four Points was to have been expected; for it was but the renewal of a policy adopted by the late Czar, and which could not have been disallowed by Alexander II., without an open defiance to all Europe. But the alacrity with which the first two points were conceded was scarcely to have been anticipated. The First Point, as is well known, concerns the joint protectorate of the Great Powers over the provinces of Moldavia and Wallachia—a protectorate hitherto exercised by Russia alone, and the abuse of which, and the pretensions founded upon it, was one of the main causes of the war. The Second Point provides for the free navigation of the Danube. It is the general impression in Vienna that both of these points have been fully, fairly, and honestly conceded by Russia. Had they been conceded by the Emperor Nicholas previous to the declaration of war, it is almost, if not positively, certain either that no war would have taken place, or that, if Turkey had been dissatisfied with the arrangement, she would have been left without assistance to fight her own battles. Both points are of the greatest consequence to all Europe; and to Austria, more especially, the second is of vital importance. The exact conditions and stipulations by which the free navigation of the Danube is to be secured are not publicly known. The details of the business transacted at the Conferences are transmitted only to the Governments of the several States which take part in them, and although some particulars ooze out from time to time, it might possibly mislead if I repeated any of the rumours which have been circulated upon the subject: and I therefore content myself with the simple announcement that the arrangements, whatever they may be, are represented as entirely satisfactory to the representatives of the Allied Governments: and that they will, in all probability, be equally satisfactory to the public.

The Third Point was universally foreseen to offer the only difficulty that the Conferences were likely to present. But on this, also—much to the surprise of everybody—the Russian Plenipotentiaries have hitherto displayed the utmost readiness to yield what is demanded of them. It thus becomes of importance to know exactly what these demands are. The surrender of Sebastopol? By no means. The reply of the Russians to such a demand, had it been made, would very naturally have been: "You have failed to take Sebastopol by force of arms, you are upon the soil of Russia,—the sooner you quit it the better we shall be satisfied; but, under the circumstances, you cannot ask us to yield to your diplomacy what you have not been able to accomplish by the sword." Possibly, the Russians are not without the fear that, pending the negotiations, the place may be taken; and most certainly the people of Great Britain and France, and I may add of Austria, are not without the hope that such will be the result. In Austria the sympathies of the entire population (a few of the upper nobility alone excepted, who unwisely look upon Russia as a standing barrier against Democracy and Revolution), are in favour of Turkey and the Western Powers; and news of the fall of Sebastopol would be received in this city with acclamations of delight—in which, if public opinion be not quite incorrect, no man would share more warmly than the young Emperor himself. Until the Third Point shall have passed definitively though the ordeal of the Conferences, the possibility of this result will continue with the fullest intensity to occupy the thoughts of the whole public. If their hopes be realised the Conferences will take a new turn; and Russia, as usual, will make a virtue of necessity, and accommodate her policy to a fact which she will no longer be able to overturn or even to modify. In the meantime, neither Sebastopol nor any portion thereof being in the possession of the Allies, the Plenipotentiaries of Great Britain and France, in accordance with those of Austria and Turkey, deemed it advisable to draw up the Third Point in more general terms; and to stipulate only for the reduction of the naval forces of Russia in the Black Sea. The Russian Ambassadors have as readily as on the first two points expressed the willingness of their Imperial master that Russian preponderance in that sea shall cease. But by what means the result is to be obtained has not up to the present moment been taken into official consideration, however earnestly the individual members of the Conference may have turned the subject over in their own minds, and to whatever extent they may have been instructed by the Governments which they represent. Sebastopol, and its future fate or condition, has not, it appears, been mentioned on either side. The question remains—is Russia quite sincere in conceding so much as she has done? although her concessions, great as they are, may appear small to those who look for military as well as diplomatic triumph. If she be sincere, it can only be for the reason that the new Czar really desires peace; either because he disapproves of the policy of the war which his father so wantonly and wickedly commenced; or because, not disapproving of it, he feels himself unable to prosecute it against the whole of Europe, and possibly against the dead weight of his own empty exchequer. If the first of these two suppositions should be correct, it would scarcely be prudent on the part of the Allies, to attach to the treaty of pacification any conditions degrading to the Czar and his nation. On the contrary, it would be both generous and politic, to allow the wise and temperate Sovereign such terms as would spare his own *amour propre* and that of his people to the utmost possible extent; and thereby avoid the risk that might otherwise be incurred of exasperating the Russians against their Sovereign, and replacing him on the throne by a more violent and less scrupulous monarch.

If the second supposition be correct—the same reasons for forbearance would not exist; and the Allies would be justified in exacting such material guarantees as would compel the Czar to keep the peace in the days when his Exchequer might be replenished; and when disunion among the Powers of Europe, on some other question, might offer him an opportunity of aggression, too captivating to be resisted. Seen from this point of view, the actual concessions of Russia, would be concessions to fear, and not to justice. Under such circumstances the course to be pursued by the Allies would be clear before them. Greater pressure, less forbearance, and the strictest determination to exact the whole "pound of flesh" from a foe, discomfited for the moment, but powerful and ambitious enough to renew the war on the first favourable occasion—such would be the duties that would devolve upon Great Britain, France, and Austria. The alliance between the three Powers is, up to the present time, complete and cordial enough to justify the anticipation that Austria is ready to share not alone the diplomacy, but the battle-fields, of the Western Powers. Austria has a splendid army of 600,000 men; and though she desires peace—and what Power in Europe does not?—she will be prepared for war, in case of necessity—and for war on the same side with France and England.

But the world knows too much of Russian diplomacy to trust it implicitly. If there were anything in Russian history, past or present, which could entitle that Power to claim the slightest credit for honesty towards other States, the supposition of bad faith might appear ungenerous. But the treachery of Russia is proverbial; and it is no libel upon the character of her rulers and her statesmen to consider it not only a possible, but a probable, thing, that in conceding so much as she has already done, and in taking such an infinitude of pains to impress the world with the idea of her moderation, she is true to her antecedents by playing false to her foes. "*Reculer pour mieux sauter*" is an axiom that the well-trained and astute diplomatists in the service of the late and the present Czar, have long learned to reverence and to act upon. If, by the display of apparent forbearance and moderation, Russia can work upon the dislike which Austria for many reasons—principally financial and domestic—entertains against war; she can detach that Power from the alliance with Great Britain and France, or impair and weaken to its slightest extent the *entente cordiale* now existing between the three—her diplomatists would achieve a triumph peculiarly Russian, and peculiarly mischievous. In this would lie the actual danger of the present state of affairs in Vienna, if the Emperor of Austria were not an honest man, surrounded by able as well as honest advisers. But Francis Joseph is honest and sincere; and those courageous and far-seeing men whom he has called to his councils, are too wise to become the dupes of Russia, and too patriotic to pursue any line of policy that would not conduce to the ultimate honour, and thereby to the enduring advantage of their country.

The Conference which commenced the preliminary discussion upon the Third Point on Thursday last, the 29th inst. adjourned after the meeting of that afternoon to Monday, the 2nd of April. It appears, however, that the discussions on that point, which are likely to last a very considerable time, will not immediately be resumed; but that the Fourth Point, which stipulates for the revision of all the treaties in existence between Russia and Turkey previous to the war, will be the subject of the next Conference. So much the better. The longer the Third Point is kept in abeyance, the greater the chance that Sebastopol will fall in the interim or that the British fleet in the Baltic will do its part towards cutting the Gordian knot which the Plenipotentiaries in this capital are attempting to untie.

Next to their own Emperor—who, since his marriage, has become more popular than ever among all classes of his subjects—the chief favourite of the Viennese is the Emperor of the French. There has been a rumour current for the last few days that Napoleon III. would pass through Vienna *en route* for the Crimea, and though the rumour has not the slightest foundation, it acquires interest from the manner in which the Viennese have received it, and from the determination they express to give him a most enthusiastic welcome. The sentiments of esteem and admiration which the Austrian Emperor expressed towards his Imperial brother of France have found an echo among the people; and if, by any chance, he should hereafter visit this city, not even London will give him a more brilliant ovation.

M. Drouyn de Lhuys is expected here on Wednesday, to share the Conferences on the part of the French Government. It is also stated, but the fact is not considered quite certain, that Great Britain will immediately send a third Plenipotentiary to act with the Earl of Westmoreland and Lord John Russell.

MILITIA AT PORTSMOUTH.

THE group of Militia Officers and Privates engraved upon the preceding page has been sketched by our Artist at Portsmouth, where these regiments were doing garrison duty. Commencing from the left hand, the first is a private of the South Middlesex Militia; and the next figure is that of a private of the Royal Wiltshire Militia, in marching order. Next are two of the bandmen of the South Middlesex. The figure in the centre is that of an officer of the Royal Wiltshire, in undress; and next him is an officer of the South Middlesex, in full dress. The figure whose head is next shown is that of a private of the Hampshire Militia Artillery; and the extreme right-hand front figure is that of an officer of the same regiment; and the figure in the rear is that of an Artillery private.

THE HAMPSHIRE ARTILLERY MILITIA.—A considerable number of the men of this corps, which recently arrived to do duty at Woolwich, on Monday last, followed the example of some of the militia corps in the north, and demanded and obtained their discharges, on both they served after fifty-six days' service, in terms of the Act of 1852. The well-conducted men that remain will receive £2 10s. each of bounty, and be granted one month's leave of absence.

THE City of London Regiment of Militia, numbering nearly 600 strong, have, to the number of 150, expressed their readiness for Colonial service.

RUSSIAN DEFENSIVE PREPARATIONS.—All the approaches to St. Petersburg are strongly fortified. The extremity of the point of the Vasiliostroff and the banks of the river, near the gulf, are covered with fortifications and batteries. The whole of the Gulf of Cronstadt, on both sides, is nothing but an immense fortification, bristling with great guns, and defended by 40,000 men of the very best troops, and protected, besides, by 40,000 seamen in gun-boats moored along the shore. The fleet is completely dismantled; and, if necessary, the same sacrifice will be resorted to as at Sebastopol. Similar preparations are being made at Revel and Sveaborg, and vessels loaded with stones are all ready to be sunk to the bottom. Although Cronstadt is considered impregnable, yet great apprehensions are felt of those monster gun-boats which are said to be in course of construction in France and England, for it is well known that they are the only vessels that can approach Cronstadt. Should they burn the town and fortifications, they could then easily arrive at this capital. Workmen are actively employed in setting up a line of telegraphic posts along the coast from St. Petersburg to Riga and Abo. They are so arranged as that they will have a sort of pigeon-house on the top, fixed in four tall pieces of wood, and from them signals will be transmitted concerning the enemy's fleet. Warning has been given to the French residents here not to go outside the walls, as, though they were safe in St. Petersburg, the authorities do not hold themselves responsible for them outside. The feeling is much stronger in Russia against the English than against the French, and not a single English foreman remains in any of the factories. All have been replaced by Americans; these latter have also the management of the railway from the city to Moscow, and are exceedingly well treated. Alexander II. is well inclined, it is said, to peace, but the question is, can he make it? All I can say is, that the war is assuming more and more a fanatical character, and the army on its march is everywhere supplied with every kind of refreshment. The Government no longer gives any pay to the soldiers or seamen; it feeds and clothes them, and that is all.—*Letter from St. Petersburg.*

A THOROUGH TRAVELLER.—Amongst the passengers who arrived in England by the last West India packet was Captain Petre. He sold out of a regiment of Dragoons some years since to gratify his love of travelling. He has travelled nearly over the world. His last journey was across the American continent, from Buenos Ayres to Chili, over the Pampas and the Andes.

FOREIGN AND COLONIAL NEWS.

FRANCE.

(From our own Correspondent.)

PARIS, Thursday.

IT seems probable that the day named for the departure of the Emperor and Empress for London, the 16th inst., will see the realisation of the project. In its execution, the Peace party insist on seeing a symptom of the furtherance of their views, and they cite a few random words *said* to have been pronounced by the Chef de l'Etat in confirmation of the idea.

It is said that magnificent plans are being formed for the reception of the Queen here, both by the Court and by the country, and that her Majesty is to be *fêtée* right royally.

There is a question of increasing the effective of the Imperial Guard to 40,000 men; the extra number to be selected among the troops which have particularly distinguished themselves in the present campaign. There is even some idea of establishing a special bureau for this body at the Ministère de la Guerre.

Although the visit of the Emperor and Empress to London, and the probable one of the Queen to Paris, indefinitely defers the expedition to the Crimea, the plan is still fully entertained. Among other preparations, the Sultan has ordered twelve sets of the most magnificent housings, for as many Arab horses, to be presented to the Empress.

It is still expected that the Great Exhibition will open on the day originally named—the 1st of May. We doubt the fact; but we may be wrong. Meantime, amid all the preparations that are being made for the reception of visitors, foreign and provincial, those for the care of their creature comforts are being carried on to the most unlimited extent. Right and left, in the way and out of the way, restaurants, and buffets, and gargottes are springing up, for the entertainment of man, if not for beast—at all prices and of all qualities. There is the Dîner de l'Exposition, whereof we have already given an account to our readers; La Société de Gastronomie; La Société des Buffets de Paris; Le Dîner de Paris; to say nothing of innumerable smaller fry, where people sit down and eat hot dinners, or stand up and satisfy the cravings of appetite with cold. The *entente cordiale* is kept up and utilised by most of these entertainments bearing the extra title of Anglo-Français. The Buffets de Paris is about to open on the *rez de chaussée* of the immense house built by an Englishman, Mr. Richard Wallace, on the ground lately occupied on the Boulevard by the Bains Chinois: the rent of the *part* of the ground floor thus occupied amounts to the sum of 50,000 fr., upwards of £2200. The Hôtel d'Osmont, one of the most elegant habitations in Paris, situated in the Rue Basse du Rempart, opposite the Rue de la Paix, is one of the most important mansions destined to be converted to this purpose. It is to be converted into a cercle restaurant—a sort of dining club, of the first class—where everything is to be conducted on the most splendid scale.

The grand steeplechase of the Croix de Berny, looked forward to for months by the "sportsmen" who had made their "aut-books" for the occasion, was an utter failure on account of the weather: out of thirty horses inscribed, but nine started; and of these, five exhausted by the state of the ground, which in some places was little better than a quagmire—fell before nearing the end of the course; while the spectators sat through the whole ceremony under a small freezing rain.

Paris, we learn, is about to be favoured by the presence of Lola Montes, who, it is said, is married for the ——? time. The present worse half is, we believe, a gold-digger, whom the Comtesse de Lansfeld picked up at Grass Valley, and whose millions she proposes to dispose of here: this done, we suppose the gold-digger will be disposed of in his turn—*que ne nous regarde pas.*

It is said by some that the Exposition de l'Industrie will not have received anything like the whole amount of the objects to be exhibited before the end of May or beginning of June, but that it will, nevertheless open on the day appointed. Another report states that the Emperor, in conformity with the appeals addressed to him by certain members of French commerce, more especially in the Faubourg St. Antoine, has expressed a desire that a supplementary gallery to supply the want of space complained of shall be added; and if the difficulties—which are great—for the execution of this work can be surmounted, it is probable the opening of the building will be deferred till the addition can be completed.

A book that is likely to address itself to the interest of the world in general is a history of the late Emperor of Russia, about to be published by M. Leouzou-Leduc.

The success of "Le Demi-Monde" continues to be prodigious: boxes require to be engaged many days previously by those who crowd to see the piece. On the night of its first representation, the Prince Napoleon sent to M. Alexandre Dumas *fils* two magnificent shirt-studs in diamonds. The Porte St. Martin is about to produce an adaptation of one of the novels of M. Maquet, the author of the popular piece "Le Comte de Lavernie," entitled "La Belle Gabrielle," for the *début* of Fechter. On the 16th inst. the Opéra Comique is about to produce a new work by MM. Ambroise Thomas and Rosier, "La Cour de Célimène." The piece is said to be one of particular merit and impertance, and is being brought out with the utmost care and attention. The principal parts are to be sung by Bataille, Jourdan, and Mesdames Miolan-Carvalho and Colson.

AMERICA.

The mail steam-ship *Nashville*, which sailed from New York on the 21st ult., arrived at Liverpool on Tuesday.

The most important news by the present arrival is from California. The dates from San Francisco are the 26th February. The intelligence of the failure of Page and Bacon, of St. Louis, had reached California, and caused one of the greatest monetary panics ever known; and so great was the run upon the banks and banking houses, that the heaviest and most important were obliged to give way to the pressure and close up their concerns.

An official document from the President of the United States proclaims the reciprocity treaty in full force from the 16th ult.

The *New York Herald* says:—"The letter of our Washington correspondent develops a new programme with reference to Cuba, originated by Secretary Marcy, and to be carried out by our new Minister to Madrid, Mr. Dodge. The length, breadth, and scope of this new plan is comprehended in the negotiation of a reciprocity treaty between the United States and Cuba. The alternative presented to Spain is to be free trade with Cuba, or a repeal of the neutrality laws, and the encouragement of Filibusterism."

The Governor of Halifax has received authority to raise a foreign legion for the British service there, with a couple of regiments formed of persons born subjects of the English Government.

INDIA AND CHINA.

The Bombay papers received by the last Overland Mail—of which we gave a telegraphic notice last week—represent India as tranquil throughout, with the exception of some slight marauding on the frontier. On the 9th ult. a robbery was committed by about 200 hill men, near Peshawur, on a camp close by a police station, where some thirty people lost their lives—the robbers escaping.

Oude and the Nizam's dominions continue filled with disorder.

The Calcutta Military Board has been extinguished, and those of the other Presidencies are about to encounter the same fate; a separate department for Public Works is to be brought into existence in their room.

Lord Governor-General has left Calcutta for the Neilgherry Hills, and is said to have asked permission to return to England next year from this sanitarium without revisiting Bengal. Lords Harris and Elphinstone are at their respective seats of Government, both in the enjoyment of good health.

The *Overland Friend of China*, of Feb. 18th, publishes in a supplement two communications regarding the repulse of the French from the city of Shanghae. In one of them the loss is said to be 1000 Imperialists, 18 killed and wounded; and the French between forty and fifty men, including two officers killed and four wounded.

THE WAR IN THE CRIMEA.

A telegraphic despatch from the Allied Camp announces that active operations were to commence on Tuesday last, the 3rd of April, but it is highly questionable whether the Russians would allow them to wait so long. The sortie on the night of the 22nd ult., of which we first heard from St. Petersburg, proves to have been a much more serious affair than General Osten-Sacken represented it; in fact, a battle rather than a sortie. The Russian despatch admitted that the "loss on both sides was considerable;" but affirmed that that of the French was greater than the loss of the attacking party. General Canrobert, however, states that the Russians were repulsed with the loss of 2000 men, while that of the French was only 600.

The object of attack was the same position which had been the scene of minor struggles for many nights previous to this extensive sortie. The bold and successful occupation by the Russian engineers of the height known as Gordon's-hill delayed, by threatening to enfilade the newly-constructed batteries of the besiegers, the commencement of the bombardment, and opposed an unexpected impediment to the progress of the Allies. The attempt made by General Monet to dislodge the enemy from this advantageous position failed, it will be remembered, chiefly through the misconduct of the Marines engaged in that enterprise. The Russians laboured with great activity to render their new position unassailable, and at the same time rapidly advanced their lines in direction of the Allied trenches. To facilitate the latter enterprise, the rifle-pits, which were the source of three sanguinary struggles, were excavated by the enemy. The French engineers had been equally active in sapping towards the newly constructed Russian redoubt, which, although most menacing to the Allies as an offensive work, was ill-calculated, from its isolated position, to resist successfully a heavy cannonade. The rapid progress of the French works naturally excited a sentiment of apprehension in the minds of the Russian engineers, and they resolved to direct an overwhelming attack upon that position. The moral condition of the garrison of Sebastopol, elated by the arrival of reinforcements and by the transient successes of previous nocturnal contests, favoured this determination. On the night of the 22nd of March this carefully-prepared sortie was executed, with what success we have already stated.

From the fact of several British officers having fallen in the field, it appears that a portion of our army was engaged in this nocturnal action The meagre accounts derived from the despatch of General Canrobert throw no light upon the assistance afforded by the British army; but, from our knowledge of the positions occupied by the Allies, we are enabled to form some notion of the part taken by our troops. The point of attack was entirely in the occupation of the French, and it is therefore probable that, owing to the serious nature of the sortie, the whole Allied force stood to arms, and that a portion of the British army marched to support the French, and contributed to the fortunate issue of the engagement.

As regards the operations contemplated by the Allies we are entirely in the dark at present, but it is impossible that the present state of inaction can last much longer. The Allied force now encamped on the heights before Sebastopol is of sufficient numerical strength to permit the detachment of *corps d'armée* in the necessary directions; and there can be little doubt that, if assistance were sent to Omer Pacha, the Turkish Generalissimo would be enabled to take the field, and advance either on the Alma or on Bagtcheserai, which is the true basis of the Russian position in the Crimea. A second *corps d'armée* might be disembarked, if found practicable, in the vicinity of the River Katcha, and thus force the Russian army either to abandon its positions on the Alma or to incur the risk, in case of an advance of Omer Pacha from Eupatoria, of being taken between two fires. Were even a third corps to operate in the rear of Balaclava, and, if possible, force the passage of the Tchernaya, an army would still exist in sufficient strength to conduct the operations of the siege and defend the Allied lines

We have had no reliable news from Eupatoria for some time. The Russian papers speak of Omer Pacha being about to attack the army employed to operate against that town; but it seems merely a rumour.

SUPPOSED DEARTH OF AMMUNITION IN SEBASTOPOL.—Soon after dark the French opened on the left a more vigorous bombardment against the town than has yet been attempted. All their new mortar batteries opened, and a terrific discharge followed. A series of cascades of stars, as it were, played into the town, falling with such regularity, that seen from the distance of the right attack, it appeared more like a *feu d'artifice* than the deliberate delivery of so much heavy metal. Behind the batteries of minor weight some of the 13-inch mortar works were opened, the shells from which rose to an amazing height before they fell on the devoted town. The crash of their explosion was very much among the hills. This continued shelling was kept up for some hours, and must have caused vast destruction. The fire of the Russian riflemen against the embrasures of the advanced works, though strong at first, gradually subsided. But the most wonderful part of the spectacle was the almost total absence of any flash from the Russian batteries. A complete silence reigned along their whole line. To this, or to a heavy fall of rain thrown from the French, and from some of the works on Greenhill, scarcely one replied from the Russian. This formed so remarkable a contrast with the activity of the commencement of the bombardment, as became the subject of much speculation. Whether there was really a dearth of ammunition, or whether from such a terrible shower of metal it had been thought prudent for the gunners to conceal themselves in order that could recall the hottest part of the storm was over, was equally uncertain. During the French attack on the night of the 14th instant, an Irish man, who had been two years in Sebastopol, managed to effect his escape to our lines, and he represented that there was great apprehension in the garrison respecting our opening the new batteries Whatever the cause, while an unattempted shower of shells was being poured into the town, scarcely a shot or shell was returned to check the fire or in retaliation. There was equal silence preserved in the Redan, and in the works around the Malakoff Tower, on the right—although from time to time the Lancaster and 21-gun batteries, and the French battery of Inkermann, maintained a fire against the parties supposed to be working in the new Mamelon redoubt. We must look to time alone for the explanation. The bombardment of last night on the left is a sample of what will be the fire against the town and arsenal when all the new works are opened.—*Letter from the Camp, March* 19.

A VISIT TO THE CAMP.—What a sad noisy place it is such bargaining, quarrelling, I should fancy quite equal to the original Donnybrook Fair. Hucksters were all busy, some making roads, others carrying fascines, &c., and I was much struck with their cleanly appearance. I passed several "vivandières," looking really smart and pretty—a very small glass of good brandy only gave for 6d. I got early to — 's tent, and was most warmly received; would not hear of my going back till the following day; lunched, and set out for a stroll, and to get a good view of Sebastopol, which I was surprised to see by very little damaged. It looked very pretty and very quiet; boats were plying in the harbour, and ladies walking about; it looked like anything but what I expected a besieged town would appear. We saw our besieging batteries, and took a long turn through the various camps of several divisions, finding many I knew, and was surprised at the very healthy though rough appearance of them all; and they all seemed satisfied and happy. Hospitality is certainly one of the most distinguishing features of camp life: everyone offered me food or wine, and all had a something in the eating and drinking way to offer. We got back by five or half-past; had a wash in some freezing water; pulled off my boots, which were knee-deep in mud, put on some dry ones, and all had a something in the eating and drinking way to offer. We got back by five or half-past; had a wash in some freezing water; pulled off my boots, which were knee-deep in mud, put on some dry ones, and all had a something in the eating and drinking way to offer. We got back by five or half-past; had a wash in some freezing water; pulled off my boots, which were knee-deep in mud, put on some dry ones, and all had a something in the eating and drinking way to offer. We had mutton broth and sheep's head, salmon and lobster from preserved tins, roast mutton, fowls, hare, capital bread, potatoes, heads of sauces, sherry, port, and porter; and all of us in capital spirits. The stove was wonderful; having no funnel, it was kept outside till the smoke was gone, and with the smoke went most of the heat in the men's tents; close to us we heard all sorts of jovial singing old familiar songs; and no set of men could to all appearance have been happier than those besieging Sebastopol, though it was blowing hard and snowing, and any moment their songs might have been stopped by war in its stern reality. We heard constant firing of heavy guns and musketry, which my companions seemed insensible to the noise of. By ten p.m. the singing and fiddling among the men ceased, but we sat chatting and talking till twelve. I had a tent to myself to sleep in, a camp bed, and plenty of warm clothing, and a very good fire. The tent pole was hung round with hams. It blew very hard, and the tent shook so that I expected it would blow down; however, I suffered no misfortune beyond a few hams tumbling on me. Turned out and had a cold wash. Breakfasted at eight—coffee, mutton chops, fried potatoes A Frenchman brought from the French camps excellent bread, but dear—2s. for a small loaf. At nine I mounted and rode to headquarters. Near Lord Raglan's little bit of road; loads of carriages, carts, and all sorts of things piled up; plenty of turkeys and poultry strutting about—in fact, his quarters have a good deal the appearance of a Dutch farmyard, nothing to denote that it was the Commander-in-Chief's.—*Letter from Balaclava, March* 21.

A PRINCE INCOG.—A Jewish banker, of Frankfort, while proceeding to Vienna by railway not long since, fell into conversation with a gentleman of very pleasing manners, who was in the same carriage with him, and so delighted was the banker with his new acquaintance, that he offered to give him a letter of recommendation to his daughter, who was well married at Vienna, and might be of service to him. The gentleman thanked him, and with a smile, said, "I also have one of my daughters married at Vienna, and she has made a very tolerable match." "Pray, may I presume," said the banker, "to ask the name of her husband?" "It is the Emperor of Austria" was the answer, the gentleman being Prince Maximilian of Bavaria.—*Vienna Wonders*.

DESPATCHES FROM LORD RAGLAN.

War Department, April 2, 1855.

Lord Panmure has this day received two despatches and their enclosures, of which the following are copies, addressed to his Lordship by Field-Marshal the Lord Raglan, G.C.B.:—

Before Sebastopol, March 20, 1855.

My Lord,—I do myself the honour to transmit to your Lordship a letter from the Inspector-General of Hospitals, forwarding the weekly return of sick to the 17th inst. The number of sick is not diminished, but the cases are lighter, and every day the men in Camp exhibit a more healthy appearance.

I have, &c., RAGLAN.

[Enclosure.]

Before Sebastopol, March 19, 1855.

My Lord,—In transmitting the weekly state of sick of the army to the 17th inst., I have the honour to state that, though the sickness still amounts to 14·31 per cent, the mortality does not exceed 0·51 per cent, which is a proof that the diseases are milder in character; and I think I may safely say the general health and appearance of the men is greatly improved; and, had not the duty, by the unavoidable pressure of the siege going on, been increased of late, I think the sick list would have been still more diminished, as the men's condition is in every other way so much improved both in diet, dress, and accommodation

It has been proposed by the Minister-at-War to give the men tea, coffee, and cocoa, on alternate mornings; and to-morrow your Lordship will receive the report of the Medical Board ordered to consider the subject. The first two I think good, and the change will be both agreeable and beneficial to the men; but cocoa, I am afraid, requires too much preparation to be usefully adopted in the army under present circumstances

The prevailing diseases are fevers, of a low typhoid form in some instances, and in others assuming an intermittent and remittent type, and bowel complaints. Fevers have been rather on the increase of late, but bowel complaints have become much fewer in number, and milder in character. Scurvy, too, though the number appears large in the return, is on the decrease; and I can assure your Lordship, from recent personal inspection of the men of the different divisions, that the generality of the cases returned under that head are of the most trifling character; and, under the use of the present change of diet, I am in hopes the disease will soon totally disappear from our list.

In the First Division, the Brigade of Guards continues to improve in health and appearance, from its change of situation; and the Brigade of Highlanders is also efficient. The 79th and 93rd are influenced by the locality of their camps, which cannot well be changed, and have more sickness than the 42nd, which are more favourably placed; and in the regiments the most scrupulous attention is paid to the sanitary condition of their camp.

To show how locality affects the health of the men, I may mention the wing of the second battalion of the Rifle Brigade, which occupies the high promontory of the southern extremity of the Baladava lines overlooking the sea; and here, though the men are exposed, and the duty is as severe as in any other part of the Camp, there is little or no disease.

In the Second Division, the 41st and 90th Regiments have been more unhealthy than the rest, and have had a larger number of fever cases than others admitted into hospital, and many of them have been of a serious character. It is difficult to account for this, as there is nothing in the locality of the ground occupied by these two regiments different from that of the rest of the division. Perhaps their tents were a little more crowded than the rest; and the hospitals, from the pressure of sickness, had more men in them than was advisable; but this I directed to be remedied when I visited the hospitals a few days ago.

The health of the Third Division is improved decidedly so in some of the regiments; and the health of the Fourth and Light Divisions is improved also.

The cavalry, with the exception of the 2nd Dragoons, is in good health, and the health of the 2nd, the supernumerary medical officer seems to think, has been influenced by local causes that are now in course of removal

The health of the artillery has been tolerably good during the week, and the cases under treatment, both in the general and convalescent hospitals at Balaclava, have progressed favourably; and with the remainder of the hospital huts at the Castle come into use, I expect great advantage from their occupation, both by convalescents and wounded men, should we unfortunately have any.

I have, &c., J HALL, Inspector-General of Hosp tals

To Field Marshal Lord Raglan, G.C.B.

Before Sebastopol, March 20, 1855

My Lord,—In my despatch of the 17th instant I reported to your Lordship the progress made in forming the parallel constructed to unite the right of our right attack with the left of the French on the Inkerman heights.

The contest of the latter with the enemy for the possession of the rifle pits in their immediate front was renewed after dark on that night, and was continued for several hours, the fire being excessively heavy, particularly of musketry, and considerable loss must have been sustained by our allies I fear, as well as by the enemy, who continue to hold the embankades: but the French persevere, notwithstanding, in working forward, and are approaching the Mamelon, on which the Russians are busily engaged in building a formidable work, though frequently interrupted by our batteries and those of the I rench

On the night of the 17th the English parallels were not attacked, but the fire to which I have above alluded was so continuous, that the whole force was either under arms or ready to turn out.

Inclose the return of casualties to the 18th inst

It was currently reported yesterday that Prince Menschikoff had died on his way to Moscow. I have not been able to ascertain if the report be founded; but it was so fully credited as to have been dispatched to Constantinople.

Prince Gortschakoff is stated to have arrived at Bagtcheserai, and to have assumed the command of the army. Reinforcements are reported to be on their way from Russia, and the Ninth Division to have reached the neighbourhood of Eupatoria The position of the Russian troops in the vicinity of the Tchernaya remains unaltered

The progress of the railway continues to be satisfactory, and we are already able to use it with considerable advantage, both for the conveyance of supplies and hutting, so far as the high ground some way on this side of Kadikoi. Mr. Beattie's exertions deserve every commendation

I have, &c., RAGLAN.

Nominal Return of Officer, Non-Commissioned Officers, and Privates, Wounded and Missing, from 18th to 18th March, 1855, Inclusive

WOUNDED.—97th Foot: Lieutenant George Mcdnell, dangerously. Royal Sappers and Miners: Private R. Masters, slightly. 77th Foot: Private Robert Wiley, slightly. 30th: Private Thomas Rutledge, dangerously. 89th: Private John Wall and John Kelly, slightly. Royal Artillery: Sergeant Alexander Hunter, slightly 34th Foot: Private Robert Hughes and Andrew Humphries, severely; Private Sidney Vlanlay, slightly; 2nd Battalion Rifle Brigade: Private Thomas Franklin, severely; Private Emanuel Gillard, slightly

KILLED.—31st Foot. Private Hugh McWiggin.

J. B. BUCKNALL ESTCOURT, Adjutant-General.

War Department, April 3.

Lord Panmure has this day received a despatch and its enclosure, of which the following are copies, addressed to his Lordship, by Field-Marshal the Lord Raglan, G.C.B.:—

Before Sebastopol, March 20, 1855

My Lord,—It is with deep concern that I transmit to your Lordship confirmation the copy of a letter, which I received on the 18th instant, from General Canrobert, announcing, with every expression of concern, the death of a British officer, who appears to have wandered into the French camp, and, at unanswering challenge, that was repeated three times, was shot dead by the French sentry, whose post he had approached

This officer, Surgeon Le Blanc, of the 9th Foot, occupied a tent near the hospital huts of his regiment, situate at some distance from the encampment of the regiment itself. He was a gentleman of most temperate habits, and was accustomed in reading, when, suddenly, upon the alarm sounding, he rose from his seat, leaving his candle lighted and his book open, and walked out: he was never seen alive afterwards.

It should be explained that, shortly after the close of the day on the 17th, there was a very heavy fire on the left of the French right, which was maintained for several hours. None of the English posts were attacked, but it was considered prudent to get the greater number of the troops under arms at M. Le Blanc was shortsighted, and probably mistook his way from the first, the night being excessively dark, for he was found far distant to the left, and must have wandered from our position without knowing the direction in which he was going

Being anxious to ascertain the facts of this unfortunate case as correctly as possible, I have set on foot an inquiry, to be conducted by English and French officers, in association with each other, and I propose to do myself the honour to send you their report. I have addressed a similar letter to the General Commanding-in-Chief.

I have, &c., RAGLAN.

[Inclosure]

Head-quarters, March 18th, 1855.

My Lord,—I am grieved to have to inform you of an event, much to be regretted, which painfully engrosses the French army and its Commander-in-Chief.

Last night, whilst the troops were kept perpetually on the alert, an English officer presented himself before the line of the 18th Regiment, established near the Watch-tower behind our trenches of the left attack Although summoned three times by the qui vive, the officer did not reply; the sentinel fired, and he was killed on the spot.

I can hardly understand how this unhappy officer found himself at such an hour so far from the English Camp. I believe that his death can only be attributed to his own imprudence; but I do not the less deplore the event, which must also be attributed to the natural emotion of a young soldier, who, in the midst of the events which marked last night, rigorously executed the military regulation. I have, &c., GENERAL CANROBERT,

Field-Marshal Lord Raglan, &c., &c.

War Department, April 6.

Lord Panmure has this day received a despatch and its enclosures, of which the following are copies, addressed to his Lordship, by Field-Marshal the Lord Raglan, G.C.B.:—

Before Sebastopol, March 24.

My Lord,—On the morning of the 22nd the French troops in the advanced parallel moved forward, and drove the enemy out of the rifle pits in their immediate front, but nothing of any importance occurred during the day.

Early in the night, however, a serious attack was made upon the works of our allies in front of the Victoria redoubt, opposite the Malakoff tower.

The night was very dark, and the wind so high, that the firing which took place, and which was very heavy, could scarcely be heard on the British Camp; it is therefore difficult to speak with certainty of what occurred from anything that could be heard or observed at the moment.

It appears, however, that the Russians, after attacking the head of the sap which the French are carrying on towards the Mamelon, fell with two heavy masses on their new parallel, to the rear of which they succeeded in penetrating and momentarily possessing themselves of, after a gallant resistance on the part of our allies.

Having broken through, they passed along the parallel and in rear of it, until they came in contact with the troops stationed in our advanced parallel extending into the ravine, from the right of our advance, where it connects with the French trench

The enemy was here met by detachments of the 77th and 97th Regiments, forming part of the guard of the trenches, who, although thus taken suddenly both in flank and rear, behaved with the utmost gallantry and coolness

The detachment of the 97th, which was on the extreme right, and which consequently first came in contact with the enemy, repulsed the attack at the point of the bayonet

They were led by Captain Vicars, who, unfortunately, lost his life on the occasion; and I am assured that nothing could be more distinguished than the gallantry and good example which he set to the detachment under his command

The conduct of the detachment of the 77th was equally distinguished; and the firmness and promptitude with which the attack in this part of our works was met, were also the highest degree creditable to that regiment

These troops were under the direction of Major Gordon, of the Royal Engineers, who was wounded on the occasion so severely as for some time, I fear, to deprive the army of the benefit of his valuable services.

The detachment of the troops in our advanced works having been by these transactions drawn to the right, the enemy took occasion to move upon, and succeeded in penetrating into, the left front of our right attack, near the battery where two 10-inch mortars have recently been placed. They advanced through the works until they were met by a detachment of the 7th and 34th Regiments, which had been at work in the neighbourhood, under the direction of Lieut.-Colonel Tylden, of the Royal Engineers, who promptly made them stand to their arms, and led them with the greatest determination and steadiness against the enemy who were speedily ejected from the works and fairly pitched over the parapet, with but little or no firing on our part

Lieutenant Colonel Tylden speaks in the highest terms of the conduct of the troops on this occasion, and particularly of that of Lieutenant Marsh, Acting Adjutant of the 33rd Regiment, whose services and activity throughout the night were very useful to him.

Captain the Hon. Cavendish Browne, of the 7th, and Lieutenant Jordan of the 34th Regiment, were unfortunately killed in this attack, after displaying the most distinguished gallantry, and Lieutenant M'Henry, of the former regiment, was wounded; but I hope not very severely. Lieut.-Colonel Kelly, of the 34th Regiment, who commanded in the trenches, is, I regret to have to add, missing

The French, in retiring from their advanced parallel upon their supports, speedily rallied, and fell upon the enemy's flank, when they repulsed with great loss, and followed so far up towards the Mamelon that they were enabled to level and destroy nearly all the "ambuscades" or "rifle concealments" erected along their front.

I fear, however, that this success has not been accomplished without considerable loss on our part, although that of the enemy is much greater.

Yesterday the whole of the ground between the posts of the two armies was covered with their dead, amounting to several hundreds, besides those which they had undoubtedly carried off before daylight

In the meanwhile the enemy in great numbers found their way into the advanced batteries on our extreme left, which are not yet armed, and momentarily keep up a fire of shot and shell from

The working parties were, however, speedily collected and re-formed by Captain Chapman, of the 20th Regiment, and they at once drove the enemy out of the trenches with the utmost gallantry.

Captain Madigan, of the Royal Engineers, who was superintending the works, unfortunately fell into the hands of the enemy

I inclose a return of casualties to the 22nd, inclusive

The wind is excessively high, but the weather is in other respects fine

I have, &c., (signed) RAGLAN

The Lord Panmure, &c

Return of Officers who have been Killed, Wounded, and Missing from the 19th to the 22nd March, 1855, Inclusive

KILLED.—7th Foot: Captain Hon C. Browne 34th: Lieut W. W. Jordan 97th: Captain H. S. Tylden

WOUNDED.—7th Foot: Lieut J McHenry, severely. Royal Engineers: Brevet-Major J W. Gordon, severely

MISSING.—34th Foot: Brevet Lieut.-Colonel R. D Kelly Royal Engineers: Captain H. J B. BUCKNALL ESTCOURT, Adjutant-General.

Return of Non-Commissioned Officers and Privates Killed, Wounded, and Missing from 19th to 22nd March, 1855, Inclusive

KILLED.—7th Foot: Sergeant Michael Cunningham 20th: Private John Cummins, 34th: Corporals Henry Fisher, dangerously; Private Peter Reeve, James Black, and Edmund Kirby 41st: Private Barnard Reynolds. 47th: Private Michael Drennan 57th: Privates John Jones, Felix Smith. 77th: Private Richard Cross. 88th: Private Charles Sanders. 97th: Lance-Corporal James Stevens. Royal Sappers and Miners: 2nd Battalion Rifle Brigade: Private Patrick M'Guire, severely.

MISSING.—34th: Private John Murphy 44th: Privates John Bonham, Martin Healy, William Henry Robinson, William Wills. 97th Sergeant William B. Locke; Private Edward Sale. 77th: Private Richard O'Sullivan. John Collins, and John Lyons. 97th: Private H. Wrater.

J. B. BUCKNALL ESTCOURT, Adjutant-General.

FRENCH AND ENGLISH JOURNALS IN RUSSIA.—A St. Petersburg letter in the *Lutrre* notices as a remarkable circumstance that since the commencement of the war all the French and English journals which used to be received in Russia have been allowed freely to enter the capital, and to lie about on the tables in all the cafés. The London *Punch* and the Paris *Charivari*, with their broad caricatures of everything Russian, are now the favourite reading in St. Petersburg. The Russian is evidently delighted to see the habits of his whole life, and reversing the established policy of the empire, ordered shortly before his death the free admission of all foreign journals without discrimination; and Alexander II. has hitherto scrupulously observed the continuance of his intention. The object of the new measure is supposed to be to excite the orthodox nobility against the infidel enemy. "You see how they insult your Emperor, your God, they speak of your Czar," the Czarina, from old habit, sometimes scratch out a few lines; but, as a general rule, all the Paris and London papers may now be seen unmutilated.

EXPEDITION PRIVATELY FITTED OUT AT CAPE TOWN, CAPE OF GOOD HOPE, TO EXPLORE IN THE INTERIOR OF SOUTH AFRICA, BY MESSRS. GREEN AND ANDERTON.—Mr. Green, accompanied by a Mr. Dalton, sailed from Cape Town in September last, for Walvisch Bay, on the west coast of Africa. Disembarking from Walvisch Bay, they purposed to proceed overland to Lake Ngami. They have fitted out two waggons, and have taken an extra number of draught oxen, horses, &c., and the requisite supplies for a two years' expedition On reaching the lake, Mr. Green has a small boat built by Mr. Hustwick, of Cape Town, on the life-boat principle, which will be conveyed on waggon-wheels to Lake Ngami. The boat *is* fitted up so as to answer the double purpose of accommodation afforded by the usual Cape waggon, and on reaching the Lake Ngami will be of invaluable service. The object in taking a boat is to follow out the river Tiouga, and to trace, if the Ngami has any communication with the river Zambesi. Mr. Green also proposes to explore further, and to solve the correctness of a report of the natives of the existence of a lake said to be 300 miles to the north of the Ngami. Mr. Anderton, who co-operates with Mr. Green, was one of the first travellers who penetrated from Walvisch Bay, on the west coast, to the lake. Mr. Green is an experienced and acclimatised African traveller; he is son of the late and much lamented Dr. Green, formerly of the Cape colony. In 1850 he reached the territory of Sekoume, the Bemeguwah chief. In 1851, in company of Captain E. Shelley and Mr. E. Busbie, he reached the Ngami, and penetrated to the N.W., further than any European had previously done. In 1852 he again proceeded a very long way to the north-west. In 1853 he penetrated to within thirty miles of Belagon Bay, on the east coast of Africa. From his experience in Africa, his mode of travelling, and his acquaintance with the language, habits, and customs of the natives of South Africa, Mr. Green is well qualified for the arduous and luxurious enterprise which he has undertaken.—*From a Correspondent*

A barque called the *Panama* has just arrived at Southampton, and is to be immediately surveyed, previous to her taking out provisions to the Crimea

FIRE AT THE CHESTER GRAND STAND.

FIRE AT THE CHESTER GRAND STAND.

ON Saturday evening last a destructive fire broke out in the Grand Stand on the Race-course at Chester, which has destroyed property to a considerable amount. We quote the details from the *Chester Courant* of Wednesday:—

A very serious fire broke out at the Grand Stand on Saturday evening last, which has destroyed property to a considerable amount. For some time past workmen have been engaged at the building; painting, beautifying, and cleansing the interior, and preparing it for the great Spring gathering, which will concentrate the interest of all classes of sportsmen on the 1st of May next. The building was left by the workmen apparently all safe at a few minutes after four o'clock, but about seven smoke was perceived issuing from the leaden roof, and an alarm was soon raised that the "Stand was on fire." The Castle engine, manned by a detachment of the Royal Artillery, was the first to reach the scene of the conflagration: but, in consequence of a scarcity of water, was unable to get to work for some time. The city engines, with the fire brigade, under the superintendence of Mr. Hill, soon after arrived, and commenced playing upon the devouring element. By this time the fire had made considerable progress, a greater portion of the roof had gone, and the timbers supporting the upper portions of the Stand had been destroyed. The melted lead dropped in scalding streams, and the windows in the balcony were quickly smashed with the heat. The fire was ultimately got under, but not before the whole of the rooms had been gutted, leaving only the ground floor and the outer walls of the edifice remaining. A detachment of the Royal Cheshire Militia was in attendance, and rendered effective service by guarding the engines and hose. It is supposed that the fire was caused by the carelessness of some plumbers who had been employed during the day in repairing the roof. The damage done to the Stand is estimated at £2500. The fire caused an immense sensation throughout the city, and thousands of persons have been attracted to the scene of the disaster

The property was insured in the West of England Insurance Office for £5000.

The Committee of the Grand Stand Proprietors met at the Exchange on Monday last; present Thomas Dickson, Esq., in the chair; Messrs. T. F. Maddock, Wm. Morris, J. Royle, Thos. Griffith, John Hill, and E. W. Topham; Mr. Penson, architect, also attended; when the following resolutions were proposed and carried:—"That Mr. Royle be authorised to proceed with the restoration of the building with the utmost dispatch in his power, under the direction of Mr. Penson, the architect." "That Mr. Penson be authorised to make a valuation of the damage done by the fire, with the view to lay the same before the Inspector of the West of England Insurance Office." It will thus be seen that the proprietors have taken active measures for the immediate restoration of the building, so as to be available for the Races, which commence on the 1st of May next; and we are assured that the building will be ready for use at that time

The following is the official report of the fire:—

"Saturday, March 31st, 1855.—The Chief Constable reports, for the information of the Watch Committee, at seven o'clock p.m. he received intelligence that the Grand Stand was on fire, when he proceeded immediately to the spot, and found the flames just breaking through the centre of the roof: gave instructions to have an engine brought down, which arrived as quick as the distance which it had to be brought and the difficulty of running the engine up hill *by men* would permit. A second engine arrived soon after, and both set to work as soon as possible. The Board of Ordnance engine from the Castle arrived first; but, in consequence of there not being a sufficient supply of water, and the city engine being of far greater power, the Ordnance engine was immediately stopped. By the time the second city engine arrived a further supply of water was found to feed both engines. The fire was completely got under by half-past eleven o'clock p.m. The awning in front of the Stand, stewards'-room, reporters'-stand, stairs leading to the saloons and roof, first-floor, and refreshment-rooms were all saved. The damage is estimated at £2500."

We understand that, in all probability, the building would have been entirely consumed had it not been for the prompt manner in which the 1st Royal Cheshire Militia and the detachment of Royal Artillery worked the fire-engines

The accompanying View is taken from the Race-course, and includes the Grand Stand, part of the Dee Stand, the City Walls, Water-gate, &c.

THE SCHOONER "WATERLOO" STRUCK BY A WHALE.

SHIP STRUCK BY A WHALE.

(To the Editor of the ILLUSTRATED LONDON NEWS*)*

I BEG to send you a Sketch of an extraordinary occurrence; namely, the total loss of my vessel, the *Waterloo*, caused by being run down by a whale.

I sailed from Lynn on the 19th ult., being bound to Schiedam, with a cargo of barley. On the 21st, when about fifty miles from Lowestoft, a large whale was perceived to windward, coming down for the vessel, swimming at a fearfully rapid rate, partly out of the water. This was at ten a.m.: there was a strong gale and high sea at the time.

When about ten yards from the ship's side the whale dipped, and struck a fearful blow with his head upon the vessel under water, abreast of the fore-rigging, on the port side. Immediately the vessel was perceived to heel and crack: while the whale plunged into the deep, head foremost, and raised his tail erect, nearly touching the foreyard, and then disappeared.

The pumps were fixed and worked, but by half-past twelve we found the ship had five feet water in the well, and was settling down fast. The long-boat was cleared, and lashings cut away, and nearly floated off the decks, when all hands (six in number) jumped into her, without food or water; myself, the mate, and two men, were without jackets; we had only one oar and a piece of another in the boat, and the sea was running very high. About twenty minutes after we had abandoned the vessel she capsized; and, after floating for about twenty minutes or more on her side, she disappeared head foremost.

At the time of the vessel's capsizing, there was a French fishing-boat about four miles to windward, which immediately came to our assistance, and took us all on board; there we were most kindly treated; and at midnight we were landed at Calais, when Mr. Bonham, H.B.M. Consul, provided us with jackets, &c., and sent us to London. Mons. Peter Mallard, the owner of the fishing boat, and Mons. J. Leclong, the master, as well as the crew, treated us with the greatest kindness; we found them true friends at a time when we were without jackets, food, or money.

EVAN JONES, late Master of the *Waterloo*, of Portmadoc.

THE CRIMEAN MEDAL.

THIS characteristic testimonial of the War has been struck at her Majesty's Mint, in silver, and is now in course of distribution. The design is

by Mr. Wyon: the obverse bears the effigies of her Majesty, from the die of the Peninsular Medal. The reverse, engraved in the accompanying Illustration, shows a figure of Fame about to place a wreath upon the brow of a stalwart hero; and the ribbon bears three clasps, inscribed Alma, Balaclava, and Inkerman.

ARRIVAL OF THE HIGH SHERIFF OF CHESHIRE AT THE MOTTRAM STATION.

GRAND BANQUET TO THE HIGH SHERIFF OF CHESHIRE.—DEPARTURE FOR THE ASSIZES.

On Friday (last week) a grand Banquet was given to John Chapman, Esq., of Hill-end, Mottram, the High Sheriff of Cheshire, by the principal gentry and inhabitants of the county, prior to his departure for Chester to meet the Judges of Assize. The Banquet took place at Mottram, at the station of the Manchester, Sheffield, and Lincolnshire Railway Company, of which Mr. Chapman is deputy-chairman. The room was elegantly decorated for the occasion. The day was clear and beautiful, and the assemblage probably the most brilliant that has congregated in Cheshire for many years. The friends of the High Sheriff mustered, not only from all parts of the county, but from many parts of Lancashire, and even so far distant as Sheffield and Grimsby. There were also a very large number of gentlemen from Manchester. The carriages assembled at the house of the High Sheriff, Mill-end, Mottram, at eleven o'clock. There were not fewer than eighty equipages, &c. About half-past eleven o'clock the carriages formed in procession, and proceeded with the High Sheriff to the railway station, where the Banquet was given. The High Sheriff's carriage was drawn by four bay horses, and was preceded by an outrider.

THE BANQUET.

It was nearly twelve o'clock before all the company were seated. The chair was taken by John Cheetham, Esq., the Liberal M.P. for South Lancashire; who had on his right John Chapman, Esq., the High Sheriff, and Mrs. Chapman. At the head table were Sir Elkanah Armitage and lady, William Hutton and Richard Thorold, Esqrs., the Sheriff's Chaplain, the Mayor of Sheffield, the Mayor of Grimsby, P. Bazley, Esq., &c., &c.; and the assemblage mustered altogether 300 persons.

After the cloth had been withdrawn the Chairman proposed "the Health of the Queen." He said we had the happiness to live at a period of our history when the Throne was never surrounded with more dignity and affability on the one hand, and more private worth and excellence on the other (Applause). We had had monarchs who, possessing the courage of Englishmen, had led our armies in the field of victory. That was precluded from the sex of our present Sovereign; but he thought he was correct when he said that we never possessed a Monarch who united so much fervent loyalty, with such implicit obedience to the law, and such affectionate regard to her person. The health of her Majesty was given with every demonstration of loyalty. The band of the 61st Regiment, from Manchester, which was present, then played "God Save the Queen."

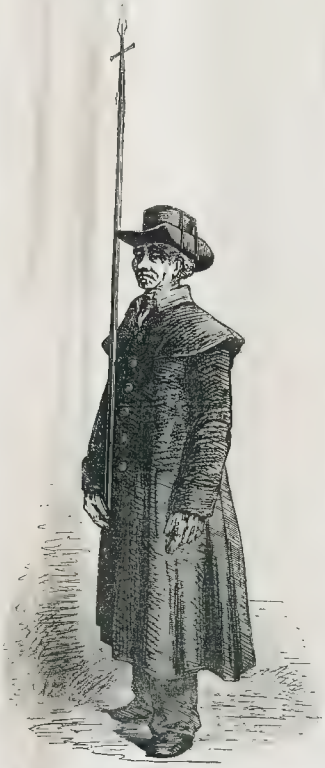
The Chairman then proposed "Prince Albert;" "The Bishop and Clergy," and "The Army and Navy."

The Chairman next proposed "the Health of the High Sheriff," which was received most cordially; and alluded to that gentleman's public services as a magistrate for three counties, as an ardent supporter of popular education, as the moving spirit in the prosecution of the Sheffield and Lincolnshire Railway, and the construction of the Great Grimsby Docks.

The health of the High Sheriff was then drunk, accompanied by three times three and several cheers more; the band playing "The fine old English gentleman."

The High Sheriff, on rising to respond, was loudly applauded. He should be doing an injustice if he attempted to find words to thank them for this great compliment. On similar occasions, as the Chairman had said, the High Sheriff had been honoured before his departure for the assizes, by his own invitation, with the company of his friends: then how great was the honour conferred upon himself, who was now the invited guest of such an assembly as the present! (Loud cheers.) He thanked them most cordially for such a distinguished compliment. He hoped they would excuse him when he said that at one time, after the recent loss in his domestic circle, he doubted if he ought to be present. But considering that this was a public duty knowing that his friends felt great interest in this event—feeling deeply also their great kindness—knowing, likewise, the gratification of the one to whom he referred when she heard of the high office conferred upon him—knowing that if she had been spared today she would have greatly appreciated their kindness, he could not refuse so great a compliment (Applause). He hoped, therefore, that no one would think he was doing injustice to her memory in being present on this occasion (Applause). He was glad to say that, through the exertions, not only of the clergy, but the laity of all denominations, the duty of High Sheriff was much less onerous than heretofore. We now lived in a period when the Queen's Judges were quite as safe under the protection of octogenarian javelin-men as if they had called out the ordinary protectors of the country (Applause). This arose from the progress of the age—from education and the good example of the intelligent classes. It was now discovered that it was far easier to teach a youth his duty to God and his neighbour than to reform the man (Applause); that it was better to bring the youthful portion of the community to a sense of their duty than to punish adults at the criminal bar (Applause). He sincerely hoped that this spread of education—this attempt to reform the young and to teach the man—would receive every support which such a noble object deserved, as by such means only could the bonds of society be drawn closer together (Applause). If these benevolent purposes were carried out, the Judges of Assize and Sheriffs would then have less onerous duties to perform, and the family circle would derive infinite advantage (Applause). The High Sheriff concluded by again thanking the company for the distinguished honour they had done him (Applause).

The Chairman then proposed "The Healths of the Magistrates of the County of Chester."



CHESHIRE JAVELIN-MAN, SKETCHED FROM THE SHERIFF'S PROCESSION.

Mr. Manwaring responded. He concluded by proposing "The Health of Mrs. Chapman, the lady of the High Sheriff."

Mrs. Chapman's health was drunk with three times three cheers, and was suitably acknowledged by the High Sheriff.

The Chairman proposed "The Healths of the Magistrates of the County of Lincoln," coupling with the toast the names of Mr. Thorold and Mr. Hutton. Mr. Richard Thorold having responded,

The Chairman gave "The Corporation of Manchester;" which was responded to by Sir Elkanah Armitage, of Manchester.

The Chairman said that, on this occasion, not only was the Corporation of Manchester represented, but the Corporation of Sheffield, and he begged to propose "The Health of the Mayor of Sheffield." The toast having been duly honoured, Mr. Fisher, Mayor of Sheffield, responded.

The Chairman next proposed "The Corporation of Grimsby," which was also represented by the Mayor of that borough.

Mr. Robert Keetley, Mayor of Grimsby, in acknowledging the toast, said that the High Sheriff, Mr. Chapman, was certainly not a stranger to the inhabitants of Grimsby, and he had no hesitation in saying that the more they saw of him at Grimsby the more they appreciated his qualities. They trusted that ere long they would be able to pay him a higher compliment than this. (This last observation referred to an invitation recently given to Mr. Chapman to become a candidate for representation of Grimsby, and was received by the company with loud cheering.)

"The health of the Chairman," proposed by the High Sheriff, was then drunk; and the proceedings of the Banquet terminated. A procession on foot was then formed to escort the High Sheriff to the train, which was waiting at the station to convey him to Chester; and he took his departure about a quarter past two o'clock, amid the vociferous cheering of the assembled multitude. The special train, propelled by the "Chaperon" engine, arrived at Chester at four.

Next day the High Sheriff met the Judges (Crompton and Vaughan Williams), in accordance with the ancient custom, on the confines of the county. The Sheriff's private carriage and four horses were accompanied by the javelin-men and trumpeters. The "javelin-men" are vestiges of the past of considerable interest. Tradition attributes the origin of those of Chester to very remote times—some persons receiving them as the remains of the 23rd Legion, which occupied Castra (now Chester) in the year 48 B.C. The subjoined Illustration exhibits one of these veterans.

Mr. Chapman is a magistrate for the three counties of Lincoln, Chester, and Derby; and is Chairman of the local Sessions. He is also Deputy-Chairman of the Manchester, Sheffield, and Lincolnshire Railway Company; and, since 1836, has had the largest share in the construction of that system of 200 miles of railway, and of the docks at Grimsby, upon which nearly £1,000,000 has been expended. Mr. Chapman was born at the residence of his father, near Mottram, in 1815; and married his cousin, Miss Sidebotham, in 1836. He inherited the properties possessed by his uncle and father, and is a man of very great wealth. Mr. Chapman is a true patron of the Fine Arts: in his collection at Hill-end, Mottram, are to be found Wilkie's "Reat Day;" C. Landseer's *first* pictures, "The Faithful Sentinel;" and the well-known piece of Landseer "Waiting for the Countess." He possesses, also, some of the choicest cabinet pictures of Turner, Mulready, Maclise, Webster, Pyne, and Linley. Two of his pictures were exhibited in the Dublin Exhibition, and he is about to contribute to the magnificent collection to be brought together in Paris. Mr. Chapman possesses great local influence in the manufacturing districts, and is universally esteemed. Hitherto his life has been spent in promoting popular education and local reforms rather than in party politics. He has been invited to stand for Grimsby, and will doubtless be elected, as one of those thorough men of business who are now so much wanted in the Legislature.

THE EMPEROR'S VISIT.—Preparations are being made at Windsor for the reception of the Emperor and Empress of the French. The apartments in which the pieces of decoration, and on which no less than forty gilders, besides upholsterers, are employed, are the Ball or grand Reception-rooms, the Throne-room, the Rubens-room (where the theatrical entertainments have usually taken place), the King's Council-chamber, the King's-closet, the Queen's-closet, the Zuccarella-room, the Vandyke-room, and, indeed, all the apartments on the North-terrace. That the whole suite will be finished in a style of unprecedented magnificence cannot be doubted. It is understood that the Emperor and Empress of the French will remain in England for about a fortnight, visiting London, Osborne, Woolwich, Portsmouth, Greenwich, and other places, but residing principally at Windsor Castle.

THE PUBLIC DEBT.—A return just published gives an account of all additions made to the annual charge of the public debt by the interest of any loan or annuities created during the last ten years. It hence appears that in 1847 the annual charge was entailed of £270,837, in respect of £8,000,000 borrowed for the service of the year (at the rate of £89 10s. to £100 capital stock); in 1848, a total charge of £69,339 in respect of a capital of £2,228,434, created in Three per Cent Consols; in 1853, a charge of £11,807, in respect of a capital of £383,093 created in the Three per Cents Reduced; and one of £27,017, in respect of a capital of £891,662 in the Three per Cent Consols; and, lastly, a charge of £13,344 in respect of £408,900 Exchequer-bonds created in exchange for Exchequer-bills, in 1853. All these annual charges are authorised to be defrayed out of the Consolidated Fund.

CALENDAR FOR THE WEEK.

SUNDAY, April 8.—Easter Sunday.
MONDAY, 9.—Easter Monday. Lord Bacon died, 1626.
TUESDAY, 10.—Catholic Emancipation Bill passed, 1829
WEDNESDAY, 11.—Canning born, 1770 Napoleon abdicated, 1814.
THURSDAY, 12.—America discovered, 1492.
FRIDAY, 13.—Handel died, 1759. Vaccination introduced, 1796.
SATURDAY, 14.—Bishop Fortescue died, 1809.

SAILING OF THE BALTIC FLEET,
AND
VISIT OF THE EMPEROR OF THE FRENCH TO ENGLAND.

AN EXTRA NUMBER

will be published on SATURDAY, APRIL 14th, 1855, containing very fine Engravings of

THE SAILING OF THE BALTIC FLEET;

Together with many Pictures from the Seat of War. Also,

A LARGE SHEET OF ENGRAVINGS.

Svesborg and Helsingfors, in the Baltic Sea; Frescoes from the Houses of Parliament; and a

LARGE VIEW OF

THE ATTACK ON SEBASTOPOL.

This great DOUBLE NUMBER will consist of THREE FULL SHEETS. Price One Shilling, Post-free.

Orders received by all Newsmen and Booksellers.

Office, 198, Strand.

THE ILLUSTRATED LONDON NEWS.

LONDON, SATURDAY, APRIL 7, 1855.

IT is understood that on the re-assembling of Parliament certain determined and practical members of the House of Commons intend to take a decided course on the subject of the Sebastopol Committee. There are reasons for supposing that in influential quarters an effort will be made to render the inquiry nugatory, by protracting it until so late that the report would be almost impossible, if made, and nearly harmless. This departmental device will probably be met by a demand that the evidence, so far as it has gone, shall be laid before the House, and in some way it will be endeavoured to obtain an expression of opinion. Unless the investigation is to be a mockery, some step of this kind is essential; for although much evidence has been given to the world, and the people have pronounced their sentence, they have a right to insist upon a formal registry of sentence by their representatives. This fight will, in all probability, have to be fought and won; and then we trust that a few nights may be allotted to the social and domestic affairs of the nation.

The Educational question will come up in various forms, and we would hope, almost against hope, that some nucleus of a scheme for National Education might be framed out of the different projects before the House. Sir John Pakington has a plan, the Lord Advocate has a plan, Mr. Milner Gibson has a plan, and Lord John Russell has a plan. The High Church party are likely to set themselves against the first, on the ground that it is a compromise of principle, and that it tends to diminish the influence of the parochial clergy; the Scottish clergy will probably deem the Lord Advocate's scheme objectionable in many respects; the moderate religious party will most likely think Mr. Gibson's plan too secular; Lord John Russell's has been pretty well considered, and has not obtained much favour; and the Dissenting interest alleges that none but "voluntary" effort is required for the instruction of the people. There is so evident a clash of principles, all containing one view of truth, in the strife which has always attended the introduction of any such measure, that it is hard to believe that the disputants can be reconciled. Yet, is it not a stern and cruel fact that thousands of children are annually slinking on their murky way to the hulks, the gaols, and the convict-ships, simply because they are untaught? Fearful responsibility in this respect lies upon the heads of all who have influence upon legislation. This is not one of the questions that will ever be carried by popular outcry. Senators need not wait to see indignant assemblies carry fiery resolutions in favour of the primer and the copy-book. No banners will ever bear the menace, "Schoolmasters, or ——!" The presence of a conviction among the people that they need teaching would be a release to Parliament of any trouble on the subject, for they would take the matter into their own hands. But it is the duty of the educated and influential classes to show the need, and to provide the remedy, despite the absence of the pressure from without, and despite the probable unfruitfulness of the effort as a means of attaining popularity. We admit that this is asking no trifling matter; but there is a growing sense of earnestness abroad which forbids men to deny that wealth, power, and influence are attended by a responsibility not to be trifled with—one of which mere private merit, charity, and liberality do not acquit the owner, but one which must be discharged on the broad principle of social duty.

We shall have, too, some religious battles of another kind. The Maynooth Report has at length appeared. It is what every one expected who knew the materials for it, and those who had to work them. On the whole, it is a report favourable to the institution. The Commissioners have been unable, they say, to find that either immorality or disloyalty have been the results of the Maynooth system. It would have been singular, indeed, had the charges of the assailants of Maynooth been substantiated by the method which was selected for their establishment. Yet it is admitted that that foulness is contained in some of the educational works used in the seminary; and those who were incensed by the course of the Roman Catholic hierarchy in 1850-51 will not easily resign their belief that the Protestant Sovereign of England is a very secondary personage in the eyes of Maynooth acolytes. The question is just where it was, except that the report will be triumphantly appealed to by the Roman Catholic members in proof that the most rigid investigation could elicit nothing against the establishment in question. This will be a mere dialectic advantage, as nobody will be in the slightest degree convinced by the record of an unsatisfactory attempt to deal with what was intangible by the means employed.

Protestant and Catholic teaching having been discussed, some law reforms will be taken in hand; and even earlier than these, and before the Budget itself, the sanitary measures of Sir Benjamin Hall will come under the notice of the House. The latter bills will—to judge from certain local agitation—be resisted on the old cry of centralisation and arbitrary power. Every man's house is his castle—and every man's cesspool is his castle moat. The liberty of poisoning your neighbour is a precious relic of our Constitution, and a bequest from our gallant sires who accomplished the Revolution. The appointing responsible men to suggest, and even to compel, the removal of nuisances is a most tyrannical thing; and "Patrictieus Furens," "Nolo leges mutare," "A Magna Chartist," "A Free Briton," and all the other blockheads who ably represent the dogged ignorance and self-will of the country, are already spasmodically shedding their ink in defence of the pest-heap and the stagnant pool—*pro aris et focis*, as they would themselves say. The abject terror into which thousands were cast by the cholera has subsided. A few months ago these bills would have been passed amid grateful acclamation; but the owners of nuisances have regained their courage, and clamour for their vested dirt. They declare that the authorities, as at present constituted, have power enough for sanatory purposes, and they will see no force in the argument that such power has never been exercised, and that those who ought to exercise it deny its existence. The dirt party is very strong in England, and in the House, and Sir Benjamin Hall's measures are by no means safe. We only ask the practical men in the House to consider the question in a large point of view, and not with reference to the representations of knots of interested parties.

As regards law reforms, we see measures which are of evident and hopeful promise; and, as for the time, the Legislature seems to think that punishment will do, almost as well as education, for the repression of crime, we may at least ask that the penal machinery thus logically elevated into the place of education should be made as efficient as possible. The abuses of the present system of dealing with petty offenders (the thief, for instance, who steals a halfpennyworth of milk being put upon trial, and costing the country £5) would be ludicrous, were the subject one for light treatment. Something may be done with this system; and a bit-by-bit reform of the Ecclesiastical tribunals is in hand the probate of wills being about to be handed over to a new Chancery department.

These topics, and a few cognate ones likely to be raised, may, it is respectfully hoped, occupy a portion at least of our representatives on the "off nights," when the great military "spectacles" are not given. In those brief intervals, *cedant arma togæ*.

SOON after the reassembling of Parliament, the Chancellor of the Exchequer will have to provide the ways and means of the year, and it will be useful if we place before our readers an account of our resources at present. From the Revenue tables recently published, it appears that the national income ending for the year ending March 31st was £59,496,154, and the national expenditure for the same period appears to have been £62,991,769; showing a deficiency of £3,495,615. To meet the immediate deficiency, an equal sum will be at once borrowed of the Bank of England, to be repaid out of the revenue as it accrues. The £59,496,154 is £6,312,624 more than the revenue to the end of March, 1854; but this sum does not show the whole amount of the revenue expected in the year. A part only of the increase of taxation imposed in 1854 has yet been collected—about £3,000,000 out of £6,600,000; and therefore about £3,600,000—a sum nearly equal to the deficiency may yet be looked for. If the late Chancellor of the Exchequer's expectations be answered, the whole of the expense of last year will be fully provided for, and the present Chancellor will have only to provide for the expense of 1855-6, with no arrears of his predecessors to pay off. We believe that this anticipation is very nearly if not strictly in accordance with facts; and it does credit to the late Chancellor that he has provided for all the expense of the first year of war. We can add, too—as Mr. Gladstone reduced as well as augmented the debt in his administration—that, taking into consideration the balances in the Exchequer and the funded and unfunded debt, the total of the National Debt was upwards of £1,400,000 less at the commencement of 1855 than at the commencement of 1853. The present Chancellor of the Exchequer has a fair field before him.

All the Estimates for 1855 are not yet voted, but we may be quite sure that the demand on the national resources will not be less than last year, or, at least, £64,000,000. It will most probably be considerably above this sum perhaps five or six millions. The additions made in 1854 to the Income and Property tax, and to the duties on malt, spirits, and sugar, were calculated to raise the revenue permanently up to £63,000,000; and there is no reason to suppose, as the country continues generally prosperous, that it will fall short of this sum in the present year. As much as the expenditure may be greater than this sum the Chancellor will have to provide. We do not mean to forestall, in any manner, his probable Budget, nor to recommend one plan of finance as preferable to another in the present condition of the country. We content ourselves with making our readers aware of the facts that nearly all the expense of last year has been provided for by the taxes then ordained; and that the expense of the present year is not likely to surpass by a very great sum the expense of last year. We must, however, press on them, and on the public generally, the propriety of saving in every other branch of the national expenditure, in order to apply all our resources in bringing the war to a successful and speedy conclusion. It is almost necessary for the future welfare of the Government, and the future peace of society, that the national feelings which have been roused on the question of the war into greater intensity than on any previous occasion within our recollection, and which have already been severely lacerated, should not be wholly disappointed and affronted.

As some little alarm has been occasioned by the publication of the Board of Trade tables, for the month of February, by our morning contemporaries, with some injudicious comments implying a decline in the national business and prosperity, we must remind our readers that a severe frost prevailed throughout the month; while in February, 1854—with which the trade in February, 1855, is compared—the weather was open and the rivers clear of ice. That this is the chief cause of the great falling off in our trade in February is evident from the fact that the coasting trade was more affected than the over-sea trade, the frost having blocked up many harbours, while it left the ocean open and free.

THE REVENUE.

THE COURT.

The Queen and Prince Albert left Buckingham Palace at five minutes past three o'clock on Wednesday afternoon for Windsor Castle. Her Majesty and his Royal Highness were accompanied by the Prince of Wales, the Princess Royal, Prince Alfred, Prince Arthur, the Princesses Alice, Helena, and Louisa, Prince Leopold, and the Prince of Leiningen. The Royal party occupied seven carriages, and was escorted by a detachment of Carabineers to the Paddington terminus of the Great Western Railway.

Her Majesty and Prince Albert, with the Royal Family, and his Serene Highness the Prince of Leiningen, and attended by the ladies and gentlemen in waiting, arrived at the Castle soon after four o'clock from London.

On Saturday morning the Queen and the Prince, accompanied by the Duke of Cambridge and the Prince of Leiningen, visited the Crystal Palace at Sydenham. In the afternoon her Majesty presided at a Privy Council held at Buckingham Palace. The Earl of Harrowby had an audience of the Queen, and was sworn in Chancellor of the Duchy and County Palatine of Lancaster, of which office the Earl Granville had an audience to resign the seals. Her Majesty in Council was pleased to appoint the Right Hon. E. P. Bouverie, Vice-President of the Committee of Council appointed for the consideration of all matters relating to trade and foreign plantations. The Right Hon. Dudley Earl of Harrowby and the Hon. Edward Pleydell Bouverie were, by command of the Queen, sworn of her Majesty's Most Hon. Privy Council. In the evening her Majesty had a dinner party, the company at which included the Duchess of Kent, the Duke of Cambridge, the Prince of Leiningen, the Maharajah Dhuleep Singh, &c.

On Sunday the Queen and Prince Albert, with the Prince of Wales, the Princess Royal, Prince Alfred, the Princess Alice, and the Prince of Leiningen, attended Divine service in the private chapel in Buckingham Palace. The Hon. and Rev. Dr. Dudley Fortescue officiated.

On Monday the Prince Consort went to Farnborough, and from thence proceeded to Aldershott, to inspect the works in progress for the accommodation of the troops. Viscount Hardinge accompanied the Prince to Aldershott. The Prince and Princess Augustus of Saxe Coburg arrived at Buckingham Palace on a visit to the Queen. In the course of the day, by command of her Majesty, fifty men of the Brigade of Guards on service in the Crimea, invalided during the different military operations, attended at Buckingham Palace, and were inspected by the Queen and the Prince in the Grand Hall. Twenty of the invalids were Grenadiers, fifteen were of the Coldstreams, and fifteen were of the Scots Fusilier Regiment. Her Majesty was attended during the inspection by Colonel Wood and Surgeon-Major Brown, of the Grenadiers, Colonel Upton and Surgeon Major Munro, of the Coldstream Guards; and Colonel Ridley and Surgeon-Major Richardson, of the Scots Fusilier Guards, who explained to the Queen the nature of the different wounds, the actions in which they were received, and the state of the health of the men.

On Tuesday the Queen, attended by the Duchess of Athull, Lord Charles Fitzroy, and Colonel Seymour, visited her Royal Highness the Duchess of Gloucester, at Gloucester-house. In the evening her Majesty had a dinner party.

On Wednesday, previously to the departure of the Court for Windsor, Prince Albert went to the Wellington Barracks, for the purpose of inspecting the draughts of the three regiments of Guards under orders for immediate embarkation to the Crimea. The Prince remained nearly an hour in the barracks. The troops were then marched to Buckingham Palace, and were formed in the quadrangle, where they marched past the Queen, who was accompanied by the elder Royal Family and the Duke of Cambridge, the Prince and Princess Augustus of Saxe Coburg, the Prince of Leiningen, and Prince Ernest of Leiningen.

Her Royal Highness the Duchess of Kent, attended by Lady Anna Maria Dawson, Lady Fanny Howard, Baroness de Speth, and Sir George Couper, left her residence, Clarence-house, St. James's, for Frogmore, on Wednesday. Lady Anna Maria Dawson has succeeded Lady Fanny Howard as the Lady in Waiting to the Duchess of Kent.

His Serene Highness Prince Ernest of Leiningen left Clarence-house, St. James's, on Wednesday afternoon, for Portsmouth.

The marriage of the Earl of Lichfield with the Lady Harriet Hamilton, eldest daughter of the Marquis of Abercorn, will take place during the present month, at Brocket-hall, Herts.

The Earl of Cardigan arrived in Portman-square on Monday from visiting the Duke of Rutland, at Belvoir Castle, Leicestershire.

Viscount and Viscountess Sydney have left London for Paris on a visit to their Excellencies Lord and Lady Cowley.

Advices from Madrid of the 4th, received by telegraph, state that the Spanish Government had assisted on the recall of Lord Howden.—*From the Daily News of Friday.*

THE NEW IRISH PEER. Mr. Edmund Burke Roche, late member for the county of Cork, which he has represented for nearly twenty years, has been elevated to the Peerage of Baron Fermoy. Three Irish Peerages having recently become extinct, Lord Palmerston has had the power of recommending to the Crown the creating of a new one, and has done so in favour of a gentleman whose private character, public conduct, and ample means are a guarantee that he will sustain the dignity in every way most fitingly.

THE ex-Chancellor of the Exchequer (Mr. Gladstone), by an arrangement with his successor in office, Sir George C. Lewis, will not vacate the official residence attached to his late appointment, in Downing-street, until shortly after Easter, when the new Chancellor and Lady Theresa Lewis and family will remove from Kent House, Knightsbridge, and Mr. Gladstone and establishment will remove *pro tem.* to the Dowager Lady Wenlock's, in Berkeley-square.

HER Majesty the Queen of Spain has just been pleased to confer the honour of the Grand Cross of the Order of Charles III. upon Don Rafael Benjumea, as a further proof of her Majesty's high opinion of his works in painting.

THE NEW BELGIUM MINISTRY.—After a struggle of many years the Ultramontane party in Belgium have contrived to force a Ministry after their own heart upon their King and country. The King took a most friendly leave of the late Liberal Ministers on the 30th ult. All the members of the new Cabinet, with the exception of M. Nothomb, are new to the duties of government.

THE NEWSPAPER STAMP.—A deputation of Yorkshire newspaper proprietors from Leeds had an interview with the Chancellor of the Exchequer on Wednesday at his official residence in Downing-street, for the purpose of laying before him their unanimous views in favour of a halfpenny stamp on newspapers to free the post, and of a halfpenny stamped cover to entitle unstamped copies of registered newspapers to a single transmission through the post.

GLOUCESTER ELECTION.—Mr. Price, who resigned his seat for Gloucester in consequence of his connection with the Government contracts for wooden huts for the Crimea, was re-elected on Saturday without opposition. Mr. Trotter and Sir Charles Napier were spoken of, but did not appear. A bill of indemnity respecting Mr Price has been passed, which obviates all difficulty as to the retention of his seat

MEDICAL COMFORTS FOR THE EAST.—The Queen has ordered her biscuit bakers, Messrs. Hill and Jones, of Jewry-street, to forward to Lady de Redcliffe, for the use of the hospitals in the Black Sea, a number of cases of their best biscuits, with other medical comforts, as jams, jellies raspberry vinegar, lemon and other syrups.

Note. The sign — denotes below the average.

The reading of the barometer decreased from 30.44 inches at the beginning of the week to 29.88 inches by the afternoon of the 3rd; and increased to 30.03 inches by the end of the week. The mean for the week, at the height of 82 feet above the level of the sea, was 29.991 inches.

The mean daily temperature of April 1 was 34·8°, and is the lowest recorded since the year 1838, when the mean temperature was 33°, and that of the 1st was 29°, and is the lowest since 1839, when it was 32·4°. The mean daily temperatures have now been below their averages on every day from March 21, the mean defect being 6·9° daily.

The mean temperature of the week was 39·2°, being 5·5° below the average of the corresponding week during thirty-eight years.

The range of temperature during the week was 30·4°.

The mean daily range of temperature during the week was 22·4°.

Rain fell slightly on the 3rd, to the depth of three-hundredths of an inch.

The weather has been fine and cold throughout the week.

For the month of March the mean reading of the barometer at the level of the sea was 29.726 inches. The highest temperature during the month was 55° on the 20th; and the lowest 22½ on the 11th; the range of temperature during the month was therefore 33.5°. The mean of all the highest temperatures by day was 47°, and of all the lowest by night was 31°; the mean daily range of temperature during the month was therefore 16°. The mean temperature of the month was 38°, being 2·4° below the average of the corresponding month during thirty-eight years. The mean temperature of evaporation for the month was 36·6°. The mean temperature of the dew point was 34½° The mean degree of humidity was 88 (complete saturation being represented by 100); and the fall of rain for the month was 1·13 inch.

JAMES GLAISHER.

Lewisham, April 6, 1855.

Health of London.—Within the week ending March 31 the births of the unusually large number of 2039 children were registered within the metropolitan districts. In the three last weeks of the year, the averages from ten years ending 1854 were, 809 boys and 772 girls. The number of deaths registered was 1694; but these did not all occur within the week, but include 139 spread over the quarter, and in which coroners have held inquests; and death has chiefly been caused by fractures, wounds, burns, suffocation, &c. Under the head sudden, no less than 74 deaths are classed; which is a number much greater than usual. The estimated number of deaths for the thirteenth week from ten years' register, is 1367, so that fully 300 persons died last week above the usual number, in consequence, apparently, of the coldness of the season.

The Bank of England reduced the rate of discount ½ per centon Thursday.

London Reformatory for Adult Male Criminals.—A public meeting was held on the 20th ult. at Willis's Rooms, in aid of the funds of this excellent reformatory, established in Great Smith-street, near Westminster Abbey. The chair was taken by the Earl of Shaftesbury, and the claims of the institution, now on the verge of bankruptcy, money being wanted to meet present emergencies—the completion of thirty of its inmates, and to cover outstanding bills—were advocated by the noble chairman, Mr. Sergeant Adams, Mr. Ball, M.P., and other gentlemen; and a resolution was passed pledging the meeting to respond to the call made upon its liberality. The Rev. B. Alford, B.D., pleased the cause of the institution at Quebec Chapel, Portman street, on Sunday, the 18th, when the collection amounted to £337. The reverend gentleman has liberally given the MSS. of his sermon to Mr. E. Nash, the governor of the reformatory, who purposes having it printed by the inmates in behalf of the institution.

The General Theatrical Fund. The annual dinner in aid of this fund took place on Monday at the London Tavern, and was, as usual, very well attended. About 170 gentlemen assembled on the occasion, and there was a large muster of ladies, who, without partaking in the actual festivities, graced the hall with their presence. Mr. Buckstone occupied the chair, and, by a succession of humorous speeches, contributed much to the enjoyment of the evening. Among the company were Charles Dickens, Lord Ernest Bruce, Mr. Mark Lemon, Mr. Ball, Mr. Webster, and others connected more or less directly with the interests of the drama. No specific statements were made as to the present condition of the fund during the past year; but from what was said it appears to be in a prosperous, healthy condition, and subscriptions were announced during the evening amounting in the aggregate to more than £300. The musical arrangements, which were under the direction of Mr. Lovell Phillips, were excellent, Mdlle. Jenny Bauer, Miss Ransford, Madame Newton Frodsham, Mr. Donald King, Mr. Weiss, Mr. G. Genge, and other vocalists contributing their talents.

Epidemiological Society.—The fifth annual meeting of this society, whose object is to investigate the origin and conditions of epidemic diseases, was held on Monday evening, in the Council-room of the Royal Medical and Chirurgical College, No. 37, Soho-square. Dr. Babington presided, and about twenty gentlemen were present. The council presented their annual report, stating that there are now 100 resident and nonresident members, 78 corresponding members, and 6 honorary members—total, 211 members. The council had made an application to the Treasury, through Lord Palmerston, for some assistance, but it was not thought expedient to grant any; and they had resolved, therefore, to appeal to the profession and the public for support, by means of the circulation of a brief statement of the useful objects of the society. After the council's report, a paper was read by Dr. F. J. Brown, "On the prevalence of typhoid fever, and the absence of typhus fever at Rochester and Strood;" and another by Dr. W. Champs, "On the occurrence of fever at Chelsea, Battersea bridge, between Bridge-road and Cardiff; and at Sible Hedingham, in Essex." After some conversation, the scrutineers announced the election of the president and council for the ensuing year, and the business terminated.

Shipwrecked Mariners' Society.—The committee of the above excellent institution has awarded its gold medal to Captain Edward Henry Richmond, and its silver medal to T. and W. Hunn, brothe s, for their gallant and daring efforts in saving the lives and many of the crew and passengers of the *Charlotte*, having on board a detachment of her Majesty's troops, wrecked at Port Elizabeth, Algoa Bay. Also the gold medal to Captain Wm. Holland Warre, of the Holyhead mail steampacket *Anglia*, who, on the occasion of that vessel carrying away her tiller, close in with the rock, blowing hard with a heavy sea, by his cool bravery and seamanlike conduct, in most perilous circumstances, was the means of saving the vessel and the lives of all on board. Also the silver medal to Captain John Robinson, of the *Antioch*, for saving the lives of the crew of the *Iron Bars*, by bearing down under her lee, and taking them off the sinking vessel in a sea in which a boat could not live.

Sir R. Peel at the Marylebone Literary Institution. On Wednesday evening Sir Robert Peel, Bart., delivered to a numerous and highly respectable audience, at the Marylebone Literary and Scientific Institution, a lecture entitled "An Evening with the Poets," being notices of some of the most eminent English poets, interspersed with recitations of beautiful or powerful passages from their writings. These recitations were marked by great correctness of delivery and justness of expression; and they were heartily and unanimously applauded by the audience. The lecturer went through the series of English poets, reading several choice extracts. A denunciation of Russia, and a declaration that the time had arrived when we must avenge the crimes committed by the late and previous Czars and by the Empress Catherine (which elicited much applause, but provoked a few hisses), introduced the remark that, in the eloquent lines of Campbell upon the partition of Poland (which were recited), was embodied a spirit which now animated the people of England. The lecture was frequently and heartily applauded; and, at its conclusion, thanks were by acclamation voted to Sir Robert Peel for his kindness in delivering it. The funds realised by its delivery are to be applied for the benefit of the institution.

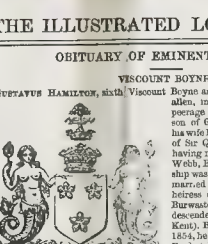
On Saturday evening the fortieth anniversary festival of the Artists' General Benevolent Institution was celebrated at the Freemasons' Tavern. The Right Hon. the Lord Mayor presided. There was a subscription in the room of £611.

At the City Court of Sewers, on Tuesday, two of the gas companies with which the commission have contracts for supplying the public streets with lights were fined £3 each for neglect.

Clerical Appointments and Preferments.—*Rectories:* The Rev. W. J. Stracey to Skeyton and Oxnead, with the vicarage of Burton; Rev. H. Gough to Enham Knights, near Andover. *Vicarages:* The Rev. E. Brown to Addingham, near Penrith; Rev. J. Russell to Rempsford, Gloucestershire. *Incumbencies:* The Rev. W. Hutchinson to Armeu, near Goole; Rev. W. J. Shield to North Moor-green.

OBITUARY OF EMINENT PERSONS.

VISCOUNT BOYNE.

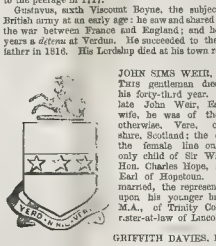


Gustavus Hamilton, sixth Viscount Boyne and Baron Hamilton of Stackallen, in the county of Meath, in the peerage of Ireland, was the elder son of Gustavus the fifth Viscount, by his wife Martha Matilda, only daughter of Sir Gusale Somerville, Bart. (who, having married, secondly, Sir Thomas Webb, Bart., died in 1826) His Lordship was born the 12th April, 1777, and married Harriet, only daughter and heiress of Benjamin Baugh, Esq., of Burwaston-house, Salop (maternally descended from the Holisads, Earls of Kent). By this lady, who died in Nov., 1854, he has left issue one son, Gustavus Frederick, now the seventh Viscount, who married Emma Maria, daughter of Matthew Russell, Esq., M.P., of Brancepeth Castle, in the county of Durham, and heiress of that estate on the death of her brother, in 1850, when her husband assumed, by Royal licence, the name of Russell, in addition to that of Hamilton. By this lady, now Viscountess Boyne, the seventh Viscount has an only son.

The house of Hamilton, Viscounts Boyne, descends from Lord Claude Hamilton, third son of the Regent of Scotland, James Earl of Arran, who was created Baron of Paisley in 1585. The first Viscount Boyne greatly distinguished himself as a military officer at William III., especially at the battle of the Boyne, the storming of Athlone, and the siege of Londonderry. For the service of the King, his master, he raised six regiments, two of which (infantry and cavalry) are now known as the Inniskillings. He was elevated to the peerage in 1717.

Gustavus, sixth Viscount Boyne, the subject of this notice, entered the British army at an early age: he saw and shared in active service in Flanders in the war between France and England; and he was afterwards for several years a *dejeune* at Verdun. He succeeded to the peerage on the death of his father in 1816. His Lordship died at his town residence on the 30th ultimo.

JOHN SIMS WEIR, ESQ.



This gentleman died on the 21st February, in his forty-third year. Being the eldest son of the late John Weir, Esq., and Mary Sims, his wife, he was of the ancient family of Weir, otherwise Vere, of Lesmahagow, Lanarkshire, Scotland; the estates of which passed into the female line on the marriage of Catherine, only child of Sir William Weir, Bart., with the Hon. Charles Hope, second son of Charles, first Earl of Hopetoun. Mr. Weir having died unmarried, the representation of the family devolves upon his younger brother, Charles Sims Weir, M.A., of Trinity College, Cambridge, and barrister-at-law of Lincoln's-inn.

GRIFFITH DAVIES, F.R.S.

This gentleman, who was one of the most eminent actuaries in London, died on Wednesday week, at the age of 67. A Correspondent of the *Times* has communicated to that journal the following account of Mr. Davies's career, which affords a remarkable example of the results of integrity and preserverance. Griffith Davies was born in 1788, at the foot of Chirgwin mountain, [illegible]. His father held a small farm, and devoted his spare time to working in the neighbouring slate quarries. Mr. Davies was also brought up a quarryman, and worked as such until the age of 23. He was about 17 years old before he learnt even the numeration table; but as soon as he had a little insight into the properties of numbers—which he managed to get by placing himself at school for a short time at Carnarvon, by his own savings—he would be seen during a portion of the meal-times allowed him at the quarry, practising himself in arithmetical operations with an iron pencil on the slates which he had to manufacture. He arrived in London in 1809, without a single acquaintance in the place, and with a very imperfect knowledge of the English language. He first sought a situation as a porter or messenger; and, being unsuccessful, placed himself for a short time in a school, where he became usher, and in the following year he opened a school on his own account. In 1814 he published his "Key to Bonnycastle's Trigonometry:" and in 1822 he was appointed consulting actuary to the Guardian Assurance Company; and soon after was appointed actuary to the Reversionary Interest Society. In 1823 he became the regular actuary to the Guardian, and published his tract on "Life Contingencies," containing his rate of mortality, deduced from the experience of the Equitable Society, and the improved columnar method in 1825. From about 1829 to 1852 he was extensively engaged, sometimes at the instance of the East India Company, in investigations respecting the present state and future prospects of the military, medical, and civil funds established by that and other bodies. In the Bank of England and other societies in this country. In the course of his career he was elected a Fellow of the Royal Society, of the Statistical Society of France, and of the Institute of Actuaries of Great Britain and Ireland.

R. C. CARPENTER, ESQ.

The architectural world has lately sustained a severe loss in the demise, at the age of forty-three, of Mr. R. C. Carpenter, one of the most eminent of the school of architects who have made the revival of Gothic architecture, especially for religious objects, their particular study. Mr. Carpenter's death took place on Tuesday, the 27th ult.; and on Monday last his remains were consigned to their long home in Highgate Cemetery; the service having been performed by the Rev. N. Woodward, Provost of St. Nicholas College, Sherborne, assisted by the Rev. B. Webb, Secretary of the Ritualogical Society. Besides the family of the lamented deceased, the ceremony was attended by the Rev. E. Stewart, Mr. A. J. B. Beresford Hope, the Rev. W. Wheeler, and a few other personal friends of Mr. Carpenter. His works, too numerous to notice in their completeness, and all of them distinguished by some peculiar trait of genius or originality, were executed under the disadvantage of delicate health. The principal of them, the College of St. John, Hurstpierpoint, founded by Mr Woodward for the education of the middle classes, has already been engraved in our pages. The Churches of St. Mary Magdalen, Munster-square; St. Paul's and All Saints', Brighton; St. Peter's, Chichester, &c., attest his original powers; while his ability in the delicate work of church restoration is attested by the magnificent pile of Sherborne Minster, the old parish church at Brighton, &c. Mr. Carpenter's latest drawings, completed immediately before his decease, was a beautiful design for the west end of the proposed cathedral at Inverness, which has been sent to the Paris Great Exhibition. His taste and judgment in directing and designing painted glass and mural work were most remarkable.

In private life Mr. Carpenter was as amiable as in the concerns of business he was strict and high principled. Altogether his loss—following so soon after the decease of his early friend, A. W. Pugin—is one which the lovers of pointed architecture will long and severely feel. He leaves a widow and two sons to lament his loss His favourite pupil—Mr. W. Slater—is, we understand, to undertake the completion of the works upon which Mr. Carpenter was engaged.

Wills and Personalty.—The Right Hon. Mary Ann Viscountess St. Vincent: personalty, £16,000. The Hon Thomas William Gage, £14,000. The Venerable Archdeacon Pope, Archdeacon of Jamaica, who died at Brompton, has left £30,000 personalty in this country. John Vivian, Esq., St. Clement's, Cornwall, £25,000 James Hill, Esq., silk manufacturer, £60,000. James Kinnoch Clement, Esq., Leytonstow, £60,000. John Southgate, packer, of Old-change, who lately died from the effect of poison, had made his will in December last: personalty, £8000 (which sum is the limit of any deduction). The will of Captain Lewis Edward Nolan, 15th Hussars, at Balaclava, has just been proved in London, and bears date June, 1854, on board H.M. steam-ship *Trent*.

The Reported Death of Dr. Barth.—A letter, dated March 13, from Colonel Herman, her Majesty's Consul at Tripoli, has reached Malta. It says:—"You will, I am confident, be delighted to hear that the rumour of Dr Barth's death was unfounded. A letter from him, dated Kano, 15th November last, reaches me yesterday. His then calculated on arriving at Moorzouk within three months, but which, as he purposed moving by the circuitous route of Kooka, he never would accomplish. The rumour of his death was fabricated by the ex-ruler of Bornou, for the purpose of possessing himself of a depôt of supplies that had been formed at Zeijan against the doctor's return, and in which he succeeded. The overthrow of this man was most fortunate, otherwise the fabricated report might have been converted into a stern reality."

Memorial Window.—A memorial window, of stained glass, well executed, has been placed in the east window of the chancel of St. Margaret's Church, in Durham, by the surviving members of the family of the late Mr. F. Bramble, who was for many years a resident in that city, and the proprietor and editor of the *Durham County Advertiser*.

United States' Navy.—It is stated that in the past ten years nine sloops of 20 guns each, and four brigs and two schooners of 10 guns each, have, by casualty or decay, been removed from the effective force of the United States' Navy, and yet not a single vessel has been built to replace them

A Strangers' Home for the natives of heathen and Mahmedan lands is being organised in London.

TOWN AND TABLE TALK ON LITERATURE, ART, &c.

Literature has just lost a very useful friend, and the publishing interest of Great Britain a back-bone of support, in the death of Mr. James Brown, of New Boston, the English partner of the European house of Messrs Little and Brown. For the last twenty years Mr. Brown has been in the habit of visiting England for the sole purpose of making extensive purchases of the most eminent publishers. His visits were looked forward to with very great interest by all the successors of Tonson and Murray; and many an English enterprise of note has been entered into on his agreement for a purchase, and would not have been undertaken without such valuable support. He knew the market of books well. He had dealings in old as well as new books, and in a very wholesale character. We have heard (and on excellent authority) that his orders in England alone have varied from £20,000 to £50,000 during the three months in the year that he was among us. Mr. James Brown, of Boston, was very much liked in this country. He had a vein of quiet humour—was generous—was still a gentleman, and was very fond of English society. Now that he is gone, we shall, perhaps, look in vain for a successor to clear off *remainders* in the same spirited and searching manner, for many a work that has been very cheap, and therefore common in the market, has become to the unknowing unaccountably dear by Mr. Brown's purchases for the great American market. Of a man thus eminent we wish to say still more, and in our own words. We must, however content ourselves with a brief extract from his character as drawn by the American papers:—

Energy, firmness, and promptitude were among his most distinguishing characteristics, and these, united with sterling good sense and a judgment that rarely erred, contributed largely to that success which continually marked his progress in life. In the finer quality of good taste he was not lacking, and the books issued by the house of which he was a member bear ample testimony to the exercise of his nice discrimination in their production. He understood his business well, and was familiar with all its details; and this may be said of him not only in a mechanical but in a much higher sense—for he not only had a knowledge of the market value and fitness of the wares in which he dealt, but also an intellectual appreciation of their worth. He was well read in general literature, and the scholars of America, and those who endeavour to encourage and promote a taste for healthy reading, are greatly indebted to him for the publication and wide distribution of numerous works of real excellence; in which manner he has done a service to our literature and education which it would not be easy to estimate. Mr. Brown was eminently social in his disposition and habits, and fond of the enjoyments of home: he was deeply attached to his family and friends, and is sincerely beloved by them in return. His cheerful face often illuminated with a smile which was sunshine itself to the beholder, and which gave an inexpressible charm to his manner—was the index of his heart, which overflowed with generous emotions.

Mr. Brown was in his fifty-fifth year.

A fine and celebrated picture, attributed to Titian—"L'Adulteren condotta al Salvatore"—has just been purchased by the Rev. John Holmes, of Broome-hall, in the county of Norfolk (the Prince Regent is known to have offered 4000 guineas for it). That *chef-d'œuvre* of Rubens, the "Judgment of Paris," now in the National Gallery, was long the companion picture to this well-known example of Italian art. The history of this acquisition at Brooke-hall deserves publicity. It came to this country from the Count Valentini's collection at Ancona. It is in perfect condition. Sir Thomas Lawrence had "not the smallest doubt of its originality, and of its being a very able work by Titian," though others assign it (more correctly, we suspect) to Bonifazio.

Our remarks on Mr Roach Smith's Museum, and the refusal of it by the Trustees of the British Museum, have brought us several communications thereon. We quote the best:—

(To the Editor of the Illustrated London News *)*

In your agreeable column entitled "Town and Table Talk on Literature, Art, &c.," I last Saturday noticed your mention of the fact that the Trustees of the British Museum had declined to purchase Mr. Roach Smith's Collection of London Antiquities—a decision which you regret. You, however, add, "with one exception." But did Mr. Smith make any stipulation with the Trustees about maintaining his collection in its integrity? We are among those who think (and the number is increasing) that the Trustees should distinctly refuse to be the receivers of a very choice collection on such terms." In the opinion which you here express I quite agree with you. For the Museum to become a miserly hoard of duplicates and triplicates of articles of interest is to discourage, not advance, science. With reference to your query, the question is simply this: if I gave it a negative answer; but that I might be quite certain, before communicating with you, that I was right in doing so, I called Mr. Roach Smith's attention to the paragraph. He writes me, "I can tell you—indeed you know—that *the collection was offered unconditionally.*" This question being settled, I would ask another. Has any one of the Trustees of the British Museum been consulted as to the collection which they have refused to purchase?

Newcastle-upon-Tyne. J. C. B.

The place and the initials will indicate "an eminent hand" in the study of Roman antiquities to many readers.

Mrs. Nicol, better known as Miss Brontë, still better known as Currer Bell, but known best of all as the writer of a clever novel entitled "Jane Eyre," died at Haworth, in Yorkshire, on the 31st ult. "Jane Eyre" will outlive many novels in the so-called series of Standard Novels; and will, we suspect, be reprinted as often as any story that has proceeded in our time from a female writer.

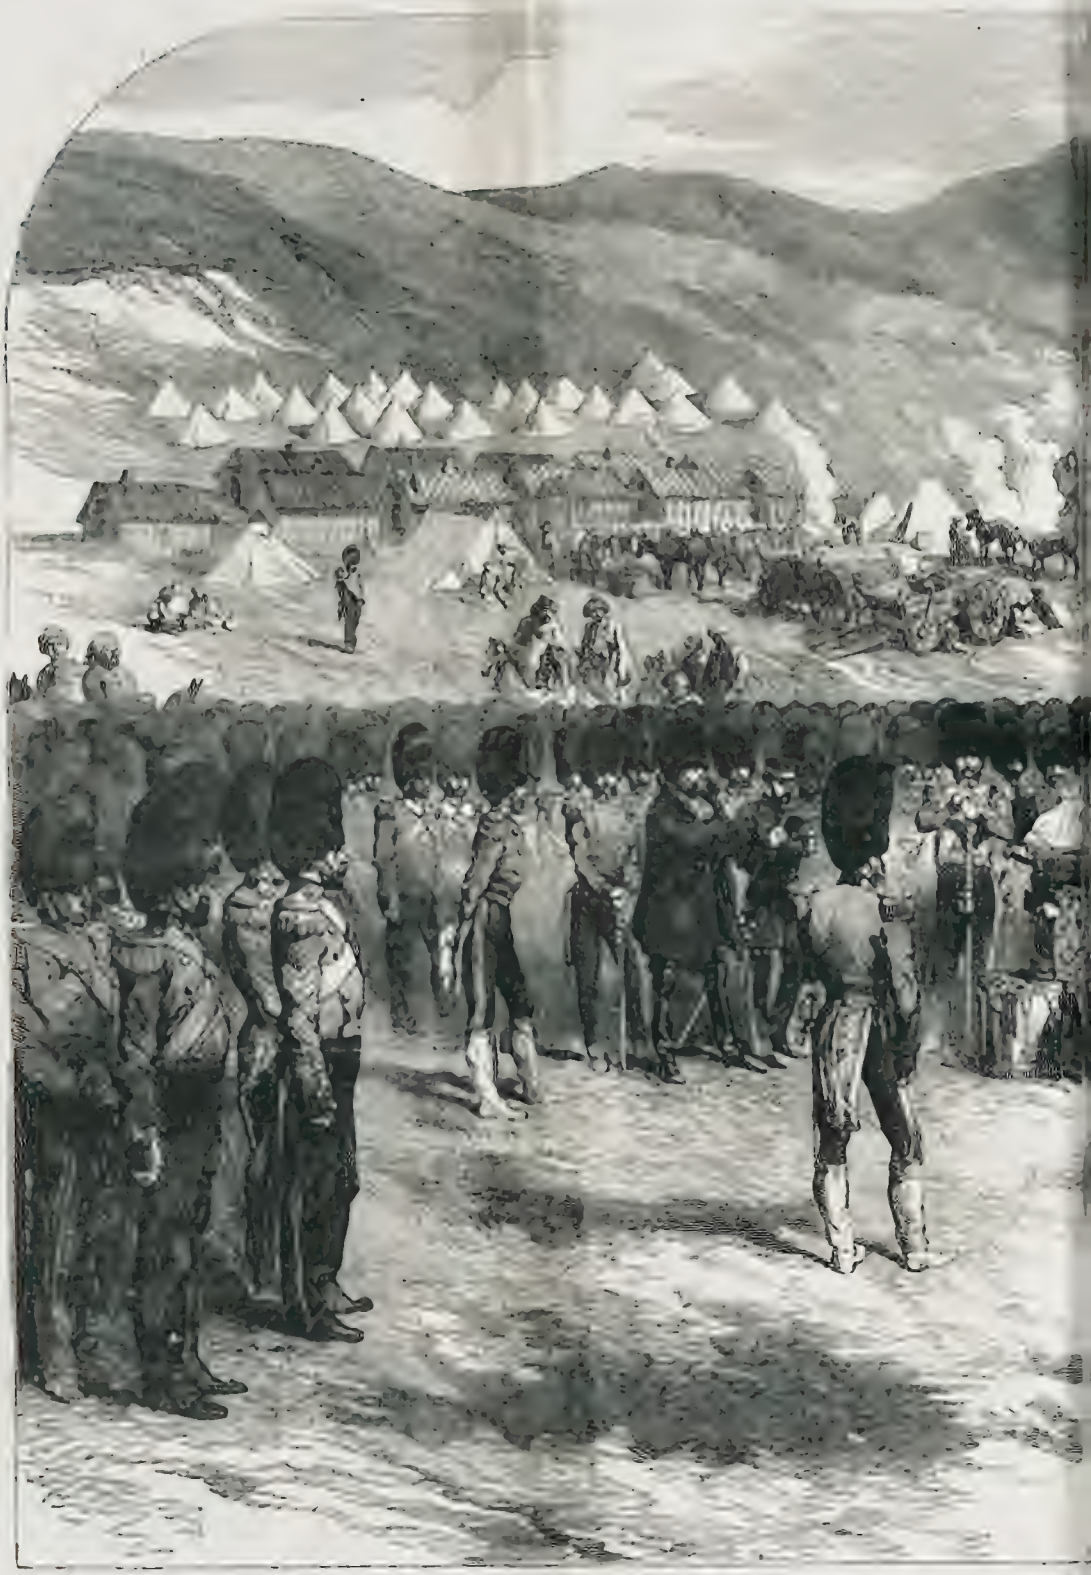
Architects are lamenting the too early death of Mr. Carpenter, the architect, whose knowledge of his profession has been shown to great advantage in the recent restoration of Sherborne Church, in Dorsetshire. Sherborne is almost a cathedral in point of size, and is equal to many cathedrals in point of architecture. Mr. Carpenter entered into its design, and restored it with great good sense. Mr. Carpenter was for some years the junior partner of Mr. William Brooks, the architect of the London Institution, Dudley Church, Finsbury Chapel, &c.; and, almost better still father of Mr. Shirley Brooks.

Londoners who in this busy season are unable to escape out of Cobbett's "wen" for more than half a day should join the Surrey Archæological Society, and enjoy the general gathering at Chertsey on the 19th. There are few places within fifty miles of London that can supply rural scenes of greater beauty than Chertsey; and the Museum of Antiquities to be impromptued for the occasion promises well.

Paris Exhibition.—An official return just published gives an account of the demands for space made by the various nations to the Fine Arts Department of the Universal Exhibition, which is not without interest. England demands 860 metres; Belgium, 800; Prussia, 752; the Netherlands, 310; Switzerland, 200; Austria, 210; Hamburg, 133; Sweden, 130; Hesse Darmstadt, 52; Wurtemberg, 23; and Hanover rather less than *half-a-metre*—45 centimetres only!

The Stained Glass in Westminster-hall.—During the last few days workmen have been employed in removing the stained glass from nine of the lower compartments of the large window at the bottom of Westminster-hall, for the purpose of being transmitted to Paris as a specimen of Birmingham art in the manufacture of stained glass, at the forthcoming Exhibition of the Works of Industry of all Nations. The vacated spaces in the window have been filled up with timber, which, from the body of the hall, has a rather unsightly appearance.

Bookbinding for the French Exhibition. —We have just seen, at the establishment of Messrs. Leighton, Son, and Hodge, of Shoe-lane, the specimens of bookbinding by which they have prepared for the approaching Paris Exhibition. In addition to some very tasteful and elaborate examples of binding in morocco, silk, papier maché, and other materials, their display is curious, as illustrating the progress of what is called cloth binding for publishers, and which will well sustain the credit of the English bookbinders. Some of our readers who are old enough to remember the time when books were scarce and expensive, and a penniless querist's query was learnt from the publishers in the same unvarying drab paper cover, with a white paper label on the back for the title, can best appreciate the change which has taken place in noticing the style in which we now receive our new books—bound in handsome coloured cloths, and stamped on the covers with appropriate and artistic devices, giving a foretaste of the contents of the volume. We may remark that the binding of books in cloth in large numbers for publication, is an art quite unknown to our neighbours the French; for, much as they excel in other kinds of binding, their new books are published *now* in the same style of thin paper cover as they were in the days of the first Napoleon. We are informed that the founder of the above firm, the late Mr. Archibald Leighton, was the first to introduce the binding of books in cloth, which is now brought to such excellence.



DIVINE SERVICE ON SUNDAY MORNING IN

CAMP BEFORE BALACLAVA.—GUARDS DIVISION.

DIVINE SERVICE IN THE ENGLISH CAMP AT BALACLAVA.

THE interesting scene which our Artist has depicted took place on the 3rd of March. The three regiments present were the Coldstream, the Grenadier, and Fusilier Guards, who formed three sides of a square, the fourth side of which was partly filled up by the party mounting guard for the day, the latter in full uniform, with knapsacks, rolled blankets, and the new yellow boots lately issued to the Guards. A few of the men wore caps; but the general appearance of the troops, as will be seen from the Engraving, shows a very great improvement compared with what it was some weeks ago. For the first time since the battle of Inkerman the Guards are described as having looked smart as they assembled there, under the blue sky, within a few miles of a hostile army, to join in the solemn service of the Church of England. To any person imbued with the slightest share of religious feeling the scene must have been a very impressive one. As the weather was rather cold, the officiating clergyman wore a small black velvet *calotte*, fitting very closely to the head, something like the well-known cap of the late Duke of Sussex.

THE CRIMEAN COMMITTEE.

THE "Departments" may congratulate themselves on having passed a week without any damaging disclosures from that place of torture for timid officials, "Committee-room No. 17." The proceedings in that apartment are, with good reason, dreaded in certain quarters; and Mr. Roebuck and his fellow-inquisitors are denounced as strongly as if the whole thing were a kind of revi val of the Star-chamber. If the evidence yet to be taken tells out of doors with as much effect as that of the week before the recess, many proper authorities have every reason to fear the reassembling of the Committee, for some of the worst reports of "those newspapers" have been confirmed, sometimes almost unconsciously, by officials themselves. The public is gaining a more distinct notion of the working of the machinery of these "Departments," which do business in a manner incomprehensible to the comparatively few individuals from the outer world who are brought into direct contact with them. But suppose the Committee works through the Medical department into the Board of Ordnance, and, with the lights there obtained, explores the recesses of the Horse Guards; proceeding thence next door, to the Admiralty—by no means so blameless as Sir J. Graham alleged—what then? That is now the question; and there can be no better time to ask it than this interval of leisure, when one day's exposure or confession of mismanagement is not overlaid by the revelation of greater mismanagement on the next. It is a question that is being asked very generally What is the result of the Committee to be? Is Mr. Sidney Herbert to prove a prophet; and is the inquiry really to turn out an "immense sham," leaving no trace behind but a Blue Book? In that case we should be inclined to add a single letter to Mr. Herbert's predictive epithets, and call it an "immense shame." But really, at this moment, it is by no means clear that the results expected from the investigation will be obtained. There is a vast distance between exposure and reformation; and abuses have an incredible vitality, especially in England, more especially if they are old; and most especially if there are great numbers, with considerable "influence," interested in maintaining them. We fear all these conditions apply to the abuses from which the Committee has lifted a corner of the veil, and will probably apply to many more yet to be discovered. The public should keep the question, "What is to be done next," before it, and furnish a practical answer; for we suspect the real work will have to begin where the Committee stops. Heads of departments may be called up one after the other; Mr. Layard may question in his boldest style, and infuse into his queries the most evident astonishment; Mr. Roebuck may guide the inquiry with more legal dexterity, and throw in a few sarcastic "asides," when the evidence is "too bad" even for more phlegmatic temperaments; that evidence may go on with a *crescendo* movement towards exposure of muddle of every kind, ending, perhaps, with a grand illustration of the disasters unwittingly brought about by the ambition of mediocrity—when the Duke of Newcastle is examined; but still Louis Napoleon's favourite question will recur—*et puis?* What then?

It is one not easily answered; the Committee can do nothing more than "report to your Honourable House;" and there is sufficient Government influence in the Committee itself to tone down any very strong condemnation of any body, Board, Department, or authority. But supposing the report passed, reflecting some degree of the feeling out of doors, all action formed on it must come from the Executive, not Parliament, for the days are gone when it could be said—

> The House impeach him, "Comingsby" harangues,
> The Court forsakes him, and Sir Balsam hangs.

How far will the House of Commons put a pressure on the Executive? The last great effective display of the prosecuting power of the Legislature was when it expelled certain members of its own body, and fined and confiscated pretty freely among the directors of that stupendous fraud, the South Sea Bubble. But very large bubbles have been blown since then, and Parliament has not interfered, except to help to inflate them by its private-bill legislation. It was one thing to vote the inquiry into the state of the army, but it will be quite another thing to act on the evidence collected by it.

Even the evidence condemns a "system" more than it criminates individuals; and a system cannot be prosecuted, indicted, or punished; it can only be changed—the most difficult thing to do of all. No culprit has yet been got at so as to fix him clearly with the responsibility for any failure. Facts enough come out, but individuals escape, as if they had had nothing to do with them. And their plea in extenuation is really a strong one—they have all had to work in fetters; and when they found they could not work well except by breaking them they had not courage enough to do it. They have all been trained to think the infringement of a regulation a kind of sacrilege.

Dr. A. Smith, "taught for forty years to save money and not to spend it," could no more acquire the habit of liberality of outlay when told he was free to disburse than an Indian fakir who has held his hand stretched above his head "for forty years" can bring it down to where the breeches pocket ought to be. Poor Dr. Menzies, bewildered among all kinds of authorities, with little power, and that disputed, obliged to leave hospitals uninspected that his piles of forms and returns might be written out—he, too, falls back on the intangible "system," and asks, "What could I do?" So all the confusion and blunders, ending in inflicting very avoidable suffering at a (now) unavoidable cost, have arisen from an invisible influence, mysterious and impersonal—"a bodiless creation," blighting everywhere, but nowhere to be grasped. Hints have been thrown out in the Committee of possible peculations and embezzlements of stores, and that certain trains of inquiry might be entrusted with advantage to the police; but there is no evidence of it. Where so much evil is so abstract, and nobody's fault, it would be almost gratifying to discover something "concrete" enough to come within the pains and penalties of a statute. The public would fully understand any part of the inquiry that could be transferred from Westminster to the Old Bailey, and would be much more secure of justice being done in the last locality than the first. But we fear the evidence will go no further than it has already; the "system" will excuse all the men who work it; and, unless a strong feeling be manifested by the constituencies throughout the country, a tolerably "strong" report, a division in the House—nearly like that a few nights since on military promotion—and a few weeks' angry talk, will suffice to restore the system to its pristine safety and oblivion, especially if assisted by the peace with which we are threatened from Vienna.

NAVAL AND MILITARY INTELLIGENCE.

DEPARTURE OF THE BALTIC FLEET FROM SPITHEAD.

The bulk of the ships at Spithead, belonging to the Baltic Fleet, sailed on Wednesday afternoon. The weather had moderated to some extent, and the wind had become more favourable than on Tuesday, although it was not fair. The order of sailing, however, given by the Commander-in-Chief, Rear-Admiral Dundas, and the fleet went away in beautiful order. Although they were all steam-ships they left Spithead under canvas alone, but getting to the Nab Light their steam power was brought into requisition by some of the ships. A vast number of persons witnessed the departure of the fleet, although it was concealed, in a measure, by a thick fog. The following are the ships that sailed:—

Duke of Wellington	131	(Capt. Caldwell, flag of Admiral Dundas	Hogue	60	Capt. W. Ramsay
Royal George ..	120	Capt. Codrington	Ajax	60	Capt. Warden
Exmouth	120	Capt. Hamelin, (Capt. W. K. Hall, flag of Admiral Seymour	Edinburgh ..	60	Capt. W. H. Hall
			Magicienne ..	16	Capt. Vansittart
Nile	91	Capt. Mundy	Vulture	6	Capt. Glasse
Majestic	91	Capt. Hope	Dragon	6	Capt. W. H. Stewart
Cæsar	91	Capt. Robb	Bulldog	6	Commander Gordon
James Watt ..	91	Capt. G. Elliot	Gorgon	6	Commander Crawford
Colossus	84	Capt. E. R. Robinson	Basilisk	6	Commander Jenner
Cressy	80	Capt. R. L. Warren			

With the exception of the last-named six vessels, which are paddle-wheels, the fleet is composed of screw ships. Before they leave the Downs they will be joined by the *Orion*, 91; *Hastings*, 60; *Pembroke*, 60, from Portsmouth; the *Russell*, 60 (all screw ships), from Chatham; and other vessels from Plymouth, &c. Every one of the ships composing this fleet is in admirable order, with crews fully disciplined and well experienced. With only one or two exceptions, every ship and every crew has turned up the Baltic before. One of the Admirals in command, Rear-Admiral Seymour, was Captain of the Fleet in the last Baltic campaign; whilst the present Master of the Fleet, Mr. Richard Stokes, went through that campaign as master of the *Neptune*, 120, sailing ship. The departure of the above-named fleet, together with the ten frigates and sloops composing the "flying squadron," leaves a very respectable force at Spithead, consisting of the—

Neptune	120	sailing ship.	Centaur	6	paddle
St. George	120	ditto.	Cruiser	6	screw.
Orion	91	screw.	Dragon	6	paddle
Calcutta	84	sailing ship.	Driver	6	ditto
Powerful	84	ditto.	Ariel	6	screw.
Pylades	21	screw.			

The Baltic fleet will anchor in the Downs and wait orders. Their departure there depends upon the information received from the state of the weather in the Baltic, and the character of the intelligence from Vienna.

IT has been decided by the Commissioners of the Chelsea Board, which has been sitting at Chatham, to give a pension of 9d. per day to those who have either lost a finger or otherwise been slightly wounded. No decision has been come to with regard to pensions for those men who are more seriously wounded, having lost either a leg or an hand. The Board, however, has allowed sick furloughs to be given them, so that the men go home to their friends, and they are allowed their daily pay, viz.—a private 1s3d., a corporal 1s6d., and a sergeant 2s3d. per day.

THE monthly returns of deserters from the army, the navy, and the militia, made up at the Horse Guards and Admiralty on Saturday last, show a large increase in the number of defaulters; the total being 814. The list of deserters, strugglers, and men discharged with disgrace from the navy is large, there being 74 deserters, 15 strugglers, and one person discharged with disgrace. From her Majesty's ship *Colossus* there are 24 deserters, and from the *Serapheu* 8. From the various regiments of militia there are 278 deserters, 216 of whom belonged to the 1st Surrey Regiment.

THE Crimean medals have been issued for distinguished services, and have been dispatched to the army before Sebastopol. They are of silver, with red riband and blue centre. The friends of those deceased will receive them on putting in claims.

THE new pattern clothing has been served out to the 1st Dragoon Guards. The frock or tunic appears to great advantage upon large-sized men, and, when worn with the helmet, is undoubtedly a vast improvement upon the tailless garment conferred upon the "Heavies" some eight years since, and which is now about to be discarded.

GREAT progress has been made in the erection of the temporary wooden buildings, officers' quarters, stabling, &c., for the Encampment at Aldershott; the concrete roads and footways have been formed, and in a few days the buildings will be handed over by the contractors to the military authorities.

ORDERS have been issued for detachments of the following cavalry and infantry regiments to be held in readiness for immediate embarkation, for the seat of war, each cavalry regiment to be reinforced by 160 mounted men, the infantry by draughts varying from 1 to 250 bayonets:—4th Dragoon Guards, 5th (Princess Charlotte of Wales) ditto, 1st Royal Dragoons, 2nd Scots Greys, 4th Light Dragoons, 5th Inniskillings, 8th Hussars, 10th (Prince of Wales) ditto, 11th (Prince Albert's) ditto, 12th Light Dragoons, 13th Hussars, 17th Lancers The detachments for the Grenadier, Coldstream, and Scots Fusilier Guards will not exceed 100 each, and are to be in the middle of next month; but the draughts from the respective depôt companies of the following infantry regiments will embark forthwith—1st, the Royals (1st battalion), 4th Foot, 5th Fusiliers, 9th Foot, 14th ditto, 17th ditto, 18th Royal Irish, 19th Foot, 20th ditto, 21st Royal North British Fusiliers, 23rd Royal Welsh ditto, 28th Foot, 30th ditto, 33rd Duke of Wellington's (West Riding), 34th Foot, 38th ditto, 39th ditto, 41st ditto, 42nd Royal Highlanders, 44th Foot, 46th ditto, 47th ditto, 49th ditto, 50th ditto, 58th ditto, 57th ditto, 62nd ditto, 63rd ditto, 68th Durham Light Infantry, 71st Highland (1st battalion), ditto 2nd battalion, 79th Highlanders, 88th Connaught Rangers, 90th Foot, 93rd Highlanders, 97th Foot, and the 1st and 2nd battalions of the Rifle Brigade. The Land Transport Corps will be augmented by 500 drivers as soon as possible. The strength of the Royal Artillery in the field will be increased by four field batteries and two batteries of light field pieces of the Royal Horse Artillery.

THE great point of attraction in the Thames at the present moment is the construction of the screw batteries for the Baltic. Mr. Scott Russell is building one, Messrs. Green two, and Messrs. Mare and Co. two. Numbers of people visit them daily, or rather watch their progress, for they are crowded with workmen, and there is no room either about the slips or on board the ships for visitors. No efforts have been spared, no expense has been stinted, to get these batteries ready for launching. Night and day gangs of men are employed, and there is no pause to the busy work. It is expected that the five batteries will be launched in the Thames on or before Monday, the 16th instant, when they will be instantly fitted and dispatched for service, under the most active, energetic, and skilful Captains in the Royal Navy.

TWO YEARS' ENLISTMENT.—The *Gazette* of Tuesday night contains an order by her Queen in Council, which is as following is the essential portion: "Now, therefore, her Majesty is pleased, by and with the advice of her Privy Council, to order, and it is hereby ordered, that any person may be enlisted as a soldier for the purposes of the Act of the 10th and 11th years of her Majesty (cap. 37), for ten years in the infantry, or for twelve years in the cavalry, or artillery, or other ordnance corps, and also that any person between the ages of twenty-four and thirty-six years may, under the provisions of the Act passed in the present Session of Parliament, for three years after the passing thereof, be enlisted as a soldier in her Majesty's land forces, or in the infantry force of the East India Company, for the term of two years, and for such further term, not exceeding one year, as her Majesty may by order in Council direct—the term of service to be reckoned as directed and provided in and by the Act of the 10th and 11th years of the reign of her Majesty for limiting the time of service in the army."

ON Tuesday upwards of 2000 Minié and Pritchett rifles, rifled muskets, and carbines, were delivered from the manufacturers at Birmingham into the Ordnance stores at the Tower.

IT is intended to establish a dépôt of seamen, artificers, stokers, &c., for service in the Baltic and White Sea fleets, in Leith-roads, for which purpose, in addition to her Majesty's ship *Athol*, the guard-ship in the roads, a 50-gun frigate is to be stationed there, to afford accommodation to volunteers.

A LARGE quantity of medical and surgical stores, &c., was shipped from the Tower on Tuesday for conveyance to Smyrna and Scutari. Among the stores are 500 hospital bedsteads, with bedding complete, bit, and slipper baths, pails, &c., for the new hospital at Smyrna.

IN the thirty-six days just past, thirty-five hired transports, having a measurement of 52,830 tons, have left the port of Southampton, with 12,000 troops, 500 horses, several thousand tons of forage, and 641 wooden houses, sufficient to shelter 20,000 men. At a rate of 50s. per ton per month, the hire of these thirty-five vessels costs the Government £132,075 monthly.

ON Saturday last Messrs. Green launched from their establishment at Blackwall two of the screw gun-boats for the Baltic fleet. On the same day Messrs. Wigram launched two of the mortar-vessels for the Baltic, to be fitted with Captain Roberts' sliding carriages.

THE CURRAGH AT THE CURRAGH OF KILDARE.—It will be beautifully placed on the side of the hill, extending from the walled-in Park for more than two miles towards the end of the Curragh, on the Wicklow side. In the rear it will be completely sheltered by the hill itself from the cold northerly winds, while in front its southerly aspect will make it exceedingly warm. The nature of the soil, and the inclination of the ground upon which it is placed, will cause it to be comfortable and dry in the wettest season of the year. The Camp itself will be composed of huts made of wood, placed on brick foundations, about forty by twenty feet in size, arranged in rows, with streets twenty feet wide between each, running down the side of the hill, so as to form an inclined plane for the water to be carried away in rainy weather. Each house will face the one at the opposite side, and there will be a space between the end of each, forming as it were cross streets—a matter of great importance in the ventilation. Each hut will be covered in with asphalte, except those of the officers, which will have vulcanised iron roofs, and will be supplied with a stove in the centre, and open by a door at each end. Some of them will have boarded floors, others merely the soil on which they are placed, and none will have ceilings. It is estimated that five rows, each having eight huts, will accommodate 1000 men. The foundations for four are already built. Ovens and a slaughtering house will also be erected: thus, along with being taught to manœuvre in masses, the men will be trained to the minor though not less important duties of the field.

THE ORDNANCE FACTORY AT ENFIELD LOCK.—The Government Ordnance Factory for the manufacture of muskets and small arms at Enfield Lock, having been found very inadequate to the extensive supply at present required, is about being increased to a very considerable extent. The new building, when complete, will be surmounted by a corrugated iron roof of immense space. In consequence of the large number of workmen now employed, and those that will be necessarily required, the Eastern Counties Railway Company have established a new station about a quarter of a mile from the factory, and midway between the Waltham and Ponder's End stations, thereby saving the workmen a walk of at least two miles.

INSPECTION OF THE GUARDS FOR SERVICE IN THE EAST.

The detachments of the Household Infantry, under orders for embarkation to join the service battalions in the Crimea, marched yesterday from their barracks to the Wellington Barrack Parade, where his Royal Highness Prince Albert and Staff, in the presence of a very large assemblage of persons, made a most minute examination of the men, their arms, and accoutrements.

His Royal Highness, accompanied by the Duke of Cambridge, arrived shortly after ten o'clock, the Prince Albert wearing the tunic or new dress of the regiment, of which he is the Colonel. There were also on the parade-ground Colonel Wood (the second in command of the regiment), Quartermaster Payne, Colonel Thornton; Captain Hutton, Brigade Adjutant; John F. Cust, Adjutant of the 1st Battalion of Grenadier Guards; Captain Popple, of the 2nd Battalion of Grenadiers; Lieutenant H. Parnell, of the Grenadier Guards; Captain Quin, Lieutenant Mallett, Colonel Lewis, Colonel How, the Hon. G. Cadogan, Lieut.-Colonel Bruce, Captain Thesiger, the Hon. A. F. Egerton, Lieutenant J. Digby, Lieutenant the Earl of Carrick, Lieutenant the Viscount Stormont, and many other distinguished officers belonging to the Scots Fusiliers and Coldstreams.

Prince Albert having reached the ground, he was received by the troops with full honours, the bands playing "God Save the Queen." The Prince Albert, accompanied by his distinguished suite, walked through the ranks, and minutely inspected the men, and expressed his approbation of their apparent efficiency. His Royal Highness, on perceiving several invalided soldiers, expressed his sympathy with their sufferings.

On his Royal Highness Prince Albert's return, the various detachments marched to Buckingham Palace, where her Majesty, Prince Albert, his Serene Highness the Prince of Leiningen, Prince Augustus of Saxe-Coburg, the Prince of Wales, and the younger branches of the Royal family, inspected them from the balcony of the interior courtyard, the bands of the various regiments being in attendance. At the conclusion of the inspection, her Majesty expressed her extreme satisfaction at the soldier-like bearing and efficiency of the several troops brought under her notice, when the detachments returned to their various barracks, and were greeted with the most energetic cheers from crowds of all classes who had assembled to witness the inspection.

ON Wednesday forenoon, at nine o'clock, about 1000 of the Royal Artillery, with the full complement of officers, horses, baggage-waggons, and twelve pieces of heavy cannon, marched from the Barracks at Romford, Essex, for the Royal Dockyard, Woolwich, preparatory to their departure for the seat of war in the East. The whole of the men were in high spirits, and were loudly cheered as they passed on their way to London.

THE SARDINIAN CONTINGENT.—The embarkation of the Sardinian contingent will take place at the period first fixed on—that is, from the 10th to the 15th inst. The organisation of the small staff which will accompany and partly convey it is now completed, and the command confided to the Marquis de Negro. Two squadrons of cavalry in garrison at Chambery have received orders by electric telegraph to leave *en route* for the East, and they would accordingly proceed to Genoa on Saturday. A grand banquet of 110 covers was given on Friday week at Turin by the deputies to such of their military colleagues as were about to embark with the contingent. Members of all shades of politics, even those who voted against the treaty of alliance, took part in this farewell.

ST. PATRICK'S DAY.—Many an officer had a bit of some sorry green material for a shamrock in his cap, and the cries of the apple-ding multitude had now and then a particular "shine" about them which showed that the Hibernians who owned the voices had not forgotten the peculiar rite and ceremony by which the anniversary was remembered in times gone by. But not a drunken man was visible on the course. Every face beamed with good humour and joy, and high spirits. *Sans perpetua*. Some thoughtful people at home had actually sent out to their friends real shamrocks by post, which arrived just in the nick of time, and an officer of my acquaintance was agreeably surprised this morning by his servant presenting himself at his bedside with a handful of that curious plant. The fellow had cut out of some opulent vegetable with a pair of scissors, and a request that he would wear it, "and nobody would ever know the differ."—*Letter from the Camp*.

EMIGRATION.—323,113 persons emigrated in 1854, viz.: 43,021 to Canada, &c.; 192,993 to the United States; 83,162 to Australia; and 3336 to other places. Since 1840, as many as 34,33,414 persons have emigrated from this country to the countries above mentioned.

CREMORNE GARDENS were reopened yesterday for promenade; and the amusements will be resumed on Monday with a holiday programme that will, doubtless, prove attractive.

SHIP-LAUNCHES.—On Tuesday there were launched from Messrs. Mare's ship-building yard, Blackwall, two vessels—one of 900 tons, intended for the Mexican Government; the other, a large iron screw steam-ship of 2200 tons, steer ship to the *Perseverance*, which lately overturned in the Woolwich Dockyard. This latter vessel is also taken up by our own Government, for the conveyance of troops, and in readiness for her engines, which are now in course of construction by Messrs. Rupier's, of Glasgow, and which were some time back seized as the property of the late Emperor of Russia. This splendid vessel makes, in all, five ships launched within a fortnight from Messrs. Mare's yards. The gun and mortar batteries are rapidly progressing to completion, and are expected to be launched in a few days.

BATHS AND WASH-HOUSES.—Cold is less fatal than dirt in the air and water of London, through which the cholera, dysentery, and other malignant diseases, principally epidemic diseases of filth; thus while intense cold killed 1604 persons in the five weeks preceding the last; cholera destroyed 7229 in five weeks of last year; and while cold killed 169 men and women of the age 20—60, cholera killed 1309 at the corresponding age. It is the religious of antiquity, before science had demonstrated the truth that dirt is the cause of innumerable diseases, men had been taught by their great lawgivers to regard personal uncleanness as something defiling in the highest degree; yet it is only recently that the artisans, and even the middle class of London, have in parts been supplied with baths, and with the means of washing linen easily and at little cost. The last Report of the Committee for Promoting the Establishment of Baths and Wash-houses for the Labouring Classes," shows that there are thirteen baths and wash-houses in London, at which 1,220,739 baths were administered for £17,089, and 631,101 washings of the linen of 44,404 persons were performed for £6696.—*Registrar General's Report, Feb. 24, 1855*.

AMONG the cases about to come before the Insolvent Debtors' Court, London, is that of an insolvent, at present confined in prison, who is nearly ninety-five years of age.

AN EPITOMAL DUEL.—On the 6th ult. M. Corradi, editor of the *Clamor Publico*, and M. De Masso, editor of the *Occalente*, both at Madrid fought a duel. To escape the penalty of the Spanish law, the duel was fought in a hired hall. The combatants fought with swords, which were ground for the occasion, and, having wounded one another, closed, intending each to end the other's life. The seconds were compelled to tear them asunder.

THE Marchioness of Ely has been selected by the Queen to be Lady in Waiting to the Empress of the French during her Majesty's stay in England.

LORD ALFRED PAGET, Equerry to her Majesty, has been selected by the Queen to be Lord in Waiting to the Emperor of the French during his visit to England.

THE manners of the "old Court" are returning to the Tuileries. On the day after the first representation of the "Demi-Monde," Prince Napoleon sent to the successful author (Alexandre Dumas, fils) two magnificent diamond shirt-studs.

A PARTY of thirty-one Mormonites started from Worcester on Monday morning by the ten o'clock train to Liverpool, on their way to the Salt Lake.

THE Sardinian clergy are making enormous efforts to induce the Senate to reject the Convent Law. The Pope has authorised the clergy to guarantee, in case of rejection, 900,000 francs indemnity to the poor curates, in lieu of the benefits proposed to be conferred on them by the law.

NEARLY twenty of the senior mail-guards are about to be superannuated. Some of these guards have been in the service of the Post-office between forty and fifty years.

MUSIC.

THE "directors" of the Royal Italian Opera—a body incorporated in the single person of the enterprising Mr. Gye—have issued their usual prospectus of the arrangements for the season. Its substance may be comprised in a small space. The season is to begin on the 10th of April (Tuesday next), and to terminate early in August. A very strong company has been engaged. Its principal members are: Soprani—Mdlle. Bosio, Mdlle. Jenny Ney, Mdlle. Marai, and Madame Viardot; Contralto—Mdlle. Didiée; Tenors—Mario (for a limited number of nights), Tamberlik, Gardoni, and Lucchesi; Baritones and Basses—Ronconi, Lablache, Formès, Zelger, Tagliafico, and Polonini. All these performers are well known to us, with the exception of Mdlle. Jenny Ney, who brings with her a splendid Continental reputation, both as an actress and a singer. Two other names are mentioned, both new to us—Albicini, a tenor, and Graziani, a baritone. This company is almost superfluously strong in some respects, while in one (and a by no means unimportant one) it is exceedingly weak; the *only* contralto being Mdlle. Didiée. We fully expected Madame Borghi Mamo, the celebrated contralto, of whom we lately gave a particular account, and who is now in the highest favour with the Parisian public. The only new opera promised this season are Meyerbeer's last work, "L'Etoile du Nord," and Verdi's "Trovatore." Meyerbeer is now occupied in preparing his opera for the Italian stage, and it is hoped that he will superintend its production in person. In the "Trovatore," the character of the *Gitana*, or gipsy, is to be performed by Madame Viardot, who has lately appeared in it at Paris with remarkable success. More attention than usual, it would seem, is to be paid to the ballet; for, in addition to the splendid performers of last season, we are to have the famous Fanny Cerito, formerly one of the most brilliant stars of Her Majesty's Theatre. There is thus a goodly preparation for the approaching campaign; but, among the tuneful host whom we have been accustomed for so many years to welcome at the season, there is one whom we shall welcome no more—and what can console us for the loss of the peerless Grisi?

THIS, not being a theatrical week, has been a week of concerts. Mr. Allcroft had one of his "monster" performances on Monday evening, at the Lyceum. An army of singers and players got through a farrago of popular music, to the delight of a crowded and insatiable audience, who insisted on having the greatest part of it twice over. On the same evening a concert of a much superior class was given at St. Martin's Hall by Mr. Alfred Mellon, a young musician of great talent, who is rapidly rising to eminence. Several of the finest orchestral pieces, including Beethoven's "Pastoral Symphony," Mendelssohn's overture to "Ruy Blas," and an excellent overture of Mr. Mellon's own, entitled "Hélène," were admirably performed by a select band. Mr. Sainton played a new fantasia, composed by himself, on themes from Verdi's "Rigoletto;" and Mendelssohn's Andante and Rondo Brillante, in B minor, was executed in a masterly manner by the accomplished young pianist, Mr. Cousins. Madame Clara Novello sang the splendid scene, "Ocean, thou mighty monster," from Weber's "Oberon," and the aria, "Deh vieni," from "Figaro;" and Formès gave the famous buffo song, "Largo al factotum," from the "Barbiere di Siviglia." The hall was crowded, and this excellent concert had the success it so well deserved.—Likewise, on the same evening, Mr and Mrs. German Reed gave a comic and musical entertainment, under the title of "Illustrated Gatherings." Mrs. Reed (better known as Miss Priscilla Horton) has long been a favourite of the public, both as a comedian and a singer. She gave a series of sketches of character, extremely lively and amusing, intermixed with admirable singing. The most remarkable part of the entertainment was a scene taken from Hogarth's picture of "The Enraged Musician." Mr. Reed personated the unfortunate virtuoso, who was persecuted successively by a garrulous landlady, an Italian organ boy, a country housemaid, and a French prima donna; all these characters being assumed by Mrs. Reed. This clever performance was very favourably received, and promises to have a successful run.

ON Tuesday evening the London Sacred Harmonic Society performed "Elijah;" and on Wednesday the Sacred Harmonic Society gave the "Messiah." On both occasions, as usual, Exeter-hall was filled to the doors.

MR. Sterndale Bennett's second concert of Classical Pianoforte Music, at the Hanover-square Rooms, on Tuesday evening, was a most elegant and refined entertainment. Mr. Bennett was assisted by Herr Ernst, Signor Piatti, and Madame Clara Novello. The principal instrumental pieces were Mozart's Trio in B flat for piano, violin, and violoncello; Clementi's Sonata in B minor, Op. 40; Beethoven's Sonata in G, Op. 30, for piano and violin; Mendelssohn's Duet in D, for piano and violoncello; and a selection from Mr. Bennett's own Preludes and Lessons. Madame Clara Novello sang Purcell's "Morning Hymn"—a fine specimen of that great old master—and Meyerbeer's "Sabbath Song," with English words by Mr. Oliphant. So attractive was this fine performance, that the great room was literally full to overflowing

THE THEATRES.

OLYMPIC.—We had occasion lately, in noticing an amateur performance, to mention that a change had taken place in regard to such exhibitions. We were wont to go to them for the purpose of "guying" the candidates for applause, and getting some sport out of their blunders. A professional prejudice had, moreover, for a long time been maintained that the technical and traditional business of the stage was so difficult, the best part of a life was needful to its acquisition. Such notions are now dissipated: improved education, and appliant facilities, have given such advantages to the histrionic neophyte, that a play enacted by novices would now-a-days command respect, and furnish no motive for derision; nay, we have been present at amateur acting that was scarcely to be distinguished from the professional. On one or two occasions we have witnessed a tragedy so supported by ladies and gentlemen that its general effect was even better than that obtained by regular workers. On last Saturday at this theatre an experiment was tried, which henceforth in amateur annals must hold a remarkable place. The "Fielding Club" had resolved, for the benefit of a much esteemed journalist, now suffering from a severe affliction, to venture on an amateur pantomime—a school of histrionic art in which volunteer pupils are naturally rare. Mr. Albert Smith, Mr. Cole, Mr. Hall, Mr. Palgrave Simpson, Mr. Tom Taylor, Mr. Holmes, Mr. Arthur Smith, Mr. Bidwell, Mr. Edmund Yates, Mr. J. Robins, Mr. Ibbotson, and Mr. Hallett, assisted by a professional *Columbine*, Miss Rosina Wright, adventured on the perilous ground and within the magic circle of harlequinade achievement. It is proper to state that this "terrible feat" was preceded by the quiet presentation of the farce of "My Neighbour's Wife," which proved to be very neatly acted. The name of the pantomime is "Harlequin Sunlight, or a Match for a King." A prologue by Mr. Tom Taylor introduced the important experiment. The opening was entrusted to Mr. Albert Smith, who, as *Catesby*, smokes a pipe in the midst of barrels of gunpowder, in the vaults under Messrs. Harrison's establishment, and sings a song including the story of the Fifth of November. Mr. Holmes was the *Guy Fawkes*; the combat between him and *Catesby* being admirably managed, with the genuine conventional grotesque. When the transformations were effected, Mr. Bidwell, as *Harlequin*, Mr. Arthur Smith, as *Pantaloon*, Mr. J. Robins, as *Clown*, and Mr. Edmund Yates, as *Lover*, proved to be so well fitted for their parts, that curiosity soon changed into wonder, admiration, and applause. "Hot Codlings" was sung to a riotous demand of the house; and the whole affair, with its mock accessories and real humour, terminated in a decided triumph. Mr. Albert Smith appeared also as a showman, singing the "Country Fair," with alterations, in the style of the late Mr. Mathews, and audibly identifying the performer of some surprising balancing tricks as an amateur. Nor were the audience less distinguishable than the actors. Among those present were the Duke and Duchess of Wellington, the Marchioness of Ailesbury, the Marquis d'Azeglio, the Marquis of Bristol, Earl of Mountcharles, the Earl and Countess of Earl of Shelburne, Earl Granville, Lord and Lady Bessborough, Marquis and Marchioness of Ely, Frances Countess Waldegrave, and others of noble name, with the *élite* of authorship and the press.

ON the reopening of the theatres on Monday, some new pieces will be produced. At the PRINCESS', a romance in two acts, called the "Sorceress of Toledo." At the HAYMARKET, the extravaganza, by Mr. Planché, called the "New Haymarket Spring Meeting (1855)," introducing Lord Mayor's Show—Mr. Buckstone sustaining the character of *Lord Mayor*, Mr. C. White the *City of London*, and Mr. Chippendale *Old Father Thames*. The sporting portion of the Extravaganza will introduce the "Grand Stand of Up-and-Downs, and Bird's-eye View of the Race-course, in the Field of Speculation; in which the favourites of the town will be trotted out by their respective jockeys. The names of the horses and colours of the riders will be correctly given while, previous to the start, the jockeys will dance a hornpipe and *galop*." At the ADELPHI, "A New Edition of the Fairy Tales of Mother Goose, with numerous highly-coloured Illustrations;" and at ASTLEY'S, "The Field against the Favourite." The LYCEUM company act at SADLER'S WELLS for the next fortnight. Mr. C. Mathews is engaged for two months at the Haymarket.

CHESS.

TO CORRESPONDENTS

PALAMEDES.—There are no finer models than the games you speak of, played between La Bourdonnais and McDonnell. They have many faults. Yet what, that is human, is exempt? But where will you find such beauties? Where the same invention, depth, comprehensiveness—in a word, mind—as in those Titanic battles?

MUMUS.—Your opponent is in error. The King is not incapacitated from Castling by having once been checked.

HUMUS, LORD HE GOETHE, T. G. L., TEIG. Now under consideration.

W. W., Sunbury; P. T., G. P., HENRY IV.—Indigité.

W. C.—The Enigma you refer to appears impracticable according to your own Solution, but to admit of an easy mate by 1. P. to B 8th "Queens," &c.

Solutions of Leitadell's clever Stratagem, or of the curious old Problem of Caliph Mutarim Billah, have been furnished by W. C. C., C. W., Sunbury; P. T. F., A DANE, GEORGE, CHARLES, LOUIS, LORD, F. T., Derby; E. H. N. B.

SIGNOR D., Plaza di Spagni, Rome.—On a question so intimately affecting the interests of the Game as a revision of the Laws of Chess, the opinions of distinguished players in every country are entitled to consideration and respect, and certainly none more so than those of the Signor himself. We trust, therefore, that you and others of eminence among amateurs of Italy will give free expression to your sentiments on the subject.

W. J. N., York.—Your attempt to trace the Indian Problem in wide of the mark.

MORLAND.—There is not space for the "Career," or we should be tempted to break a lance upon more than one point in your pleasant gossip about Spanish Sports. Even as regards the Bull-fights, or, more correctly, Bull-feasts, admitting that you have overthrown all historic evidence to favour your attempt to trace them to a Roman origin; since everybody has heard of the "Lodi Turrillo," and Pitty speaks of the Roman Bull-fights as a The endless pastime; yet, the probabilities are that the Goths-Spaniards owed their Bull-feasts to the Moorish Caliphs. But to claim for Iberian Chess the same illustrious descent, when all authorities worth the name concur to prove the game unknown to Greeks and Romans both, is the wildest of quixotic theories.

ALPHA-BETA.—The objections you advance to a plurality of Queens on the Chess-board have been, with more or less force, repeatedly urged. Very lately, indeed, H. Patroff has suggested that the possessor of a Pawn advanced to its eighth square should be permitted to summon his right to demand for it a second Queen, or other piece, and let it remain as a Pawn until it was captured, or the game brought to a close. With all deference to so eminent an authority, and to those who entertain the same opinion, we hold this suggestion to be inadmissible. What is a Pawn? A Pawn is a member of the Chess army, privileged to move one square *forward*, in a direct line, and to capture on one square *forward*, diagonally. When, therefore, it reaches the extreme line of the Chess-board, is it cannot go further forward—if not invested with the power of some piece which is allowed to retrograde—it must remain, not a Pawn, but a mere nullity. But—and—retain—an—upon—a—head, it was which led originally to the promotion of a Pawn, whenever it arrives at the eighth square. Once there, it was immovable, a useless encumbrance and barrier of changing it for a piece which could be brought into action again was not only natural, but also an inevitable.

SOLUTIONS OF PROBLEM No. 579 by Alma-viva, T. Addison, Omega, Guillelmus, Mesamate, C. W. Sunbury, W. C. C. Dereon, are correct.

SOLUTIONS OF PROBLEM No. 580 by W. C. C., M. P., Dumbeddikes, N. B., C. W., Sunbury, Chirurg. Ruris, Clericus, P. T. F., Cardinal, Dereon, F. R. of Norwich, F. T., Derby, E. H., Cant, Omicron, J. A. M., Falconium, D. G. Beddian, Courtegod, H. S. K., Blanco, Philo-Chess, Manfred are correct

SOLUTIONS OF ENIGMA 578 by Dereon, P. P., O. P. Q., Sigma, Felix, N. B., F. T., Derby, E. H., are correct. All others are wrong

SOLUTION OF PROBLEM NO. 579.

READING AND BERKSHIRE CHESS-CLUB.—The anniversary meeting and dinner of this old-established society are appointed to be held at the New Rooms, Reading, on Tuesday next, the 10th inst.; and a strong muster of amateurs from the adjoining counties and from London is anticipated. Strangers desirous of admission can obtain tickets to the play-rooms, without charge, by applying to the hon. secretary, Mr. W. Hodges, jun., Reading.

THE LATE MR. WILLIAMS, THE CHESS PLAYER. We are obliged to a Correspondent (R. C., of Clifton) for apprising us that a praiseworthy effort is being made by the friends of this unfortunate gentleman to place one of his orphan children in the Infant Orphan Asylum at Wanstead. The election, it appears, will take place on the 25th of May; and those of our readers who have proxies are entreated to send them to the Rev. H. C. Price, St. Peter's, Bristol; or the Rev. J. B. Clifford, St. Matthew's, Bristol.

THE SILENT MEMBER.—(No. XI.)

THE temporary cessation of Parliamentary talk will afford an opportunity for Government action, and it may be hoped that the Ministers, being released from the necessity of answering, or attempting to answer, disagreeable questions, will employ the recess in the performance of those duties which may render future questions comparatively needless. Sir John Pakington has announced his intention to place a rod in pickle during the holidays, to be used immediately after the vacation, unless that vacation has been employed in getting the Colonial-office into a more satisfactory condition. I have already touched on this topic, and I am glad to find that Sir John Pakington is determined to "know the reason why" the Colonies are to be abandoned to the care, or rather to the carelessness, of a Minister already occupied with a mission at Vienna. Already has Sir George Grey given up the task he had undertaken of attending to Colonial matters during the absence of the Colonial Secretary, and an important department is now left almost to chance, because the interests that are being sacrificed are too distant to make their complaints heard immediately. In dealing with the Colonies, the Ministers appear to act on the principle of a spendthrift who is perfectly reckless of his affairs as long as credit can be obtained, and there is a possibility of putting off the day of reckoning. When the bills begin to come in—when complaints from a score of neglected colonies are poured in upon the Government, and brought under the notice of the Legislature, which is sure to be the case as soon as there is time to receive news from abroad of the feeling created by what is now passing at home—the Ministers will begin to regret, perhaps, that they did not listen in time to the warnings of the Silent Member and the voice of Sir John Pakington. The fact is, that the public interests are sacrificed too easily when party interests are concerned; and it is notorious that Lord John Russell was appointed Colonial Minister, not because he is the fittest man for the management of Colonial affairs—or, if he is, why is he away from his post?—but simply because his "adhesion" was thought likely to give strength to Lord Palmerston's Government.

In the absence of political discussion there is much grave matter in the records of our law-courts to invite serious reflection on certain very disagreeable features of our social condition. Crime, which the friends of moral progress had hoped was rapidly becoming more limited to the ignorant classes, has developed itself in more than one instance among those whose position should have placed them out of the reach of what are considered the usual causes of delinquency. As long as the laws are broken by the poor and the uneducated there is every fair prospect of social amendment, for poverty will disappear before industry, and ignorance is daily diminishing among even the very humblest classes of the community. As long as criminals are found chiefly among the physically and intellectually destitute, society may feel that it has only itself to thank for the inconvenience it suffers on account of crime, inasmuch as the remedy is in the hands of society itself, which has only to set to work to educate and improve the physical condition of all its members. But what is to be done when we find persons of good condition violating the laws in the manner recently shown in two very sad instances? The different modes of treatment of two persons about equal in station, and equally charged with having offended against the law, may illustrate the difference between the value of professional and unprofessional magistrates. In the first case we find the utmost caution to prevent the ends of justice from being defeated by the escape of the accused; while, in the second, we see a provoked and admitted offender escaping with what seems to be a very inadequate punishment. Without alluding more particularly to the former case, which is still *sub judice*, I may suggest that a penalty of five pounds on a young lady who drives her pony carriage, and can throw down a ten-pound note for change, is not a very severe punishment for torturing an animal to a degree that had a costermonger so ill-used his donkey, in London, he would probably have expiated his offence by a term of imprisonment. In the costermonger's case, a fine would have been a real punishment; while, in the case of a Baronet's daughter, the only mode of really punishing was, by a committal to prison without a penalty. It would seem to an ordinary comprehension that, for such cases as the latter, the power of imprisoning without fine was originally given; but such does not seem to have been the view taken by a bench of county justices in the instance to which I have alluded.

Many persons will have perused with an uncomfortable feeling the report of a trial in which a late Inspector of Police, who has retired on a pension from the public service, answered himself to have taken up the profession of a private spy on the actions of any one that he may be paid for keeping watch over. This infamous and truly un-English business ought to be put down at once, for though it may be employed sometimes in tracking the guilty, it may be resorted to for the vilest purposes, and become a curse to society. I regret to say that the habits of some portion of the police are favourable to this system of espionage, which keeps an eye on evil, not for the purpose of baffling its designs, but in order to see its feats and then make a profit of the knowledge that has been acquired. The first duty of a police is the prevention of crime, but its detection is too often made the primary object with a body of men whose vigilance is estimated, not by the offences they prevent, but by those they assist in bringing to punishment. He is regarded as the most vigilant officer who has been a witness in the largest number of cases of conviction, though he may sometimes have been morally a sharer in the guilt at which he has looked on, for surely he is, according to all moral law, a *participeps criminis* who stands by during the commission of a crime which he might have prevented from being completed. If promotion in the police were to depend in some degree upon the smallness of the number of cases in the district where the candidates for promotion might have been employed, accompanied, of course, by an absence of any well-grounded complaint of neglect of duty, society would gain considerably by the system; and we should not be so likely to hear of retired detectives setting up in the "business" of witnesses to the commission of sets of criminality.

The past merit of what a highly-salaried butler was pleased to term the "inferior clergy," is a topic that is forced on the attention by the report of a recent action for libel, brought by a reverend gentleman, who, with a family of eight children, had only the income of a curacy of £190 per annum. He had a prospect of a better thing, worth some £400 a year; but he was unable to obtain it because somebody had charged him with habitual drunkenness. This accusation has been happily negatived by the verdict of a jury, which has awarded him twenty-five pounds by compensation for his injured character. The reputation of a clergyman would seem to be *prima facie* worth more than the sum above named; but perhaps the Jury felt that, although a rich Rector might suffer from the imputation, a poor Curate could not be more than morally degraded by a charge of habitual drunkenness. Poverty does sometimes foolishly fly to the bottle; and frequent intoxication might, therefore, be considered as not such a very serious slander on the character of a clergyman with a wife and family and an income of £190 per annum. It was rather distressing to learn from the evidence that the reverend gentleman was avowedly in the habit of taking what he called "a glass," and associating with those who, however respectable in their way, would appear to have been fitter companions for a parish clerk than for a parish parson. It is hardly fair to blame a clergyman who accepts the society of his inferiors when his means will not allow him the society of his equals. As it is proper for the parson to visit all his parishioners, no one can fairly charge him with impropriety in making companions of those who are on a par with himself in pecuniary position; for it would be ridiculous, while paying him the wages of a carpenter, to expect him to mix in what is called the "best society" of his neighbourhood.

Talking of the ill-treatment of professional men reminds one of the complaints of the assistant-surgeons in the navy, who are naturally object to be classed with boys and uneducated subordinates, with whom it is impossible for men of superior attainments to hold companionship, with comfort either to themselves or to those with whom it is desired to bring them in contact. By forcing into each other's society those who are unfitted, by difference of taste and education, for comfortable companionship, the superior is degraded without the inferior being elevated, and dissatisfaction is caused to both. The medical body has so keenly felt the treatment it has received, that meetings have been held, and even the students have resolved not to accept the offers that have been made by the Government of positions which ought to be filled by more experienced members of the profession. This has led to a determination to accept the services—if services they can be called of dressers, who have attended for six months in a dispensary, poor-house, or hospital, and it is to the hands of such inexperienced bunglers that the care of our sick and wounded seamen will be abandoned, unless the public voice sounds that of the medical profession, in protesting against so flagrant an act of official impropriety.

NEW GRECO-ROMAN SALOON, JUST OPENED AT THE BRITISH MUSEUM

THE BRITISH MUSEUM.

THE noble apartment, or gallery, represented in the above Illustration, has just been opened to the public, and will be acceptable to the Easter visitors, especially to the more classically disposed, who are interested in mythology and hero-worship. It is the larger room of the two seen from the corridor, after leaving the large entrance-hall: its dimensions are—80 feet in length, about 17 feet in width, and 19 feet in height. The walls are coloured bright red, the moulding is polychromatic, as well as the ceiling or at least that portion of it which is left to support the skylights by which the room is lighted. The stove-grates are of the same bold pattern as those in the large Egyptian saloon, and other antique galleries.

This new apartment corresponds with the spacious grandeur and simplicity which we so much admire in the principal galleries of the Museum. The room is named the Third Greco-Roman Saloon, and contains a series of statues of gods, demigods, and heroes. Our Artist's View shows the fragment of a statue or a youth, seen on the right-hand side; beyond which are several heads of the Muses, the statue of Thalia, with various others. The room is terminated by a recess, and in the centre is a Caryatidal figure; behind which is a staircase leading to a lower room, at present unfinished.

By each successive addition to this truly national establishment, we are reminded of the large amount of enlightenment and social enjoyment which the British Museum has opened to all classes of the people: on this account, therefore, we are unwilling that the recipients of this public good should be excluded unnecessarily for a single day from the benefit. It will be recollected that the Museum is closed three weeks in the year—namely, in January, May, and September—for the purposes of "cleaning." Now, could not this be done by closing a portion of the Museum at a time, instead of excluding visitors from the whole of the public rooms at one time? The old Museum building was removed by piecemeal, and the present edifice was erected in the same manner; and surely a similar plan might be adopted for the "cleaning" of the rooms.

CIRCASSIAN BEAR, IN THE GARDENS OF THE ZOOLOGICAL SOCIETY, REGENT'S-PARK.

CIRCASSIAN BEAR IN THE ZOOLOGICAL SOCIETY'S GARDENS, REGENT'S PARK.

AMONG the attractions offered to holiday-makers, the Zoological Society's Gardens in the Regent's-park are always pre-eminent On Easter Monday, 1854, they were visited by upwards of 16,000 persons; and during the whole week large numbers continued to avail themselves of the liberal terms upon which the establishment is opened at that period. The severity of winter has touched but lightly upon the well-protected inhabitants of the Society's menagerie, in which we find all our old favourites in the most beautiful condition, and eagerly waiting for the first rays of spring sunshine, which cannot possibly be much longer denied to us.

In the recent visit which the approach of Easter has induced us to make to the Gardens, we were particularly struck with the magnificent series of "Wild Beasts," which present almost every known variety of that popularly-interesting division of the animal kingdom. The profusion of Lions, Tigers, Jaguars, Leopards, Hyenas, and Bears, so fill the quarter allotted to them that they would seem to suffer from want of space, were it not that their healthy and vigorous appearance almost precludes the idea they could be better. It must be regretted, however, that there is, under present arrangements, no means of avoiding the separation of the smaller carnivora in two distinct buildings from the main body of the collection, as it would be infinitely more striking, as well as more instructive, if the whole of the illustrations of each great group of animals could be inspected successively, and, as it were, in juxtaposition. Among the most recent additions to this part of the Collection is the somewhat singular little Bear which was captured on the Circassian coast during the cruise of H.M.S. *Samson* in the Black Sea, and brought home by the officers of that vessel. Its youth renders its identification with the common Brown Bear rather uncertain; and it is quite possible that the differences which appear to exist both in colour and expression may hereafter become sufficiently developed to characterise it as the representative of another species The Society are rich in bears, and, in fact, only want the Spectacled Bear of South America, and the great Grizzly Bear of the Rocky Mountains, to complete their series The absence of the latter is scarcely felt when we look at the huge Russian specimen of *Ursus Arctos* which fills the next den to the Polar Bears at the end of the Terrace—by far the finest individual of this kind ever seen, either at large or in confinement

The Antelopes have increased, notwithstanding the severe trial which they must have undergone during so many weeks of inclement weather; and we were agreeably surprised to find a young Eland, some fourteen days old, among the noble herd of those animals which the Society originally derived from the liberality of the late Lord Derby.

The pair of Hippopotami are both growing rapidly. Our old friend Obsyah has thickened into leviathan dimensions, and exhibits no small degree of ferocity when the aspect of some obnoxious visitor excites his caprice.

Perhaps one of the most picturesque and beautiful families in the Gardens are the Great Canadian Deer—the Wapiti—of which the Society are said to possess the only specimens now existing in Europe. The collection of deer, which is really large and interesting, suffers very much in effect from its being scattered about in half a dozen different localities, instead of being arranged in a continuous line of inclosures, which, one would think, might be made a most characteristic feature in the line of the Society's occupation towards the Park

The *Birds* have suffered no sensible diminution since the winter commenced; and Pelicans, Flamingoes, Brush-Turkeys, Bower-Birds, and other rarities, still enrich the long catalogue of ornithological delights which present themselves at every turn.

The *Reptiles*, although not quite so numerous as formerly, are in beautiful state, and include a singularly striking horned Viper, of great size, from Western Africa, which, having just shed his skin when we saw him, affords one of the most exquisite combinations of colour that can be imagined

The *Fish* and *Zoophytes* were never more interesting than at the present moment, as several species of the latter are now to be found in the tanks at all periods of their development, and every day presents some addition or some change in the wonderful population of these most successful illustrations of submarine existence.

Nothing can exceed the order and neatness of the whole establishment; and we cannot but prognosticate another season of gratifying appreciation of the Society's efforts by the public, who are already so largely indebted to them for the combined instruction and amusement which their spirited and liberal management affords.

"THE DEAD CHRIST."—PAINTED BY SPAGNOLETTO.—FROM THE NATIONAL GALLERY.

THE DEAD CHRIST, BY SPAGNOLETTO.

Ribera, otherwise and more generally known as "Spagnoletto," was, as the latter name implies, a native of Spain. He early went to Italy, however, and studied under Michael Angelo Caravaggio, whose vigorous dramatic style he emulated in all his works. He was of a period, however (the beginning of the seventeenth century), when the true inspiration of art was gone; and artists contented themselves with following in the steps and imitating the manner of the great originals Michael Angelo, Raphael, Correggio, &c.—who had raised art to its zenith of power and perfection, and left behind them names of undying fame. Of these scholastic followers Caravaggio was one of the most eminent; and Spagnoletto, undoubtedly, merits to be mentioned very nearly in the same rank with that master. Spagnoletto, from habits of mind, was inclined to gloomy and horrible subjects—emaciated hermits, martyrdoms, executions, and so forth; and prided himself upon the exhibition of the anatomical development which such incidents would call forth. In colouring he is distinguished by the general use of great breadth in his lights and shades.

The picture before us, which was recently added to the national collection (having been presented by David Barclay, Esq.), is not one of the finest specimens of the artist; but it exemplifies his peculiar style, and is not without points calling for admiration. The body of the dead Christ is a careful study after nature—a little painful, perhaps, in treatment; and the figures of the female mourners exhibit an *abandon* of grief which appeals powerfully to the sympathies. It must be confessed, however, that, taken as a whole, there is an absence of the sublime sentiment which we find in the severer works of the earlier schools. In the draperies, also—particularly the sheet upon which the body of the Saviour rests—we do not find that breadth and simplicity of treatment which we so much admire in the works of the early Florentine school. In a word, this picture is chiefly interesting as a connecting link between the period of the perfection of art and that of its decadence.

PLATE PRESENTED TO ROBERT BRIGHT, ESQ.

TESTIMONIAL TO MR. ROBERT BRIGHT, OF BRISTOL.

A very gratifying recognition of eminent services to the commercial world has lately been made at Bristol, by the presentation of a valuable Service of Plate to Mr. Robert Bright, of the eminent firm of Gibbs, Bright, and Co., Bristol and Liverpool, owners of the *Great Britain* steam ship, Eagle Australian line of packets, &c. The value of this superb gift, £1000, was the result of a public subscription, in acknowledgment of Mr. Bright's exertions in freeing the port of Bristol from the heavy dues levied on its commerce. Prior to 1848, the Bristol Docks were in the hands of a private company: in that year a bill was passed whereby they were transferred to the Corporation of the City, which has resulted in a vast increase of the shipping interest. In 1847 the number of vessels from foreign parts was 372, with a tonnage of 97,000; while, in 1854, they had increased to 788, and in tonnage to 175,000.

To Mr. Bright the citizens of Bristol are mainly indebted for the carrying out of this measure so vitally important to them; and, from his high character and untiring energy and zeal, conflicting interests were reconciled, and difficulties at first sight insurmountable were overcome.

The presentation took place in the Council chamber of the city of Bristol by Mr. P. W. S. Miles, on behalf of the committee and subscribers; the Mayor, Mr. J. G. Shaw, being in the chair, and a large number of the merchants, bankers, and the influential inhabitants of the city being present.

The Service of Plate consists of the following articles:—The

centre-piece, an allegorical group; two five-arm candelabra; two handsome soup tureens; and four elegant corner dishes

The Centre-piece, which we have engraved, is a pyramidical group of ten allegorical figures, on a tripod base, measuring 24 inches on each side, and is 26 inches high. The centre figuresrepresents Commercial Liberty exceeding her arms towards and protecting the principal sitting figure, representing the City, with her sceptre; at the same time turning towards the second figure, representing Maritime Commerce, assuring her she may traffic safely under her protection. The third figure represents Prosperity: the two boys on the front of the group are packing and carrying bales of merchandise; of the next two boys, one is receiving coin, the reward of labour, from the hand of the Civic figure, and is passing it in bags to the other, who empties it into the cornucopia of Prosperity; whilst of the last two boys one is receiving flowers from Prosperity, and is playing on a musical instrument; the other is dancing.

The group is raised on a tripod base, richly chased, supported by dolphins; in the centre of each side is a shield one bearing the city arms, one those of Mr. Bright, and the other an appropriate inscription.

This costly Service has been designed and manufactured by Charles Taylor and Son, 30, College-green, Bristol.

NATIONAL SPORTS.

As the recent fine weather has brought horses considerably forward in their condition, we may expect to see some truer running next week, when the "Newmarket Cavalry" enlist every animal in the town, from the broken-down racer down to the mule (on which we once saw Tommy Lye seated), in order to open their 1855 campaign on the Heath. Frank Butler's name does not appear in "Ruff," and we fear that he will ride 8st. 7lbs. no more. The list, however, is not a very strong one, although the results may give some pregnant hints for Epsom. Isaac, Isaac, Isaac,

AMUSEMENTS, &c.

THEATRE ROYAL HAYMARKET. —On EASTER MONDAY, and During the Week, being the Last Week but One of THE SECRET AGENT, and the SPANISH DANCERS, Pepita Nena and Marcos Diaz, with, Every Evening, a new Divertissement, entitled "The New Haymarket Spring Meeting." &c.

ROYAL PRINCESS' THEATRE.— GENERAL LEGISLATIVE REFORMS, as effected on the Midshore of Toledo; Tuesday, Feast and Maygarette; Thursday, Corsican Jewellers. Wednesday, Friday, and Saturday, Louis XI.

Prospectuses, fully explaining the objects of this Association, may be obtained of the printing Music Publishers, and Librarians (by whom also Subscribers' names will be received) of Mr. Benedict, 2, Manchester-square; and of Mr Henry Smart, 4, Regent's-park-terrace

MISS P. HORTON'S ILLUSTRATIVE GATHERINGS at ST. MARTIN'S-HALL, EVERY EVENING, at Eight o'Clock (Friday excepted), introducing MUSICAL and CHARACTERISTIC ILLUSTRATIONS from HEAD, LEIGH, the English, French, and Italian, by Mrs. T. German Reed (late Miss Rebecca Horton) and Mr. T. German Reed. Admission, 3s.; Centre Seats, 5s.; Stalls, 7s.—Tickets to be had at St. Martin's-hall; and all Musicsellers.

SACRED HARMONIC SOCIETY, Exeter hall.—Conductor, Mr. COSTA. On FRIDAY NEXT, APRIL 13, Mendelssohn's ELIJAH. Vocalists: Madame Clara Novello, Miss Lucy, Mrs. Lockey, Mr. Sims Reeves, and Mr. Weiss. Band and Chorus. The Orchestra, as usual, will consist of nearly 700 performers. Tickets, 5s., 3s., and 10s. 6d. each, may be secured by immediate application at the Society's sole office, No. 6 Room, within Exeter-hall.

PATRON H.R.H. PRINCE ALBERT

ROYAL POLYTECHNIC INSTITUTION.—EASTER HOLIDAYS.—Great Novelties and Attractions without Extra Charge. In addition to New Diascloving Views, a New Musical Lecture, by George Buckland, Esq. A Splendid Moving Diorama, illustrating an Entertainment called Sam Slick at Home and Abroad, depicting the Passage from Liverpool, across the Atlantic, and visiting all the principal Cities in the United States, is now added to the other attractions of the Institution, and will be shown daily at Three and Eight.

CHRIST'S HOSPITAL.—The Parents and Friends of the Scholars of Christ's Hospital are respectfully informed by special invitation from the Council, the Scholars will be at the ROYAL PANOPTICON on Thursday Afternoon, from Two to Five.

EARLY-CLOSING MOVEMENT.—For the convenience of parties released from business by the Early-closing Movement, the ROYAL PANOPTICON will hereafter be OPEN on SATURDAY EVENINGS, from Seven to Ten, as on other days. Admission, to Schools and Children, Half-price.

ROYAL PANOPTICON of SCIENCE and ART, Leicester-square.—EASTER HOLIDAYS. The following attractive novelties will be exhibited in the Easter Week:—Large additions to the Dioramic Views of the War in the Crimea on Monday, Wednesday, and Friday evenings, and on Tuesday, Thursday, and Saturday mornings. Life in Liverpool on Monday Morning, and Friday mornings and Tuesday, Thursday, and Saturday evenings. Dioramic View of the Moon's Path in the Starry Heavens, Monday evening and Saturday morning. Grand Organ Performances on the Double Diapason Organ, Monday and Saturday evenings. Lectures on Chemistry, Monday and Saturday mornings

FASHIONS FOR LONGCHAMPS, 1855.—DRAWN BY GAVARNI.

PARIS FASHIONS FOR APRIL.

Although the Spring Fashions for Longchamps have but partially appeared, the materials may be seen in the shops of Paris. The shades are very varied: cherry seems the colour most worn. For fair persons, whose complexions would not support so varied a colour, more sober hues are intermingled. The ordinary patterns are plaids of about an inch wide, colour upon colour; bands of the same width, from the top to the bottom of the dress, are oftener worn; but the corsages of similar material are cut to disadvantage. This, however, is the only inconvenience; for the skirt is very graceful. Patterned robes, with three, or at most four, flounces for walking-dresses, are also very much worn. The ground is clear, and the patterns are of lively shades, somewhat deeper upon the edge of the flounces, and disappearing in the ground by a *chaud*, cleverly shaded. In other robes the pattern is reversed; the ground being shaded, and the borders plain. The material almost exclusively employed for these robes is taffetas. The materials for summer toilets are not yet known; the rigour of the season having retarded their appearance. The number of flounces upon the skirt is always repeated in miniature upon the edges of the sleeves. When seven flounces are worn on the skirt, the arms must be long to wear as many, otherwise they would reach to the shoulder.

The skirts are still very full. Corsages and sleeves have not changed. Ball dresses are still loaded with ornaments, and mingled with black velvet, either in short bows or long ends.

We notice a novelty in no longer placing the bow of the corsage in the centre, but wearing one on each side of the breast, just at the beginning of the sleeves. For balls that verge towards the fine season, a goodly number of white muslin robes richly embroidered *à l'aiguille et à plumettes* are worn; while, in order not to lose the traditions of winter, knots of velvet or of dark-shaded ribbon are employed.

Bonnets—if what is worn upon the head may be called such—are, perhaps, smaller, and placed more behind than ever. The ornaments are disposed precisely upon the edge of the *passe en dehors*, so as to touch the inside ornaments. The crown is very much inclined, behind it is very straight. This produces almost the same effect as a slightly truncated coronet. For walking, bonnets are of rice-straw, *gaufrés* alternated with taffetas bands of different colours, with either feathers or flowers. Toilets, somewhat more dressy, are made of crape and blonde thrown back, with ornaments: green feathers, or dark-shaded, and sometimes even black, flowers. The Empress wore a dress of this pattern in one of her recent drives in the Bois de Boulogne. The *coiffures de bal* most adopted are those which terminate in long trains upon the shoulder.

The form of cloaks and mantles is still the same. The "transition" Indian shawls are most worn. A charming garment for summer is a little black lace corsage *à basques*, with *des entre-deux* of black ribbon, placed along it lengthwise. This is worn over the corsage of the robe; which, in similar cases, is of a clear colour.

For the gentlemen, the best advice is to steer clear of all eccentricity, and adopt a quiet taste in colours and forms.

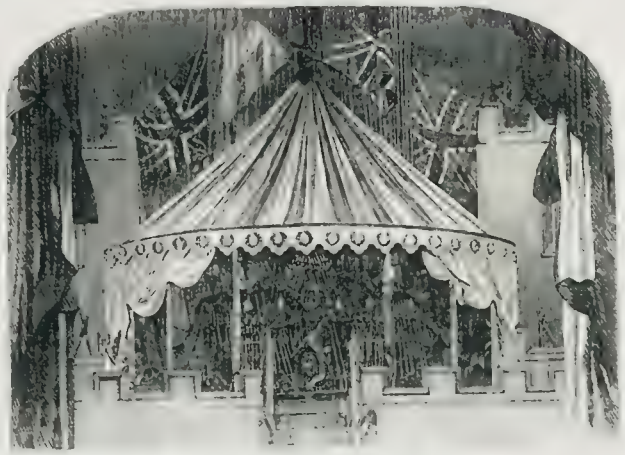
GRAND MILITARY BALL AT EDINBURGH.

A very tasteful instance of the martial *eclat* given to our public amusements by the all engrossing topic of the day has just taken place at Edinburgh. It appears that the officers of the regular regiments stationed in Scotland, acting with the officers of the different militia corps recently embodied, having resolved to give a Ball upon a superb scale, the Music-hall and Assembly-rooms were selected for the occasion; and the fête took place on the 29th ult. To give effect to its military character, the ample stores of the Castle Armoury, Piershill Barracks, and Leith Fort, were put in requisition, and formed an important part of the decorations of the rooms, in which some four or five thousand stand of arms were conspicuously displayed.

The main entrance from George-street was lined with evergreens. Two formidable 24-pounder cannon, with limbers complete, were ranged to the right and left of the inside of the doorway. The staircase leading up to the Hall was festooned with floral decorations. In the Assembly-rooms, the light from the gaseliers was modified by throwing around them a screen of pink tarlatan. It was, however, in the Music-hall that the skilful disposition of the armour was most apparent. From every point the eye was met by the gleam of sword and musket, pistol and carbine, arranged with much taste by Mr. Scrymgeour. The most conspicuous of these were two enormous discs, placed one at each end of the hall, the radii of which were formed by sabres springing from the centre. Flags were also profusely hung from every available point; and not a few suits of armour that had, mayhap, seen service in the days of Oliver Cromwell hung side by side with the Highland bonnets of the gallant 92nd. The platform and organ had disappeared, and in their place had sprung the stately battlements of a lordly fortress, in which watch and ward was kept by armed sentinels. The presence of *bonâ fide* mortars pressing open-mouthed through the embrasures of the mimic fortification, and the heaps of shot and shell that lay piled beside them, kept up the warlike idea in the midst of the festive scene. In front of the fortress, and resting on its lower platform, a handsome tent was placed, inside of which, and surrounded with a blaze of light from innumerable gas jets, was erected a magnificent military trophy, composed of arms of all kinds, almost every weapon having its representative. The effect of this trophy, as seen from all parts of the hall, was most brilliant. The small ante room, which forms a connection between the Assembly-rooms and the Music-hall, was fitted up with exquisite taste in imitation of a tent, having for its pervading hues the national colours of France; the roof being partly covered with the union jack, as typical of the alliance between the two great Western Powers.

The company numbered from 600 to 700 of the *élite* of Edinburgh. The appearance of the main entrance was very imposing—the whole line of lobby and staircase being lined with military; the artillery men standing beside their guns, and the infantry soldiers presenting an unbroken front, with the arms at the present.

Mr Mackenzie's admirable band performed in the Ball-room; but to those who preferred the wider area of the Music-hall, the band of the 1st Dragoon Guards played appropriate music; and the pipers of the Highland detachments gave some lively strathspeys.



GRAND MILITARY BALL AT EDINBURGH.—PRINCIPAL ENTRANCE.

THE 13-INCH MORTAR BATTERY, BEFORE SEBASTOPOL. (SEE NEXT PAGE.)

BEFORE SEBASTOPOL.—THE THIRTEEN-INCH MORTAR BATTERY.

THIS battery was brought very successfully into action, after a short time, on the 16th ult. against the "Mamelon Redoubt." [illegible] has been kept up. Excellent practice is said to have been made, and the 13-inch mortars, several shells from which fell in the very centre of the large redoubt. At one time the Russians were observed to leave the work in such numbers as to lead to the belief that the whole of the working party had been driven out. On the following day a well-directed shot from a [illegible] Battery struck the upper pit or small redoubt, occupied by the Russian riflemen. A crowd, calculated to be found in number, immediately took flight up a ravine towards the large redoubt, and, without going round to the entrance, sought shelter in the nearest part of the ditch. About thirty other rifle-men followed in quick succession, escaping two or three together.

Now that the railway is fairly in operation, no time is to be lost in enabling the artillerists of shells and gunpowder to be transported to the Camp without much trouble. We may expect to hear of the 13-inch mortars playing an important part in the bombardment of the town. If it be true that the ammunition of the Russians is failing them, the chances of something decisive being accomplished soon will be greatly increased.

M. SOYER ON HIS MISSION TO SCUTARI.

(To the Editor of the ILLUSTRATED LONDON NEWS.)

ACROPOLIS, ATHENS, March 18.

HAVING left Marseilles, on the 12th inst., for Constantinople, in the prosecution of my mission to the Hospital at Scutari, owing to a sudden and unexpected change from a beautifully calm to a rough and stormy gale in the Archipelago, the steam of our vessel (the *Simois*) was compelled to seek shelter in the peaceable harbour of Ajaccio, in Corsica, the birthplace of the immortal Emperor Napoleon I. And since our departure from that celebrated port a [illegible] gale succeeded a most tempestuous gale, and soon brought us amongst the Levanti Rocks, on which the French frigate *Semillante* a few weeks ago was wrecked, and all her passengers and crew lost. At this we were gratified with the sight of a slight eruption of the Stromboli Mountain, which rises immediately from the sea to the height of several thousand feet. Next morning we anchored in Messina, the spring garden of Sicily, where, in the open air, orange and lemon were in full blossom, and covered with delicious fruit. Roses, roses, and violets perfume the air; whilst peas, beans, artichokes, and asparagus are gathered at the foot of the lofty mountains covered with snow. Although Messina is well known to travellers, yet they are not so well acquainted with the productions of its early season. After a few hours' ramble in this interesting city, our party embarked, and rapidly passed on our left the small but pretty town of Reggio, and on our right the mighty Mount Ætna, covered with heavy snow. In less than forty-seven hours the *Simois* brought us before the Dardanelles, the voyage never having before been accomplished under fifty

M. SOYER.

The Steamship *Simois*, built at Liverpool by Mr. Laird, and [illegible] Messageries Impériales, and in which he now [illegible] the Mediterranean Sea. From the unexpected quickness of our passage, we were allowed to remain at this port four hours, and availed ourselves of the opportunity of visiting Athens. At the present time, in the ancient Parthenon, I am cooking, with my new camp stove, on a table covered with the [illegible] vases, a good *repas à la française*, with French and Sicilian wines, for my distinguished fellow-travellers, amongst whom are General Cannon (Royal Artillery), Colonel St. George, of the Woolwich Artillery, Captain Gordon, Captains Turner and Peyton, [illegible] Wyatt, Esq., Queen's Messenger, Captain Boucher, Aide-de-camp of General Canrobert, and Signor Pitaki, the Governor of the Acropolis.

We shall speedily re-embark for Constantinople.

A. SOYER.

RUSSIAN SHIPS IN THE BALTIC.—As our squadrons are on the eve of proceeding to their previous stations in the Gulf of Finland, the following statement of the number of Russian war vessels in the different harbours may be useful.—The fleet consists of three divisions, under Admirals Lütke, Berens, and Nachimoff

NOTES OF THE WEEK.

THEATRES may be comparatively empty—the souls of managers may be darkened by visions of Basinghall-street—but it does not follow that theatrical amusements are unpopular in England. If they are, how comes it that not a month in the year passes without our hearing of some new performances, got up not only with expense, but with care and attention?—from those during the "Canterbury week" now approaching their sixteenth repetition, and looked for annually by the squires of Kent, much as the reopening of Covent garden is expected by the Opera *habitué*, or Somebody Countess of Soandso's aristocratic farces at a great house in the country—to the amateuring of the officers belonging to the gallant ninety-ninth, who are so constantly relieving the tedium of military discipline, and delighting the nobility and gentry of Tralee or Port Patrick with "Used Up," or "The Captain of the Watch," and those of the "Philodramatics," or "Rosciens," at the Soho Theatre. Everywhere the stage pursues you. No rank or position bars an appearance upon it, any more than in the days when Louis le Grand danced in a ballet, and *les filles de France* made up a chorus. The low comedian, who recalls John Reeve in his best days, is the secretary to a Minister; that capital light comedy actor has been a Minister himself. So when it became known that the Fielding Club—a society small in number, humble in its abode, and late in its hours, which counts among its members many of the most celebrated *littérateurs* of the day—had determined to give an amateur performance for the benefit of a popular writer whom Providence had seen fit to afflict with incapacitating sickness, no one was particularly surprised or excited But when it transpired that the principal part of the performance was to be a pantomime, people became first incredulous, then astonished, and then they all wanted to know how to get tickets. Not one advertisement, not a poster, not a play bill was issued; and, on a moderate computation, just about ten times more admissions were wanted than the committee of management had to give away. Covent-garden might have been filled twice over, and they had to deal with the Olympic! For ten days before the night of performance they had to sneak about in courts and alleys, taking roundabout ways through unfrequented streets: St. James's-street or Piccadilly were closed to them, for there they were beset by unsatisfied applicants, crying "A ticket, or your life!" which ticket no one had to give. A private box with four seats sold for 12 guineas; and one enthusiastic party offered, unsuccessfully, £20 for two stalls. The night of performance came at last, and those most interested in the performers were not (though they knew how well the rehearsals had gone) without disquietude; while the general public rather anticipated a *fiasco*—complicated, probably, by an accident—Clown breaking his collar-bone, or Harlequin his neck Very few really thought that amateurs could perfectly master those rough mysteries of Pantomime, the possession of which has hitherto been supposed to be confined to some dozen professionals graced by foreign sounding names. There is a popular opinion that the flesh and blood of Clowns differ from that of other men. First that there was a prologue—Shakspeare and modern drama at issue, till both have to yield (for the time) to the spirit of Pantomime. Such a dress by-the-by as that spirit wore! not worth a guinea, but graceful as no theatrical wardrobe-maker could have designed it. Well, there was no hitch there—nothing amateur like (according to the general prejudice) in the way in which those smooth and brilliant lines were delivered. Then the curtain fell and rose again on the opening of the pantomime proper. Scene, the vaults under the House of Lords; present, Catesby and Guy Faux, and sundry powder-barrels, which looked as if in an earlier stage of their existence they might have been oysters; "to them," as old stage directions say, "Lord Monteagle," who tells us he was "formerly Spring Rice." A better scene than this, whether as regards the words, the acting, the singing, or the "terrific combat" (for there was a little of everything), never was put on any stage. The audience now saw that the idea of anything like toleration to the actors on the ground of their amateurship, was absurd; so they gave it up, and only laughed and cheered the more heartily on that account. Still there were some who were nervous about the comic business. Could the harbreser's shop without smashing his *os frontis*—could an unpractised Clown knock Pantaloon about in the usual cruel way without maiming him for life? It is not my business to give a detailed account of the performance, so I will content myself with saying, in one summary of praise, that through the entire length of the pantomime—in which there was more fun, more dancing, more singing, more diversifications of all kinds than in a general way would make the fortune of half a dozen theatres—on no occasion, on the ground of their amateurship, was there a hitch, not even a temporary boxing-night—there was not a failure, not a hitch, not even a temporary slowness. I am not pantomimic mad, and I am warranted to speak the truth on such matters of all, "though they are my friends;" but I declare the amateur pantomime of last Saturday was the very best pantomime I ever saw in my life. The intimate friendship I enjoy with all the performers precludes me from speaking of them individually, with one exception—the Columbine (of course professional), Miss Rosina Wright. Such a Columbine as that was surely never seen before: to be sure, her doing the ordinary pantomimic business was something like Bosio singing in a chorus, but she had the opportunity of showing her real quality in several introduced dances. May I hope that Mr. Gye, of Covent-gar den will be able to secure two or three coryphées one-half as good dancers to support Cerito?

It is decision by Mr. Yardley, of the Thames Police Court, be correctly reported in the *Daily News* of Wednesday, the Sunday Tavern Act will prove a heavy blow and deep discouragement to the lovers of water souchee and whitebait. Mr. Lovegrove, of the Brunswick Tavern at Blackwall, appears to have been fined forty shillings for serving a customer at half-past four on the Fast-day. Woe to Hart and Quartermaine—desolation to the Trafalgar and the Crown and Sceptre, if this be the law! What will the House of Commons say to this reading of the statute? It annihilates one of the dearest prerogatives of its members—that of eating fish dinners on Sunday at Greenwich or Blackwall.

Two or three attacks have lately been made upon the Board of Ordnance with regard to their preparations for the Camp at Aldershott. It seems to be admitted that the situation, comprising 3000 acres of open common, at an easy distance from two railways and a canal, was well chosen; but the arrangements for lodging the troops—if the accounts given by persons little likely to be misled are correct—seem to have been hitherto distinguished by all the *improvyance* and want of system which have made bywords of the Commissariat at Balaclava and the Hospitals at Scutari. It is proposed to construct upon this heath huts for 20,000 militia, and permanent barracks for 10,000 regular troops. The latter are but just commenced, and it is therefore too early to pass judgment on them; but, of the former, 400, out of 1260 are completed. Sir Joseph Paxton and other good judges tell us that scarcely any possible fault in their construction has been avoided. They were built without any foundation the windows are so placed as to give the minimum of air and light—the ventilators are faulty—the planking of the roof is so arranged that the thinnest portions of the wood are those which have to bear the most strain and exposure—&c. &c., *valent quantitan*. But, without pronouncing on the justice of these accusations, there are some palpable absurdities in the different contracts. For instance, the timber to be used in the construction of the huts was described in the specification as follows:—"The fir timber to be from Memel, *Riga*, or Dantzic, and the deals to be the best yellow Christiania." Here the blundering of the Board of Ordnance is curiously exemplified in their forgetting that we happen to be at war with the country to which Riga belongs; and their ignorance by their requiring a supply of Christiania deals about ten times larger than could have been got from all the timber yards in the country. Further, we are told that the employment of only one kind of brick, that called greystock, a quality hardly known out of London, is insisted upon. The cost of the huts will certainly not be less than £150,000. Now, every country gentleman, who either knows his own business, or has a steward to whom he can trust, is well aware that a row of twelve brick-built fourroomed cottages ought not to cost more than £800 to £850; it would seem, therefore, unreasonable that the 1260 wooden huts intended for our 20,000 militia men should cost within a trifle of £120 each. If, however, the *Times* is correct in asserting that, "instead of giving the work out to be done in the usual manner, the Board retained it in their own hands, collecting all the broken-down labourers and half-grown boys in the country, and paying them, not by piece-work, but by the old-fashioned system of day's wages, without any adequate supervision over them," then it is not difficult to understand how a wooden hut can be made to cost nearly twice as much as a brick cottage.

SOME OBSERVATIONS ON THE ORIGIN OF CHESS.

BY DR. DUNCAN FORBES.

CHAPTER X.—THEORY AND PRACTICE OF MEDIÆVAL CHESS.

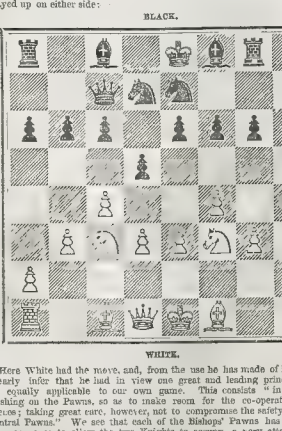
(*Continued from page 299.*)

SECTION 1ST.—ON THE OPENING.

In order fully to appreciate the system of tactics adopted in opening the game of Shatranj, the reader must bear in mind, once more, that the Pawns could move only one step at the first move. From this restriction on the part of the Pawns, together with the very limited range of the Queen and Bishops, it will be easily perceived that no formidable collision of the forces could have taken place till at least from ten to twenty moves had been made on either side. Hence, in order to save time, and to prevent useless exchanges, it was agreed that the first player should make his (let us say) fifteen moves all at once, without, however, crossing the middle line of the board; after which the adversary was entitled to play up, at once, an equal number of counter-moves, such as he might deem most conducive to success, being also restricted to his own half of the board. These preliminary manœuvres the Arabs called "Tabiyat," which signifies "the drawing up of troops in battle array." This term corresponds in some degree with our word "opening," with this serious difference, that in the "tabiyat" all the pieces and Pawns remain on the board, each on their own side, up to the fifteenth move, more or less, which, I believe, rarely happens in our game, except in the cautious openings of 1. P to K 3rd.

In the old Arabic MS. in the British Museum, we find no fewer than eleven diagrams of "battle array," mostly named after the old masters who established them. There is nothing said about the order in which the moves had been played up. Nor is this of any consequence; all we have to consider is the strategic position taken up by the first player—that of the opponent being supposed to exhibit the very best defensive position. It would be quite out of place here to give diagrams of all the Tabiyats: nor would a mere dry rehearsal of their names prove of any interest to the generality of readers. I shall, therefore, confine myself to an examination of one very neat opening from the Arabic Society's MS., folio 2 (a), which will amply suffice to explain this part of our subject. The following diagram shows the position of the respective armies after twelve moves have been played up on either side:

BLACK.



WHITE.

Here White had the move, and, from the use he has made of it, we may clearly infer that he had in view one great and leading principle which is equally applicable to our own game. This consists "in cautiously pushing on the Pawns, so as to make room for the co-operation of the pieces; taking great care, however, not to compromise the safety of the two central Pawns." We see that each of the Bishops' Pawns has moved two squares, so as to allow the two Knights to occupy a very attacking position. By-and-by, when the two centre Pawns can with safety be advanced, the places where they now stand will be occupied by the two Bishops, which is the best position for the latter. Observe also that in two moves more the Rooks may be doubled; one at Q Kt, and the other at Q Kt 2. Lastly, the King and Queen will move up in the rear of the centre: for, in this game, the King took an active share in the combat, and scorned to shut himself up in a corner as with us.

The position assumed by the Black is evidently defensive. The Knights are less advanced, and the Queen has moved to her B's second square. It looks as if Black expected an attack on the Queen's side, which the menacing situation of the White Rooks seems to warrant. Still, from the peculiar nature of the openings in the Shatranj, it is evident that no rapid or brilliant attack could possibly take place as in our gambits. In the Oriental game the armies were advanced into close quarters before the engagement commenced; and, thenceforth, the final victory really depended upon a series of skilful manœuvres, such as might tend to lead the enemy into an unfavourable position. In fact, the Oriental game, though less brilliant than ours, appears to us to have been calculated to form better players in the true sense of the term, that is, players who excelled in carrying the contest through the middle stage of the game a rare secret, which neither books nor preceptors can teach. Finally, the difficulty of giving the odds of the Rook, in the Shatranj, to which I alluded in our last chapter, will be abundantly obvious, when we take into account both the superior value of the Rook and the mode in which the game was opened. I think it is not too much to say that the odds of the Rook, in our Oriental game, was equivalent to the Rook and Knight, if not to the Queen, in our modern game.

SECTION 2ND.—OF END-GAMES, AND POSITIONS WON BY FORCE.

In the Shatranj the game was won in two different ways. First, by a *checkmate*, as with us; and, secondly, when one player had succeeded in capturing all his opponent's forces—provided he had any of his own forces remaining, however small. It will not be difficult to assign good reasons why the winner should have been allowed to push his latitude in the Oriental game. With us, for example, the circumstance of a King and Pawn against a King, is, under certain conditions, a sure victory; but not so in the Shatranj (that is if victory depended on a checkmate), for suppose the Pawn had become a Queen, the latter possessed not the mastery over a King, with us, a Knight and Bishop, or two Bishops, against a King, can mate; but not so in the Oriental game, where, as we have shown, the Bishops were of very little value. From these considerations, and many more that might have been alleged, it is evident that in the Shatranj if the victory depended solely on check-mate, a won game among good players would have been a rarity; and it could have occurred chiefly between a first-rate player and one decidedly his inferior.

The Arabs, and after them the Persians, call the End game "Maatiba," which corresponds exactly with our words "position" and "situation," being a "determinate" Chess problem, the solution of which is reduced to a certainty. It would appear that their best players prided themselves on their readiness of seizing on such positions as led to victory in a certain number of moves. Hence the epithet "manaûbe-dân," "a man cunning in positions," became figuratively to signify "a prudent," or "far-sighted" man. So the term "manaûba-baz," literally, "a position player," denoted "a first-rate Chess-player." Such appears to have been Ali Shatranji, of whom it was said that no mortal could either divine his coming move, or perceive its purport when made.

We have already shown several specimens of Oriental positions won by force, and we shall now conclude this section with a position won by a superiority of force. It is from the Museum MS., No. 16,856, fol. 41 A, where White plays first and wins in four or five moves.

White: K at his Kt 5th, Q at K Kt 4th, R at Q R 8th, Ps at K B 7th and K Kt 6th.

Black: K at his Kt 2nd, K B at his own sq, R at K R 8th.

SOLUTION.—White R takes B; and, as his best move, Black K takes R. 2. White K to his B 6th; and Black R checks. 3. White Q interposes at K B 8th; and, as his best, Black R moves to his Kt 6th. 4. White P checks; and Black R takes P. 5. Q to K Kt 6th, shutting up Black R. If R takes Q, K retakes, and the game is won by a majority of force. If R takes P, Q retakes, and *wins by stalemate*. If R to Kt sq, P takes R, and the game is won by a majority of force. Lastly, if R moves to R 2nd, Q takes R, and wins by stalemate. It will be seen here, then, that with the Orientals *he who gave stalemate won the game*—at least, when the stalemated King had no other piece or Pawn left on the board. If, however, the Black King had any piece or Pawn blocked up anywhere on the board, he was allowed (in case of a stale) to change places with any such piece or Pawn at his own option, provided always he did not go into

EPITOME OF NEWS—FOREIGN AND DOMESTIC.

Orders have been forwarded by the Minister of Marine to the Maritime Prefects at Brest and Cherbourg to fit our several steamers of the Imperial Navy, which are to accompany the Emperor and Empress on their visit to England.

The Prince and Princess of Saxe-Coburg and suite arrived at the Waterloo station of the South-Western Railway at half-past twelve o'clock on Saturday, and a train was provided, consisting of several carriages which were in waiting for Buckingham Palace, on a visit to Her Majesty.

In Court circles at Vienna a rumour prevails that a Prince of the Imperial Austrian family is shortly to pay a visit to Paris on a special mission It is said that a brother of the Emperor will be charged to make this visit, and that it will take place before the opening of the Exhibition

The rumour runs in Constantinople that the Sultan intends to accompany the Emperor of the French to the Crimea, should the visit of the latter take place.

The following entry appeared in one of the recent returns made by the Vienna police agents to their superiors:—"Lord John Russell has walked arm-in-arm on the places with Prince Gortschakoff."

The King of Hanover has conferred the Grand Cross of the Royal Order of the Guelphs upon General de Budberg, Adjutant-General of the Emperor of Russia

It is the alphabet which fixes the order in which the Plenipotentiaries are to vote, and sign the minutes—viz., Austria, France, Great Britain, Russia, and Turkey. The Congress holds only three sittings a week.

The Hereditary Princess of Saxe Meiningen, daughter of Prince Albert of Prussia, and niece of the King, died on the 30th ult., in a very sudden and unexpected manner. The King was very much attached to her, and her death has produced great affliction at the Court

The Earl of Aberdeen has received more favourable accounts of the health of Lord Hallo. His Lordship found himself much benefited by the climate of Upper Egypt, where he intends to remain until the middle of June.

The Grand Dukes Michael and Nicholas are making preparations to return to the Crimea.

The Duchess Regent of Parma gave a private audience on the 26th ult. to the Marquis of Normanby, who presented his credentials as Minister Plenipotentiary to the Court of Parma, as well as to the Grand Ducal Court of Tuscany.

The King of Holland arrived at Amsterdam on the 30th ult. A vast crowd awaited his Majesty's arrival, and saluted him with loud acclamations. The whole city was ornamented with the national colours and the use of the House of Orange

Captain Broch, deputed by the British Government to concert the necessary arrangements for embarking the Piedmontese contingent, arrived at Turin on the 26th ult.

M. de Kisseleff has continued his journey to St. Peter-burg, where it is said he will occupy a post at the Foreign-office

The Grand Duchess Regent of Parma, in order to give encouragement to agricultural pursuits, has ordered that cattle shows shall be regularly held in her States.

The King of Prussia has decreed that the Sixteenth Cuirassiers shall bear for ever the name of the Emperor Nicholas, and that the Third Regiment of Hulans shall take the name of the present Emperor of Russia

Captain Douglas, who took out the General Screw Company's steamer *Eaglehawk* to Australia, has been appointed Harbour-master at Port Phillip, with a salary of £2000 a year and residence.

Death has been busy among the notables of Greece. General Tsavellas, the hero of Missolonghi; Gardikiotis Grivas, formerly Palace-Marshal; and Deliany, formerly President of the Senate, have died within the space of ten days.

Among the passengers who arrived at Marseilles last week from Malta is the Governor-General of Australia, Sir Charles Fitzroy.

The Archduchess Marie Dorothy, widow of the Prince Palatine Joseph, and mother of the Archduke Stephen, died last week at Buda, in Hungary, aged fifty-eight.

The *Indépendance* of Brussels states that M. d'Usedom, finding himself in a false position at London, demanded his recal, and has received a letter from the King of Prussia, requesting him to remain provisionally at his post.

Baron Prevost, formerly private Secretary to Kings Louis XVIII and Charles X., died a few days ago, at the château of Vosseron, aged seventy-three.

The late Right Hon. James Grattan has bequeathed the sum of £5000 to each of the most deserving medical charities in Ireland.

The Vladida of Montenegro has ordered a ten days' mourning, of the deepest kind, for the late Czar. Hopes are entertained that Alexander II will appreciate this manifestation, and restore the pension of 8000 zeckins per annum, which Nicholas cut off in 1842

Louis, ex-King of Bavaria, visited Munich on the 25th ult. The streets were crowded with people, anxious to welcome him.

Victor Hugo and his sons are engaged in writing a work descriptive of the history, customs, and scenery of Jersey.

Jenny Lind has left Holland for Dresden; but has promised to return and resume her professional avocations after Easter.

Judge Halliburton, author of "Sam Slick," &c., is at present on a visit to his son-in-law, the Rev. J. Bulcridge Smith, at Batby, near Wragby, Lincolnshire.

The editor of the *New York Herald* announces his intention to commence civil actions against the proprietors of the *Tribune*, for libels lately published in that paper. He demands at least 50,000 dollars damages.

Madame Bishop and M. Bochsa, who have been very successful in South America and in California, are going to make the tour of Australia.

As soon as the Paris Exhibition opens, a daily steam-packet communication will be established between Southampton and Havre.

Church-going has become a very expensive matter in San Francisco. At a recent sale of pews, several sold as high as 1200 dollars, equivalent to about 240 dollars per Sunday.

Several of the English missionaries lately expelled from Poland for the circulation of the Holy Scriptures have arrived at Hamburg on their way home.

The Government has decided to send no more malt liquor to the Black Sea. The East India Company are sending out 90,000 barrels for the use of the troops in India—all of this year's brewing.

The First Chamber of Prussia has adopted a motion inviting the Government to shorten the annual Parliamentary session!

The total cost of the contributions sent to the Paris Exhibition from New South Wales is £10,000, 4,000 of which was spent in purchasing gold specimens.

The convention between the Governments of France and Holland for the reciprocal protection of literary property was signed at the Hague on the 29th ult.

A native of the parish of Lairg, Sutherlandshire, who emigrated a considerable number of years ago, has returned to this country, after realising, it is said, a fortune of £300,000.

There are to be two days in each week set apart for free admission to the Paris Exhibition, that "the people" may have the full benefit of it present.

For the year ending September 1st, 1854, the advertising and printing for the Corporation of New York cost the city 73,231 dollars

Amongst the Sydney contributions to the Paris Exhibition are a statuette in gold of a gold-digger with all his implements, and a statuette in silver of an Australian of native race

The Bank of Rome is in so precarious a condition that it is preparing to wind up its affairs. It is to be succeeded by another bank, to be established by Prince Torlonia and Messrs. de Rothschild.

A new treaty has been signed between Sardinia and England, granting the latter the right of coasting trade to the subjects of each country on terms of equality.

The French Mint is now engaged in striking gold pieces of 100f., which will be soon put into circulation. These coins, which are rather smaller than a five-franc piece, have on the reverse the Imperial arms.

The estimated value of the aggregate imports into the United Kingdom from Archangel last year was £655,198

The sittings of the Provincial Legislative Corps will be prolonged to the 11th of April

The monster Wo[illegible]lia steamer *Pavana* has been taken up by the French Government.

An excellent company of dramatic artists will visit Paris during the period of the Exposition, and play the most esteemed and classical dramas of the Italian stage.

Last year the revenue derived from newspaper stamps, at one penny duty, was £464,000 [illegible] number issued was 111,369,170

EXHIBITION OF THE SOCIETY OF BRITISH ARTISTS.

(SECOND NOTICE.)

Our Illustrations for this week are excellent representations of the strength of the Exhibition in the [illegible]timent of female beauty, and the [illegible]ful rendering of the English landscape.

We are indebted to Mr. C. Baxter, now an established favourite in Suffolk-street, for a picture which he calls, somewhat obscurely, "Sunshine." We will not, however, quarrel with a graceful artist, for an unmeaning title, but are perfectly content to accept his picture for what it is worth, and even without a name. "Sunshine" brings before us what Dryden is said to have seen in the studio of Sir Godfrey Kneller:—

Once I beheld the fairest of her kind,
And still the sweet idea charms my mind
True, she was dumb: for Nature gazed so long,
Pleased with her work, that she forgot her tongue.
But, smiling [illegible] the [illegible]
I only [illegible]

Mr. Baxter's "Sunshine" does all but speak; those eyes of "dewy light" are worthy of Burns or Moore, of Lely or Lawrence.

Mr. Gosling has given us (No 507) a delicious landscape called "Church Pool, Wargrave. This is a sylvan scene close to the Thames in its mid way between Cirencester and London. Very full, indeed, of what is beautiful in nature and skilful in art is this picture. The atmosphere is pure and healthy, the trees delicately manipulated, and the whole effect irresistibly pleasing. We have not seen Church Pool for many years, but Mr. Gosling has induced us to renew our acquaintance with a favourite spot. We shall see it once more, and thank Mr. Gosling for sending us there.

PATRIOTIC FUND EXHIBITION.

When some future Horace Walpole shall compile a Catalogue of Royal and Noble Artists, he will have to include her Majesty, her illustrious Consort, the Prince of Wales, the Princess Royal, Prince Alfred, the Princess Alice, and the Princess Helena; and, while describing their works, will doubtless find occasion to lament that the taste and skill in Art exhibited by her Majesty and her children had not been evinced by her Majesty's predecessors on the throne. Had King George the Second and Queen Caroline cultivated the Fine Arts, art in England had stood higher in Continental estimation than it does at present. The love for art and the skill displayed in it by the present reigning family, will materially assist in bringing our school of painting to a nearer level with the great Continental schools. If her Majesty would woo the Muse (Queen Elizabeth wrote English verses), drooping Poetry might once more revive among us.

We alluded last week to the contributions made by his Royal Highness the Prince of Wales, and his brothers and sisters, to the Patriotic Fund Exhibition of Works of Amateur Artists, and we are this week enabled to Engrave two characteristic examples from the series—one by the Prince of Wales, "The Knight;" the other by Prince Alfred, "The Prince of Wales, afterwards Henry V." Critics as well as courtiers see proofs of merit in these drawings that evince a taste for art deserving cultivation. We see this, and more. We see a chivalric feeling in them, which would have warmed the blood of Sir Philip Sidney or Lord Herbert of Cherbury.

"SUNSHINE."—PAINTED BY C. BAXTER.—EXHIBITION OF THE SOCIETY OF BRITISH ARTISTS.

FINE ARTS.

VAN LERIUS'S PICTURE OF "ADAM AND EVE."

M. Van Lerius's large picture of "Adam and Eve," of which there has been much talk lately in Art circles, is now on view at 57, Fall-mall. It is of large dimensions, very original in the idea and construction, executed with immense pains-taking and [illegible] skill, and be[illegible] striking from the [illegible] of the materials introduced. It is an important contribution, therefore, to the credit of the Belgian School of Art, of which the painter is a distinguished ornament: and will, for a season, command the attention, and perhaps divide the opinions, of the critical public. In this work the First Parents are represented before the Fall. They are both asleep—Adam in a half reclining, half reclining posture across the picture; whilst Eve reposes in his bosom, her limbs being carelessly gathered up, and her head thrown back whilst her magnificent golden tresses fall in rich masses over her arms and the upper part of the figure. The eyes and the mouth are slightly open; the latter affording the faintest indication of a pearly set of teeth. The face is altogether a very beautiful study. The profile face of Adam is less striking, and as some would declare somewhat commonplace. The figures—seen of course in the nude—are treated in such a manner as to avoid all danger of offence. They are not after the classic ideal model, but obviously from Flemish originals: the female rather above than under the middle size, with long, well rounded limbs, and flesh fair and pulpy; the man long-limbed, and with fully sufficient muscular development for Adam in the days anterior to the imposition of the penalty of labour. The texture throughout, seen under the dubious gaslight in which the picture is exhibited, appears to have been most carefully and successfully finished.

We have now to mention a third figure, which completes the group—

CHURCH POOL, WARGRAVE.—PAINTED BY W. W. GOSLING.—EXHIBITION OF THE SOCIETY OF BRITISH A[illegible]

THE KNIGHT." DRAWN BY HIS ROYAL HIGHNESS THE PRINCE OF WALES.
PRESENTED TO THE PATRIOTIC FUND EXHIBITION.

"THE PRINCE OF WALES, AFTERWARDS HENRY V."—DRAWN BY HIS ROYAL HIGHNESS PRINCE ALFRED.
PRESENTED TO THE PATRIOTIC FUND EXHIBITION.

namely, that of the "Evil One," a dark-skinned personage, who stands in an attitude of vindictive triumph over his intended victims. In the left hand he grasps a coiled serpent of green colour, whilst his right is stretched out meaningly over the sleeping mortals: and his eyes, which glare in a setting of lurid red, are cast towards heaven, with an expression of impious defiance. We have more doubt about the judgment shown in the introduction and treatment of this figure than of the other two. It certainly destroys the harmony; and the figure itself is but a transfer from the conventional stage demon, of which little Wieland used to give us so many samples at the Adelphi. In the landscape a similar contrast is introduced as that shown between the figures. In the foreground, where Adam and Eve repose, is the most delicious herbage, enriched with flowers and fruits; in the background, the sky is obscured and lowering, streaked with the fiery warnings of an approaching storm.

Art-Union Publications.

The publications of the London Art-Union for the present year are of a peculiarly attractive character, and will be sure to engage the sympathies and the applause of the numerous subscribers. The subjects selected for the large Presentation Print is the "Water Party," by J. J. Chalon, R.A.—a gay and brilliant scene, full of incident and material. Two state barges proudly float upon the water in front of a palatial building, down the steps of which a group of high dames and cavaliers are descending, as setting out upon the promised festive excursion. The engraving has been executed in a very superior manner by J. T. Wilmore, A.R.A.

The "Thirty Illustrations of Childe Harold," from original drawings by Cope, R.A., Faed, Goodall, A.R.A., J. Gilbert, Tenniel, Selous, Wehnert, E. Duncan, &c.—engraved by J. L. Williams, J. Thompson, Dalziel, Smyth, Measom, the Lintons, &c.—are most charming productions, and afford gratifying proof of the wonderful strides which have been made within our time, in the art of wood-engraving. Landscapes and figure subjects of every clime and age are judiciously interspersed throughout the volume, which will form a most acceptable and graceful addition to the drawing-room table.

"Honour thy Father and thy Mother." Painted by H. Barraud, Engraved by W. T. Davy. T. Boys

This is a companion to several works of a similar kind, illustrative of Scripture subjects, which have become so popular of late years. It represents a mother inculcating the well-known commandment to her son, an intelligent and ingenuous-looking lad. Engraved in mezzotint, oval form.

St John and the Lamb. Painted by Murillo, Engraved by Frederick Bacon. T. Boys.

We are glad to see that the works of the real masters of art are still considered eligible subjects for investment by our publishers. Murillo's "St. John and the Lamb" is one of his most effective and popular works in the National Gallery, and never fails to please by its natural treatment and its suggestive poetry. The engraving, in line, by F. Bacon, has been executed in the first style of art; nothing can be finer in their way than the flesh surface and the soft woolly coating of the lamb.

Nicholas I., late Emperor of All the Russias. By Sir Edwin Landseer, R.A. Vincent Brooke, Ldn. J. Hogarth

This little outline Sketch, taken from life, represents the late Czar—the terror and scourge of Europe—in rather a different aspect from that of some of the larger and more finished portraits; still, we cannot doubt the general verisimilitude—especially the life and truth which speak in that close knitted brow, and earnest downcast eye. Published subsequently to the death of the original, this may be looked upon as the shadow of a mysterious apparition, and is worthy of preservation as an historical curiosity.

PRESENTATION OF A WAR TROPHY TO STAFFORD.

A very interesting event was commemorated on Tuesday (last week) at Stafford, when a trophy of the Burmese War was presented to the county by Colonel Hutchinson and the officers of the 80th Regiment. The trophy was captured at the taking of Rangoon. It is a finely cast Bell, composed, we believe, principally of silver; it is eighteen inches in diameter, and proportionately high, and weighs about 200 lbs. An inscription, in Oriental characters, runs round the bell, in lines; so far as the inscription has been translated, it would seem to be dedicated to Gaudama—a deity of the Burmans.

BURMESE BELL, PRESENTED TO THE COUNTY OF STAFFORD.

The 80th Regiment, by whose officers the Bell was presented, was originally raised by the late lamented Marquis of Anglesey, who was a Captain in the Staffordshire Militia. About five hundred of the Militia volunteered to enter the line, under the command of their Captain: hence the title of the regiment —"The Staffordshire Volunteers:" the remainder being recruited from the county at large. Soon after their formation (in 1793), the regiment entered upon active warfare; and from that time down to the middle of the present century, they have contributed in an eminent degree to the renown of the British arms. During the long period of sixty years, few British regiments have been oftener engaged with the enemy, and none with greater distinction. Among the later victories achieved, with the assistance of the 80th, was the capture of Rangoon on the 14th April, 1852, and where they secured, among other trophies of the war, a bell, which, with others, was hung at the base of the Dagon Pagoda. The pagoda was hung round with bells of different sizes, varying from eight feet in diameter to eighteen inches. In consequence of want of proper machinery to remove the larger bells, which were of immense weight, the regiment were compelled to content themselves with securing some of the smaller ones, including the trophy which has now been presented to Stafford

The presentation took place on the evening of Tuesday week, when a large party of gentlemen assembled at dinner at the Swan Hotel. The officers of the 80th were efficiently represented on the occasion by Major Ormsby. Most of the officers of the 2nd Regiment of Staffordshire Militia, now quartered at Lichfield, were present.

The dinner was served in the handsome new assembly-room of the Hotel. The Bell was placed on a table at the end of the room, behind the Chairman, and attracted considerable attention.

The Mayor of Stafford, J. H. Webb, Esq., presided, and Captain Hargreaves occupied the vice-chair. Major Ormsby, of the 80th Regiment, sat on the right of the Mayor; and Major Dyett, of the 2nd Regiment of Staffordshire Militia, on his left. The company numbered about fifty.

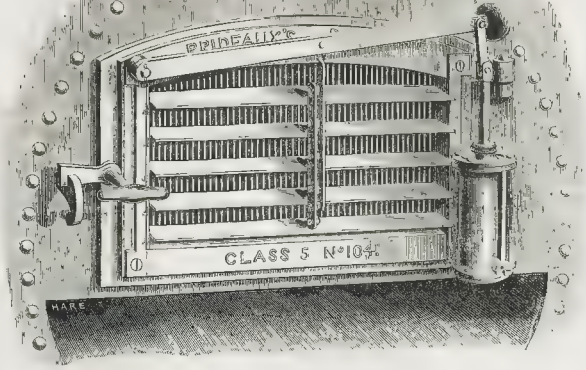
A variety of toasts were drunk; and Major Ormsby, in responding to his health, said "the Officers of the 80th Regiment," said, he would avail himself of that opportunity of presenting to the Mayor and Corporation and the inhabitants of Stafford a Bell which was captured by the 80th Regiment at Rangoon, on the 14th April, 1852 (Cheers); and he had no doubt that the Corporation of Stafford would cause the Bell to be placed in the County-hall, where the inhabitants of the county at large, as well as those of the town of Stafford, would equally have access to it (Hear and cheers). It might not be uninteresting to them to mention that on the occasion of casting a bell, such as that which he had been deputed to present to the town, the inhabitants of the place, as well as of the suburban villages, and indeed of the entire country for miles around, would attend; and while the metal was in a state of fusion the Burmese women of all ranks, waking round it in procession, would throw into it the ornaments which they had worn, consisting of gold, silver, and brass, according to their station in life: and the whole being fused together, were offered in the shape of a bell to the deity Gaudama, whose votaries they were.

A recruiting party of the 80th Regiment, including a sergeant who was present at the capture of Rangoon, being in the town, the Mayor liberally ordered that a dinner should be provided for them at the Royal Oak, in order that they might also be partakers in the festivities of the day. The other recruiting parties in the town were also invited; and about thirty sat down to dinner.

PRIDEAUX'S SELF-CLOSING FURNACE-VALVE, FOR PREVENTING SMOKE

In the month of May last, in the anticipation of the speedy coming into operation of the Smoke Act, we thought it time to direct our attention to the subject of its prevention in our own establishment. So little favourable was our own experience and the reports that reached us of the operation of the various inventions before the public for obviating the nuisance, that we determined to have recourse to the use of smokeless coal. We here, however, encountered the difficulty of not being able to obtain a sufficiency of steam to drive our machinery, although the firing was pushed to such an extent as partially to melt the fire-bars. In this dilemma, our attention was directed to a new invention for preventing smoke, recently brought before the public by Mr. Prideaux, author of the "Treatise on Economy of Fuel," in Weale's Series. Although, upon examination, this invention appeared to us to be sound in principle, and carried into effect with great mechanical simplicity, yet, knowing the vast difference between theory and practice, and being influenced by the uniform failures of other inventions for the same object, in which our previous experience consisted, we must confess to having felt very considerable distrust as to any decided success being achieved; and we only consented to its being tried in our establishment upon condition that the apparatus should be fixed, and, if not approved of, removed entirely at the expense of the inventor; and also that the regular daily working of the machinery should not be interfered with.

These terms having been readily acceded to, one day, *when we were in full work*, Mr. Prideaux's engineer made his appearance and measured the doorway of our furnace. At the expiration of a week he again presented himself (we being in full work), opened the furnace-door, and a piece of plank being



FRONT VIEW OF VALVE AS FIXED IN FURNACE DOOR.

held against the mouth of the furnace, so as effectually to close it, and prevent its action being in any way affected, he unhung our old door and hung in its place a new door frame, with the self-closing valve attached. The plank was removed, the door closed, and the affair was perfect. The rapidity and completeness with which the opening of the valve dissipated the smoke exceeded our most sanguine expectations; and from that time to the present a period of more than ten months—its performance has never varied, but continued all that we could desire.

It is comparatively easy to get rid of smoke, if the consumption of fuel and production of steam be disregarded. A few perforations in the door or bridge will attain the object; but the effect of this continuous admission of air above the fuel will be to diminish the supply of steam from twenty-five to thirty per cent, as many can testify to their cost.

The superiority of Mr. Prideaux's invention consists in this—that it only admits a full supply of air immediately after coaling; lessens the supply as less becomes required from the fuel becoming coked, and, finally, shuts it off altogether, when, from this operation being complete, no more is desirable, burning in fact all the smoke by the admission on the average of only one-fifth part the quantity of air above the fuel which would enter on the principle of continuous supply.

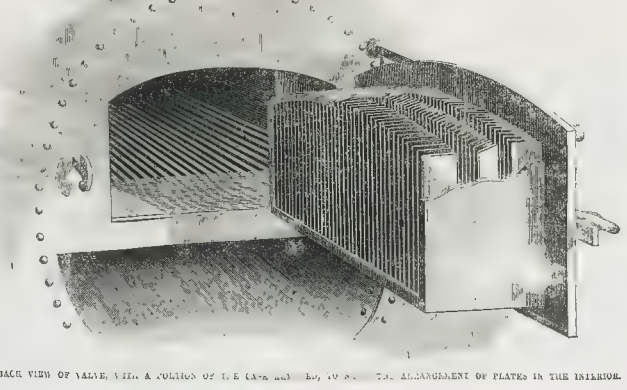
Another feature of this invention worthy of notice is the coolness (we may say, without exaggeration, coldness) of the furnace-door. During the time of the action of the valve, the face of the door is reduced to the temperature of the entering stream of air; and it rarely rises above this in the intervals when it is closed, so extraordinary is the effect of the peculiar arrangement of plates in the interior (presenting a surface of 8000 square inches) in arresting the passage of heat.

A large body of evidence leads to the conclusion that the saving is never less than 10 per cent in Cornish boilers, and 15 per cent in brick furnaces; on which supposition it is clear that, irrespective of the question of smoke, the adoption of the invention becomes a matter of economy.

In no case, however, does the introduction of this invention offer such great advantages as in that of steam-vessels, from the confined character of the stoke-hole. This forcibly suggested itself to our mind the first time we placed our hand on our fire-door after the application of the valve; and we are glad to see our own impressions on this point confirmed by the high authority of Mr Fairbairn, who, at a recent meeting of the Institute of Mechanical Engineers, after remarking "that it would, doubtless, be an advantageous addition to any boiler, however well constructed for burning the smoke, by making the process more complete and certain in its effects," proceeded to observe, "that the apparatus appeared particularly applicable to marine boilers, where the heat of the stoke-hole was ordinarily very objectionable, and interfered seriously with the duties of the men: and he was surprised it had not been taken up by the marine authorities on that account, as well as for effecting the consumption of smoke. Those valves that he had seen at work certainly kept quite cool and in very complete order, and had not been injured at all by the heat."

We learn from Mr. Prideaux that the invention is already introduced on the Tyne, the Clyde, and the Mersey; and will be in the Danish navy in the course of the summer. In short, the invention of Mr. Prideaux bids fair to become as uniform an appendage to the furnace as the generator is to the steam-engine.

Should any of our readers desire to become further acquainted with the Smoke question, we recommend them to read "A Lecture on the Prevention of Smoke, delivered before the United Service Institution, by Mr. Prideaux," and published by Weale, at 6d., as containing the clearest and most concise exposition of the subject we have seen.



BACK VIEW OF VALVE, WITH A PORTION OF THE CASE REMOVED, TO SHOW THE ARRANGEMENT OF PLATES IN THE INTERIOR.

The Leviathan Ship.—Most persons have doubtless heard of the immense iron ship now building by Messrs. Scott Russell and Co., but few can form a true conception of her size from mere figures. She will be, when completed, 679 feet long, 83 feet wide, and 58 deep. Now these are, as nearly as possible, the dimensions of the garden in the centre of Bryanstone-square, which is about 660 feet long and 84 feet wide; and the height of the houses in the square about the same as the depth of the ship, 58 feet. Thus, a person walking round the square may form some idea of the colossal size of this immense structure.

Lodge of Antiquity.—On Thursday week, the 29th March, the foundation-stone of the Junior United Service Club, Regent-street, was laid by the Right Hon. the Earl of Orkney, with the ancient mail belonging to this lodge, which was used at the laying of the foundation-stone of St. Paul's, by King Charles II. This is the first time the lodge has ever lent the mail for other than masonic business; and upon this occasion it was entrusted to the care of Mr Thiselton, the secretary of the boys' school, to whom it was returned by his Lordship the instant the ceremony was completed.—*Masonic Mirror.*

NEW MUSIC, &c.

CALLCOTT'S New ANTHEM, HE MAKETH WARS TO CEASE Solo, 1s. 6d; four voices 2s. Post free. ADDISON, 210, Regent-street.

ALMA; a Battle Piece for the Pianoforte. By ALBERT LINDAHL. Beautifully illustrated in colours by J. Brandard. Free by postage free. JULLIEN and CO., 214, Regent-street

WE GRUDGE HIM NOT, ENGLAND, TO THEE: a Song for English Homes in 1855, by the Author of "When I think on England." Composed by STEPHEN GLOVER. Free by postage. CHAPPELL, 50, New Bond-street.

SAY YES, sung by Mdme. Anna Thillon, at M. Jullien's Concerts, with the greatest success, and nightly encored. Composed by W. H. CALLCOTT. Price 2s.; postage free. JULLIEN and CO., 214, Regent-street.

MINNIE: Sung by Madame Anna Thillon, at M. Jullien's Concerts with the greatest success. Illustrated with a Portrait of Madame Anna Thillon. Also, "The Old Friends at Home," sung by Madame Thillon. Price 2s. each; Postage free. JULLIEN and Co., 214, Regent-street.

CHARLIE, Sequel to MINNIE, Sung by Madame THILLON at M. Jullien's Concerts with the greatest success. Illustrated with a Portrait of Madame Thillon. Price 2s.; postage free. JULLIEN and Co., 214, Regent-street.

THE HOLY FAMILY. CALLCOTT'S New Series of SACRED AIRS for the PIANOFORTE; arranged Duets. This new set contains favourite airs by Handel, Haydn, Mozart, Beethoven, Mayer, and others. Illustrated with a Portrait of Handel. Price 2s. 6d.; postage free. JULLIEN and Co., 214, Regent-street.

THE BRIDE of the WILDERNESS. Two New Songs from this popular Novel.—I. GERTRUDE; 2. SONG of the WANDERER. Sung with the greatest success, by Madame Anna Thillon. Price 2s. each; postage free. JULLIEN and Co., 214, Regent-street.

D'ALBERT'S NEW MUSIC FOR THE SEASON.
D'ALBERT'S LILLIAN and RUSTIC POLKAS. Each 3s. Postage free. The latest compositions of this popular composer.—CHAPPELL, 50, New Bond-street.

D'ALBERT'S LILY of the VALLEY VALSE; also, the PERI ALBINA, REGATTA, and COQUETTE WALTZES. Each 4s. Postage free.—CHAPPELL, 50, New Bond-street.

D'ALBERT'S OPERATIC QUADRILLES.—New Sets, from Les Huguenots, Linda, Norma, and Lilla d'Amore, all beautifully illustrated by Brandard. Price 3s. each. Postage free.—CHAPPELL, 50, New Bond-street.

D'ALBERT'S PALERMO and LE JUIF ERRANT QUADRILLES. Each 4s. Also the SCHOMBERG GALOP, just out, beautifully illustrated, price 3s.; postage free. CHAPPELL, 50, New Bond-street.

LINDAHL'S MIDNIGHT CHIMES for the Pianoforte, Third Edition. Price 3s. 6d. Also FANTANT POUR LA SYRIE, as played by the French and English Military Bands. The best arrangement by Albert Lindahl. Price 3s. 6d.; Post, 3d.; sent postage free.—CHAPPELL, 50, New Bond-street.

JUANITA; a Spanish Ballad by the Hon. Mrs. NORTON. Sung at Brighton with immense success. Just published, price 2s.; postage free. CHAPPELL, 50, New Bond-street.

CALLCOTT'S 1000 MELODIES of ALL NATIONS.—This popular work is now completed, arranged for the Pianoforte, by W. HUTCHINS CALLCOTT. LEADER and COCK, 63, New Bond-street.

OVER THE SEA. By BRINLEY RICHARDS. Just published.

MISS DOLBY'S celebrated Jacobite Song, OVER the SEA. Arranged for the Piano by BRINLEY RICHARDS. Price 3s.; post free. LEADER and COCK, 63, New Bond-street. (Next door to Bond-street.)

THE MAID of the VALLEY and EVENING STAR WALTZES. By H. FARMER. Solo and duet, post free, 4s. each; orchestra, 2s. JOSEPH WILLIAMS, 123, Cheapside.

I CANNOT SMILE, DEAR MOTHER. By GEORGE BARKER, the composer of "Mary Dane." Post free, 2s. JOSEPH WILLIAMS, 123, Cheapside.

G. A. MACFARREN'S LITTLE CLARINA'S LESSON-BOOK for the PIANOFORTE. Parts 1, 2, and 3, price 2s. 6d. each; post, postage free. G. A. MACFARREN, 9, Hanover-terrace, Regent's-park, Composer.

GALOP des GUIDES, by HENRY SMART. This is the most popular and stirring Galop since the SOMNAMBULA. It is called for by every occasion, to publish as I private. Price 2s. 6d. Illustrated from Peter. LOONEY and SONS, 28, Holles-street.

THE WINDS ARE HUSHED TO REST. Barcarolle. By CAMPANA. The most popular Song of the most popular Italian Composer of the day. Price 2s. BOOSEY and SONS, 28, Holles-street.

BELIEVE IF YOU CAN. Ballad. Written and Composed by CHARLES MACKAY. Price 2s. BOOSEY and SONS, 28, Holles-street.

THE ROSE'S ERRAND. Ballad. Written and Composed by CHARLES MACKAY. Price 2s. BOOSEY and SONS, 28, Holles-street.

THE BALACLAVA CHARGE; a brilliant Military Fantasia for the Pianoforte. Composed by MRS. BEALE (LADY OF LEIGHLIN). Free by postage for 24 stamps. Published by D'ALMAINE, Soho-square. Price 2s.

THE SELF-COMPOSER. An amusing and effective piece of Music, for amateurs who prefer to compose Waltzes. Price 2s.; sent post free for forty stamps.—DY BERNARD, 37, Bark place, Bayswater.

NEW SONG—OUR LOVED, OUR BRAVE. Written by JULIA DAY, composed by J. BARTON. Price 2s. Sung with the most distinguished applause by Mrs. Lockey at the concerts of the English Glee and Madrigal Union. LONDON: ROBERT COCKS and HODGSON, 6, Oxford-street.

NEW SONG.—The GALLANT SOLDIER'S BRIDE. By the Author of "Will You Love Me Then as Now?" &c. Price 2s.; post postage free. This song possesses all the attractive requisites to secure immediate popularity; both words and music are equally happy.—DUFF and HODGSON, 65, Oxford-street.

VALSE du CARNAVAL. Par HENRI LAURENT. Price 3s. This beautiful composition, founded on the [illegible] is one of the most [illegible] Waltzes of the season. Sent post free for 24 stamps. ROBERT COCKS and CO., New Burlington-street.

London: SMITH, ELDER, and Co., 65, Cornhill

Just published, in post 8vo, price 6s., cloth,
THORNLEIGH: a Story of Home and Old Family. By HOLME LEE, Author of "Maude Talbot."
"One of the most charming novels of the class which has issued from the English press for a long time past. The story is full of truth, taste, simplicity, and truth to nature; and it is graced with unaffected ease and clearness of style. . . . Some of the hues which affect sensibility and artist-like skill, and lay fast hold of the reader's interest."—Leader
"In the pastures there is a breadth in minuteness, a truth and a finish, which equal, if they do not surpass, the picture we painted last year. . . . It has this further mark of actuality, that sorrows and trials are mitigated, as in nature."—Spectator
London: SMITH, ELDER, and Co., 65, Cornhill

Just published, in demy 8vo, price 16s., cloth,
THE MILITARY FORCES and INSTITUTIONS of GREAT BRITAIN, their Administration and Government, Military Law, and Regulations. By HENRY THOMSON, Esq., of the Inner Temple. Author of "The Laws of War Affecting Commerce and Shipping."
"Mr. Byerley Thomson has interwoven with the contents of an Officer's Manual an outline of English history in its relation to Military Establishments, a description of the regular Army and Militia, and their organization, and a sketch of the laws which affect them, and a review of the system by which promotions are regulated. It is a serviceable publication, and the subject is treated in a practical manner."—Athenæum
"Such a book is much wanted, and it contains a great mass of information on military topics, now scattered over a variety of discussions."—Economist
"A well-arranged and carefully-digested compilation, giving a clear insight into the economy of the Army, and the working of our Military System."—Spectator
London: SMITH, ELDER, and Co., 65, Cornhill

Just published, in Two Volumes, crown 8vo, price One Guinea, cloth,
FOUR YEARS at the COURT of HENRY VIII; being a Selection of the Despatches of SEBASTIAN GIUSTINIAN Venetian Ambassador, 1515–1519. Translated by RAWDON BROWN.
"Translated with much spirit and fidelity."—Examiner
"These letters throw considerable light upon the customs and feelings, the manners and modes of thought prevalent in mythical Europe at the beginning of the sixteenth century. Apart from their historical value, these volumes will be interesting to those who seek only a carnal amusement."—Times
"A work valuable alike to the antiquary and the historian: as full of anecdotes as a biography, as fascinating as a novel."—Economist.
"A more attractive book altogether it would be very difficult to imagine."—Examiner, &c.
"Nowhere is there so much to also minute a picture of the English Court from 1515 to 1518."—Press
"These volumes are delightful reading."—Leader.
"The historical value of these volumes can hardly be too highly estimated."—Eclectic.
London: SMITH, ELDER, and Co., 65, Cornhill.

The Committee feel it a duty to themselves, and to the Christian public to state, that the operations of this Society, by the liberality of the friends of the soldier, they have considerably extended the line of their operations; and have from time to time published cheering reports (several of which have been recently printed, and widely circulated), which they are constantly receiving from their agents, in which they state that the Lord is working by them on the battle-field, and thus crowning their needful and arduous labours with a large measure of success. Hence they are encouraged to appeal to the public for fresh support to the continued sympathies, fervent prayers, and renewed liberality of their supporters in this cause.
For the spiritual and eternal benefit of the brave and beloved defenders of our country (in humble dependence on the Divine blessing) there are now actively employed under the auspices of this Society, twelve Scripture Readers. And the Committee would entertain the hope that this number may yet further be augmented if this appeal is liberally responded to. Should the sympathy in her from being stirred to activity in the wide, and yet widening field of labour which is presenting itself on every side
The following are several departments of labour occupied in this Christian enterprise. One agent is actively and usefully employed in visiting the barracks in London, Westminster, and the surrounding military depôts. One is engaged amongst the militia in Ireland and Scotland, who will also visit the wives and families of the soldiers. It is also the intention of the Committee, as promptly as funds will permit, to organize plans for the employment of a Scripture Reader at Aldershott, during the great encampment, which is likely for some months to be located there. There are also one agent in Kent, one in Dorsetshire occupied, amongst the militia, one in the West of England, one in Yorkshire, one missionary to the Russian prisoners at Plymouth and elsewhere, one in Scotland, and one in Ireland.
On the open service, there are eight at Constantinople and Scutari. Two of these are clergymen of the Church of England, one of whom chiefly devotes his energies to the spiritual instruction of the Protestants in the French army. One is at Balaclava. And the Committee have also two agents in Malta, that they have also just appointed a Scripture Reader to labour amongst the thousands of military at Malta, under the auspices of the Rev. W. Hare the garrison chaplain.
A series of useful and interesting publications, especially adapted to the thoughts and habits of the soldiery, have been prepared, and are being circulated with encouraging success, both among the troops gratuitously and widely circulated abroad. Also, an interesting magazine entitled "The Sentinel," is published every alternate month, and gratuitously circulated by the soldiers themselves.
Having before them so extensive and inviting a field of labour, the Committee confidently present the religious claims of this Society to continued and increased support before all those who profess to feel the vast value of immortal souls. They, therefore, most respectfully yet most earnestly, entreat their friends, and the public at large, in no degree to relax their efforts (for the claims on the Committee are great and urgent), but rather still more effectively than before to aid them in this great and important enterprise, by their Christian sympathies, and above all, by their united and fervent prayers for a still larger measure of the Divine blessing on their several labours, as instruments of the Divine will.
The thanks of the Committee are presented to friends and Collectors for the valuable donations of books and tracts: friends at Clifton (per Rev. G. Hilsett, Dr. Lorimer, Miss Shephard, Rev. Dr. Cumming, Rev. A. F. Blake, Rev. Mr. Mines Harrison, Archdeacon Law, and Rev. J. Dalton.
Contributions will be thankfully received by the Treasurer, G. Burns, Esq., 17, Fortnes-road, Paddington; by the Secretary, Mr. William A. Blake, at the Offices, 14 and 15, Exeter Hall; by Rev. Mr. Marsh, Beckenham; by Messrs Mylet, Bonners-street, Oxford street, Lieutenant Blackmore, 6, Seymour-place, New-road; by the Bankers, Royal British Bank, 429, Strand; and at the Offices of the Record and Dublin Journal.

FOREIGN VINEYARD ASSOCIATION.—(Capital £200,000.)
President—The Right Hon Lord MUSKERRY.
A Joint-Stock Company, formed for the purpose of supplying private families and establishments direct with foreign wines and spirits on large or small quantities, at really wholesale prices—that is, from 20s to 36 per dozen, the produce of wine merchants. Examples—the finest Champagne, at 36s. per three-dozen case, instead of £10 16s.; Claret, the stanzas wine, at 27 in case, instead of £12 12s.; Sherries, at 28s., 32s., and 44s., in place of 36s., 48s., and 56s.; Ports, same rates; and the finest pale or brown Cognac, 36s. per gallon. Apply to T. W. STAPLETON, Esq., Secretary and Manager, 31, King-street, Regent-street, for prospectuses and detailed price lists. The principal clubs in London supplied. All wines sent out on approval, or samples forwarded first if desired. Terms, cash or reference.—And at 6, Boulevard des Italiens, Paris.

LETTERS ON THE WAR AND THE EASTERN QUESTION.—(No. III.)

(From our Special Correspondent.)

VIENNA, April 7, 1855.

FOR the last week the Conferences have been at a stand-still. The redoubtable Third Point—the only one of the four which offered any difficulties for diplomacy to unravel—was no sooner approached than the Ambassadors, ordinary and extraordinary, found themselves at a loss how to proceed. It is likely that Lord John Russell and Lord Westmoreland perfectly well understood the work they had to perform, and that M. de Bourqueney was equally well instructed. Perhaps, also, the Ministers of the Ottoman Porte, who are not quite extinguished by the powerful protection under which it is the misfortune of their country to be placed, were determined to resist any project, come whence it would, for cobbling up an ephemeral and unsatisfactory peace. But the Russians were evidently not prepared to carry their concessions beyond the first two points; supposing, which is not yet quite certain, that those points were actually agreed to. The Austrian Government—an arbitrator, rather than a principal, in the quarrel, and caring little or, at all events, less than Great Britain and France—for the point of honour involved in the capture or destruction of Sebastopol—had not made up its mind in what manner and to what extent the power of Russia in the Black Sea could be restricted. No sooner, therefore, was the Third Point reached than the assembled Plenipotentiaries discovered that the profane vulgar out of doors were not altogether wrong in the conviction that all previous discussion had been useless palaver; and that the tug of diplomacy, like the tug of war, would have to be directed against Sebastopol. A formal suspension of the Conferences at this point would have alarmed the too sensitive public; but, fortunately, a pretext was to be found by which appearances might be saved, and time gained. Advantage was taken of the religious solemnities of Passion Week to procure a delay which, while it could not injure the prospects of the Allies in the Crimea, was likely to be of service to such of the Ambassadors and Plenipotentiaries as desired to receive further instructions. In consequence of the difference in the Calendar it only happens once in about twenty years that the Easter of the Greek Christians occurs at the same period as the Easter of the Protestants and Roman Catholics; so that, on this occasion, the Russians had the same excuse as the British, French, and Austrian Ministers for the non-transaction of diplomatic business. The delay was further serviceable in allowing time for the arrival of two new and important personages—new to Vienna, but by no means new to the Eastern question or any of its complications. M. Drouyn de Lhuys—whose ruthless scarification of Count Nesselrode, on every occasion when the latter has been reduced to the sad necessity of pleading the bad cause of Russia, has gained him a reputation second to that of no statesman in Europe arrived in Vienna this morning. Ali Pacha is expected this evening; so that all the Powers which take a part in the Conferences, with the exception of Russia, will be represented by a high Minister of State, as well as by an Ambassador. When the Conferences resume business eleven diplomatists and statesmen will be present:—Lord John Russell and the Earl of Westmoreland, for Great Britain; M. Drouyn de Lhuys and M. de Bourqueney, for France; Count Buol-Schauenstein and the Baron Prokesch von Osten, for Austria; Ali Pacha, Riza Bey, and Arif Effendi, for the Ottoman Porte; and Prince Gortschakoff and M. de Titoff, for Russia. With these will be associated M. von Meyssenburg, as Secretary; and M. von Hammer (son of the celebrated historian), as Turkish Interpreter. Thus the number amounts to thirteen persons, which the Viennese consider of evil augury—thirteen in council being thought as unlucky as thirteen at dinner. This superstitious feeling is not confined to the *gobemouches* of the coffee-houses and the Exchange; but is shared by more than one high member of the Conference. Possibly Riza Bey will not remain many days after the arrival of Ali Pacha; but, if he should, it has been rumoured that the number will be reduced to twelve by dispensing with the services of M. von Hammer. If Riza Bey should take his departure, M. von Hammer will be allowed to remain as dragoman for Arif Effendi, the only member of the Conference who does not speak French. M. de Nesselrode will not be present—which is a pity, were it only that he might renew or make the acquaintance of M. Drouyn de Lhuys.

Last week the people of Vienna were in high spirits. All was *couleur de rose;* and every one dreamed and spoke of peace. This week the colour is gory red; and war—bloody war—seems to be imminent. The Government and people of Austria ardently desire peace; but the more the question involved in the Conferences unfolds itself to their understanding, the more inclined they are to the opinion prevalent elsewhere—that things have either gone too far, or not far enough, to admit of the labours of diplomacy. If the Crimea had not been invaded, the Allies might have been contented to accept the overtures of Russia without insisting upon the destruction of Sebastopol; or if Sebastopol had been carried, or any decisive victory had been gained by the armies or fleets of Great Britain and France, Ambassadors and Ministers might hope to arrive at a satisfactory pacification. But in the purgatorial *juste milieu* in which affairs at present stand diplomacy serves no other purpose than to prove that the Allies are as willing to hear as they are to strike; and that if Russia desires peace she can have it, if she will

RAILWAY AT BALACLAVA.—STATIONARY ENGINE BEYOND THE CAMP OF GENERAL VEREY.—(SEE NEXT PAGE.)

give security. The Austrian Government has been slow to understand all the difficulties of this very difficult question; but it should not be forgotten that Austria has acted from first to last with the strictest honour and integrity; that every step she has taken has been a step in advance; that her sympathies are, and have ever been, with France and England; that she has many powerful motives—of which financial ones are not the least—to dislike and avoid war; but that reason, State necessity, and justice, are still more powerful in impelling her to take part against Russia; and that she could not, even if disposed, recede from the position which she has already assumed, without incurring dangers infinitely greater than any to which she could be exposed by the enmity of the Czar. Though it is always unsafe to make predictions, and although at the present time, when events succeed each other with such unexpectedness and rapidity that they set all reasonable calculation and ordinary observation at defiance, it may be doubly hazardous to speculate upon the future, it is impossible for any one who knows anything of the Austrian people and Government to doubt their good faith. Austria will not, dare not, and cannot, draw back from the path into which she has entered. In the honour of France and England lies the safety of Europe. Diplomacy may prattle as it will; but, as long as the Russians keep us at bay before Sebastopol, nothing can come of the proceedings at Vienna but utter failure. Something else might come of them, if these two great nations were weak enough to withdraw from the Crimea without striking a blow, and gaining a great victory; and that something would be Shame and Dishonour. Great Britain and France will not inflict upon themselves so fatal a humiliation. Prussia herself, degraded as she is, would be entitled to assume a higher rank in the world than these two mighty States, if they could sacrifice in such a manner the prestige of their name, the glory of their arms, and the character of their Governments. The same reasoning, though with less force, will apply to Austria. Where England and France are compelled to lead, she will be compelled to follow. It may be inconvenient, but it is right; and Austria, though reluctant to draw the sword, will wield it with effect against the common enemy, whenever the last effort at pacification shall be proved to be unavailing.

POSTSCRIPT. PASSION WEEK IN VIENNA. WASHING THE FEET OF THE POOR.

(From our Special Correspondent.)

Vienna, April 9th.

In the preceding letter is contained all the authentic information obtainable in Vienna on the subject of the Conferences, with the single exception of the fact that they are to be resumed this afternoon. Beyond this all is matter of speculation. In my next I shall probably be enabled to communicate something more positive than mere surmises. In the meantime a short description of some of the salient points of courtly and popular life in Vienna, as they struck the eyes of a stranger, during the week that has just elapsed, may prove interesting, if only as a relief to the eternal routine of politics, and the old, though engrossing, subjects of Peace and War.

The Viennese are as fond of pleasure as the Parisians. This day—after being long pent up in the observance of Lent—their gaiety breaks out in its full vigour, and the Prater swarms with crowds of all ranks and classes. "*Es ist lustig hier am Prater*," says Goethe, in "Faust;" and on Easter Monday the phrase is more especially applicable. But Passion Week, though the dullest of the year in Vienna, would possibly be accounted rather a gay week in London, if spent in the same manner by the soberer English people. Though the theatres and places of public amusement were closed, the streets for the last four days have been encumbered with crowds of citizens in their holiday attire, strolling forth to see and to be seen—the fair ladies sporting in all the hues of the rainbow, as if inviting the spring and summer not to be tardy, but to banish winter with the banishment of winter costume. So dense have been the multitudes that carriages have found it difficult to pierce their way through the moving masses; and the pedestrian whose business or amusement did not lead him with the stream had to fight against countless obstacles at every step of his progress, unless he were wise enough to strike out of the main streets, and percolate quietly through the byways. The public spectacles of the week have been rare; the only amusement offered being the oratorio of the "Creation"—very splendidly performed at the Burg Theatre. The churches have been crammed to suffocation at every hour of the day; the fine music, both vocal and instrumental, attracting thousands of persons who might not, perhaps, have even entered their doors had devotional feeling been the only motive that inspired them. The Court, also, contributed in an eminent degree to the gratification of those who delight in the brilliant and the imposing.

On Thursday the Emperor performed the ancient ceremony of the "Fusswaschung," in the Great Hall, or "Rittersaal," of the Imperial Palace. By eight o'clock in the morning, those who had been fortunate enough to procure tickets of admission (as I did, thanks to the excellent proprietor of the excellent Hôtel Munich, where I have been located for the last fortnight) began to pour into the avenues of the Palace, and by nine o'clock all the best places in the galleries erected for the purpose had been occupied. At ten o'clock the doors were closed. The *coup d'œil* presented in the noble apartment was particularly striking. The spectators, both ladies and gentlemen, were in full evening costume; and the places reserved for the nobility, the members of the Corps Diplomatique, and their families, were filled with all the rank and beauty of Vienna. On the right of the hall was arranged a table, on one side of which sat twelve old men, dressed in black serge, with large white collars;—these were the individuals whose feet the Emperor was to wash. The oldest was ninety-three and the youngest eighty-four years of age. They had been selected for the honour about to be conferred upon them on the three several grounds, united in each case, of old age, poverty, and good character. In the body of the Rittersaal coming and going, and forming themselves into groups, were some hundreds of the first nobles of the empire—most of them in military costume; and glowing in their white, blue, or scarlet uniforms. Precisely at half-past ten o'clock the sonorous chanting of priests, walking in procession through the hall, marked the commencement of the ceremony. The Emperor then entered, followed by his father, the Archduke Francis Charles, by several other Archdukes and members of the Imperial Family, whose names I could not ascertain; and by Prince Charles Liechtenstein, the Grand Marshal of the Palace; and a brilliant cortége of general officers and Ministers of State. Next followed a long array of ushers and gentlemen of the Court, dressed in black—and some of them wearing crosses and orders on their breasts—each bearing a dinner-tray, containing some portion of a very *recherché* and elegant repast. I lost some portion of the ceremonial as soon as the Emperor entered, for my attention was for a time too earnestly directed towards him to permit of any close observation of other things. His Majesty is about four-and-twenty years of age, but looks younger. His bearing is manly and erect. He is well made and handsome; and in any society, or in any dress, would, by the grace of his manner and by his fine, athletic form, attract attention. But it can scarcely be said that his face is as prepossessing as his general appearance. His high forehead, and the whole contour of his head, betoken a superior intellect and an energetic will. Perhaps his firmness has a tendency to degenerate into obstinacy; but, however that may be, it is evident that he is one of those men who are not to be swayed from any purpose that they have deliberately formed, and who will go right on to their object, through every kind of difficulty and discouragement. If he take the right course Austria will be fortunate in possessing such a Sovereign. If he take the wrong one there will be dark days in store for his country and for himself. But of this there is little prospect. His public acts for the last three years have been of a character to attach to him the respect and gratitude of his people; and since he made a love-match and a happy marriage proving thereby what some had previously doubted, more from his physiognomy than from his conduct, that he was in possession of a kindly human heart—his popularity has gone on increasing. This is a digression that may be excused, for the fate of Europe depends in no slight degree upon the conduct of this young Sovereign; who, more than any other man of the present day, under the peculiar circumstances of our time, has it in his power to influence the great war of Civilisation against Barbarism. If he give England and France the aid of his magnificent army of 600,000 men to repel the aggressions of Russia, as it is firmly believed he will, unless the Czar yield to the demands of the Allies, the war will be a short one. If he do not the war will linger, and Austria will ultimately be the greatest sufferer by it. But to return to the ceremonial. As each tray-bearer arrived with his burden, the Emperor disembarrassed him of it, and spread the viands on the table with all the *savoir faire* of an accomplished waiter. He seemed "to the manner born," and his agility and readiness would have done honour to a professional garçon of the Trois Frères Provençaux at Paris, or of a *Kellner* at the equally excellent restaurant of the Hôtel Munich. When the table had been spread, the Emperor spoke a few words to the nonogenarian, evidently inviting him and his eleven companions to partake of the good things set before him. The old gentleman rose, shook his head, and said something in reply, as evidently intimating that they could not think of dining in so august a presence. The Emperor did not press the point, for it was not in the programme, and immediately the viands were removed by the Archdukes and the members of the Imperial Family. The Archduke Francis Charles—the Emperor's father, and who might himself have been an Emperor if he had been disposed to assume the responsibility—performed the most active part in this stage of the ceremonial. A second course was brought in by the same attendants, in the same way, arranged on the table by the Emperor with the same coolness and agility, and removed by the Archdukes exactly as before—the only difference being that the twelve old men were not asked to partake, but were merely shown the good things which they were to discuss elsewhere, after the conclusion of the ceremony. A third course, and, ultimately, a very splendid dessert, were brought in, spread, and carried out, with precisely the same formalities; and thus this *faire-semblant* of a dinner was brought to a close. The table was then removed; and a long white cloth was spread over the knees of the twelve old men, concealing their legs and feet. The attendants, placing their hands under this cloth, removed the shoes and stockings of the whole twelve—leaving bare the aged feet, which had previously undergone sufficient ablution to be fit to be touched by the dainty fingers of a Kaiser. A priest, bearing a golden ewer half filled with water, and another priest holding a golden flagon also containing water, then proceeded to the real business of the morning. The Emperor knelt on his right knee, while the one attendant priest held the ewer under, and the other the flagon over, the foot to be honoured with the Imperial purification. The Emperor with his left hand sprinkled a little water from the ewer on the sole of the foot, while the priest poured a few drops from the flagon upon the instep. Then with his right hand the Emperor wiped the foot slightly with a towel and passed on to the next, performing the whole ceremony in somewhere less than three minutes. This done, his Majesty hung round the neck of each a little bag containing thirty pieces of silver of ten kreuzers each; and, amid the chanting of priests and choristers, and the sprinkling of incense, the ceremony was completed. The Emperor performed this part of the business, as well as every other, with gracefulness and self-possession—giving one the idea of a man who thought nothing too unmeaning or too commonplace to be done well, if it were necessary or desirable to do it at all. On ordinary occasions a similar honour is rendered by the Empress to twelve poor women; but this year, in consequence of the advent of the little Archduchess—now only a few weeks old—and the delicate condition of her Imperial Majesty, the ceremonial was shorn of more than one-half of its grace and beauty.

On Saturday there was a grand procession of the Imperial Court and household, and a review of troops in the court of the Palace, at which all the *élite* of Vienna were present. I had the good fortune to procure a place in the balcony of the Reichskanzlei; but it would occupy too much of your space if I were to enter into the particulars. This also is an annual ceremony, performed on the Saturday before Easter Sunday.

If the necessary funds can be raised, it is said that the next annual gathering of the Royal Agricultural Society will be held at Chelmsford.

BALACLAVA RAILWAY.

The navvies employed on the Balaclava Railway continue to enjoy excellent health, work with steady and hearty goodwill, and, with very few exceptions, are described as giving no cause of complaint on account of their behaviour.

The View we have given this week represents the stationary engine for drawing goods up the incline. Some of the accounts speak of it as not adequate to the fulfilment of the task imposed on it. On the 23rd ult. twenty-four French waggons were loaded with *matériel* before half-past eleven o'clock, but the engines had not worked them up to the top of the incline at four o'clock. Perhaps it will be found advisable to give it a more moderate draught. An overtasked engine is as bad economy as an overworked man.

On the 26th ult. the engineers expected to complete the line as far as the Turkish Camp, and in a week or ten days more it would be extended to Lord Raglan's head-quarters—a distance of about four and a half miles from Balaclava. The main portion of the work would then be over, as the ground from head-quarters to the trenches is comparatively level.

FOREIGN AND COLONIAL NEWS.

FRANCE.

(From our own Correspondent.)

Paris, Thursday.

The arrival of Easter brings back all the movement and gaiety of the Carnival; and feasting and dancing, dressing and dining, become the order of the day. It is a strange, and to us incomprehensible, sign of the times that at the moment the country is engaged in a sanguinary, expensive, and, we cannot conceal from ourselves, in many respects disastrous war; when a series of bad seasons have made their ill-effects felt; and when these two combining causes have raised the price of every necessary and every luxury of life; that, in the midst of all these depressing influences, the taste for, and indulgence in, extravagances of all descriptions should have risen to the pitch it has now arrived at. In dress and in furniture this is particularly the case. Never did the streets and *salons* of Paris within our experience display the same *étalage* of velvets, satins, laces, plumes, and jewels, and these on people of less than moderate fortunes; never was there a greater demand for buhl and marqueterie, brocades and lampas; the while the price of rents and wages, bread and meat, become daily more and more heavy pulls on the pockets and purses of every class of consumers: this must come to an end; when and how, are alarming questions.

The second day of Longchamps, under the influence of a bright sunshine, which dazzled the promenaders out of the fact of the bitter north wind, that made great sport of their flimsy garments, was singularly brilliant. During a part of the day no less than seven compact lines of carriages, of one sort or another, defiled up and down the Avenue of the Champs Elysées, and the toilets displayed were of the most dazzling and *Mirobolante* description. Influenza and sore throats are abundant; but, of course, there is no connection between the two subjects. We merely make the remark *en passant*.

It is said that on the return of the Emperor and Empress from England, they intend inhabiting the Elysée, and resigning the Tuileries to the Queen and her household, during her stay in Paris.

The Emperor has acceded to the petitions on the subject of the extension of the Palais d'Industrie, and the order for the execution of the necessary works is being carried into effect. No announcement of the opening of the building being deferred has yet been made, but the general impression is that it will be impossible for it to take place so early as the day appointed. It appears that, contrary to the first statement, there are to be two days in the week when the entrance will be free, to enable the poor and working-classes and their families to profit by the sight, which, under other circumstances, many of them would be deprived of. In the Gallery des Beaux Arts a sensible regulation has forbidden the admission of sketches and *dessches*, and it is only to receive finished pictures.

The often-renewed, and till now so often-rejected, question of the imposition of a dog-tax has brought to light the following singular facts on the subject of the canine population of France—facts which we think would, if sooner revealed, terminated the question. There are, it appears, in round numbers, three millions of dogs in France, which cost in food eighty millions of francs, and communicate hydrophobia to 200 persons annually. It is supposed that the tax would *supprimer* (the statist has a delicate consideration for the feelings of fanciers) about a third of the number; we humbly think, a larger proportion, as the greater part of the curs that infest the streets belong to persons who leave them pretty much to pick up their own livings among the offal thrown there, and who certainly would be extremely sorry to pay a tax for them.

A report went the round, a few days since, of the death of the Duchesse de Berry.

There is a question of raising two new regiments of infantry; but it is said that, instead of giving them new numbers, they will bear duplicate numbers (doubtless with some distinguishing mark) of two other regiments already existing. One of the reasons assigned for this plan is the design of deceiving the enemy as to the real number of the troops.

Among the works of improvement going on in Paris, those prosecuted on the ground formerly occupied by the Passage St. Pierre have led to a singular discovery—that of a quantity of human bones, in a state of perfect preservation, which, there is little doubt, are those of the victims of the massacre of St. Bartholomew, interred in the ancient cemetery of St. Merry. These remains have been transferred to the Catacombs.

Among the movements of journalism, it appears that M. Théophile Gautier (whose name stands almost at the head of the list of critics on art and the drama, and whose literary reputation on other points a number of most interesting and popular works has long since established) removes from the theatrical *feuilleton* of the *Presse* to that of the *Moniteur*. M. Gautier is also to render an account of the Exposition in all that relates to the domain of art. His engagement is, it appears, to last for five years, and it is to bring in a salary of 1200 francs a month. The place thus left vacant in the *Presse* is to be filled by M. Nestor Roque plan, late Director of the Grand Opera, who commenced his career as a journalist.

It is the *Austerlitz*—not the *Reine Hortense*, which has not quitted its station at Toulon—that is to convey the Emperor and Empress to England. The Emperor takes in his suite the Duc de Bassano (Grand Chamberlain), MM. Fleury, Toulongeon, Edgar Ney, and the Marechal Vaillant. The Empress's suite consists of the Princesse d'Essling, Mdmes. de Montebello and de Malaret, the Comte Tascher de la Pagerie (Grand Maître de la Maison), and the Baron de Pierre (Ecuyer).

A correspondence from Constantinople asserts that preparations are still being carried on there with the utmost activity for the reception of their Imperial Majesties; and that three Armenian ladies of the best society have been named to serve as attendants and interpreters to the Empress.

The Grand Opera has a *reprise* of the "Prophète" for the reappearance of Madame Stoltz. The celebrated *cantatrice* has but just recovered from severe illness, and her consequent weakness, joined to the emotion she experienced on the occasion, made itself somewhat felt in her voice: there is, however, every reason to suppose that with the return of strength will be restored her usual superiority. A new opera by Signor Biletti, which is highly spoken of, is to produce Mdlle. Cinti Damoreau, of whom such great things are said that we hope the public may not be disappointed. Rossini is expected in Paris. A story is going the rounds that, in order to repair certain losses sustained in 1848, the maestro proposes to sell to any amateur or speculator who chooses to become the purchaser the entire copyright of a "Macbeth" that he has lately composed, and that the Marquis of Hertford proposes to acquire possession of the work for 200,000 francs. What to do with it seems a question that is not regarded. The celebrated pianist Emile Prudent has just published two new pieces, "La Barcarolle," and "Les Naiades," which promise to become highly popular.

THE WAR IN THE CRIMEA.

Once more we are told that the grand assault is at last about to be made. The letters which arrived by the *Clyde* steamer say, "The general opinion is, that within three or four days, at latest, we shall open; and I certainly think," says our Correspondent, writing on the 26th, "such a step will be taken in the course of another week at latest." Since the receipt of that intelligence, a telegraphic despatch from Marseilles, dated Thursday, announces the arrival of the *Hydaspes*, which left Constantinople on the 2nd inst., with news from the Camp to the 31st. The substance of it is, "that the Russians have constructed two new batteries, and have converted the ambuscades into an advance parallel." These batteries will, no doubt, be in front of the Malakoff Tower, that being the point toward which all the efforts of the besiegers, as well as the besieged, have been directed lately. The despatch from Marseilles states also that "the Allies have constructed two new batteries;" that "the fire has been slack;" and, as regards the long-expected assault, "it was said positively that the bombardment would commence on the 3rd of April." A letter from the Camp, dated March 26th, says

What will be the result of this second bomb ardment of course none can tell; but our engineer officers seem at last confid ent that the place will be ours, though not without a desperate contest. One thing, however, is a matter of positive certainty—namely, that if the Allied Commanders wish it, the whole town could be utterly destroyed in tw enty-four hours. Not on stone will roman upon another if our guns and m ortars are directed against it.

Up to the 6th inst., however, if we may rely upon the telegraph, the grand trial of strength had not been made. A despatch of that date affirms that nothing decisive had yet take n place. The French held their ground before the Malakoff Tower.

The *Ost-Deutsche Post* of Vienna says:—

The intention is that General Bosquet shall drive General Liprandi from his position, while General Canrobert will direct the operatio ns against the Malakoff Tower in person; General Pelissier commands the r eserve. From the heights of the French Camp, caravans of men, women, and children have been latterly seen to quit Sebastopol with their effects. One of these, which took latterly seen to quit Sebastopol with their effects. One of these, which took the direction of Bagtchiserai, was preceded by a procession bearing sacred banners, and escorted by about forty Cossacks. Our letters state that many Russian soldiers take advantage of the sorties to pass over to the Allies.

The statement relative to the caravans of men, women, and children leaving Sebastopol is corroborated by the *Military Gazette* of Vienna, which says that General Osten-Sacken published an order of the day, enjoining all females to quit the town at once. The Grand Duke Nicholas, taking the case of these poor women into consideration, has given from his own purse 100 roubles to each woman having a family, to enable her to remove; and from 20 to 50 roubles to each unmarried female. It was naturally supposed that this order was gi ven in anticipation of a serious attack.

There have been various rumours regarding the operations of Omer Pacha, who is said to have advanced from Eupatoria towards Old Fort, with the intention of supporting a movement of the Allies. This is premature. The Turkish Commander has merely thrown out a covering party while advancing the fortifications of the town, so as to give the Russians a much warmer reception, should they attack him again. His army, it appears, has been strengthened by the addition of 8000 Egyptian troops.

THE SORTIE ON THE 23RD OF MARCH.

The letters received by the *Clyde*, which left Constantinople on the 29th ult, give ample details of the part which the English troops took in the affair of the 23rd. We are glad to learn that the number killed and wounded is not so great as was at first supposed. Instead of nearly 100 killed, wounded, and missing, our loss did not amount to much more than half that number; and Lieut.-Colonel Kelly, of the 34th Regiment, is alive in Sebastopol, with a slight wound. Captain Montagu, Royal Engineers, is also a prisoner.

It appears that at the time the heavy fire between the French and Russians was going on a portion of the 90th Regiment were employed on fatigue duty on the right of the new advanced works on our right attack. They were in the act of returning to their posts in the Gordon Battery, just at the moment the heavy firing on the right had ceased, when a scattered irregular fusillade commenced in the dark, on the left of their position close to the Mortar Battery. Captain Vaughton, who commanded the party of the 90th, ordered his men to advance along the covered way to the works. They moved up in double time, and found the Russians in complete possession of the Mortar Battery. The 90th at once opened as heavy a fire of musketry as they could upon the enemy, who returned it; but the coolness and steadiness of our men were giving us the advantage, when an alarm was given that our men were firing on the French; but the mistake was speedily discovered by the enemy's fire being poured in with more deadly effect, and the small party of the 90th were thrown into great confusion. Captain Vaughton at this moment called, "Men of the 90th, follow me!" and Sergeant Henry Clarke, Sergeant Brittle, a sergeant of the 7th Fusiliers, about fourteen men of the 90th, and a few of the 7th, dashed out of the confused ranks, and rushed right into the Mortar Battery. In a few moments these brave fellows drove the enemy beyond the first traverse, and at the narrow way leading into the second traverse they made a stand, and opened a heavy flanking fire on the parapet, over which the Russians were making determined efforts to come upon them. The numbers was augmented, defended by the sergeants and a few men, who delivered fire as fast as they could load right into the Russians, who gradually began to give way. With a loud "hurrah" the gallant little band sprang with the bayonet upon the enemy, who at once precipitately retired over the parapet, followed by our rifle balls, which were poured in upon them incessantly, till every round in the men's pouches was expended. In order to keep up the fire, the men groped about among the dead Russians, and exhausted all the cartridges they could find in the enemy's pouches. At the first charge at the Mortar Battery the Russian leader, who wore an Albanian costume, and whose gallantry was most conspicuous, fell dead. As an act of justice, the names of the officers and men of the party of the 90th Regiment whose conduct was distinguished in this affair should be recorded. They are—Clarke, Brittle, and Kaser (sergeants); Caruthers, severely wounded (corporal), Fare, Walsh, Nicholson (wounded), and Nash. Captain Vaughton received a severe contusion in the affair. The courage displayed by Captain Cavendish Browne, of the 7th, in another part of the works, was most conspicuous. He was severely wounded at the commencement of the attack, but he refused to go to the rear, though nearly fainting from loss of blood. He led on his men, encouraging them by voice and gesture, to the front. When his body was found it lay far in advance of our line, with three balls in the chest. The 77th Regiment behaved admirably, and Major-General Codrington has communicated to the 88th, and the other regiments of the brigade of the Light Division engaged, the satisfaction of Sir George Brown at their gallant conduct. It is not known how many Albanian chiefs there were with the Russians, but the two who were killed led them on with intrepidity and ferocious courage. One of them, who struggled into the battery in spite of a severe wound, while his life-blood was ebbing fast, rushed at a powder-barrel and fired his pistol into it before he fell. Fortunately, the powder did not explode, as the fire did not go through the wood. Another charged with a scimitar in one hand, and a formidable curved blade (which he used as a dagger) in the other, right into our ranks twice, and fell dead the second time, perforated with balls and bayonets. They were magnificently dressed, and it is supposed they were men of rank.

AN ARMISTICE.

On the morning of the 24th ult. a flag of truce was sent to Sebastopol by the Allies with a proposition to the Russians for an armistice, to bury the dead, which were lying in numbers—five or six Russians to every Frenchman and Englishman—in front of the Round Tower and Mamelon; after some delay, an answer in the affirmative was returned; and it was arranged that two hours should be gran ted for collecting and carrying away the dead on both sides. The news spread through the camps; and the races which the Chasseurs d'Afrique had got up in exchange style were much shorn of their attractions by the opportunity afforded to the French and English of meeting their enemies on neutral ground. All the ravines leading to the front trenches were crowded with officers hastening on horse and foot down to the front of the batteries, fighting. The crests of the hills and the slopes in front of the batteries were covered with men, and they dotted the deadly interval between the batteries, which had been before occupied alone by thousands of tons of shot and fragments of shell discharged by French and English and Russians during this protracted siege.

The day was beautifully bright and warm. White flags waved gently in the faint spring breeze above the embrasures of our batteries, and from the Round Tower and Mamelon. Not a soul had been visible in front of the lines an instant before the emblems of peace were run up to the flagstaffs, and a sullen gun from the Mamelon and a burst of smoke from Gordon's batteries had but a short time previously heralded the armistice. The instant the flags were hoisted friend and foe swarmed out of the embrasures. The riflemen of the Allies and the enemy rose from their lairs in the rifle-pits, and sauntered towards each other to behold their grim handiwork. The whole of the space between the Russian lines and our own was filled with groups of unarmed soldiery. The sight was strange beyond description. French, English, and Russian officers were walking about, saluting each other courteously as they passed, and occasionally entering into conversation; and a constant interchange of little civilities, such as offering and receiving cigar lights, was heard among each little group. Some of the Russian officers were evidently going on in each little group. Some of the Russian officers were evidently men of high rank and breeding. Their polished manners contrasted remarkably with their plain and rather coarse clothing. They wore, with few exceptions, the invariable long grey coat over their uniforms. The French officers were all en *grande tenue*, and offered a striking contrast to many of our English officers, who were dressed *à la* Balaclava, and wore uncouth head dresses, catskin coats, and nondescript paletots. Many of the Russians looked remarkably like English gentlemen in "style" of face and bearing. One tall, fine-looking man, with a long grey beard and strangely-shaped cap, was pointed out as Hetman of the Cossacks in the Crimea; but it did not appear as if there were many men of very high military rank present. The Russians were rather grave and reserved, but they seemed to fraternise with the French better than with the English, and the men certainly got on better with our allies than with the few privates of our own regiments who were down towards the front.

The Russians appeared to treat their dead with great respect. Most of the soldiers were white-faced and seemed ill-fed, though many of them had powerful frames, square shoulders, and broad chests. All their dead who fell within and near our lines were stripped of boots and stockings. The cleanliness of their feet, and, in most cases, of their coarse linen shirts, was remarkable. Several sailors of the "equipage" of the fleet of Admiral Nepoil were killed in the attack. They were generally fine muscular fellows, with rough, soldierly faces. The Russians carried off all the dead which lay outside our lines to the town, passing down between the Mamelon and the Round Tower. In the midst of all this stern evidence of war a certain amount of lively conversation began to spring up, in which the Russian officers indulged in a little badinage. Some of them asked our officers "when we were coming in to take the place;" others, "when we thought of going away?" Some congratulated the Allies upon the excellent quality they had of getting a good look at Sebastopol, as the chance of a nearer view, except on similar occasions, was not, in their opinion, very probable. One officer asked a private confidentially, in English, how many men were sent into the trenches? Seeing only 1000 a night, and a wake covering party of 10,000," was the ready reply. The officer laughed and turned away. At one time a Russian with a litter stopped by a dead body, and put it into the litter. He looked round for a comrade to help him. A Zouave at once advanced with much grace and lifted it, to the infinite amusement of the bystanders; but the joke was not long-lived, as a Russian brusquely came up and helped to carry off his dead comrade.

In the town large bodies of soldiery were seen in the streets, assembled at the corners and in the public places. Probably they were ordered out to make a show of their strength. The Russians denied that Prince Menschikoff was dead, but they admitted that Admiral Istumin was killed. He was one of the principal officers engaged in the destruction of the Turkish fleet at Sinope, and the Czar had rewarded him by giving him an order of St. George of higher distinction than that worn by Prince Menschikoff, and of a class which is generally accorded only to successful generals who have conducted an army and closed a triumphant campaign. A distinguished-looking man, who complained that he was likely to be deprived of his cruise in his yacht this year by the war, was pointed out as Prince Baratinski. Owing to some misunderstanding or other, a little fusillade began among the riflemen on the left during the armistice, which caused a little alarm for a moment, but it was soon terminated. General Bosquet and several officers of rank of the Allied army visited the trenches during the armistice, and staff officers were present on both sides to see that the men did not go out of bounds. The armistice was over about three o'clock. Scarcely had the white flag disappeared behind the parapet of the Mamelon before a round-shot from the Sailors' Battery went slap through one of the embrasures of the Russian work, and dashed up a great pillar of earth inside. The Russians at once replied, and the noise of cannon soon re-echoed through the ravines.

THE ADVANCED SQUADRON OF THE BALTIC FLEET.

The advanced squadron of the Baltic fleet arrived at Elsinore on the 1st of April, but, owing to the masses of drift ice and strong current, were unable to remain there—three (*the Arrogant*, *Tartar*, and *Cossack*) having parted their anchors; so they all got under way and proceeded to Landscrona, where they were joined by the *Amphion* on the 3rd inst., one of the "nine ducks." The *Archer* had not made her appearance. The *Amphion* got on shore near the anchorage, through the ignorance of the pilot; but it was not supposed that she had injured herself, as the mud is very soft. The *Impérieuse* and *Arrogant*, being of too much draught of water to pass through the Sound, parted company for Kiel, leaving the squadron under the command of Captain Yelverton, her Majesty's ship *Arrogant*. Some of the colliers sent out to supply the squadron with coals have fared but badly—one having foundered, and two or three others more or less injured, when trying to pass the Sound. Landscrona is a very snug little harbour, and it is expected that the ships will remain there till the Sound is entirely clear of ice.

A letter from Cherbourg says:—"The screw line-of-battle ship *Andérite*, which had been preparing to convey the Emperor and Empress to England, has received counter-orders, and is to proceed almost immediately to the Baltic, to operate with the English squadron. Four other line-of battle ships have been ordered to proceed to the Downs to serve as an escort to their Majesties in crossing the Channel, after which these vessels will also join the Baltic fleet."

A letter from Elsinore states that a Russian merchant vessel is lying there "which came in the autumn to take in a cargo of salt, and which got locked up in the ice. There are others similarly situated at Gothenburg and on different points of the coast; all of them came for salt, which appears to be wanted in Russia. They will probably be all captured by the English."

The Russians appear to be adopting the same mode of resisting invasion in the Baltic as they did in the Black Sea. The approaches to Abo, Helsingfors, and every town on the coast from Wyborg up to Tornea, have been rendered impassable by the sinking of vessels in the fairway channel; in Abo, Bjorneborg, and other towns, the inhabitants have formed themselves into sharpshooter corps, and armed themselves with double barrelled rifles. On the southern coast of the Baltic the conviction is general that Riga will be the first point attacked in the coming Baltic campaign. On the sea-side vessels and large blocks of stone are being sunk at the entrance to the bay, so that the shallowest-going craft will not be able to pass Dunamunde. At the further end of the bay there have been several heavily-armed mud batteries erected. On the land side a fortified camp is being formed, capable of containing two divisions of Russian troops. The Baltic army, which was to be brought up to 100,000 men by the late Emperor, is now about to be raised to 140,000 men.

PERSIA

The Hon. Mr. Murray arrived in Teheran towards the latter end of February. The camp at Sultanieh was decided on, and 40,000 to 50,000 men, with 100 pieces of artillery, were to compose the force. Provisions and ammunition; but the vermment has ample supplies of provisions and ammunition; but the vermment has ample supplies of provisions and ammunition; but the vermment has ample supplies of

RECEPTION OF HIS ROYAL HIGHNESS THE DUKE OF CAMBRIDGE AT THE MANSION-HOUSE BY THE LORD MAYOR.

As or himself, he had done nothing more than his duty, but he felt that those over whom he had had the honour and satisfaction of being placed in command had nobly conducted themselves, and, in short, achieved all the glory (Loud cheers). A General placed in high command has, indeed, no easy task; but, when supported, as he had been, by such men as the officers and soldiers of the First Division, or any other division of the British Army, he feels assured in the consciousness that that indomitable spirit which pervades every rank, from the highest to the lowest in his command, that it will not fail him in the hour of peril, but that the honour of the country must always be safe in such hands (Loud cheers.) But, in addition to having such men under his command, he had also had the advantage of acting with allies with whom it had always been his greatest pride and pleasure to be associated (Loud cheers.) He saw near him a gallant Admiral with whom he was associated in the Mediterranean, and he was glad to have the opportunity of assuring him and his country that one of the greatest sources of satisfaction had been his association with the French army in the Crimea (Loud cheers). That great alliance, so happily cemented, and which, thank God, was growing more intimate from day to day, would soon receive a new impulse from the arrival in this country of that great and illustrious man who now rules over a neighbouring and mighty nation (Loud cheers). May that alliance be of long duration, and may such a friendship be cemented between England and France as is necessary to secure the peace of the world (Hear).

The Lord Mayor next gave the "United naval and military services of England and France," associating with the toast the names of Admiral de Chabannes, Sir George Pollock, and Admiral Ryder Burton.

Sir G. Pollock briefly returned thanks for the military service.

The Vicomte de Chabannes, who spoke excellent English, returned thanks for the French naval service, at the same time vouching for the friendly feeling of the French navy for its kindred service in England (Cheers). The same feeling existed between the two armies, and was, if possible, stronger, because it was stimulated by common action, common duties, mutual assistance, mutual esteem, and the great hardships which both had suffered together (Cheers).

Admiral Ryder Burton briefly returned thanks for the British Navy, but expressed his regret that two proposals he had made—one to lead the Allied fleets into Sebastopol, and another to burn the Russian fleet—had not been entertained by our Government.

The Lord Mayor gave, with one or two observations, "Her Majesty's Ministers," coupling with it the name of the Chancellor of the Exchequer

The Chancellor of the Exchequer, in returning thanks, said that the illustrious Duke who had recently expressed their acknowledgments of his success to the officers and men by whom he was supported. In the same way did her Majesty's Ministers derive strength from the support they received from the great communities of this country, such as he now saw represented in that hall, communities celebrated for their industry, wealth, and power. Such support was in some sort a sharing of the responsibility of public affairs and a sure way of bringing them to a successful termination. It was only by the aid of well-earned public confidence that Ministers could get on with their difficult task, and that confidence was the more especially necessary in the office which he had the honour to fill.

Several other toasts were given, and suitably responded to, after which the company adjourned to the drawing-room

MEETING AT SURAT, IN AID OF THE PATRIOTIC FUND.—(SEE PRECEDING PAGE.)

OPENING OF THE EAST INDIAN RAILWAY.—THE BURDWAN STATION.

OPENING OF THE CALCUTTA, DELHI, AND LAHORE RAILWAY.

The official inauguration of the opening of this gigantic line of railway (of which we gave a description in our publication of March 24th) took place on the 3rd of February.

The building represented in the Engraving we have given is the Burdwan Station, sixty-six miles from Calcutta, at which place the Company gave a champagne breakfast on the day of opening to about 700 guests, including most of the leading men in Calcutta. From the station a leafy arcade, richly garlanded with flowers and banners, conducted across the Grand Trunk Road to an enclosure where the breakfast had been tastefully laid out in tents. The Maharajah of Burdwan had sent his mounted body guard, and a number of sepoys, in honour of the Governor-General's anticipated visit. He also kindly lent his magnificent shawl tents, with silver poles, for the accommodation of the principal guests. After an excellent breakfast, at which a number of loyal and appropriate toasts were given, the company returned to Calcutta at an early hour in the afternoon.

CANOSA.—EXCAVATIONS OF GREEK TOMBS IN 1854-55, AND RESTORATIONS IN 1855.

(From our own Correspondent.)

Whilst the excavations at Pompeii have of late been unattended with any important results, those of Canosa, on the contrary, have been full of the deepest interest. One of the most classical tombs discovered in this city within the last few years has been already described in the Illustrated London News. During 1854-55 the excavations have been continued; and, whilst treasures of art have been brought to light, funereal chambers of great architectural beauty have been disclosed to public view. The Engraving represents in three several compartments, as it were, the tombs just discovered; the portion of the ground not yet excavated; and the tomb already illustrated, with the exception of the intended restorations above, and a small chamber just discovered on the left. The compartment which we first described contained the entrances and the "prospetto" of the newly-excavated funereal chambers, decorated with columns and frontispieces. The doors have an Oriental character, narrowing towards the upper part—thus resembling the monuments of Assyria and Egypt. Two columns of the Ionic style, terminating with a fronti-piece, ornament these entrances, and the whole "fondo" is painted a dark red and blue. In the tomb facing us, perhaps, the master of the family was buried; whilst in the lateral chambers the women of the family were laid. And now we describe a state of things which would appear to be almost fabulous. Human skeletons were here extended on beds of bronze, decorated with statues and ornaments in ivory. The ground was bestrewed with filaments of gold, belonging certainly to a carpet, or some golden web; whilst round its walls were grouped vases of terra cotta, of various forms, but all extremely graceful. There were also paterae containing eggs and various kinds of eatables, whilst others had obviously contained liquids, as the deposit yet remained. In the female chambers were discovered a skeleton of one—young and beautiful, perhaps, when she died—wearing earrings which represented two peacocks, the colour of the plumage being produced by smalt upon gold. The arms were adorned with bracelets of gold, in the form of a serpent. The dress of this relic of mortality must have been

TOMB JUST DISCOVERED AT CANOSA; AND PROJECTED RESTORATION OF ADJOINING TOMB.

embroidered, for garlands of myrtle were found, both the leaves and the berries made of gold leaf; and in these are still visible the holes which were perforated when they were attached to the dress. A diadem of flowers, mysterious as were those of the asphodel, was ranged around the head. The cups of the flowers were of various colours, and were represented by rubies, by jacinths, and by emeralds, and some by smalt of various colours. That, however, which merits a distinct notice is a ring, which was found on the finger of this skeleton. It is formed of two clubs of Hercules, completing a circle, and terminating beneath in what is called the knot of Hercules, in the middle of which is a ruby. The upper part of the ring is a box, made to hold hair or perfume, and the cover is formed of a gorgeous emerald. The whole body of the ring is adorned with beautiful designs in filagree, which are the admiration of all the goldsmiths in Naples. The archæologists have been more particularly delighted with two gold medals found in this same tomb—having on one side, in relievo, the figure of a bull, the symbol of the earth; and on the other the head of the fountain of Juno, crowned with reeds. Such are the principal objects which have been discovered within this highly interesting tomb; the description of which will appear as fabulous almost as any of the illusions of the "Arabian Nights," but we have seen these objects within the last twenty-four hours, and seeing is believing. Passing to the second compartment, which we have marked B, and which is as yet untouched, nothing more is to be said than that the works will be resumed here after Easter. The portion of the design marked C has on the left side a small lateral room, just discovered. The entrance is decorated with two columns and a frontispiece. In this chamber were found the remains of a battle-horse, which had been sacrificed on the death of a warrior here buried. Its harness, ornaments, and bridle—all in bronze—were found here, as also a quantity of arms of various kinds. Some, perhaps, had served the purposes of the warrior, and some were trophies. The lower part of the tomb facing us in this compartment is that which has been already described in the ILLUSTRATED LONDON NEWS. In a short time it will be restored, according to the design here given, and with the original materials, which have been collected, and are carefully preserved in a chamber close at hand. The shade on the upper tier of columns marks the condition in which they were found, and their actual state. The restoration will commence from the shade line; and, when completed, this tomb will form an architectural curiosity perfectly unique. We may venture here to express a hope that his Sicilian Majesty, who has prosecuted these excavations hitherto with so much spirit, and has been so ably seconded by the Prince di Belmonte Bisignano and St. Georgio, will not relax his efforts in a work in which the whole artistic and antiquarian world is so deeply interested. It is expected that Signor Bonucci, director of the excavations, will resume operations immediately after Easter.

HENRY WREFORD.

CALENDAR FOR THE WEEK.

SUNDAY, April 15.—1st Sunday after Easter. Mutiny at Spithead, 1797.
MONDAY, 16.—Buffon died, 1788.
TUESDAY, 17.—Abernethy died, 1831.
WEDNESDAY, 18.—Oxford and Cambridge Term ends.
THURSDAY, 19.—St. Alphage. Lord Byron died, 1824.
FRIDAY, 20.—Spanish Fleet destroyed by Admiral Blake, 1657.
SATURDAY, 21.—Bishop Heber born, 1783.

THE ILLUSTRATED LONDON NEWS.

LONDON, SATURDAY, APRIL 14, 1855.

PARLIAMENT will reassemble under peculiar circumstances—not the least remarkable of which is the paralysation of party action under the influence of the double crisis. A few days must bring decisive tidings from Vienna, and may bring them from Sebastopol. We may hear that Alexander II. has consented to surrender Russian ascendancy in the Euxine; we may be informed that Canrobert and Raglan have anticipated his Imperial Majesty's resolution; or, as now seems to be expected, we may learn that the peace negotiations cannot be protracted with advantage. Whatever be the situation into which events may resolve themselves during the present month, it will be a very grave one; and faction—let it range itself on which side it may—must be silenced in presence of such operations. The visit of the Emperor of the French will, moreover, force the Houses of Parliament into a sort of holiday demonstration. There must be gratulations and compliments; and these, in ordinary decorum, must be unanimous. A family may be at extremely high words—and that species of aggravation which can be practised advantageously only in families, from the intimate knowledge each belligerent possesses of the weak points of all the others, may be at its intensest, when a visitor's entrance lays the whole storm. A general expression of gladness, and particular justifications of such gladness at such a time, and amiable testimonies to the hopes which had been previously expressed that such a visit should take place, succeed to the taunt and the homethrust; and not only is there peace for the time, but after the guest's departure the interval of courtesy is found to have done good. Something of this sort will be seen to have taken place in the House of Commons. Mr. Disraeli is "well up" in the supposed weak places of the Ministry, which he considers too aristocratic for such a country as this; besides its having a coalition taint upon it, and possessing no fixed principles, and being altogether incapable, and so forth; and Lord Palmerston is seldom at a loss for retort upon a party that is hungry for office, but distrusts its leaders, has little or no talent in its ranks, and is obnoxious to the nation; nor are the *dii minores* on either side much less ready with similar charges and counter-charges. But we shall not hear much of this kind of thing while the Emperor of the French is here. The satisfaction of Lord Palmerston at the presence of our noble ally will only be equalled by the delight of Mr. Disraeli that a great and wise Monarch should have selected such a time for his appearance; and perhaps the leader of Opposition will even congratulate her Majesty on having some one in the country who can give her judicious counsel at such a formidable conjuncture. And if the importance of the crisis should prove insufficient to ensure a statesmanlike gravity in its treatment, the duty prescribed by courtesy to the illustrious guest will infuse a becoming tone into the Parliamentary discussions of the time.

But the "lull," we take it, will not be of any long duration. The attitude of all parties must necessarily be that of expectation, for the moment, and any premature move would be received with the utmost impatience. There will be a home conflict, let the European question be decided which way it may. The conduct of the war, or the conditions of the peace, will supply equally matter for those who are bent on political strife; but still they must wait and see whether it is with war or peace that they are to be indignant. As soon as this is known the trumpet will, doubtless, give no uncertain sound. In the mean time, perhaps, the Budget may afford earlier scope for the energies of the discontented. For, whether peaceful or warlike counsels prevail, there is a bill to be paid. How Sir Cornewall Lewis intends to pay it remains to be seen (may we hope, *par parenthèse*, that all idea of getting it out of Russia, in the same way as we did out of China, has not been abandoned—the silver rouble will be as welcome in Threadneedle-street as the Sycee silver); but he has a more formidable task before him than any Chancellor of the Exchequer who has preceded him for many a day. We are disposed to think that, though his Budget will be a good deal criticised, it will not be torn to pieces, for reasons which have less to do with its own merits than with the situation of those who, were it destroyed, might have to concoct another. We shall not to be surprised to see the Budget—with the loan, to which all people seem to have made up their minds—disposed of with comparative ease.

Then, however, will come more serious business. It is not for nothing that the great Conservative party has been drawing together, appealing to traditions of our past military glory, fighting all election battles, obtaining what individual popularity was to be got at, and generally consolidating itself. Its leaders have not yet proclaimed war; but Russia, moving down upon the Pruth, gave not more significant intimation of her intention than the recent policy of the Opposition has afforded. The party is too strong to remain inactive, though not as yet strong enough to act independently. The incidents of the next few weeks may settle its position for a long period to come. Brilliant success in the Crimea, or an honourable and satisfactory treaty at Vienna, and the Opposition will have little chance of success in a hostile demonstration, or an appeal to the country. But reverses or long inaction at Sebastopol, and, still more, an unworthy and patched-up peace, and the road to office may be open to those who are eager to rush upon it. We will not so far wrong any class of statesmen as to impute to them a desire that the events at Vienna or in the Crimea may furnish them with political capital; but it is manifest that a large party is watching with no friendly eye the proceedings directed by Lord Palmerston's Government.

This state of things is, of course, perfectly well known to the Liberal party as to the Opposition. Already we have rumours that the Government contemplates measures, at home and abroad, which are designed to prevent the alienation of national confidence, and which are to afford rallying cries to the friends of the Cabinet. Lord John Russell may return either as a triumphant negotiator, or as one who has boldly asserted in Congress the sentiments he expressed in Parliament; another alternative may bring him home as the unpopular arranger of an unworthy peace—in which case it will be still more necessary that he should have something in store for the redemption of his character. It is said that the Representation of the People has not ceased to occupy his attention, and that his chief now approves his views. Then it is manifest that, whether peace or war is to occupy Europe, a bold course of action in regard to certain nationalities—one which should be at once an effort in the cause of liberty and a military operation of great advantage—would be a *coup de maître* on the part of an English Minister. Movements with which the name of Poland is connected are somewhat freely discussed in high places. Whether at present the two ideas in question are merely promulgated for temporary purposes, to be laid aside should they not be needed, we will not now discuss. It is sufficient for our purpose that such things are "ventilated," for they are evidence that the lull produced by the crisis is not expected long to survive the events that have, for the hour, paralysed party strife.

SINCE August 3, 1854, the minimum rate of discount at the Bank of England has been 5 per cent, but last week it was lowered to 4½—a sign of money becoming more abundant and cheaper. Between January 20th, when the bullion in the Bank was £12,162,495, and the 31st March, when it was £15,205,527, it has increased £3,043,032. Within the same period the reserve, or cash, in the Bank, which it is ready and willing to lend, has increased from £6,116,825 to £9,717,217, or £3,600,392. But the money out of the Bank, or in the hands of individuals, is also abundant, or the bill-discounters have so much to lend, that in Lombard-street bills are discounted at lower terms than 4½ per cent, and the Bank gets no bills, or is unable to lend money at its present terms. After a long period, from the beginning of 1852 to the autumn of 1854, of increasing and successful trade, a period of comparative stagnation and less successful trade has arrived. The chief causes of the rapid increase subsequent to 1851 were the gold discoveries in California, which gave a great extension to enterprise in the United States, and the gold discoveries in Australia, which in like manner affected our business. But towards the close of 1854 it was fully ascertained that the previous progress had been more rapid than sound; that the markets of California and Australia were overdone; that enterprise in the States had in many cases had a fraudulent basis; and bankruptcies became numerous in our colony, at home, and in the States. In the last six months the imports into the States have fallen off a full fourth, which has affected our manufactures; while the trade with Australia has not only fallen off—it has latterly brought home insufficient returns. At present commercial enterprise in both countries is very much curtailed; but much more, be it particularly remembered, in the States, which have had no war, than in our country; and in both countries money is now, in consequence of the diminution of commercial enterprise, comparatively abundant and cheap. A New York paper of the 24th says "the abundance of money is the inevitable result of the contraction of business, and of the effort to get out of debt; while there was, till the summer of 1854, only a desire to increase business and get into debt." If the present condition of trade, therefore, be less showy and dazzling than at the beginning of last year, it is more sound both at home and in the States. The reduction in the rate of discount will at least relieve business of one difficulty, if it give business no new impulse; but the probability is, that the increasing abundance of money seeking employment will stimulate enterprise; and the year 1855, as it advances, will be more prosperous than was the close of 1854.

THE Duke de Grammont, French Minister at Turin, is about to proceed to Rome, and offer his good offices in the differences which have arisen between the Holy See and Piedmont.

THE COURT.

The most active preparations are in progress for the reception of their Imperial Majesties the Emperor and Empress of the Fren who are expected to arrive at Windsor Castle on Monday next. Tuesday a grand dinner and evening party will take place at the Cast and on Wednesday, it is understood, the Emperor will be invested w the Insignia of the Order of the Garter. Thursday is to be devoted a visit to the Crystal Palace; and some of the succeeding days of t week the Emperor and Empress will honour the city of London w their presence at the Guildhall; the visit closing on Saturday.

The incidents of the week just closed have necessarily been few unimportant.

On Saturday last her Majesty and his Serene Highness the Prince Leiningen, with the Princess Helena and Prince Arthur, drove out in open carriage. His Royal Highness Prince Albert accompanied Majesty on horseback.

On Sunday the Queen and Prince, the four elder Royal children, the Prince of Leiningen, the Ladies and Gentlemen of the Court, and domestic household, attended Divine service in the private chapel of Castle. The Hon. and Very Rev. the Dean of Windsor performed service, and administered the Holy Communion.

On Monday the Queen and Prince, accompanied by the Prince Leiningen, walked in the Home-park. The four elder members of Royal family rode on horseback. The younger Royal children took t accustomed exercise. In the afternoon the Queen and the Prince Leiningen drove out in a carriage. The Prince Consort accompanied horseback.

On Tuesday there was no addition to the Royal dinner-party.

On Wednesday the Queen and Prince, accompanied by the Prince Leiningen, walked in the Home-park. Her Majesty afterwards rod the riding horse, attended by the Hon. Flora Macdonald.

On the same day the Prince Consort presided at a meeting of the Comm sioners of the Patriotic Fund, at the New Palace of Westminster.

The Viscountess Canning has succeeded the Duchess of Ath as the Lady in Waiting to her Majesty. Lord Rivers and Ge ral Sir Edward Bowater have succeeded Earl Somers and the Hon. M timer Sackville West as Lord and Groom in Waiting.

His Royal Highness the Duke of Cambridge leaves London Monday for Windsor Castle, where he will remain a guest of her Maje until Thursday next.

The marriage of the Earl of Lichfield and the Lady Harr Hamilton, eldest daughter of the Marquis and Marchioness of Aberco took place at Brocket-hall, Herts, on Tuesday last.

THE APPROACHING VISIT OF THE EMPEROR AN EMPRESS OF THE FRENCH.

The Emperor and Empress will leave Paris on Sunday by railway Boulogne. The following personages will have the honour of accompanying the Imperial visitors:—In the suite of the Emperor: His Excellency Marshal Vaillant, M. le Grand Maréchal du Palais, and Excellency the Duke de Bassano, M. le Grand Chamberlain. Aides-Camp: General Comte de Montebello, M. le Colonel Fleury, M. le Colo Fleury, M. le Comte Edgar Ney, and M. le Marquis de Toul gon, Officier d'Ordonnance. In the suite of the Empress: Madame Princesse d'Essling, Grande Maîtresse. Dames du Palais—Mdme. la Co tesse de Montebello, Mdme la Baronne Malaret. Premier Chamber M. le Comte Charles de Tascher de la Pagerie.

The Emperor and Empress will probably sleep at Boulogne, and e on Monday morning proceed to Dover; where the Imperial visitors will received by his Royal Highness Prince Albert. His Excellency L Cowley will accompany the Emperor, and proceed with the Impe cortège to Windsor Castle. Orders have been given to have apartme prepared for the Emperor and Empress of the French and their su and a *déjeuner* is to be ready for their Majesties and the Prince at two o'clock on Monday next, the 16th instant, at the Lord Warden Ho Their Majesties will leave Dover for Windsor Castle by a special train two p.m. on Monday.

It is understood that their Imperial Majesties the Emperor and Empr of the French will arrive at Windsor, by the Great Western Railway, six o'clock on Monday evening. The august visitors will be received a guard of honour, composed of the 94th Regiment of the Line, n quartered at the Sheet-street Barracks, a company of the Foot Guar from the Tower, and by a detachment from the Rifle Brigade. The Ma of Windsor (John Clode, Esq.) will have the honour of receiving the ill trious visitors on their arrival at the terminus in the Royal borough.

The Lords will be in attendance to conduct the Emperor a Empress to her Majesty's waiting room, which is beautifully fitted up the Arabesque style; and afterwards to the magnificent apartments p pared for them at the Castle. On emerging from the Windsor Railw Station, the Imperial Majesties will pass through a triumphal a erected at the junction between Thames-street and High street. Th will also be another triumphal arch erected in Castle-street under whi the Royal carriages will pass. The Castle-green, immediately bene the Castle walls, opposite to the establishment of Mr. Layton, confection to the Queen, will be furnished with thousands of seats, which will exte as far as Henry VIII.'s Gate, for the accommodation of the public tickets being previously granted by the committee.

On the arrival of the Emperor and Empress at the Castle they will received at the grand entrance by her Majesty the Queen, his Royal Hi ness the Prince Consort, and by the brilliant circle of visitors invited do due honour to the auspicious occasion.

On Tuesday next the Mayor and Corporation of Windsor, in th official robes, will present an address of congratulation to the Empe Napoleon III., and afterwards participate in a public dinner of the habitants, to be given at the Town-hall.

There will be state dinners at the Castle on every evening after t Emperor's arrival; and, subsequent to the investiture of his Imper Majesty with the Order of the Garter, on Wednesday, a magnificent be quet will be given, at which many of the nobility and gentry will present. There will be a review of the whole of the Household troo The 2nd Life Guards are at present in garrison, but the 1st Life Guar and the Royal Horse Guards (Blue) are expected next Monday, and w be billetted for two or three days on the inhabitants.

The Hon. and Very Rev. the Dean of Windsor, who is brother to Lo Cowley, the British Ambassador at Paris, has placed his residence in t Cloisters at the service of a portion of the Emperor's suite, and l great p parations are in progress to redecorate the ancient mansion. The prepa tions at the Castle are by no means complete, no less than 300 workm being still engaged.

It is said that the six days to which their Majesties' visit will exte will be divided between Windsor Castle and Buckingham Palace; t the Queen will herself conduct the illustrious visitors to an inspecti of the Crystal Palace, and to a performance at the Italian Opera; a that her Majesty will give either a State concert or ball at Buckingha Palace during the short stay of the Emperor and Empress.

His Royal Highness the Duke of Cambridge and a brilliant party w be present at Windsor Castle as the guests of her Most Gracious Majes

The Emperor Napoleon is said to have intimated to the Lord May through official channels, his desire and that of the Empress to pay personal visit to the City. The visit of their Imperial Majesties to Crystal Palace will probably take place on Thursday, the 19th. T public will be excluded from the building itself while they are maki their inspection; but in their progress they will present themselves the balcony to the people assembled in the gardens. Season ticke holders will be admitted to the interior during luncheon in t Queen's apartments, and her Majesty and her august visitors will th pass down the entire length of the Palace to the place of exit behind t Pompeian Court.

By these arrangements the inhabitants of the metropolis and the pub at large will have ample opportunities afforded them for evincing t cordial satisfaction with which they hail the presence of the Emperor a Empress of the French upon English soil.

The arrangements for the reception of the Emperor and Empress of t French at Guildhall are being completed with the greatest rapidity, und the able superintendence of Mr. Bunning, the City architect. As at p sent proposed, their Majesties will alight from their carriage in Gresha street, and proceed by a covered platform to the entrance to the t in front of the Hall, which will also be covered, and will accommodate abo 1700 persons. There will be accommodation for nearly 1500 in the Hall, a seats will be provided in the different lobbies on the north side of the H for fully 300 more. It is also proposed, subject to alteration hereaft that their Majesties will, on entering the Hall, turn to the east (the righ and sit upon the throne which will be placed there, when the address the Corporation will be presented to them. They afterwards proceed the Council Chamber; and, after partaking of the *déjeuner* which will there provided, will depart by the route they took on entering.

The members of the Army and Navy Club have determined to inv the Emperor of the French to a public entertainment at their splen Club-house in Pall-mall, on any day most convenient to his Majesty duri his stay in London. Four hundred officers of the two services have p down their names.

LATEST INTELLIGENCE.

A GOVERNMENT LOAN.

The Chancellor of the Exchequer has transmitted the following notice to the Governor and Deputy-Governor of the Bank of England, as a medium of communication with the Stock Exchange:—

Treasury Chambers, April 12, 1855

Gentlemen, I beg leave to inform you, and request that you will make it known in the usual manner, that Lord Palmerston and I shall be ready to see any gentlemen who may be desirous of contracting for a loan for the service of the present year, on Monday next, the 16th instant, at one o'clock, in order to inform them of the amount which will be wanted, and to fix the time and the manner of the bidding; and I hope it will be convenient to you, or one of you, to meet those gentlemen here at that hour.

I have the honour to be, Gentlemen,
Your obedient, humble servant,
The Governor and Deputy-Governor of the Bank of England. G. Cornewall Lewis

The announcement made to-day by the Chancellor of the Exchequer to the Stock Exchange that on Monday he will be prepared to meet parties and receive proposals for a loan is no more than was anticipated, the expenses of the current year being about £30,000,000 beyond the ordinary expenditure. The loan will most probably be for about £20,000,000. Opinions are divided, however, as to the probable mode in which it will be raised. It is not expected that any further additions will be made to Consols, and while some lean to the idea that a Three-and-a-Half per Cent Stock at par may be offered, others consider it most likely that a further extension of the various terminable annuities may be made, which would be readily taken for another twenty-five years, and would provide fully three-fourths of the probable amount required.—*From the Globe of yesterday.*

THE WAR IN THE CRIMEA.

Letters from Constantinople, of the 2nd of April, state that all the Allied fleet would soon sail for Sebastopol, in order to co-operate in the general attack. General Canrobert is said to have conferred with Admiral Bruat on the subject of a grand movement of the fleets. Admiral Lyons is making the blockade in the Black Sea more stringent.

According to a telegraphic despatch from the *Times* Correspondent in the Crimea, dated April 1 (this must be an error), the Allied armies were quite ready to open their fire on Sebastopol. The Generals probably only awaited the arrival of despatches from home before beginning the bombardment, which might be expected to take place any day during the ensuing week. The Generals wished to spare the town and public buildings. The Russians still shelled the Allied camp and batteries, but the guns of the Allies were nearly silent. The fire of musketry on both sides was active every night. The weather was fine and dry. Two fires had occurred in Balaclava, a circumstance which excited suspicions of treachery. The Russians were concentrating themselves towards Baidar. The garrison of Sebastopol was on short rations, as the authorities preferred storing up their supplies in magazines to issuing full rations.

The Paris correspondent of the *Times* says:—

It is said that a modification in the military operations is intended to be announced, which may necessitate a removal of a considerable portion of the army from before Sebastopol. Already people are beginning of talk of strongly fortifying Balaclava and Kamiesch with from 12,000 to 15,000 men each, supported by the squadrons, and transferring the mass of the army to some part of the southern provinces of Russia. They may either proceed to the attack of Odessa, or with the Imperial Guard and the Sardinian contingent enter Bessarabia. Such conjectures, however, can as yet only be attributed to the article in question. It is rumoured that we are to have another levy of 100,000 men in France, and that from 60,000 to 80,000 troops will be placed at the disposal of Austria, should war be the issue of the Conferences of Vienna.

THE VIENNA CONFERENCE.

The latest accounts from Vienna speak as though there was very little hope of peace being concluded. Letters from St. Petersburg, received in Paris on Thursday, speak in very positive terms of the determination of the Emperor of Russia to consent to no limitation of his force in the Black Sea, on the ground that the Allies have gained no advantage which would justify them in making any such demand.

THE OVERLAND MAIL.

The following has arrived at Trieste, in anticipation of the Overland Mail:—

The steamer *Calcutta* arrived on the 11th April at half-past three o'clock p.m., in 124 hours, from Alexandria. The India Mail left Alexandria on the 6th inst. with intelligence from Calcutta to the 10th; Madras, 14th; Bombay, 18th March. Mr. Laurence has gone to Peshawur to negotiate a treaty with Dost Mahommed. Lord Dalhousie was at the Neilgherries. The reorganisation of the military departments is complete, and the system works admirably. All usury laws throughout India have been abolished. The natives are petitioning the Council for an act to prevent polygamy.

CHURCH, UNIVERSITIES, &c.

Preferments and Appointments.—*Rectories:* The Rev. J. M. Lee to Botley, near Bishop's Waltham, Hampshire; Rev. M. Farrell to Woughton-on-the-Green, near Fenny Stratford; Hon. and Rev. J. Gifford to Widworthy, near Honiton, Devonshire; Rev. S. Thackwell to Little Birch, Herefordshire; Rev. J. T. Johnson to Beccles, Suffolk; Rev. H. P. Cooke to Nuneham Courtenay, Oxfordshire; Rev. W. Ewing to North Pakenham, near Swaffham; Rev. G. Coulcher to Wattesfield, near Bury St. Edmunds; Rev. H. C. Pigou to Wyke Regis, near Weymouth; Rev. R. H. Scott to Wootton, Isle of Wight; Rev. J. M. Lakin to Guestling, Sussex; Rev. R. Carter to Brantham, Suffolk. *Vicarages:* The Rev. J. Fitzgerald to Borden, near Sittingbourne; Rev. J. Atkyns to Ombersley, near Droitwich. *Incumbency:* The Rev. Symonds to Baldhu, near Truro.

The Lords of the Admiralty have notified to the Rev. J. C. Conolly, Chaplain of the Dockyard, Woolwich, that they have voted £200 for the improvement of the Dockyard Chapel, and to repair the damage done on the west side when the *Perseverance* fell upon it.

Testimonial.—A deputation from the poor of St. Matthews's district, Westminster, have presented the Rev. Alfred Jones, Chaplain of Ashe's Hospital, Hoxton, with a silver cup, in testimony of his ministry among them during ten years.

The Monument to the Late Dean of Wells, described in the Illustrated London News of March 31, was designed by Mr. S. S. Teulon, architect.

A Committee, composed of members of the Church Protestant Defence Society, Evangelical Alliance, National Club, Protestant Alliance, &c., have convened an "aggregate meeting of Protestants" on the subject of Maynooth, on Tuesday next, at the Freemasons'-hall.

Orders have been received at Woolwich to fit out, with all dispatch, twelve 9-pounder field batteries and two 12-pounder batteries, for immediate service.

The Foley-place Murder.—The trial of Luigi Buranelli for the murder of Joseph Latham, on the 7th of January, took place before Mr. Justice Erle, on Thursday. On the part of the prisoner several witnesses were called to prove that he was subject at times to mental aberration. The jury, after having retired a quarter of an hour, gave a verdict of "Guilty."

Christ's Hospital.—According to annual custom, the Bluecoat Boys, to the number of about 800, were presented to the Lord Mayor and Mayoress, in the Egyptian Hall, at the Mansion House, on Tuesday, when a more than usually large attendance of ladies and gentlemen were present to witness the interesting ceremony, in consequence of its being known that the Duke of Cambridge would attend. The Lord Mayor briefly addressed the boys, congratulating them upon the advantages which have been conferred upon them by the instruction which they had received in one of the noblest institutions of the City. The boys, after which then retired to the drawing-room, where the boys received from the Lord Mayor 1s. each, and partook of a bun and a glass of ale. We shall give an engraving of the proceedings next week.

The Newspaper Stamp.—A deputation, consisting of Mr. Baxter, president of the Provincial Newspaper Society, and proprietor of the *Sussex Express*; Mr. Johnson Gedge, of the *Bury Post*; Mr. Austin, of the *Maidstone Journal*; Mr. Richard Johnson, of the *Worcester Journal*; Mr. E. Baines, of the *Leeds Mercury*; Mr. Kemsley, of the *Leeds Intelligencer*; and Mr. Hudson, of the *Leeds Times*, had an interview with the Chancellor of the Exchequer on Thursday, at his official residence in Downing-street, to present a resolution unanimously adopted by a meeting of provincial newspaper proprietors yesterday in London, in favour of a halfpenny stamp for newspapers, to entitle them to pass through the post, instead of a penny; and also to press that the registration with sureties should not be confined to small newspapers as may be printed on stamped paper

TOWN AND TABLE TALK ON LITERATURE, ART, &c.

There is every prospect of a good Exhibition of pictures at the Royal Academy Rumour is busy in praise of many contributions, and we can confirm what is generally said by our own observation.

Sunday last and the two following days were dedicated by amateurs, as other first days in April have long been dedicated, to a round of visits to the studios of our principal artists. This visiting is no light work. Our artists no longer congregate in Berners-street and Newman-street: some are at Hampstead, some at Kensington, some at Bayswater, and some in the hidden and difficult recesses of St. John's-wood To visit them all, and go through with proper politeness the requisite ceremony of compliment and sight seeing, is simply impossible; but much may be done by dogged determination to see what is to be seen, and the result will always be found more than sufficient for the time dedicated, and the distances that have been accomplished.

We have no hesitation in saying ditto to rumour's assertion, that Mr. Roberts's single contribution will be one of the largest and most attractive pictures in the collection. It is in every respect a noble work of art, embracing a panorama-like view of ancient and modern Rome, rendered in a most masterly manner, and recalling the ages of Augustus and Leo most unmistakably to the spectator. This city of cities is re presented by our English Canaletti under the warm effects of a setting sun: a red hue, almost of melancholy (and therefore not inappropriate), pervades the whole composition. The Tiber is seen winding its way as if mindful that the great city it once watered has seen not only its decline but its fall, and that a lazy course to the sea is becoming the dignity of its former importance. Mr. Roberts has very seldom shown a more poetic sense of the sublime in art than in this picture. While one stands before it it is impossible not to rush into poetry. Of Roberts's "Rome" it may be safely said that the execution will amply satisfy the expectation it must necessarily awaken

Mr. Stanfield's large picture will gratify expectation in a similar degree. The subject is "The Fall of St. Sebastian" (we had nearly written Sebastopol), and the picture itself is painted as a companion to the "Gibraltar" and "Man-of-War Conveying the Dead Body of Nelson"—which no lover of true art is likely to forget. The "St. Sebastian" is a commission, it is said, from Sir Morton Peto.

Rumour is not wrong in asserting that Mr. Maclise will contribute a very fine picture to the same Exhibition. He has chosen his subject from Shakspeare—from "As You Like It—the wrestling scene between *Orlando* and *Charles*. With great good judgment Mr. Maclise has avoided taking the actual encounter of strength. He has made it more of an intellectual fight; and has admirably contrasted the muscular *Charles* with the mental *Orlando*. Nor is *Charles* too much of a Broughton or Dutch Sam; he is more of a pocket Hercules. Very exquisite indeed is that statuesque group of *Rosalind* and *Celia*. What exquisite faces!—what happy realisations of the female character as rendered by Shakspeare! Mr. Maclise has told his story on an English lawn in front of a mediæval mansion, that is said to be an accurate copy of a stately residence near Maidstone belonging to Mr. Betts. The picture, we believe, was painted for Mrs. Betts, the sister of Sir Morton Peto, and is one of a series of commissions from the same lady to our ablest artists. These railway monarchs have the good sense to commission good things. Why does not Mr. Brassey copy the excellent example of his partners?

To the same Exhibition Sir Edwin Landseer is to send only one picture. We have not heard its name, but it is safely described as very fine, with dogs and the usual Landseer addenda.

The newly-elected Royal Academician (Mr. E. M. Ward), with the customary coyness of a new member, has nothing to send. But Mr. Ward has been busy at the new Houses of Parliament; and, though the Exhibition will suffer from his absence, we must impute his not sending to a better reason than the custom of the Academy

Mr. Egg, too long an absentee, will atone, and ably, for the absence of Mr. Ward. He has three pictures in all and two are in one frame. His subjects are from Tom Moore, and from the life and death of the second Duke of Buckingham, of the Villiers family. The Moore is a prison scene, and represents a patriot rebel in the arms of his faithful wife. The figures are erect, and the expression on the woman's face is wonderfully fine. Her eyes beam with hope—admirably supported by a gleam of sunshine which passes across the composition, and speaks of happier scenes to come, as it reflects its light on the prison mattress and the prison fare. The twin picture is more ambitious. In the composition, to the left the Duke is seen

> Gallant and gay in Cheiden's proud alcove,
> The bower of wanton Shrewsbury and love.

It is a supper-scene, and the toast of the evening is being drunk by the assembled guests, including King Charles II. himself. The moon looks in upon the scene of revelry. The Duke is in the centre, in white satin; the King is in dark blue. The whole picture is true to the times and to the life of the versatile Duke. Not less true to the death of the Duke is the second picture. We have here the worst inn's worst room; the scene, in short, as rendered immortal by Pope, in his poem "On the Use of Riches." What a contrast to the companion picture is this death-bed scene! This lord of useless thousands, this terror of wits, this envy of Whitehall—

> Bold in the lists and graceful in the dance—

this man on whom all eyes naturally turned as soon as he entered a room, so easy was his bearing—is here nothing more than food for the worms. The contrast is solemn and suggestive.

The admirers of Mr. Frith—and he has a large and increasing circle—must be content with seeing him this year on a small scale, though as charming and true to nature as ever. One little bit—an illustration for a song by Moore (of course a tale of love) is exquisitely beautiful.

In that great stronghold of our school—landscape painting—we are to have some new and clever candidates for fame; but Mr. Creswick, from what we have seen and hear, will more than maintain his superiority in that walk of art with which his name is inseparably connected. When we are told that a collector possesses "a Creswick" we know at once that he has a good picture, and one that is true to nature and English scenery.

The Associates send strongly. Hook and Puckergill will be found to excel in figure-pieces. Our English Vandervelde (Mr. E. W. Cooke) has a winter piece—a Mill on Whittlesea Mere—that will more than sustain his well-earned reputation. Mr. Millais is in great force. His subject from common life—a Fireman Rescuing a Family from the Flames—treated with his fine feeling for the true pathos and sublime of human life. Here, then, is promise. We shall have, however, to regret the absence of Mr. Frost, whose delicate creations are not easily supplied elsewhere.

Favourite contributors without the pale of the Academy will be seen to advantage. Mr. Ansdell sends a pair of gamekeepers an English gamekeeper and a Scottish gamekeeper; the characteristics of both countries admirably depicted in the faces of the men, in the scenery around them, and the dead game about them. Mr. Solomon has a Boulogne sea-shore scene, in which sickness and health, low life and high life, are most strikingly and touchingly contrasted. Mr. Glasse contributes a Prairie picture. The first Monday in May, we may safely assert, is more than likely to supply a treat to the lovers of art.

In Literature we hear of nothing of greater moment than the forthcoming "Life of Washington," by Washington Irving. The work is printed, and ready for delivery. But who is the London publisher? In the present uncertain state of the law no one is willing to venture his money in purchasing what anybody may reprint. As the law stands, no publisher is fool enough to own an account with an American book. It is not worth his trouble. The hardship of Mr. Irving's case may perhaps elicit a larger sympathy with the pockets of English authors than our American brethren have been in the habit of exhibiting. If this is so, we may have, before very long, a reciprocity of copyright, by which authors and readers will both gain.

Our contemporaries are giving circulation to a stupid paragraph respecting "a new Royal residence," which her Majesty, it is said, is about to purchase and inhabit. Denbies, near Dorking, is alleged to be the place, and Sir William Cubitt is the person whose house her Majesty has pleased to desire. Now it so happens that Denbies belongs to Mr. Thomas Cubitt, no relation whatever of Sir William; more than this, there is no truth whatever in the story.

The admirers of Mr. Martin's genius should make a point of visiting the three last efforts of his pencil, "The Last Judgment," "The Great Day of Wrath," and "The Plains of Heaven." They have never been properly seen in London, but are now on view and well hung at No. 52, Threadneedle-street.

THE CRISIS OF THE VIENNA CONFERENCE.

It is, perhaps, a singular coincidence that we shall receive the intelligence of the final determination of the Czar during the visit to England of the Emperor of the French. The certainty of our having to wage together a great European war may be announced, perhaps, at the very moment that our gracious Queen is investing the Emperor Napoleon with the insignia of the highest honour she has to bestow; or the news of peace might be proclaimed as Victoria and her Imperial ally pace the tramway at Sydenham, surrounded by the arts and works of peace.

It is now certain that the instructions of Prince Gortschakoff and of M. Titoff cannot reach Vienna before the 16th, and may not arrive there till, perhaps, the 20th. The most probable date is, perhaps, the 17th or 18th; until which day public anxiety must postpone its impatience.

Whatever Conferences may be held previously to that date will have reference to matters of comparatively minor importance.

We are glad to be able to state that the professions of the Court of Vienna are most satisfactory to the Western Powers; that, if peace be not now attained, our ally is prepared to use his utmost efforts in war to obtain the object of our alliance.

The King of Prussia, whose Russian tendencies were but the other day pushing him strongly to ally himself with the Czar, has, as we predicted, found his heart fail him; and we believe we are correct in asserting that he has written a letter to the Emperor of Russia urging him to send Count Nesselrode in person to make peace if possible; and warning him that, if the attainment of peace should be prevented by unnecessary obstacles set up by the Cabinet of St. Petersburg, then all Germany would, no doubt, side with Austria and the Western Powers; and that Prussia, deserted by her German friends, would find herself in an extremely difficult position.

It is thought by some that this step on the part of Prussia may have some influence at St. Petersburg; but we confess we think that, if the weighty reasons that Russia has for yielding to our terms fail to induce to that course, the selfish arguments of the Court of Berlin will hardly be likely to determine Russia to sacrifice what she considers her truest interests to those of her valued neighbour.

If the King of Prussia really desired that his nephew should accept our terms, he would join our alliance. This would argue genuine approval and genuine determination; but, so long as he holds aloof from either party, he is only in the position of a man who, from fear, shrinks from adopting any definite line of policy. We do not believe that he will do this; Russia; we consider that we have material guarantees for that. Whether, however, he will join us till his aid is worthless, and his power nil, is more than we can pretend to say.

Since the proclamations and speeches of the Emperor, and the circular note of Count Nesselrode, we have no indications of any change in the policy of the Russian Cabinet; and the question remains the same—Will Russia postpone her dignity, reduce her fleet, and abolish her aggressive power in the Black Sea, or will she brave the alternative of an European war? We shall know this next week.—*Morning Post.*

Grand Military Ball at Edinburgh.—The pavilion engraved in the Illustrated London News of last week was from a daguerreotype taken by M. Pygowitz.

A Business Man.—A commercial gentleman recently arrived at Niagara Falls just before midnight. He immediately bought a globe-lantern, crossed to Goat Island, examined the cataract, and, in thirty-seven minutes, had finished up the great American wonder, and was once more on his way to Albany.

For the second time, the clergy of the Convent of St. Sergius, near Moscow (which passes for one of the richest convents in Russia), have presented a sum of money to the Emperor for the purpose of carrying on the war, their gift on this occasion amounting to nearly a million francs.

All the electric telegraphs throughout the Pontifical States are now open to the public. A despatch of 20 words or under, transmitted to a distance not exceeding 40 miles, costs about 2f. 60c. (2s. 2d.)

A few days back Mr. John Harsan, a workman at Paisley, was presented with a purse containing 50 sovereigns, a handsome gold watch and appendages, and a gold ring for his wife, as a token of public respect for having rescued upwards of twenty persons from drowning in the river Clyde.

Barbarous Ustromarty.—St. Petersburg letters of the 31st ult. let us into some of the secrets of the Russian army. Strangers returning from the city of the Czars had more than once expressed their astonishment at beholding whole regiments, the uniformity of whose costume extended to their hair. The letter in question explains how this result is arrived at. "The Emperor has deigned to order—1st, that the soldiers who mount guard on week-days shall not be required to dye either their hair or whiskers; and, secondly, that mondays and feast-days they must mount guard with their hair and whiskers waxed and dressed."

The Queen of Spain has been pleased to confer the honour of Chevalier of the Order of Charles III. on Mr. W. J. Smith, of her Majesty's Office of Works, Whitehall.

Cremorne Gardens. The Easter festivities at this popular resort were liberally patronised on Monday, and the musical and other novelties which had been advertised appeared to give great satisfaction.

"Sparks and Specs of Sam Slick" at the Polytechnic Institution.—On Saturday evening we were favoured with a private view of this Diorama, which is both novel in character and excellent in effect. After some delay, rendered necessary by the important preparations for so extensive an experiment, Mr. Pepper appeared, and explained the difficulties under which they laboured, and stated that it was the first attempt at a rehearsal of the entertainment. The working, however, of the Diorama proved better than had been expected. The lecturer, who was not named, but who was either, by general report, Mr. Banvard or Mr. Hall, stated that the Egyptian-hall Dioramas of some years since was the origin of those that are now so frequently exhibited. The present is certainly painted in a highly-pleasing style, well illustrative of the lecture, besides presenting a series of the great cities of the United States. Commencing at Liverpool, with the steamer lying off St. George's Docks, we are taken to witness the burning of the *Ocean Monarch*, the steaming of the *Great Britain* in Dundrum-bay, a storm in the Atlantic and floating icebergs, and at length to Boston. Here the main interest of the diorama really begins. To enable the *Britannia* steam-ship to sail for England, a channel in the ice, eight miles in length, through the ice; the river steamers are brought into play, in order to land the passengers at Charleston, and enable them to arrive at Boston. Jenny Lind's hotel at New York was an object of interest, with the furniture, which was long preserved, until finally sold by auction—the auctioneer describing her bed as the "nightly receptacle of her vocalised beauty." The Broadway also presents its points of attraction. Philadelphia, Baltimore, and Washington succeed. The lecture was, in parts, highly humorous in its details and reflections. Some interesting experiments on glass followed the exhibition of the diorama, and the company parted highly delighted with the evening's entertainment.

South Wales Iron Works.—In consequence of the depressed state of the iron trade, and the high rate of wages which have for a length of time past been received by the workmen, the ironmasters of South Wales have determined to reduce the wages of their men to the extent of 10 per cent.

Expedition to the Interior of South Africa. (*From a Correspondent*)—I noticed in your paper of the 7th a paragraph respecting my brother Frederick's travels in South Africa, and his present expedition, in company with Mr. Dalton, to the Great Lake in Ngami. Anderton (not Mr. Anderson), a friend of my brother, is an experienced traveller in that region, and is at present in London preparing to give the public some account of his travels and adventures in Africa, and which, I have no doubt, will be faithful representations of what he has seen and done. My father, whom you designate as "Assistant-Commissioner on the frontier of the Cape Colony," was Deputy-Commissary-General there for some time; but latterly at Cape Town, and has now retired from the service. My brother has a further object in his present expedition—that of exploring the copper-ore region on the western coast. He is a young traveller for the experience he has had, being now twenty-six years of age.—W. G. Green, Chattingham Barns, Northumberland.

FLEET FROM SPITHEAD.—(SEE PAGE 353.)

THE SILENT MEMBER.—(No. XII.)

It has become a rather general belief that our recent disasters in the Crimea are attributable in a great degree to the aristocratic element which has been allowed to enter too largely into the composition of the heads of our Army, as well as into the principal offices of Government. Lord Palmerston, as a Premier belonging to the aristocracy, has been anxious to throw the blame from the shoulders of his "order;" and, in doing so, he rather unceremoniously attempted to cast the burden, with all the odium attaching to it, on to the unfortunate body of the Commissariat. The Premier argued that the department in question had been the weak point in the conduct of the war; and he assumed that, as the Commissariat is not made up of the materials objected to as aristocratic, it must be inferred that the aristocratic composition of our public service has not been the cause of our Crimean failures. It might naturally be expected that the department thus attacked by the Prime Minister would remonstrate against the treatment it has received; but it will surprise many people to hear the grounds on which the Commissariat complains of the alleged injustice that has been done to it. Passing over lightly the charges of incapacity, the Commissariat dwells with much sensibility on that part of the accusation which ranks the members of the department among the "common fellows," who have no aristocratic or gentle blood in their veins. It would, perhaps, have been a hopeless task to lay claim to much credit for ability; but the Commissariat had better have let the charge pass altogether unnoticed than have exhibited a maudlin sensitiveness to the sneers of Lord Palmerston on the class to which the body is presumed to belong. Nobody cares to know anything at all about the quality of the blood running in the veins of the whole of the Commissariat; whose members, instead of boasting of their own blood, had better render an account of that which has been sacrificed by their incapacity and neglect.

It is hardly a time to boast of aristocratic connection, when society is ringing with tales of scandal in which a member of a very aristocratic family has played a most disreputable part. Since all the daily papers have openly named the Hon. Francis Villiers—a son of the Earl and Countess of Jersey—it is unnecessary for the Silent Member to observe a solitary silence, as to the party against whom "painful rumours"—as they are always called when one of the upper circles has disgraced himself—have been for some time current. Without wishing to add to the sufferings of this very aristocratic family, one may legitimately ask whether such evils as the one that has lately happened are not sometimes aggravated by that cold exclusiveness which shuts out sympathy, and causes many to exult over the pride that has met a fall? Many will remember the slavish sycophancy which some years ago expressed its deep condolence with the distress of this very family at the calamity that had fallen up on it by the alliance of one of its daughters to a person of the middle class. "Society" was shocked at the contamination; and all the parasites of aristocracy lamented the *mesalliance* which is understood to have brought happiness to the two parties immediately concer ned, though the "honour of the family" is said to have never recovered the wound it then sustained. Let what has occurred be a warning to the nominally noble; that there are virtues out of their own class; and that, unless some of these virtues are from time to time imp orted into it, the honour of a family may either die away, or be exposed to those rude shocks, one of which has done more violence to the fame of the house of Jersey than the marriage of all its single member s at once into the middle classes would have inflicted

An attempt has been made to st op the gap at the Colonial-office by throwing into it a certain Ball, who, though not without ability, which he has from time to time displayed in the House of Commons, is wholly without experience in Colonial affairs. Mr. Ball goes to his new appointment, at all events, without prejudice, for it is impossible he can have formed a partial judgment upon that of which he knows nothing. The colonists at all events cannot complain of his views being on e-sided, for he can have no views, as yet, of that which he has never seen. The news to be sent out to the expectant Colonies will, however, be more welcome than the last intelligence, which could only have told them that there was nobody at the Colonial-office; whereas now they may be assured that an apprentice has been taken into the business, who, when the master comes back from Vienna, will begin to learn his work.

The condition of our own Administration in nearly all its departments brings very naturally to one's mind the great American party of Know-nothings, which seems to be making rapid progress, while our Know-nothings have a tendency rather to retrograde than to advance. In America, however, the Know-nothings are only ignorant of every thing which impedes the welfare of their own country; while our K now-nothings seem to know everything, or at least to be able to talk about everything, except the duty they have to perform. Our Know-nothings should rather be called Know-nobodies; for, while inefficient themselves, they seem to know nobody who can help them, and they system atically ignore everybody but the nobodies who belong to their own privileged class.

Everybody is beginning to talk of the visit of the French Emperor, with his Empress—an incident that some two years ago the boldest prophet would not have ventured to predict. Popular feeling has changed wonderfully in this country towards the illustrious man who has used with admirable wisdom and good faith towards us the power which the friends of constitutional government would have desired to see attained in a different manner from that in which it came into the hands of Louis Napoleon. It is not, however, for us to question the will of the F rench nation, and we may, at all events, compliment our ally on having chosen for her rules the most remarkable man of the present age, and the only Sovereign of France under whom a cordial alliance with England has ever been accomplished. In the choice of his Empress he gave a new proof of his shrewdness which often renders Royal marriages the source of unhappiness to Sovereigns themselves, and of misfortunes to the people they govern. Napoleon III. may be regarded as, in one sense, the embodiment of the principle of progress, for he is the representative of no ancient or noble family, and he owes his position on the throne of F rance less, after all, to his being the heir of the first Napoleon, than to his own invincible energy. His name, no doubt, gave him the opportunity; but, had he not possessed some of the genius which raised the first Napoleon to his high position, that opportunity would have been unavailing. Whatever sentiments may have been formerly entertain ed towards him, the fact of his being a guest of our Sovereign, and the ruler of a great nation in friendly alliance with ourselves, should ensure him a respectful and cordial, if not an enthusiastic, greeting. He has, at all events, shown his own generous confidence in us, by coming among us notwithstanding all the rather hard thin gs we have from time to time said about him; and he has set the example of putting in practice that oblivion of the past which we ought now to reciprocate.

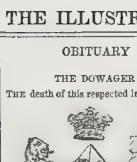
AMERICAN ENTERPRISE. Cornelius Vanderbilt, "the commercial king of America," who has always strenuously maintained that the American merchants could sustain ocean steamers at a profit without aid from the Government, is putting his theory into practice. On the 21st of April his steamship *North Star* sails for Havre, the pioneer of the new line of packets which he is establishing between New York and France. On the 3rd of next month he launches the *Ariel*, which is to follow the *North Star* in May; while in June the third ship of the line gets under way. These are all first-class steamers, and, with the enormous wealth and irrepressible energy of Mr. Vanderbilt, a great experiment will be made. This gives us now ten American steamers plying regularly between New York and Europe.

A PROPOSITION has been made to the French Government by M. Petros Demetracarakes, a Greek gentleman residing in Paris, to raise a corps of from 500 to 1000 Spartans, his countrymen, to fight against the Russians. The proposition has been submitted to the Emperor, who decided that there was no occasion for following it out.

OBITUARY OF EMINENT PERSONS.

THE DOWAGER MARCHIONESS OF DOWNSHIRE.

THE death of this respected lady occurred, after a short illness, at Hillsborough, county Down. The event has cast a deep gloom over the neighbourhood in which she resided.



The Marchioness was born May 30, 1790, the eldest daughter and coheir of Other-Hickman, fifth Earl of Plymouth, by Sarah, his wife, daughter and coheir of Andrew, last Lord Archer. Her Ladyship married, October 25, 1811, Arthur-Blundell-Sandys-Trumbull, third Marquis of Downshire; and by him, who died April 12, 1845, had three sons, viz., Arthur, present Marquis of Downshire; Lord William Frederick Hill, killed by a fall from his horse, March 18, 1844; and Lord Arthur Moyses Hill, M.P.; and two daughters, Lady Charlotte-Augusta, wife of Sir George Chetwynd, Bart.; and Lady Mary-Penelope, wife of the Hon. Alexander Nelson Hood. The Marchioness was one of the coheiresses of the barony of Windsor.

MAJOR GEORGE DRUMMOND GRÆME, K.H., OF INCHBRAKIE, PERTH.

MAJOR GRÆME died on the 20th ult., at Tours, in France. He was second son of the late George Græme, of Inchbrakie, Captain 72nd Highlanders, who was wounded at the Siege of Gibraltar, and grandson of Patrick Græme, of Inchbrakie, Captain in the Dutch Service, who was served heir to Patrick, first of Inchbrakie, second son of William, first Earl of Montrose, slain at Flodden-field.

Major Græme served with reputation in the 2nd battalion King's German Legion, and in the Hanoverian Guards, having been present with the former distinguished corps through a long series of battles and skirmishes; and having, at Waterloo, made himself conspicuous in the defence of La Haye Sainte, from the roof of which he kept in check (with a handful of rifles, and until he fell wounded) the repeated charges of the Emperor's Cuirassiers, the corpses of his friends in arms forming a breastwork around. The broken-down wall borne in the shield of the ancient family of Græme is of significant notoriety: it was originally granted to an ancester—in allusion to the prowess of the renowned progenitor who governed Scotland during the minority of his stepson Eugene II., repulsed the Roman legions, and, by overthrowing the mighty rampart of Antonius, immortalised his name, so that to this day the ruins, still extant, retain the denomination of the Græme's Dyke.

Major Græme, whose death we record, married, in 1842, his cousin, Marianne Jane, daughter of James, Viscount Strathallan, and grand-daughter of the late Duke of Atholl, by whom he leaves issue.

MISS LUNDIN, OF AUCHTERMAIRNIE, N.B.

THIS excellent lady died at her residence in Edinburgh, at the age of fifty-nine, last month. The family of which she was the representative is one of the oldest, and was, at one time, one of the most influential in Scotland. Its possessions extended over the greater part of the counties of Forfar and Fife, where estates and villages are still called by the name of Lundie. The family can be traced up to the time of Malcolm Canmore, King of Scotland, the earliest period in Scottish family history that any documents are extant. The Lundins were, probably, as Chalmers believes, one of those great Anglo-Norman families that settled in the neighbourhood of the Forth and the Tay. In the reign of William the Lion, one of his sons married the heiress of Lundin, and took her name with her estates. From this period the Lundins of Lundin enjoyed, in uninterrupted succession, their possessions and influence for the

long period of nearly five hundred years. Near the middle of last century the estates were inherited by a female, who married the Earl of Perth, but the estate of Auchtermairnie still continued in the possession of a younger branch of the family, and we hope it long may. Miss Lundin succeeded, in 1832, her brother, Captain Lundin, who died unmarried. She is succeeded by her sister, who is married, and has a large family. The arms of Lundin of Lundin were the Royal arms of Scotland, which they were granted to bear, as being descended from Royalty. The arms of Auchtermairnie were those of the family before their connection with the Sovereign, and are still worn by the present generation. The motto "Lean gemm," &c., shows that birth and power were their most cherished inheritance. The estate of Lundin at Pitlessie is at present owned by a large insurance company. Auchtermairnie remains in the family.

WILLS AND PERSONALTY.—The will of Lieut.-General the Right Hon. Lord Frederick Fitzclarence, Commander-in-Chief of the Forces at Bombay, has been proved in Calcutta, under £5,000, within the province of Canterbury. The Rev. Sir Thomas Gery Cullum, Bart., F.S.A., M.A., £45,000. The Rev Jonathan Dawson, M.A., of Rolleston-hall, £40,000. The Rev. Joshua Rowley, £35,000. The Rev. James Haldane Stewart, M.A., £4000. Captain John Spencer Manning, 1st Dragoon Guards, of Portland Castle, £12,000. George Taylor, M.D., of Lewes, £12,000.

A CHARGER FOR THE EMPRESS.—The Emperor of the French has offered 1000 guineas, open to Great Britain and Ireland, for a perfectly broke charger for the Empress. He must be thorough-bred, quiet with troops, and stand fire.

COLLISION IN THE IRISH SEA.—The screw-steamer *North Carolina*, from Philadelphia to Liverpool, was run into and sunk off Barnsey, on Sunday morning, by the *Robert*, from Liverpool to New Orleans. The *Robert* put back with the captain and crew on board, and the remainder of the *Carolina*'s passengers and crew were saved by another ship.

A PROLIFIC EWE.—A ewe, the property of Mr. Arnall, of Thrussington, Leicestershire, has had the immense number of twenty-two lambs in six years, and is still in a very healthy condition. She has had three lambs at a time for three times, four during the last twelve months.

THERE will be a meeting of the choirs of St. Paul's, Westminster Abbey, Canterbury, Cambridge, Oxford, Windsor, and the gentlemen of her Majesty's Chapel Royal, at Eton, on Tuesday next, for the purpose of performing several anthems of our most celebrated composers of our cathedral music. The meeting is for the benefit of the Choir Benevolent Fund.

PRIZE ESSAY.—Sir Edward Bulwer Lytton's gold medal, for the best essay, by any student of the University of Edinburgh matriculated in 1853-54 or 1854-55, "On the Influence of the Mind over the Body in Causing and Curing Morbid and Anomalous Conditions," has just been adjudged by the Senatus Academicus. The successful competitor is John Glen, M.A., student of medicine; son, we believe, of the late Rev. Dr. Glen, for many years missionary in Persia.

TESTIMONIAL TO MR. G. D. THOMPSON.—On Wednesday evening a party of gentlemen, including several eminent members of the clerical and medical professions, with a strong contribution from the circles of art and literature, met at Radley's Hotel, for the twofold purpose of enjoying an excellent dinner, and presenting a testimonial to Mr. G. Douglas Thompson. This gentleman, we should state, is well known for his success in dealing with all defects of the voice, whether contracted by habit, caused by nervous affection, or arising from malformation of the teeth or palate. He is a skilful master of what has received the name of an art—pronunciation. The last Mr. Thompson has for many years practised in London, and the Universities of Oxford and Cambridge, with uniform and decided success. Possessing the accomplishments of a scholar and a poet, Mr. Thompson has made of treatment exercises and lectures that improve the mind, while he trains and strengthens the organs of voice; and those who have sought him as pupils, in very many cases, remain to him as friends. In their feeling of the value of his services they expressed themselves at the evening. Mr. Samuel Lover, the popular author and artist, presided, and, in the address with which he prefaced the toast of the evening, gracefully touched on the qualities above alluded to, introducing in his happiest vein of humour anecdotes and illustrations that, by turns sparkled with wit affected by pathos. The testimonial presented to Mr. Thompson was a handsome silver inkstand and a rare quarto edition of "Shakspeare." With the latter present Mr. Lover intends to prove

MUSIC.

THE opening of the ROYAL ITALIAN OPERA, which was to have taken place on Tuesday last, was postponed to Thursday. The opera selected on this occasion was Rossini's "Comte Ory," a piece which was performed several times with considerable success in the course of last season. It owed this success to the beauty of the music and the brilliancy of Mademoiselle Bosio's singing, for the opera, as a drama, is beneath contempt. An additional interest was given to its performance by the accession of Gardoni, who has not appeared on our opera stage since the closing of Her Majesty's Theatre. Next Thursday the Queen is to visit the Opera in state, accompanied by her illustrious guests, the Emperor and Empress of the French; on which occasion "Fidelio" is to be performed, and the celebrated Jenny Ney will make her first appearance in England.

THE opening of DRURY LANE, too, with an operatic company, which was to have taken place on Monday last, has been postponed to Friday. Signor and Madame Gassier, announced to appear in the "Sonnambula," are singers of considerable reputation on the Continent. Next week we shall be able to describe their début and its success.

THERE was another "Monster Concert" at Exeter-hall on Wednesday evening, given by Mr. Case—a gentleman principally known as a performer on the concertina. Its only remarkable feature was its *bulk*. "There were," says a daily contemporary, "*twenty* male and female vocal performers; *nineteen* solo instrumentalists, *six* of whom were pianoforte players; a pretty numerous orchestra, led by Mr. Viotti Collins; and no less than *seven* conductors. The number of the pieces in the programme was *forty-two*—many of which were instrumental solos of great length." The list of performers included almost every eminent name in London; but the programme consisted almost entirely of common and familiar stuff, which, though they appear hackneyed to the *blasé* concertgoer, are nevertheless sufficient to please a popular audience not in the habit of frequenting such entertainments.

HARMONIC UNION, HANOVER-SQUARE ROOMS.—At the next concert, which takes place on Wednesday, Mendelssohn's music to "A Midsummer Night's Dream" and the "Walpurgis Night" will be performed. Signor Piatti is engaged for Molique's Violoncello Concerto—a work which created a great sensation when first performed by the Philharmonic Society.

SIR HENRY BISHOP'S CONCERTS.—The Second Evening Concert will take place on Monday next, at Exeter-hall; and the Afternoon Vocal Concerts will be resumed at the Hanover-square Rooms on Saturday next, the 21st instant.

METROPOLITAN NEWS.

RESULTS OF METEOROLOGICAL OBSERVATIONS

NOTE.—The sign + denotes above the average, and the sign — below the average. The numbers in the seventh column are calculated on the supposition that the saturation of the air is represented by 100.

The *reading of the barometer* decreased from 30·10 inches at the beginning of the week, to 30·04 inches by the afternoon of the 6th; increased to 30·11 inches by the 7th; decreased to 29·22 inches by the 10th; and then increased to 29·73 inches by the end of the week. The mean for the week, at the height of 82 feet above the level of the sea, was 29·724 inches.

The mean temperature of the week was 47·8°—being 5° above the average of the corresponding week during thirty-eight years.

The range of temperature during the week was 24°, being the differences between the lowest reading on the 6th and 8th, and the highest on the 6th.

The mean daily range of temperature during the week was 16·7°. The least was 11·4° on the 10th, and the greatest was 22° on the 6th.

The weather on the first day of this week was very fine; and, with the exception of the 8th, the temperature has been somewhat above its average. A high wind was blowing almost continuously from the 8th to the 11th. The weather has been unsettled and unseasonable. Rain to a small amount only has fallen.

JAMES GLAISHER.

Lewisham, April 13, 1855.

HEALTH OF LONDON.—Within the week ending April 7, the births of 1017 were entered in the registrars' books of the metropolitan district: 528 were boys, and 489 were girls. The average number in the fourteenth week of the year are 760 males and 734 females. Of 1222 persons were registered in the week, being less than the corrected average for the week by 23; thus exhibiting satisfactory evidence of an improved state of public health, the mortality week to week for a long time having been excessive. In the thirteen weeks ending 31st March, 19,627 deaths were registered, a number exceeding the average by 4096 nearly—chiefly persons in advanced age, weakly children, the sufferers from chronic diseases, and others who, when the winter set in, were in good health, and whose deaths were caused by the severe weather, which extended from January 10 to the end of the quarter. Congestion and inflammation of the lungs were the most prevalent fatal diseases.

BANK OF ENGLAND.—At a general Court of Directors, held on Tuesday, Mr. T. M. Wegnelin was elected Governor, and Mr. S. Neave Deputy-Governor, for the ensuing year.

MICROSCOPICAL SOIREE AT APOTHECARIES' HALL.—On Wednesday evening the Society of Apothecaries gave their second soirée, in their fine old Hall. The assembly was presided over by the master, N. B. Ward, Esq., F.R.S.; and the company, numbering between 600 and 700 guests, included the leading microscopists of the day. The walls were decorated with superb drawings, diagrams, and paintings from the most celebrated collections; and upon the tables were ranged upwards of 150 microscopes, exhibiting many of the actual organisms whose representations were suspended above them. We reserve the details of this very interesting meeting until next week, when we shall engrave the scene.

ROYAL WESTMINSTER OPHTHALMIC HOSPITAL, CHARING-CROSS.—At a quarterly meeting of the Governors of the charity, held on Thursday, the 5th inst., the secretary reported that 1199 poor persons had applied to be relieved as out-patients for the quarter ending March 31, that 47 persons had been admitted as in-patients during the same period, and 9 died in all. Amongst other operations, 11 for cataract had been successfully performed during the last month. The Governors still have to regret the inadequate state of the funds placed at their disposal to meet the increasing demands for relief.

TRIAL AND ACQUITTAL OF MRS. RAMSBOTHAM.—The trial of Mrs. Ramsbotham for two distinct larcenies said to have been committed by her—two sleeves on the 15th of March, and four handkerchiefs on the 27th of March—from the shop of Mr. J. W. Moule, of Baker-street, took place at the Middlesex Sessions on Wednesday. Mr. Bodkin was counsel for the prosecution. Mr. Ballantine and Mr. Parry were for the prisoner. The court was crowded in every part, a large number of ladies being present. The prisoner pleaded "Not Guilty" to both counts of the indictment. A number of witnesses were called, who stated that they saw Mrs. Ramsbotham take the articles in question. Mr. Ballantine, in addressing the jury on behalf of the prisoner, contended that a trap had been laid for her, and she had fallen into it, "She was about to go away when a basket of handkerchiefs was put forward to excite her morbid imagination, and tempt her to the commission of crime." No attempt was made to deny the facts of the case, but a number of witnesses to character were called on the part of the prisoner. The Judge then summed up the case, and the jury retired about half-past four to consider their verdict. After three hours' consideration they were unable to agree. A consultation therefore took place between Mr. Bodkin and the counsel for the prisoner, the result of which was that they agreed to suggest to the Court that the jury should be discharged without giving a verdict, which was accordingly done.

DANGEROUS EXPLOSION OF GUNPOWDER.—On Saturday last an explosion of gunpowder took place in the oil, colour, and Italian warehouse kept by Mr. William Bennett, 26, James-street, Covent-garden, by which it is feared that three if not four children, members of the same family, will perish. It appears that Mr. Bennett sent one of his sons, aged about twelve years, to the top of the house, to fill a quarter pound canister with gunpowder. Having done so, he repaired to the third-floor back, in which the other children were playing. In order to amuse them, he began to sprinkle the powder upon the fire, when the whole contents of the canister became ignited, and exploded, blowing the windows out, forcing the ceiling down, and setting fire to the children's clothes. On the neighbours rushing in to render assistance, the four children were found to be so dreadfully injured, that it was deemed advisable to remove them to Charing-cross Hospital, which was accordingly done.

CHESS.

TO CORRESPONDENTS

J. E. B.; J. E. SMITH, Dorset; BEKEON, M., Aberdeenshire; R. T. V., OLD STAGER. The Solutions of Mr. Bolton's, E. Bardt's, and the Indian Problem, you have sent, are by no means.

T. T. T. (Hitchin).—Mr. Staunton has the option of inflicting whichever of the penalties he pleases.

J. D. T. "Chess Players's Handbook," published by Messrs. Bell, of Covent-garden, price 7s., is in English of the German Handbuch, price 1.

L. M. A. Your Solution of Mutanda Bilkah's problem appears to be correct.

CESSIAN.—The Solutions at page 195 are misnumbered, that is all. They are the Solutions of Nos. 570 and 573, not of 571 and 572. The first move in the Solution of 577 is obviously Q R to Q R 4th, not Q to Q R 4th.

CHERUBS, BURY.—In all nine of your Solutions

A. H.—Much as we our standard

WALK.—You have omitted the White King altogether.

ARTHUR.—Many thanks. Next time.

SOLUS.—A problem for one solver should be forwarded.

BRAHAM.—Your name, as a Member of the Committee, of subscriptions, and all necessary information, will be duly noted with the forthcoming Meeting at Leamington, by applying to the Rev. W. Wolfe, of Leamington.

R. P. S., Dublin.—1. When a player has won two or three matches by a large majority of games, he may fairly demand to give his opponent the Pawn and move. 2. Messrs. Ross, 22, Paternoster-row, London.

R. D.—Thanks. It is very pretty, and shall have a niche.

SOLUTIONS OF PROBLEM No. 580, by E. F. Norwood, E. Lambert, M., Aberdeenshire; R. H., Tower Villa, Cote, Bumble, Argus, P. Q. R., Pendragon, J. E. B., H. L., Coston House; J. E. Smith, R. B., C. A. M., Mir, Glasgow; Phidias, R. A., Belmont, J. C. B., T. J. of Headworth, Dymmings, C. McA., are correct.

SOLUTION OF PROBLEM No. 581, by Dorcas, O. P., E. H., Norwich, Phiz, C. F. L., F. T. Derby, G. McA., F. R. of Norwich; Medicus, Dixon, D. D., F. E. S., Fidelios, Argive, J. E. B., J. A. M., Fakenham, Peter Simple, B. I., Boxer, O. P. Q., E. F., Norwood, of Stonehouse, Mrs. Pulleody, N. B., Carl, Omega, are correct.

SOLUTIONS OF ENIGMAS, by F. F., T. W. Z., W. S. B., Renegade; Phiz, Omar, G. McA., of Stonehouse, Arub, "Know-nothing," Ben Bowling, H. M. S., V., are correct. All others are wrong.

CHESS IN THE METROPOLIS

DEATH OF MR. G. PERIGAL, LATE HON. SECRETARY TO THE LONDON CHESS-CLUB.—Of that formidable phalanx of players which a few years back was the pride and boast of the old civic Chess-club—conspicuous in the ranks of which stood Lewis McDonnell, Cochrane, Mercier, Brandt, Fraser, Popert, Horwitz, Sloss, Walker, Pullnay, Perigal, Watts, Jones, &c.—the numbers are rapidly diminishing. Death has done its remorseless work, and those whom he has spared, have, for the most part, retired from active service, so that in the arena of their glory their places know them no longer. The gentleman whose decease we have to-day the pain of recording was for several years the Hon. Secretary of this Club—an office he appears to have been eminently qualified to fill, and his resignation of which, through ill-health, we believe was very generally deplored. He was an excellent player—well studied, and well practised: not, perhaps, entitled to rank in the highest class of all—for his game was elegant and finished, rather than profound or comprehensive—but certainly he stood only one grade below that; and he has left scores of games which no amateur capable of appreciating the refinements of Chess skill will willingly let die. The two games which follow exhibit his powers both in attack and defence advantageously; and we hope next week to give some farther openings.

WHITE (Mr. G. Perigal).	BLACK (Mr. Pulling).	WHITE (Mr. G. Perigal).	BLACK (Mr. Pulling).

25. K P takes Q P (ch)	K to B 4th		

And White won the game.

(a) This is a good sound opening, and should be more frequently played than it is.

(b) Bold, but ingeniously conceived.

(c) It would have been vain to attempt to preserve the Kt.

(d) Insidious; having in view a dangerous attack upon the adverse Queen by playing K R to B sq.

(e) This effectually frustrates all Black's plans; for if he now play the Rook to B sq, White gives check with his Queen a Bishop, and wins easily.

(f) These moves are very clever, and render the position highly critical and interesting.

(g) To avoid the evil consequences of the White Queen's threatened check at her K's 5th. We have some misgivings, however, as to this being Black's best resource.

BETWEEN MR. G. PERIGAL AND MR. SPRECKLEY.

(Evans' Gambit.)

23. R to Q B sq	P to K Kt 3rd	46. P takes P	

And Black gave checkmate in two moves more (c).

(a) This mode of pursuing the attack of the Evans' Gambit has been very fully and ably exemplified in a series of articles by Mr. Waller, of Dublin. (See "Chess Player's Companion," p. 219.)

(b) Up to this point, the play is on each side nearly move for move the same as that laid down by Mr. Waller in his analysis.

(c) The termination of the game is a beautiful and instructive lesson, and will well repay the student for any attention he may bestow upon it. On Mr. Perigal's side the play could hardly be improved.

CHESS ENIGMAS.

No. 918.—By J. STONEHOUSE, of Sunderland

White: K at Q B 7th, R at K 6th, B at K Kt 5th, Kts at Q R 5th and Q sq, P at Q 4th.

Black: K at Q 4th; Ps at K Kt 2nd, Q 2nd, 5th, and 6th, Q B 5th, Q Kt 6th and 7th, and Q R 5th.

White to play, and mate in four moves.

No. 919.—By A. H. SYLVESTER, Esq., Cambridge.

White: K at K Kt 5th, R at Q 7th; Ps at K B 2nd and 5th, and K 3rd.

Black: K at K 5th, P at K B 6th.

White to play and mate in four moves.

NATIONAL SPORTS.

WITH the exception of a hybrid meeting at Abergavenny on Wednesday and Thursday, which, although it possesses stirring interest for the lovers of mountains and stone walls, will have none whatever for "the Ring," York and Malton divide the racing of the coming week between them. The York Stand opens its doors for the season on Tuesday, and Hoppeday, Jack Sheppard, King of Trumpets, and Scherz, four of the speediest mile-horses of the day, will probably meet in the Craven Stakes. The Great Northern Handicap is a race of even more interest than it was last year, when it had double the number of subscribers. Fandango (6st. 6lbs.) is rather over-weighted, thanks to his 10lb. Epsom penalty; and if Vandal's trial be correct, and a clever lad can be got to ride the weight, nothing should be able to beat him. This son of Van Tromp (whom breeders are beginning to regret) also figures in the Spring St. Leger on the same day, along with Scrabaud, Jack Sheppard, and Fandango. Gamester, Mario, Prairie, Birdcatcher, and fifty-three others are in the Spring Biennial on Wednesday; and the sport derives great strength from the Londesbro' Cup and the Flying Dutchman Handicap, in the latter of which Ivan (7st 12lb.), from whom no horse improved more in look last autumn, will probably be no mean bearer of the "blue and silver." A general move will be made to Malton on Thursday and Friday, not so much for the sake of the racing, which has, nevertheless, very fair promise, but in order to pick up some crumbs of intelligence about the Whitewall Derby horses. They will no doubt be stripped, or take a gallop for the amusement of visitors, who generally return as wise as they went. Our own impression is that the Derby will not go north this year. Nat and Newmarket are still in ecstasies about Polydore, who looks and goes wonderfully well; and it is thought that John Day, junior, has found out that there is less in Cruiser (who was little enough to begin with) than he once believed, and puts his Derby faith on St. Hubert. With such trial horses as Virago and Scythian in the stable, old John Day can hardly make a mistake about him, but, till we see his winning number up, we shall continue to distrust his Epsom chance, whatever he may do in the 2000 guineas. Parr is thought by some to have a good Chester Cup horse in Mortimer, who was only a clever leather-plaster last season, but our humour still jumps with Scythian for that event. John Robinson, brother to the great ex-jockey, has some horses in his charge at Newmarket but no one exactly knows to whom they belong.

The sudden "continental tour" of an M.P. and Steward of the Jockey Club has caused no small sensation. The stable in which he was a confederate has, for some years back, been very unlucky; although Bay Middleton, who has favoured other breeders so largely with his Flying Dutchman, Andover, Hermit, &c., was its Stud Nestor. This event, coupled with the sale of the Royal Palace on Tuesday next, will no doubt lead the public to infer that the sun of Newmarket is set for ever. Such an hypothesis would be premature, as several of the Glidden stud have been trained at Northleach for some time past, while the Palace has long been only a palace in name. Not even a Royal Duke has, we believe, been there for thirty years, and George IV. only slept one night there between the autumn of 1791 and the day of his death.

The steeplechases for the week include three at Abergavenny, on Wednesday and Thursday. There will also be a day at Howden, on Wednesday; while the Irishmen will employ Monday, in like manner, at Tallaght, and Tuesday at Westmeath. It seems that their Miss Mowbray indictment cannot be sustained, and that the man in charge of her has made a legal "declaration" of his entire innocence in the matter. A steeplechase stud of seven will shortly be in the market; the sales for Monday next including the Hexham hunters, and the Cottesmore hounds; and six thorough-bred yearlings and five brood mares will be disposed of at York, on Wednesday.

As regards coursing, we may remark that it has been a drawn battle between English and Scotch dogs in their recent contests at Biggar, as the first and second prizes for the Open Cup both went to England, and the first and second in the Open Champion, to Scotland. The last course of the meeting extended over about nine miles, and Mr. Nightingale's Bendigo and Curragh's Alma at length gave in in favour of Mr. Rhubarb instead of Knight of St. George. We hear of nothing, anywhere, but litters of black puppies by Bedlamite (who bids fair to emulate the glories of Snowball, King Cob, Figaro, and Foremost), and his owner need not regret that he bought him in for 500 guineas at Doncaster. This modest price reminds us that a nobleman in the midland counties has lately given 300 guineas for a cover hackney.

The Rugbeans have pitched their wickets for the season, and the eleven have triumphed over the Salopians by twenty-two. Salmon-fishers have also had great sport—one of them, in Devonshire, killing a 14lb. and a 9lb. fish together, after a five-and-thirty minutes' struggle. The yachters are also gradually taking to the water, and the Royal London Yacht Club has its opening trip on Saturday.—"Yachts to assemble at Blackwall, and weigh at four p.m. for Erith." The accounts of the different clubs are considerably more flourishing than those which clerks of the course have to show this year; and the walls of their club-rooms will soon receive an accession in the print of Messenger, the Champion of the Thames, which is on the eve of publication.

NEWMARKET CRAVEN MEETING.—MONDAY.

Craven Stakes.—Ormoco, 1. Sphere, 2

Handicap Sweepstakes.—Nathan, 1. Guitar, 2.

Sweepstakes of 50 sovs.—Antonette, 1. Alcyone, 2.

Sweepstakes of 100 sovs.—Tumbler, 1. Refraction colt, 2.

Renewal of the Sweepstakes for 50 sovs Furia, 1. Affghan, 2.

Bennington Stakes. Habena, 1. Harry of Hereford, 2.

Sweepstakes of 200 sovs.—Reciprocity colt, 1. Miss Whip filly, 2.

Handicap Sweepstakes.—Argyle, 1. Alma, 2.

Sweepstakes of 200 sovs.—Bonnie Mora walked over.

TUESDAY.

Plate of 50 sovs Coroner, 1. Lucy, 2.

Twenty-second Tuesday Biddlesworth Stakes.—Chalice, 1. Hazel, 2.

Sweepstakes of 50 sovs.—Treacherous filly, 1. Bessie, 2.

Renewal of the Newmarket Handicap.—Beaulieu, 1. Dr. O'Toole, 2.

Sweepstakes of 100 sovs.—Refraction colt, 1. Spinner, 2.

Subscription Plate.—Scherzi, 1. Top Sawyer, 2

Sweepstakes of 10 sovs.—Gay Mannering, 1. Fact, 2.

WEDNESDAY.

Handicap Plate of £70.—Blue Devil, 1. Vingt'un, 2.

Craven Handicap Plate.—Ephesus, 1. Cheddar, 2.

Handicap Plate of £50.—Tumbler, 1. Georgium Sidus, 2.

Column Stakes.—Habena, 1. The Bonnie Morn, 2.

THURSDAY.

Sweepstakes 100 sovs Dead Heat with Hazel and Sneer colt.

Sweepstakes 50 sovs.—Alcyone, 1. Professor, 2.

£100 Handicap Plate.—Ormoco, 1. Gossip, 2.

Sweepstakes 50 sovs.—Icarus, 1.

Handicap Plate.—Vivian, 1. Ely, 2.

Selling Stakes.—Inex, 1. Guy Mannering, 2.

Sweepstakes of 100 sovs.—Professor, 1. Tynemouth, 2.

FRIDAY.

Post Stakes.—Virago, 1. Acrobat, 2

£100 Plate.—Testy, 1. Diminutive, 2.

Selling Sweepstakes.—Ceres, 1. Filly by Iago, 2.

Sweepstakes of 50 sovs.—Joshua walked over.

Sweepstakes.—Claret beat Antonette.

RAISING OF THE BARQUE "SAMUEL," IN THE THAMES.

THE difficult operation of raising a sunken vessel in the Thames has during the past week been successfully accomplished by Messrs. Wallace and James Bell, the well-known divers, of Whitstable. The *Samuel*, a very fine Prussian barque, of 560 tons burden, belonging to C. H. Bulcke, Esq., of Dantzic, chartered through Messrs. R. W. Cousens, Atchison, and Co., of George-yard, Lombard-street, while proceeding down the river, in charge of a pilot, on the morning of the 8th ult., with a valuable cargo, bound to Kingston, Jamaica, came into collision with a brig, and in a few minutes went down, in about five fathoms, a short distance below Gravesend. The following method was used in raising her:—Several large chain cables, lent by the city of London authorities, were placed by divers under the keel and attached on each side to four powerful sailing-barges which, being so

THE RAISING OF THE BARQUE "SAMUEL," IN THE THAMES.

planned down at low water, held the vessel slung between them, while the rising tide carried her towards shore. This operation was repeated at each successive tide until placed sufficiently high on shore for the damage to be repaired. The accompanying Illustration shows the position of the vessel as her hull became visible above water, she having been carried for a considerable distance up the river while so slung, the shore in the neighbourhood of the disaster being unfavourable for the purpose. The *Samuel* is now in the West India Docks, discharging her cargo previously to undergoing thorough repairs

THE GEELONG AND MELBOURNE RAILWAY.

AUSTRALIA is singularly deficient in rivers, and these often spread into marshes, and do not preserve any course which can be called long when compared with the size of the continent Hence, the occupation of the country, unlike America, is restricted within narrow limits, except by sheep-farmers and graziers, who have extensive runs, far from the towns and seated districts. To develop, therefore, the resources of the colony, and to promote the social interests of its population, railways were imperatively demanded. With the importance of this demand the present Lieutenant Governor of Victoria, Sir Charles Hotham, became so fully impressed, that soon after his assuming the Government (in December, 1853), in order to encourage Railway enterprise, his Excellency made large grants of land and assigned guarantees out of the territorial revenue A railway had already been commenced from Geelong to Melbourne, the earliest portion of which, sixteen miles in length, was opened in September, 1853, and one of the last acts of Governor Latrobe was the laying of the foundation-stone of the Geelong Terminus, and the inauguration ceremony was engraved in the ILLUSTRATED LONDON NEWS for Dec. 31. Sir Charles Hotham took up the great work which his predecessor had commenced; and one of the earliest steps of the new Governor was the inspection of the railway works, and the extension of the guarantee of 5 per cent interest, before limited to £200,000, to the entire capital of £ [illegible] At the same time the Governor made further grants of land for the general purposes of the Company. Since the date of our former Illustration the undertaking has been progressing most satisfactorily towards completion, and the entire line is expected to be opened at the close of the present year. We now engrave a View of the Station and Workshops of the Geelong Terminus.

The economy of this railway communication between the capitals of the gold district is evident. The formation of common roads to the digging population, from the tributary towns, has already cost the Government [illegible] millions of money; and up to this time the great trunk highways to Ballarat, Castlemaine, and Sandhurst, during the winter months, are lined with broken-down drays, bogged and checked in their journeys by the freshets in the creeks And if the head of "Roads," "Bridges," "Police," and "Transport," may be found the largest items of the Colonial Public Expenditure; and it is only by the adoption of a general economic system of railways that the vast and increasing wants of the community can be adequately provided for, and the Colonial exchequer proportionally benefited. Of the wise policy of extending the inventive triumph of the Old World to aid in the development of the natural resources of the New, it has been well observed by Mr Sterling, in his able volume upon the "Australian and Canton in Gold Discoveries, that Australia is "the first example in history of the discovery of a mutual gold-fields in the midst of a civilised and intelligent community, already possessed of capital, and having its industry organised and protected by a stable Government and free institutions;" a position which presages much for the success of such enlightened enterprise as railway communication, especially when backed by a Government guarantee of a minimum of five per cent, and all profits beyond, to the shareholders, as in the case of the Geelong and Melbourne Railway Company.

THE GEELONG AND MELBOURNE RAILWAY.—GEELONG TERMINUS.

SOCIETY OF BRITISH ARTISTS.

Mr. J. J. Hill's single contribution to the Gallery in Suffolk-street belongs to that class of subject of which the English have always been particularly fond. He calls it "The Cabin Door;" and his picture presents a young, comely, barefooted peasant girl giving a drink of milk to a barefooted boy of six years old, who is evidently enjoying the contents of the bowl that he holds to his lip with one hand, while his other hand, extended to the pail from which the bowl has been filled, evinces (very naturally) a longing for more when this is done. An attendant goat completes the picture

In cabinet pictures of this class there is not much room for any effort of fancy; nor, indeed, does the subject allow of anything more than a happy transcript of every-day life in the rural districts. Skill in execution more than compensates for any absence of invention; and in renewing our acquaintance with the Collection in Suffolk-street we have been at a loss to discover any one work of art, of its class, more true to peasant life than the "Cabin Door" of Mr Hill The complexion of the girl is, to our taste, too pinky, but this may be its recommendation to those critics who see in Mr Holman Hunt's unnatural hues the closest attention to every-day nature.

We shall seek another opportunity of engraving one more picture from this Collection; and shall then conclude our remarks on the prospects of a Society which promises, after a fitful life, to continue prospering.

THE PHOTOGRAPHIC EXHIBITION.

(CONCLUDING NOTICE.)

In connection with the perfect representation of landscape scenery there are two difficulties with which the photographer has at present to contend. They are the representation of moving water and the foliage of trees, which is almost always in motion. The most successful representation of water is the views, a copy of one of which we have engraved, of "Waves in Caswell and Three Cliffs Bay," by Mr. Llewellyn. They are remarkable for their brilliant play of light and distinctness in the dark shades upon the surface of the rocks, not less than for the accurate manner in which the waves are represented. Some views of Mr. Fenton, showing the departure of the squadron of Admiral Napier for the Baltic, are also eminently successful with the water Passing from the regions of "still life," Photography has essayed its hand at the "fleeting clouds," and in this department Mr. Sherlock has been highly successful. It is not easy to overrate the value to artists of such studies of clouds as those by Mr Sherlock, Mr Hennah, and some very good examples sent by Prince Albert. Another highly valuable assistance which Photography is calculated to render to the artist is in the representation of animal forms. There is a most valuable collection of Photographs of live animals and birds, from the Zoological Gardens, by the Count de Montizon. The varied expression of these animals—the keen glance of the eagle, the fierce glare of the lion's eye, the soft expression of the giraffe—are rendered with a precision and beauty which make these photographs exceedingly valuable alike to the connoisseur and to the artist. We noticed, also, a few very good specimens of dogs and deer, by Mr. W. Bainbridge, taken for her Majesty by the artist. A Calotype Portrait of a Lunatic Patient in Dr. Diamond's Asylum, illustrative of that peculiar and most distressing phase of lunacy, "melancholy," shows how much Photography may be made subservient to even this branch of medical science. The startling revelations of the microscope, of the breathing system, of the structure of bones, of the marvellous and minute anatomy of insect life, of sections of mineralogical specimens, when secured by the camera, in the clear and distinct form in which they are presented by the Rev. Mr. Kingsley and others, proves that a new and vast field is open to the photographer, in which his exertions will be alike beneficial to the cause of science and of popular instruction. In the production of copies of ancient pictures, and sketches of statuary and smaller works of art, the sun's actinic rays have shown themselves equally docile and useful. Most successful instances of this are to be found in a series of Photographs of sketches of Raphael in the Royal Collection at Windsor. They include, among others, the "Murder of the Innocents," a "Pieta," a "Leda," studies with the pen for the heads of Homer, Virgil, and Dante, the "Three Graces," &c. It is, we believe, the intention of his Royal Highness to distribute copies of these works among the principal museums and collections in the country, and to obtain in exchange copies of other fine works which exist in some of our collections, but which are but very imperfectly known and appreciated The photographs of Mr. Bedford, of a "Chinese Card rack," some Shields and some Statuettes, are remarkably fine and real in their appearance

The portrait department did not evince so much progress as that of landscape and still life. The finest portraits in the collection are undoubtedly two of Mr. Rosling's, of a lady. They appear to us to be the very perfection of Photography. Some very good cases of specimens are sent by the principal photographers, such as Mr. Mayall, Mr. Heineman, and others, which fully sustain their reputation; and those who may admire pretty miniature likenesses, rather than fine photographic specimens, will be able to witness some very charming coloured portraits, principally contributed by Mr. Mayall.

"THE CABIN DOOR." PAINTED BY J. J. HILL. EXHIBITION OF THE SOCIETY OF BRITISH ARTISTS.

"WAVES IN CASWELL AND THREE CLIFFS BAY."—FROM A PHOTOGRAPH BY LLEWELLYN.

LINES

SUGGESTED BY THE PICTURE OF "THE BATTLE-FIELD" PAINTED BY HER ROYAL HIGHNESS THE PRINCESS ROYAL.

BE HOLD, a warrior sleeps the last long sleep!
A man of might! But who, so fair, doth keep
Watch over him that fought the glorious fight?
For Justice armed—went forth to 'stablish Right—
Bled for the cause—fell, with a soldier's sigh
For one best loved, in mortal agony;
In blissful peace then yielding up life's breath,
Trusted in God, a victor thus in death.
Yes, who is she that hovereth on the plain,
Heartstricken, mute, and bowed upon the slain?
Some kindred soul, hath she not wandered there,
To solace, pray with him in humble prayer—
To save, if that might be, with her own life.
Help, LORD, the Widow; help the Soldier's Wife!

Albemarle-street. JAS. LOCKHART.

A FIGHT AND A FIRE.—Two little "affairs," calculated to break the monotony of Balaclava existence, occurred on Saturday (20th ult.) *fortnight*, a fight broke out among the Crots. These gentry were all armed when they landed, and it was judged unexpedient to deprive them of their stomachsful of long pistols and yataghans. It was known for some time past that blood existed between various little sections of these wild mountaineers; Montenegrins, Albanians, Crots, Arnauts, Greeks, even Affghans and Koords—all had their quarrels. Some of the men accused the lead men of cheating them. Last night a scrimmage took place between two parties of the Crots. They drew their pistols and daggers, a regular fight took place. Thirty or forty shots were fired, and men fell wounded, two of whom have since died. Colonel Harding, the commandant, with a posse of men, proceeded to the spot and quelled the riot, and disarmed all the Crots on the spot. It is a pity it was not done before. *Scenario*, a fire broke out in the harbour on board a vessel (No 113), I believe, laden with combustible stores. The alarm-bell was rung, the *Leander* sent round her boats, and after an immense deal of excitement the fire was extinguished. An inquiry has taken place into the origin of the fire, but it appears to have sprung from the carelessness of some of the Lascar crews of some of the crew. There are, of course, rumours of incendiary spies and malignant Greeks, with matches, oil, and fuses, but they are not true.—*Letter from Balaclava.*

In the Boston Supreme Court, two English soldiers who deserted from Sydney, after having been three years in prison, were brought up yesterday on a charge of simple larceny for bringing the money to America, were discharged from custody the other day on the ground that they cannot be punished in the United States for larceny committed in another kingdom.

MONETARY TRANSACTIONS OF THE WEEK.

(From our City Correspondent.)

Although the amount of business transacted in all National Securities this week has been comparatively small, and the sales have exceeded the purchases of stock, the fluctuations in prices have been unimportant. The statements abroad to the effect that the Conference at Vienna is not likely to lead to peace have checked operations for a rise; but the fact of the Bank of England having reduced its rate of interest from 5 to 4½ per cent has had the effect of inducing the *Bears* partly to operate with considerable caution. The steady increase in the stock of bullion in the Bank of England (which is now over £15,500,000), together with the abundance and low value of money out of doors, have, no doubt, tended to maintain prices. In the Stock Exchange loans may be obtained at 3 per cent; and we understand that the India Company will shortly make advances at low as 2½ per cent.

The inquiry for gold for export to the Continent has been limited, and the total shipments do not exceed £14,000 to the Brazils, have been under £50,000. The arrivals have been chiefly confined to £11,000 from the Peninsula, and £14,000 from New York. In reference to the increased supply of the precious metals in the Bank, we may observe that during the seven weeks ending on the 31st ult. it averaged £949,861 per week—the total increase in the period here alluded to being not less than £2,447,097.

The Consol Market on Monday was very inactive. The Three per Cents Reduced marked 91¾ to 91 ex div.; the Three per Cent Consols, 93⅜ ⅝; the New Three per Cents, 91¾ ex div.; and Consols for Account, 92 ⅝; Bank Stock was done at 210½ to 212 ex div. Exchequer Bills were 7s. to 5s. prem.; Exchequer Bonds, 1858, 99¾; Ditto, 1859, 99¾. On Tuesday very little business was transacted. Bank Stock was 210½ to 212; the Three per Cent Reduced were 91 ⅝ ¾; the Three per Cent Consols, 92¾ to 92⅞; Consols for Account, 92¾ ⅝; the New Three per Cents, 91¾ ¾; and Long Annuities, 8¾ 9. India Bonds were firm, at 12s. 14s.; and Exchequer Bills were 5s. higher, the quotations being 7s. to 10s. prem. Exchequer Bonds, 99½. Prices showed a tendency to give way on the following day. The Three per Cents Reduced marked 90⅞ to 91; the Three per Cent Consols, 92⅜ ½; Consols for Account (10th of May), 92⅝ ¾; New Three per Cents, 91¾ ⅝; New Two-and-a-Half per Cents, 77¾; Long Annuities, 1860, 8¾; Ditto, thirty years, 4¾; India Bonds, 14s.; Exchequer Bills, 5s. to 7s. prem.; Bank Stock, 211½; Exchequer Bonds, 99⅜. Thursday was "pay-day" upon the Account, but the differences were easily met. The supply of Stock, however, was somewhat larger than had been anticipated, owing to a general disposition on the part of the jobbing to have been thrown upon the market. The Three per Cents were done at 92 to 92½, closing at 91¾ ⅞ for transfer. For the 10th of May the last price was 92. The New Three per Cents were 91¾ and the New Two-and-a-Half per Cents 77¾. There was tolerably firm, at 210 to 212. Exchequer Bills continued at 7s. to 10s., and India Bonds 11s. to 14s. prem.

There has been very few dealings in the Foreign-house. Turkish Bonds, as the issue of another two millions is spoken of, have fallen to 75, after having been done at 77¼. The following are the leading quotations of other Stocks:—Brazilian Five per Cents, 99¾ ex div.; Ditto, Four per Cents, 1839, 95¾; Buenos Ayres, 64½; Chilian Six per Cents, 102; Peruvian Four-and-a-Half per Cents, 70; Ditto, Three per Cents, 49 ex div.; Spanish Three per Cents, 36¾; Ditto, New Deferred, 18½; Venezuela Three-and-a-Half per Cents, 27½; Danish Three per Cents, 82¾; Granada Con-and-a-Half per Cents Deferred, 6¾; Dutch Two-and-Half per Cents, 60; Dutch Four per Cents, 92¾; Sardinian Five per Cents, 87¾; Ditto, for the Account, 87¾.

Commercial advices from California are very unfavourable; but we have that the yield of gold continues very large.

There has been a fair business doing in Joint-stock Bank Shares, and prices are well maintained:—Australasia have realised 80 ex div.; British North America, 53; English, Scottish, and Australian Chartered, 17¾; London Chartered of Australia, 20¾; Oriental, 39¾; South Australia, 23; Union of Australia, 67; Union of London, 34¾. Miscellaneous Securities have been less active. Australian Agricultural have realised 2¾. British American Land, 55 ex div.; Canada Sea Power Coal Stock, 103½; Crystal Palace, 3¾; General Screw Steam Shipping Company, 10¾; London Docks, 100¾; Victoria Docks, 15¾; Netherlands Land, 1¾; South Australian, 37; Van Diemen's Land, 4¾. Several Railway Shares were dull as follows: -Coventry, 209; Derby, 84; Grand Surrey, 48; Leicester, 59½; Loughborough, 575; Neath, 150; Peak Forest, 86; Rochdale, 60; Stourbridge, 26½; Sunbury and Worcester, 4½; Wilts and Berks, 4¾. In Waterworks Shares scarcely any transactions have been recorded:—Berlin may be quoted at 41. East London, 100½; Grand Junction, 68½; Kent, 78½; Southwark and Vauxhall, 99½; West Middlesex, 91; Do. New, 16. Gaslight Shares have been ruled dull:—Brighton, 14; Equitable, 31; Imperial, 103; Ditto New, 16; Metropolitan, 70; Phœnix, 28¾; Surrey Consumers, 31; United General, 20½; Westminster Chartered, 39¾. Insurance Company Shares have been in good demand, 2½; General, 64; Globe, 121½; Guardian, 55; Law Life, 56½; London, 29½; Rock Life, 8; Victoria Life, 6¾. Bridge Shares have sold heavily:—Hungerford at 12; Waterloo, 34; Ditto, Old Annuities, of 21½; Ditto, New, 8.

Most Railway Shares have been dull. In prices, however, very little change has taken place. The following are the official closing prices on Thursday:—

ORDINARY SHARES AND STOCKS.—Caledonian, 80¾ ex div.; Eastern Counties, 11¾; Edinburgh, Perth, and Dundee, 101; Great Northern, 88¾; Ditto, A Stock, 78; Ditto, B Stock, 123; Great Western, 64½; Ditto, Stour Valley, 69½; Lancashire and Yorkshire, 75¾; London, Brighton, and South Coast, 99; London and North-Western, 99¾; London and South-Western, 82¾; Midland, 69¾; Norfolk, 47½; North British, 29; North-Eastern Berwick, 71¾; Ditto, G. N. E. Purchase, 81; Ditto, Leeds, 128½; Ditto, York, 48¾; North Staffordshire, 12¾; Scottish Central, 99½; South-Eastern, 60¾; Wimbledon and Croydon, 3¾ ex.

LINES LEASED AT FIXED RENTALS.—London, Tilbury, and Southend, 11¾; Manchester, Buxton, and Matlock, 2¾; Northern and Eastern, 58½; Ditto, Six per Cent, 65.

PREFERENCE SHARES.—Aberdeen, 103; Eastern Counties Extension, 2 prem.; Edinburgh, Perth, and Dundee, Four per Cent, 61; Great Northern five per Cent, 118½; Ditto Five per Cent, redeemable at 10 per cent prem., 109½; Great Western (Chester Fight Per Cents, 17¾. ex N.W., Ditto, Birmingham Guaranteed Stock, 73¾, ex New; Midland Consolidated Bristol and Birmingham Six per Cents, 124; North-Eastern (Reading Guaranteed), 102¾; Stockton and Darlington Five per Cent, 17.

FOREIGN.—Antwerp and Rotterdam, 8; East Indian Five per Cent, 23¾; Grand Trunk of Canada, A issue, 6¾; Great Luxembourg, 3¾; Great Western of Canada Shares, 17¾; Madras, New, 1¾; Paris and Lyons, 39¾; West Flanders, 3⅜.

MINING SHARES have been steady. On Thursday Imperial Brazilian were 3¾; St. John del Rey, 30½; Linares, 7⅞ ex div.; Pontgibaud Silver Lead and Mining, 14¾; United Mexican, 7⅜.

Friday Evening.

A notice has been received in the Stock Exchange, to-day, from Downing-street, inviting capitalists to meet the Chancellor of the Exchequer on Monday next, at one o'clock, to subscribe amounts to meet the current expenses of the year. The particulars of the loan have only this day transpired. The amount required is as stated. Consols have been rather dull. The Three per Cents have marked 91¾ ⅞. The Three per Cent Reduced are 90¾ ⅞; and the New Three per Cents, 90¾ ⅞. Exchequer Bills, 6s. to 10s prem. In Foreign Bonds and Railway Shares very little doing

THE MARKETS.

CORN EXCHANGE (Friday).—The receipts of English wheat up to our market this week, continue met by limited demand, have been very moderate, and the show of samples on Monday was inadequate. The demand however, was rather inactive, at Monday quotations. There was a fair supply of foreign wheat, and the demand was steady, at Monday's prices. Barley commanded Monday's rates; but malt was very dull, at barely last week's prices. We had a fair average quantity of oats on sale, but the trade for them was heavy, at Monday's decline. In beans, peas, and flour very little was doing, at late rates.

ARRIVALS.—English: wheat, 1810 quarters; barley, 2720; malt, 1810; oats, 1050; flour, 1170. Irish: oats, 6150. Foreign: wheat, 2070; oats, 1240; flour, 25.0 sacks, 6100 barrels.

English.—Wheat, Essex and Kent, red, 64s. to 68s.; ditto, white, 72s. to 81s.; Norfolk and Suffolk red, 64s. to 68s.; ryo, 39s. to 40s.; grinding barley, 27s. to 29s.; distilling, 29s. to 30s.; malting, 29s. to 32s.; Lincoln and Norfolk malt, 56s. to 58s.; brown ditto, 52s. to 54s.; Kingston and Ware, 60s. to 70s.; Chevalier, 70s. to 72s.; Yorkshire and Lincolnshire feed oats, 25s. to 27s.; potato ditto, 28s. to 29s.; Youghal and Cork, black, 24s. to 26s.; ditto, white, 30s. to 32s.; Sligo ditto, 30s. to 40s.; grey peas, 34s. to 37s.; maple, 37s. to 40s.; white, 40s. to 42s.; boilers, 43s. to 45s. per quarter. Town-made flour, 60s. to 65s.; country marks, 49s. to 55s. per 280 lbs.; American flour, 38s. to 43s. per barrel.

Seeds.—There has been a fair amount of business doing in our markets, at full prices:—

Linseed, English, sowing 68s. to 70s.; Baltic, crushing, 52s. to 53s.; Mediterranean and Odessa, 48s. to 49s.; hempseed, 42s. to 50s. per quarter; coriander, 20s. to 24s. per cwt.; brown mustard seed, 12s. to 14s.; white, 8s. to 10s.; tares, 10s. 6s. to 12s. per bushel; English rapeseed, £33 to £35 per last of ten quarters; linseed cakes, English, £12 to £13 10s.; ditto foreign, £10 10s. to £11 5s.; rape cakes, £6 5s. to £6 15s. per ton; canary, 45s. to 48s. per quarter. Red clover seed, 52s. to 66s.; white ditto, 70s. to 80s. per cwt.

Bread.—The prices of loaves sold in the metropolis are from 9d. to 10d.; of household ditto, 8d. to 9d. per 4 lbs. loaf.

Imperial Weekly Averages.—Wheat, 68s. 8d.; barley, 30s. 8d.; oats, 24s. 11d.; rye, 42s. 2d.; beans, 40s. 8d.; peas, 37s. 9d.

Irish Market Prices.—Wheat, 67s. 10d.; barley, 30s. 3d.; oats, 22s. 1d.; rye, 39s. 11d.; beans, 40s. 8d.; peas, 37s. 9d.

English Cattle Market.—Wheat, 70,952; barley, 49,811; oats, 24,756, rye, 268, beans, 2,240, peas, 1,120.

Foreign.—The cattle market during the week has been very moderate, on Monday last, and the supply of sheep was small. The following are the imports:—

Shorthorns, 1,200; Scots, 1,000; sheep, 6,000; pigs, 200.

Our trade was rather inactive, at full quotations; but inferior parcels were rather cheaper. The primest Scots, in our market, realised 6s. per stone. Calves had no commanding extreme rates. Refined goods are a very sale, at from 4d. to 6d. to 6s. 6d. per cwt.

Coffee.—The demand is far from active; nevertheless, the quotations are tolerably firm. Good ordinary Ceylon, 47s. to 48s.

Rice.—Most kinds are a slower sale, at last week's decline in the quotations.

Provisions.—Irish bacon has sold readily, at full quotations. Inferior foreign parcels—the supply of which is good—are easier to purchase. In the value of English we have no change to notice. Bacon is dull, but not cheaper. In other kinds of provisions very little is doing.

Tallow.—The demand is by no means active. P. Y. C., on the spot, is 44s. per cwt. Town tallow, 46s. per cwt. not cash. Several arrivals have taken place.

Spirits.—Very little has taken place in the value of rum. Proof Leewards, 2s. 2d. to 2s. 3d.; and East India, 1s. 11d. to 2s. per gallon. Brandy is steady, but not dearer. In rum little is doing. 10 o.p. is 2s. 3d. to 2s. 4d.

Hay and Straw.—Meadow hay, £3 15s. to £5; clover ditto, £3 3s. to £5 15s.; and straw, £1 4s. to £1 16s.

Wool.—All descriptions are heavy, and the quotations are next to nominal.

Potatoes.—The supplies are large, and the demand is heavy, at prices varying from 75s. to 125s. per ton.

Hops (Friday).—There is a steady business doing in Sussex hops, on rather high terms. All other kinds move off slowly, at last week's currency. The duty received to-day is 1s. 6d. from Hertfordshire, 37 from Hamblin, and 2 from Sussex. Mid and East Kent pockets, £14 to £22; Weald of Kent, £10 10s. to £14 10s.; Sussex, £10 10s. to £13 10s.; Yearling, £7 10s. to £10 per cwt.

Coals (Friday).—Carr's Hartley, 19s. 6d.; Hunting's Hartley, 19s. 6d.; Harton, 18s. 6d.; Stewart's, 18s.; Lamaine 19s. 6d.; Heugh Hall, 19s. 6d.; Tees, 18s. per ton.

Smithfield, Friday.—Although the supply of cattle in the early market was very limited, the demand for all breeds ruled heavy, as large Monday's quotations. We were well supplied with sheep, which sold slowly, and their quotations were 4s. per 8lbs. lower. Imported lambs moved off heavily, at from 8s. 8d. to 9s. 6d. per 8 lbs. Prime small calves were scarce, and rather dearer; but inferior calves met a dull market. The pork trade was heavy, at barely late rates. Milch cows moved off slowly, at from £14 to £19 each, including their small calf.

Per 8 lbs. to sink the offals—Coarse and inferior beasts, 3s. 2d. to 3s. 4d.; second quality ditto, 3s. 6d. to 4s. 2d.; prime large oxen, 4s. 4d. to 4s. 6d.; prime Scots, &c., 4s. 8d. to 4s. 10d.; coarse and inferior sheep, 3s. 4d. to 3s. 8d.; second ditto, 3s. 10d. to 4s. 2d.; prime coarse-woolled ditto, 4s. 4d. to 4s. 6d.; prime Southdown ditto, 4s. 8d. to 4s. 10d.; large coarse calves, 3s. 8d. to 4s.; prime small ditto, 4s. 2d. to 4s. 4d.; large hogs, 3s. 4d. to 3s. 6d.; neat small porkers, 4s. 2d. to 4s. 4d.; lambs, 5s. 2d. to 6s. 6d.; sucking calves, 2s. to 3s.; and quarter-old store pigs, 20s. to 25s. each. Total supply: beasts, 600; sheep, 7,120; calves, and lambs, 6200; calves, 1,0 pigs, 320; Foreign beasts, 120; sheep, 50; calves, 120.

Newgate and Leadenhall (Friday).—The supplies were reasonably good, and the trade was heavy, as follows:—

Per 8 lbs. by the carcase—Inferior beef, 3s. 2d. to 3s. 4d.; middling ditto, 3s. 6d. to 3s. 8d.; prime large ditto, 3s. 10d. to 4s. 0d.; ditto small ditto, 4s. 2d. to 4s. 4d.; large pork, 3s. 6d. to 3s. 8d.; inferior mutton, 3s. 2d. to 3s. 6d.; middling ditto, 3s. 8d. to 3s. 10d.; prime ditto, 4s. 0d. to 4s. 4d.; veal, 3s. 8d. to 4s. 8d.; small pork, 3s. 10d. to 4s. 4d.; lamb, 5s. 6d. to 6s. 6d.

THE LONDON GAZETTE.

TUESDAY, APRIL 10.

WAR-OFFICE, APRIL 10.

On the 4th inst., at Bayswater, in the full assurance of a joyful resurrection, Matilda Anne, youngest daughter of the late Rev. Craven Ord, M.A., of Greenstead-hall, Essex, aged 37.

MEMORIAL OF THE EMPEROR NAPOLEON I.

ON this extraordinary man scores of relics are preserved in the cabinets of the curious and the museums of national establishments; but few of these memorials possess the interest of that engraved upon page 352—a solid wax cast of the Emperor, taken on the morning after his death.

We quote the following details from the late Sir Hudson Lowe's "History of the Captivity of Napoleon at St. Helena;" published in 1853, by Mr. W. Forsyth, M.A.:

Dr. Arnott remained in the room with the body during the night of the 5th, and early next morning Sir Hudson Lowe, accompanied by Rear-Admiral Lambert, the Marquis de Montchenu, and several British officers, together with Mr. Brooke and Mr. Greentree, two of the Members of Council at St. Helena, proceeded to Longwood, and viewed the corpse of Napoleon, which lay with its face uncovered. Afterwards an opportunity was afforded to various other persons—officers of the army and navy, and inhabitants of the island—to see the body as it lay dressed in uniform upon the bed

"Well, gentlemen," said Sir Hudson Lowe to Major Gorrequer and Mr. Henry, as they walked together before the door of the Plantation-house, conversing on the character of the deceased, "he was England's greatest enemy, and mine also; but I forgive him everything now that the death of a great man like him we should only feel deep concern and regret."

Mr. Henry, who assisted at the dissection of the corpse, says that the face had a remarkably placid expression, and indicated mildness and sweetness of disposition. Those who gazed on it, however, as they lay in the still repose of death, could not help exclaiming, "How beautiful!" The head was so large as to be disproportioned to the rest of the body, and the forehead was very broad and full. It may interest phrenologists to know that the organs of combativeness, causativeness, and philoprogenitiveness, were strongly developed in the cranium. The skin was particularly white and delicate, and, notwithstanding the accumulation of external fat, the whole frame was slender and effeminate. There was scarcely any hair on the body, and that of the head was fine, fine, and silky. On the left leg near the ankle, was a scar, which appeared to have been occasioned by a wound

When the coffin was finally closed it was placed upon the bed, and mass was performed in the room.

The wax cast is now in the possession of Captain Winneberger, of the Pavilion Library, Reading (No 151), who has brought it to England in the expectation that some collector of Napoleon relics may be induced to become its possessor. Our illustrations are from photographs by Bland and Sons, Fleet-street.

PROGRESS OF THE NEW LIBRARY, BRITISH MUSEUM.

THERE are few institutions, public or private, which have been more useful in advancing the general knowledge of the country than the Reading-room and Library of the British Museum. In the former, except during short vacations, from 150 to 200 industrious readers (male and female) may be found daily following various inquiries—some for the production of important works, and others for the purposes of more general literature and art: here are artists, antiquaries, architects, clergymen of various denominations, useful members of the newspaper press, students in anatomy, chemistry, botany, geography, &c., &c. The present Reading-room far forgives him everything: the most standard on various subjects, arranged in convenient order; for instance, the whole of the volumes of the *Gentleman's Magazine*, and other periodicals of that class, with their indexes are put together; in another place, the best editions of the poets and prose writers in country libraries, general histories, biographies, works on botany, &c., are also together; and the reader at the British Museum soon learns how to find them. All the 15,000 useful books contained in the present Reading-room can be taken from the shelves and brought to the table by the student. The value of this arrangement in the saving of time is very great; but for this, separate tickets of application for each book would need to be written, causing labour to the attendants, and delay to the readers. The contents of the Reading-room, however, is but a trifle in comparison with the whole Library, which contains, in round numbers, 520,000 volumes. The extent of this immense mass may be partly judged by the long range of catalogues, which reach almost round one of the Reading-rooms, and so rapidly grew the accumulation that it became necessary to remove a duplicate copy which had been placed for the greater convenience of visitors. The supplementary catalogue for Sept. 1850 (the first transcript) till April 1855 has grown from 150 to 305 folio volumes. In addition to the catalogues of books, are also those of newspapers, music, manuscripts, &c.

The annual increase of volumes at the British Museum has for some time past amounted to 20,000—5000 more than the number now contained in the Reading-room for, and to classify, so great a quantity of material has been a matter of anxiety to Mr. Panizzi, and the gentlemen of his department; who, by exercising much ingenuity, have placed and catalogued from fourteen to fifteen miles of books.

Books, however, like other substances, require a certain amount of space, and it became necessary to obtain more accommodation. Several plans were offered, and at length that at present in progress (the happy suggestion of Mr Panizzi) was adopted.

In the main building was left a large square open area, in which it has been determined to erect a structure which would answer the purposes of a new Reading-room, and, besides, afford space for many thousand volumes.

The Reading-room will form, in the centre of the new structure, a circle of 140 feet in diameter, 440 feet in circumference, and 106 feet high. From the height of about 30 feet a dome springs, which will be lighted by twenty windows, 27 ft. by 12; there will be also a glazed lantern at the top of the dome. The Reading-room will contain upwards of 30,000 volumes for reference, and accommodation for about 300 readers. The effect of this room, when complete, must, even without decoration, be exceedingly fine; and it will, with the exception of the Pantheon at Rome, be surmounted by the largest dome in the world; the Pantheon is only 2 feet wider, the Reading-room dome will be larger than that of St. Peter's at Rome, and of course very much larger than St. Paul's at London. If, however, this interior is properly decorated—and it affords a splendid scope for such a purpose—it will, no doubt, be amongst the finest interiors in the metropolis. Supposing the area to be lined with books, and surrounded by three galleries—let the windows be stained with rich and suitable patterns of such weight of colour as would prevent the glare of light and the windows from looking like holes through the dome: and the rich and subdued colours carried under the panels in larger lines of suitable forms of subjects connected with literature, art, or history, and we will then not only have an apartment worthy of the important purposes to which it is to be devoted, but also have a means of advancing the arts of the country.

The appearance of the work a few days ago was so extraordinary that we have considered it worthy of a Sketch. The scaffolding is of ingenious and clever construction, erected by Mr. H. Fielder, of Stangate-wharf. The framework of the centre structure is of iron, and the whole, up to the spring of the arch, has been raised by a movable platform working

SUPPLEMENT TO THE
ILLUSTRATED LONDON NEWS
APRIL 14, 1855.

SEBASTOPOL:

FIRST DAY'S ATTACK BY THE ALLIED FLEET AND ARMIES OF FRANCE AND ENGLAND.

No. 737] SATURDAY, APRIL 14, 1855. [VOL. XXVI.

DEPARTURE OF THE BALTIC FLEET.

Our readers are not likely to have forgotten the grand event of last year—the departure from Spithead of the noblest fleet that ever left the shores of this country, under the command of one of its most distinguished naval warriors. The morning of Saturday, the 11th of March, 1854, must be for ever "marked with white" in the calendar of every person who witnessed the glorious spectacle of that day. Everything that could avail to render a scene magnificent beyond description almost beyond conception a cloudless sky, countless masses of spectators, the thunder of a thousand guns, and the presence of the Queen of England—conspired to make that day memorable—at least as a show. But the performance of that great fleet fell sadly short of its promise. With a leader victorious in many a fight, officers of well-proved gallantry, and ships having resources wholly unprecedented, our Baltic fleet of 1854 did little more than perform a ministry promenade in the Baltic Sea; at least, what it did perform was more of a negative than of a demonstrative kind. Whether it could have done more than imprison the fleet of Russia is a question which we shall not attempt to discuss. We incline to the opinion that, under the circumstances, it served an excellent purpose, and could have done no more. In the event, let us hope that the Baltic fleet of the current year will form as strong a contrast to that of the past year as it certainly has done in the inauguration.

The Baltic fleet of 1854, on its arrival in our seas, was dispersed in various directions, and the winter months were occupied in repairing the damages inflicted during the previous cruise. From the various harbours and dockyards in which the ships found refuge during the winter, they had been, for some weeks previously con-

THE BALTIC FLEET, 1855.—"THE DUKE OF WELLINGTON," FLAG-SHIP OF REAR-ADMIRAL THE HON. R. S. DUNDAS.—(SEE NEXT PAGE.)

centrating on Spithead, the great naval rendezvous. When the weather was deemed sufficiently auspicious, the Flying Squadron, as our readers are already aware, was sent forward, as it were, to look the way. But people who beat their steps towards Southsea Beach, or seized the vantage ground offered by the batteries and houses overlooking Spithead, noticed little decrease in the number of ships, and certainly no falling off in the interest of the spectacle which varied the sameness of the sea between them and the sunny slopes of the Isle of Wight. There, during the latter days of March, in two long parallel lines, stretching from east to west, rode quietly at their anchors many of those noble ships, on whose giant strength we rely (under Providence) for the preservation of that prominence and glory which their precursors have won for us. During the week preceding the departure of the fleet, many visitors crowded into Portsmouth.

The first certain indications of sailing were given on the 31st ult., when signal was made by the flag-ship, "Prepare for Sea," all officers and sailors on shore were recalled to their respective ships, and all further leave prohibited. A general muster of crews took place, with a view to payment of wages before sailing. Exercise in gunnery practice was actively carried on; and it was evident to every looker-on that business, and that too of an engrossing kind, was to be the permanent order of the day. Steamers belonging to the local companies, and smaller craft of every description, were incessantly moving about, giving many thousands an opportunity of admiring the wonderful power of floating castles; with a peep now and then, through port-holes, at their internal economy. The space of water between the lines of the fleet became a nautical promenade, where you were tolerably certain to find any sequaintance whom you did not discover on shore. The thousands who made Spithead their rendezvous on the 2nd of this month were fortunate in having a fine day; at least, as fine as any day can be which has a strong infusion of east wind in it.

That a day like this should pass over without something in the shape of an accident to diversify the scene would be quite out of the ordinary course of things. Accordingly, early in the afternoon of Monday (2nd), a boat from the Gosport side, laden with provisions and people for the fleet, managed to capsize in the swell. This gave occasion to good deal of anxiety amongst the many who were looking on, and an excellent opportunity to a couple of man-of-war's boats to show the admirable way in which they were handled. The people who were shot out into the brine, to the number of eight, were all speedily fished out, and the provisions were rescued soon after. The wonder is that dozens of boats did not heel over, or get swamped. The escapes of some, full of women, too, were little short of miraculous.

"Queen's weather again!" was our exclamation, as we pulled up our window-blind on the morning of Tuesday the 3rd of this month: on this day, it was generally understood, and we believe intended, that the fleet should sail. Before noon it was evident that, if it did leave the anchorage, it must have been in the teeth of a gale of wind, and, as there was no special necessity for this, the order for sailing was countermanded. Bitterly had though the weather was, much disappointment was felt by the excursion people who must return or pay some three pounds for a bed in Portsmouth, without any positive certainty of seeing the fleet depart on the following day. The greater number of excursionists were conveyed by the South-Western Railway; one train alone carrying seventeen hundred people. These people had little for their pains, for though steamers were seen passing to and fro, few save officials ventured out. But, rough though the weather was, and most uninviting to all ordinary mortals though the waters of the Solent were, we were not without a plurality of representatives at Spithead. To the very great convenience of our readers, the Artists and Correspondent of the ILLUSTRATED LONDON NEWS are ubiquitous; and the scenes which people travelled hundreds of miles to witness, and could not venture from the coffee room fireside to look upon, will become familiar to every one who looks upon our pages. It may console those who remained on Tuesday to hear that they who remained to see the fleet depart, thanks to the fog, did not see the departure thereof. *Solamen miseris socios habere dolori!*

As early as six o'clock on the morning of the 4th inst. the Port-Admiral Sir Thomas Cochrane, and the Board of Admiralty, went to Spithead in the *Vivid* steam yacht, and gave the last orders to the fleet, after which the *Vivid* carried them to Sconce Point, to inspect the new works of defence at that part of the Needles Channel. A dense fog shut out the fleet entirely from the view; it was not known that the ghostly spectre-like hulls became visible to the anxious eyes gazing seawards. It appeared uncertain in the early part of the day whether the fleet would move, but at nine a.m. the flag ship the *Duke of Wellington* signalled to the *Geyser* and *Drive* to get their propers to weigh; at ten signal was made to the fleet to weigh the small bower anchor and raise screw propellers. The wind being fair, it was then known to be the Admiral's intention that the ships should put to sea under sail; and at half-past eleven signal was made to the pilot-vessels to get up and slow speed, while at the same time the dinner pennant was hoisted. At ten minutes after one signal was made "Prepare to weigh;" the fleet immediately hove short, and at half-past one signal was made "Weigh and form order of sailing" (which, however, was not completed)—with *Magicienne* and *Basilisk* in front to look out ahead of the Admiral, and the *Bulldog* and *Dragon* to take their places in the Admiral's wake. At two a general signal was made to "Rendezvous in the Downs in case of parting company." The ship got under way at seventeen (per signal) and when standing out towards the Nab appeared from that spot in the following order:—

PORT DIVISION.	Guns.	STARBOARD DIVISION.	Guns.
Magicienne, Leake	16	Basilisk, Fraser	6
Belleisle, Hall	60	James Watt, Elliot	91
Colossus, Robinson	80	Hogue, Ramsay	60
Duke of Wellington (Flag)	131	Edinburgh, Bowlett	58
Gorgon, Crawford	6	Cæsar, Robb	91
Cressy, Warren	81	Ajax, Warden	60
Bulldog, Gordon	6	Nile, Maudy	91
Majestic, Hope	81	Exmouth (Flag)	91
		Royal George, Codrington	102

The first off was the *Blenheim* under courses, topsails, and topgallant sails, the *James Watt* following closely in her wake under topsails and topgallantsails, and evidently having the heels of her. At a little interval came the *Colossus* and *Hogue*, the latter carrying fore and maintopmast and topgallant studding sails; which example was followed by the other 60-gun block-ships. Generally speaking each royal which the *Blenheim* was first to hoist, when abreast of the *Pytades*. The Port Admiral, Sir Thomas Cochrane, went out of harbour in the *Vivid*, while the fleet was under way, and remained close to the *Duke of Wellington* for some time, eventually proceeding some way out with the ships. Had not the weather been so hazy the pictures from the shore would have been magnificent, but the first of the fleet was out of sight before any movement was known ashore. About half-past three, however, the mist suddenly lifted, and a glimpse was then obtained of the fleet in full sail about six miles from the Needles, between the Warner and the Nab. The last signal seen was now made out, flying from the mast-head of the *Duke*, and was evidently in consequence of the wind falling light; it was for the line-of-battle ships to "Get up steam at low speed." During the time these manœuvres were being performed by the fleet, the splendid new two-decker *Orion*, 91, under full steam, was cruising about the roadstead, and trying her speed by the measured mile. She is a magnificent ship, and apparently of great power. The *Bellerophon*, 78, sailing ship, afforded a sad contrast to the outgoing fleet, as she was towed up to her anchor with sick and wounded invalids from the Crimea. There were but few vessels of any kind moving about the fleet, owing to the general impression that it would not leave before Thursday. Among those out we noticed the *Vivid*, the *Fairy*, the *Bee*, the *Argus*, and the trim little Dutch war-schooner *Mercury*, which got under way and stood out abreast of the Commander-in-Chief's ship. The only casualty was with a schooner-yacht, the property of Mr. H. D. P. Cunningham, R.N., the inventor and patentee of the plan for reefing topsails from the deck, who got under way with the fleet to exhibit the utility of that important application. The yacht got under the bows of the two-decker *Majestic*, carried away both her topmasts, and obliged the line-of-battle ship to drop anchor. At five o'clock on Wednesday the van of the Baltic fleet was hull down from the extreme end of the land on the Portsmouth shore. On Thursday, at noon, it was in sight, off Dover. The weather was fine, with a light easterly breeze.

On Sunday morning the *Duke of Wellington*, 131, the flag-ship of Rear-Admiral Dundas, returned to Spithead from the Downs, to effect repairs of damages she sustained by getting into collision with the *George Hurlbutt*, an American emigrant-ship, on the night of the 4th inst., about six hours after leaving that port. As soon as she was in sight a party of ships-riggers and riggers were sent off to her in one of the dockyard tugs, and these were at work on her all day. Admiral Dundas did not return to her, having shifted his flag to the *Nile*, 91, screw. Both vessels sustained considerable injuries by this unfortunate collision. The *Duke of Wellington* had her foreyard carried away, together with her port swinging boom, the whole of the port and part of the main chains, quarter-gallery, and hammock-nettings, breaking the stock of the best bower anchor, and driving the short anchor from its berth into the gangway. The shock was carried the merchant ship losing foretopmast, bowsprit, jibboom, cutwater, &c. The accident is said to have arisen from the emigrant ship suddenly coming upon the fleet, which were steaming down Channel at an easy rate—the night being very fine, and the moon shining brightly. The *Duke* reports that the cause of the accident was a bad "look out" on board the merchantman, the man who was steering her not seeing his danger till he was close on the *Duke*, whose helm was put hard-a port, steering south, to get out of the way. By this it was thought that the vessels would have passed, when the merchantman suddenly put the helm hard-a-starboard, running into the *Duke's* fore-chains.

It will be seen from the following lists of the Baltic fleet for 1854 and 1855, that the naval force which has been sent out this year is much stronger than the one which Sir Charles Napier commanded:—

THE BALTIC FLEET OF 1854.

Ships and Commanders.	Guns.	Men.	Horse-Power.
Duke of Wellington, Capt. Gordon, flag or Vice-Admiral Sir Charles Napier, K.C.B.; Michael Seymour, Captain of the Fleet	131	1100	700
Neptune, Capt. Hutton, Flag of Rear-Admiral J. H. Plumridge	120	970	—
Edinburgh, Captain Hewlett, Flag of Rear-Admiral Chads, C.B.	58	600	450
Nile, Commodore Martin, C.B.	91	850	500
Royal George, Capt. Codrington, C.B.	120	890	450
St. Jean d'Acre, Capt. the Hon. H. Keppel	101	900	600
James Watt, Capt. George Elliot	91	850	600
Cæsar, Capt Robb	91	850	180
Princess Royal, Capt. Lord Clarence Paget	91	850	400
Majestic, Capt. James Hope, C.B.	81	750	400
Cressy, Capt. Warren	81	750	400
Prince Regent, Captain H. Smith	81	750	—
Monarch, Captain Erskine	84	750	—
Cumberland, Captain Seymour	70	650	—
Hogue, Captain W. Ramsay	60	650	150
Blenheim, Captain the Hon. F. Pelham	60	650	150
Ajax, Captain Warden	60	650	150
Impregnable, Captain Watson, C.B.	71	550	500
Euryalus, Captain Ramsay	51	550	400
Arrogant, Captain Yelverton	46	450	400
Amphion, Captain A. C. Key	34	320	200
Leopard, Captain George Giffard	18	400	500
Odin, Captain Francis Scott	16	270	580
Valorous, Captain Burdett	16	220	400
Desperate, Captain D'Eyncourt	8	175	400
Penelope, Captain Caffin	18	300	620
Magicienne, Captain Fisher	16	220	140
St. George, Captain Eyres, C.B.	120	970	—
Archer, Captain Heathcote	15	175	302
Vulture, Captain Glasse	6	200	470
Dragon, Captain Willcox	6	200	765
Conflict, Captain Cumming	8	175	400
Cruiser, Commander Hon. G. Douglas	14	160	60
Bulldog, Captain W. K. Hall	6	160	300
Driver, Commander the Hon. A. Cochrane	6	160	280
Rosamond, Commander Worcklesse	6	160	280
Gorgon, Commander Crarcroft	6	160	300
Basilisk, Commander the Hon. H. Egerton	6	160	300
Hecla, Captain W. H. Hall	6	147	400
Lightning, Captain B. J. Sullivan	2	50	100
Locust, Lieutenant-Commander Day		45	80
Porcupine, Captain Fisher	2	32	200
Porcupine, Lieutenant G. M. Jackson	4	60	120
Volcano, Second Master Gilpin	4	57	140
Otter, Lieutenant W. A. J. Heath	2	36	120
Pigmy, Lieutenant Hunt	3	36	100
Cuckoo, Lieutenant A. G. E. Murray	3	57	100
Bellerophon, Commander Hosken	24	540	—
Zephyr, Lieutenant Crawley	3	50	100

THE BALTIC FLEET FOR 1855.

Ships and Commanders.	Guns.	Horse-power.
Duke of Wellington, Captain Caldwell, flag of Rear-Admiral the Hon. R. S. Dundas, C.B.; Captain of the Fleet, the Hon. F. T. Pelham	131	700
Exmouth, Captain W. K. Hall, flag of Rear-Admiral Michael Seymour	91	400
Edinburgh, Captain Lucas Fisher, flag of Rear-Admiral R. L. Baynes	58	600
Royal George, Captain Codrington, C.B	120	970
James Watt, Captain George Elliot	91	850
Orion, Captain Erskine	91	850
Cæsar, Captain Robb	91	850
Majestic, Captain Hope	81	750
Cressy, Captain Warren	81	750
Colossus, Captain Robinson	81	750
Prince Regent, Captain Smith	84	750
Blenheim, Captain W. H. Hall	60	650
Hogue, Captain W. Ramsay	60	650
Ajax, Captain Ward	60	650
Hastings, Captain Caffin	60	800
Pembroke, Captain Seymour	60	800
Sidmouth, Captain Wellesley	60	800
Hawke, Captain Ommanney	60	800
Russell, Captain F. Scott	60	800
Edinburgh, Captain Hewlett	58	600
Impregnable, Captain Watson, C.B.	71	550
Euryalus, Captain Ramsay	51	550
Arrogant, Captain Yelverton	46	450
Amphion, Captain A. C. Key	34	300
Horatio, Captain the Hon. A. Cochrane	24	250
Malacca, Captain Farquhar	16	200
Cossack, Captain Lanshawe	16	200
Tartar, Captain Dunlop	16	200
Pylades, Captain D'Eyncourt	16	200
Esk, Captain Hind	16	200
Archer, Captain Heathcote	15	200
Magicienne, Captain Vansittart	16	400
Odin, Captain Willcox	16	500
Vulture, Captain Glasse	6	470
Centaur, Captain Clifford	6	400
Dragon, Captain Stewart	6	765
Bulldog, Commander A. Gordon	6	400
Lightning, Lieutenant Campbell	6	100
Desperate, Commander Wilke	6	400
Conflict, Commander Brown	8	400
Cruiser, Commander the Hon. G. Douglas	15	60
Harrier, Commander Story	15	160
Falcon, Commander Pullen	15	160
Ariel Commander Luce	6	200
Basilisk, Commander Penner	6	300
Rosamond, Commander Crofton	6	280
Driver, Commander A. H. Gardner	6	280
Geyser, Commander Powell	6	280
Gorgon, Commander Crawford	6	300

&c. &c. &c.

Belleisle—Hospital ship, Commander Hosken.
Zebra—Shell magazine. | Malago—Powder magazine.

In looking over these lists it will be observed that, whereas one division of last year's fleet was composed chiefly of sailing line-of-battle ships, on this year's fleet all are steamers. Nor did Sir Charles Napier possess any steam floating batteries or mortar vessels, nor even a gun-boat worthy of the name. Hardly any of the gun-boats are ready to sail, but now that the main body of the fleet has cleared off, all hands at the dockyards have been put to work upon them, and no doubt they will be in the Baltic as soon as there may be occasion for their services. It is expected that the five batteries will be launched in the Thames on or before Monday next, the 16th inst., when they will be instantly fitted and dispatched for service under the most active, energetic, and skilful Captains in the Royal Navy.

The fleet left the Downs on Monday. At five a.m. the signal was made to get steam up, and shorten in their cables, which was at once obeyed, and at ten minutes to six the signal to weigh was made. The *Nile* led the van, and the other ships in succession followed in two lines. The weather was rainy, and persons on shore could not discern the fleet very far.

At Deptford the newly-launched screw gun-vessels, by Pitcher, are being fitted with every dispatch; and at Woolwich the mortar vessels have been taken in hand, and are being fitted with the "sling" mortar carriages, and also on the old bed principle, as fast as they can.

Portsmouth still has a very powerful force of ships left, notwithstanding the departure of the bulk of the Baltic expedition. There were on the 6th inst. the following:

Ships and Commanders.	Guns.	Men.	Horse-power.	
Neptune, Captain Hutton	120	970	—	At Spithead
St. George, Captain Eyres, C.B.	120	970	—	"
Orion, Captain Erskine	91	850	600	"
Cæsar, Captain J. J. Stopford	84	750	—	"
Powerful, Captain Massie	84	750	—	"
Hastings, Captain Caffin	60	600	200	In harbour
Pembroke, Captain Seymour	60	600	200	"
Retribution, Captain Fisher	28	320	400	In basin
Pylades, Captain D'Eyncourt	21	300	250	At Spithead
Malacca, Captain Farquhar	17	200	200	In dock
Odin, Captain Willcox	16	270	500	In basin
Centaur, Captain Clifford	6	200	540	At Spithead
Cruiser, Com. the Hon. G. Douglas	14	160	60	"
Falcon, Commander Pullen	14	160	160	"
Ariel, Commander Luce	6	160	60	"
Gorgon, Commander H. B. Crawford	6	160	300	"
Driver, Commander A. H. Gardner	6	160	280	"
Samson (preparing for commission)	6	200	467	In basin
Lightning, Lieutenant Campbell	8	52	100	"
Teaser (tender to Cressy)	3	32	60	In harbour

A letter from Elsinore of the 3rd inst., says, "Four steam-frigates of the flying squadron arrived and anchored in the roads on the 1st inst., at noon, but were obliged to return in the afternoon, some with loss of anchor and chain. Five sail—namely, the *Arrogant*, *Ruby*, *Tartar*, *Archer*, and *Desperate*—came in again yesterday, and, the Swedish side of the Sound being clear of ice, they proceeded up to Landscrona. Four of the above squadron have arrived in the Belt."

NAVAL AND MILITARY INTELLIGENCE.

THE force at Spithead received an unexpected and important addition, on Sunday morning by the return of the fine ship *Duke of Wellington*, Captain Caldwell, to repair the damage sustained by the collision with the American ship *Hurlbut*, also in Portsmouth harbour under similar circumstances. She seems to have struck the *Duke* amidships on the port side, taking the bower anchor and carrying away the stock right in half amidships, got loose of the fore-chains and took them right in half, took the fore-channel, cleared the fore-mast, cleared the fore-mast right up in the waist, carried away the fore-rigging, the fore-shrouds and waist, stove in the port, entering that and seven others, then smashed part of the starboard main-rail and main-yard-arm quarter gallery; the swinging boom, of course, went too. The *Duke* left the Downs on Saturday at noon, and arrived at Spithead yesterday morning at eight, when Captain Caldwell landed and sent in his list of defects, to repair which Dockyard artificers were at once sent off. It is supposed the refit will occupy a week. Rear-Admiral Dundas, in the interim, shifted his flag, and returns to the *Nile*, 91, Captain Robinson.

THE want of sufficiently-experienced non-commissioned officers for the Turkish contingent in the Crimea has been much felt, and, in consequence, a notice has been issued that the Horse Guards by the authorities, within the regiments serving there, any number of good character, were required for non-commissioned officers. A daily bounty is to be paid, and the rate of payment is to be as 6d. per day. As an additional inducement, the number of years they had previously served will be taken into account.

THE Government are fitting up every available ship and steamer which has been lying idle in various ports, so that in about six months' time we shall be in a considerable extent, independent of the merchant and packet service for our transports. Already the charge for tonnage for war purposes is reduced. Large numbers of the present war transports will in a few months hence be restored to the merchant and packet service.

THE effect of releasing militiamen who enlisted prior to the 12th of May, 1854, from permanent service, continues to be felt with more or less severity in the different corps. In the South Middlesex the commanding officer addressed the men, appealing to them as most of them had been enrolled at Pimlico, which signified Mr. Six's Patent Hotel, they could remain in her Majesty's service a few months longer and their commanding officer." The result has been that only 89 men have left the regiment. This corps, since its formation, has gained 400 men to the line, and still musters 540 men. The Nottingham Militia ranks much the same. The Northumberland was reduced on Saturday week to less than half the effective strength, about 200 only remaining. The number in the Leicestershire does not now amount to above 400. In the Rye and Radnor Rifles only 9 men out of 78 have declined to serve. Of the West Suffolk, just were entitled to their discharge, but of that number between 150 and 200 have been re-attested. The West Norfolk, one of the finest corps, and the effective strength is reported 450 men, including the staff. In the East Norfolk 300 men are liberated. In the Monmouthshire, unfortunately, much insubordination has been evinced. Two hundred men are entitled to their discharge; the regiment, however, will then be at least 500 strong, and is in a state of great efficiency. Of the 2nd Somerset, in Cork, 370 were discharged, and sailed for Bristol, leaving the corps a skeleton. Of the 3rd West York 220 were disembodied; of the Cambridgeshire, 200; and all left Dublin last week for England. Of the Northamptonshire in Dublin, 60 claimed their discharge, and left Dublin last week.

On Tuesday last the officers and medical staff attached to the recruiting department were engaged in inspecting one of the large attendances (173 in number) of volunteers and recruits that has been assembled in the metropolis in any one day since the commencement of the war.

ORDERS were forwarded from the Horse Guards on Tuesday to the commanding officers of the Household Infantry, quartered in Wellington, St. George's, and Portman street barracks, and the Tower, to have the detachments for Sevastopol service under arms that morning at seven o'clock, for the purpose of being inspected previously to their departure, which was appointed to take place at eight o'clock.

SINCE the muster roll of the 2nd Staffordshire Regiment of Militia was gone through in accordance with the circular from the War-office authorising the return to their homes of all the men who had been embodied prior to the 12th of May last, and on the occasion of which reading 1,200 men were examined and received their bounty money, only 600 have been made at the average rate of seven men a day; and as the men continue to clear themselves to be reattested. The remainder is now between 600 and 650 strong, and it is confidently expected that in a very short time it will reach its original numbers. The men who have been reattested are now absent on furlough—a favour granted to them by Government on their enlistment.

THE Irish Militia are unaffected by the recent order of release, and consequently are progressing steadily in numbers and discipline. The Limerick Artillery is probably more nearly completed than any other in Ireland, the number required to complete the quota is 400, and for the three regiments of Cork Militia is at present proceeding with great activity, but the regiments are still kept below their standard in consequence of the men daily volunteering into the line. The number of men now enrolled in the Roscommon Regiment exceeds 450, and that number will be considerably increased next week.

THE Government is about to provide hospital accommodation for the sick and wounded soldiers on their return from the East, by converting ships of war to that purpose, several of which are established at Portsmouth. The barrack at Chelsea is also being converted into a temporary hospital for the Brigade of Guards, which is approaching completion, and will be ready for use on Monday.

MILITIA FORCE OF THE UNITED STATES.—By the annual report of the War Department, transmitted to Congress on the 31st January, it appears that the whole strength of the National Militia is as follows:—

INFANTRY.			
Commissioned officers	..	..	45,062
Non-commissioned and privates	..	..	1,769,436
CAVALRY.			
Commissioned officers	..	..	910
Non-commissioned officers and privates	..	..	12,639
ARTILLERY.			
Commissioned officers	..	..	1953
Non-commissioned and privates	..	..	32,456
Aggregate	..	..	1,862,215

The cavalry and artillery must, of course, be regularly organised and drilled uniform companies. As stated above, they constitute an aggregate of 47,958 officers and men.

RUSSIAN SISTERS OF CHARITY. The first party of thirty-five Russian Sisters of Charity have found their labours in the hospitals of the Crimea beyond their strength. The fatigue and privations to which they were exposed in the hospitals of Simpheropol had, as early as January 16, been the death of two, while fourteen more were ill. From the 26th of that month several of the sisters did duty in Sebastopol, on the south side of the town. A further party of twenty left St. Petersburg for the Crimea on the 15th of February.

A Yorkshire subaltern, in the 7th Dragoon Guards, has backed himself for 500 guineas to ride 100 miles in five hours. Twenty miles per hour will therefore be the pace, almost equal to that of the Derby. He intends to have ten horses, and ride over the Curragh race-course.

THE LARGE SHEET OF ENGRAVINGS
GIVEN WITH THE PRESENT NUMBER.

THE ATTACK UPON SEBASTOPOL BY THE ALLIED FLEET AND ARMY.

The large Illustration represents the Attack of the Allied Fleet and Army upon Sebastopol. This sharp action we already been fully described in our Journal; the accompanying Engraving shows the heavy fire and respective positions of the ships, to which they were mostly taken by the small steamers. The fire of the troops is also partly shown.

HELSINGFORS AND SVEABORG.

(See the Panoramic View published with the present Number.)

The city of Helsingfors, called in the Finland dialect Helsinki, is situated on a promontory called Estnas-Skatan, to the left of the island of For, at the bottom of the Gulf of Finland. It has an excellent harbour, of which the entrance is defended by the fortress of Sveaborg, while its houses are well built, and its general appearance is picturesque and imposing.

With respect to the foundation of Helsingfors it is stated that the Swedish King, Gustavus I. wishing to open up a commercial communication with Russia, caused a sea-port to be built on the isle of Sandhamn, which he proposed to people with emigrants from Raumo, Borga, Eckniis, and other crowded towns. For some reason or other, to-day unknown, this project was soon afterwards abandoned; and the first stones of the new city were conveyed to a place near the waterfall of the Wanda, about five versts from the present site.

King John III. confirmed several privileges on the city in the year 1550, and among others the right of trading with foreign lands. In 1594 Borga was deprived of many commercial facilities which were thenceforth vested exclusively in Helsingfors; and, in 1607, it was ordained that every stranger desirous of returning to his country, should pay into the municipal coffers a sum of money equivalent to a third part of his moveables. It was soon perceived that the little town of Helsingfors, however industrious and enterprising its inhabitants, could never attain any great importance so long as it occupied its then site.

Feeling the need of a more convenient harbour, and of more spacious municipal establishments, the Regency, acting for Queen Christine (Oct. 2nd, 1639), issued a proclamation to the effect that the city should be transferred to the place where it now stands

Helsingfors was declared the capital of the Grand Duchy of Finland by an Imperial edict on the 27th of March, 1812. The advantages which ought naturally to have accrued from its splendid situation, and the numerous privileges it enjoys, were for a long time kept back by disasters of every description. The spirit of enterprise was baulked on every side: the people became disheartened, and neglected their business. In 1713, on a day when the people were devoting themselves to prayers, the Divine Service was interrupted by the arrival of a Russian squadron. After several fruitless attempts to repel the invaders, the miserable inhabitants set fire to their houses, and retired in mournful group to the ancient town. When the conflagration had subsided, the Russians landed, and kept possession of the city till the conclusion of the Peace of Nystadt, in 1721. For several months after that event Helsingfors was nearly deserted. One by one, however, the families returned to their old homes, which their enemies had, at any rate, rebuilt for them; and in less than twenty years the city began to assume an air of prosperity and importance. Just at this period, however, the Russians again molested them, and their peaceful streets were made the scene of rioting, debauchery, and murder. Among the earlier disasters of Helsingfors may be mentioned a conflagration in 1627, which almost entirely destroyed it; a famine occasioned by the bad harvest of 1695 and 1697, which decimated its inhabitants and impoverished its resources; and a pestilence in 1710, which visited every house.

A recent traveller (M. de Marmier), describing the capital of Finland, says:—"Helsingfors contains a population of 16,000 inhabitants, and occupies as much space as many of the large towns of France. It is a gay and attractive city, learned in the hard lessons of adversity, and hopeful for the future; a city which has seen within a few years hundreds of beautiful buildings clustering around it and rising as if by magic. Its streets are broad, long, and regular; its houses are neat and well built; and many of its public edifices are such as might grace even the most splendid metropolis. It has, in fact, a symmetry and entireness about it such as few possess, and which almost justifies the supposition that it was built by one hand. Court and senate, university and barrack, observatory and bathing-house, promenade and gymnasium—all that which gives to a city an air of authority, of instruction, and of enjoyment—may be found here in beautiful combination."

FRESCOES ILLUSTRATIVE OF THE BRITISH POETS IN THE NEW HOUSES OF PARLIAMENT.

(See the Four Illustrations given with the present Number.)

Or the scheme of pictorial decoration for the New Houses of Parliament, not the least interesting and attractive department is that of the Frescoes illustrative of the works of British poets, in the corridor of the House of Peers. Passages from history and ideal representations of public virtues are grand subjects, no doubt, and very ably have they been dealt with by the various hands employed upon them in this palatial structure; but in their conditions they demand a severity of treatment setting bounds to the imagination of the artist. In the pages of the poets, on the contrary, the painter has free scope for his fancy and his pencil, both in the selection of his subjects and his mode of dealing with them; whilst, to the spectator, his work comes recommended by old and agreeable associations.

The four Frescoes of which we give Engravings, and which form part of an intended series, afford gratifying evidence of the sympathy of our artists with the sister art of poetry, and the amount of talent available amongst us for the production of works of the grand class in the difficult medium of fresco

The first, by Mr. Cope, R.A., is a scene of deep pathos from the pages of the father of English poetry—"Griselda's First Trial of Patience: the Marquis causes her first Child to be taken from her." Nothing can be conceived more touching than the overwhelming grief exhibited in the prostrate figure of poor Griselda, whose averted look, closed eyes, and clasped hands denote the womanly tenderness and mild submissiveness of her nature. This touch of character, ably developed in the principal figure itself, is marked in a still stronger manner by contrast with the emotions of surprise and horror displayed by the two attendant females. The group of the man carrying off the child is vigorous in treatment, and the glimpse we catch of the Marquis, looking through the casement, is sufficient to dilate the interest he takes in what is going forward. The style of architecture and of the background are appropriate to the early period the story refers to

Mr. Horsley in his Miltonian subject, "Satan touched by Ithuriel's spear, while whispering evil dreams to Eve," has assumed a task of no ordinary difficulty, in which, however, he has acquitted himself with success which does him honour. The figures of the angels are commanding and dignified, their expression benign and heavenly. Eve in an attitude of troubled repose, gives light to the foreground, and commands the principal share of interest. The figure of Satan coiled up, and only partially seen, is an ingenious conception. His face, also, is almost wholly concealed; but what is seen of it—the intent malicious eye, and the knitted brow—sufficiently identify the Genius of Evil

St. Cecilia—whether in her prescriptive place in the Calendar, or as described in Dryden's celebrated Ode—has been a favourite subject with artists of all ages; and certainly few subjects exist better adapted for the display of varied, yet concentrated, interest—interest, also, of the most elevated and impassioned kind. Mr. Tennicl has treated his subject in a manner at once original and striking. Observing a severe simplicity in the attitude of the saint, as well as in her drapery, and the full of her head, any letdown of tone and sentiment at the observance of rapture in the uplifted eye, the open mouth, denoting musical utterance, and the action of the hands roving solemnly over the keys of the [illegible]. Surrounded by an antique circular arch, her head occupies the centre of the picture, considerably above those of the semi-circular group, which, in various attitudes and with various expression, [illegible] variously they are affected by the sublime strain.

Mr. Armitage, a picture of the "Death of Marmion" (after Scott) is of the heroic character. The principal figures in the foreground are well conceived and ably executed. The distant glimpse of the battle field is very happily introduced: the bustle of the fray still survives, and calls forth the last latent energies of the expiring knight, who still urges his gallant comrades to do battle on that day:—

"Charge, Chester, charge! On, Stanley, on!"
Were the last words of Marmion

THE PARIS UNIVERSAL EXHIBITION.

(From our Special Correspondent.)

Paris, April 10.

The authorities have been very active since I last addressed you. Various alterations have been made in the general plans. Thus the two buildings—viz., the Palais de l'Industrie and the Machinery and Raw Produce Gallery—on the Cours la Reine, are to be connected by a covered passage. At the same time, this passage will afford a little additional exhibition space to the Parisians for the *Article Paris*. This additional space was much needed, for the rejections had struck some eminent firms worthy to enjoy room in any Industrial Exhibition. Prince Napoleon, as President of the Imperial Exhibition Commission, has been, also, very busy. He has set the Fine Art Committee to work, appointed the Jurors for the industrial parts, and limited the number of Jurors to decide upon the claims of the English section to forty. He has also made some important alterations in the disposition of the Great Hall of the Palace. At one end an immense *phare* was in course of construction, and for it Gerome had painted a series of allegorical figures, representing various sea-ports. This the Prince has removed. He has also directed the removal of some chocolate apparatus that was to have been prominent in the Great Hall. In these removals the Prince has shown good taste. The French have better things than model lighthouses and chocolate machines to place in the grand Hall of their Palais de l'Industrie. If he could also urge the workmen forward; place ten men where there are now only two; put the Company in the background as far as possible, and let the Commission take care of the national and international interests involved in this Universal Exhibition—his services would be cheerfully acknowledged by his country. His return to Paris has already had its effect upon the activity of the Imperial Commission.

Among other points recently debated between the Company, that desires to realise heavy dividends, and the Imperial Commission, that is anxious only to please the French people and foreign visitors—that of the admission price has been prominent. The Company desired high prices; the Commissioners were for low prices. The first assumed to a five-franc day, a franc day, and the rest four sous days; the latter desired a three-franc day, a ten-sous day, and the rest two-sous days. Englishmen, accustomed to pay for admission everywhere, would regard the Company's tariff as low enough; but the Commissioners, having to deal with a French public, accustomed to enter any public building free; to saunter into churches, museums, libraries, academy exhibitions, and industrial exhibitions free, knew that the Parisian population would not be content with a maximum of four sous entrance fee Besides, the French people pay the shareholders four per cent on their invested capital, for the privilege of holding the national exhibitions in the Palace. Therefore, all power should reside in the hands of the Imperial Commissioners throughout the progress of this Universal Exhibition. The less a commercial company like that which has built the Palais de l'Industrie interferes with a national festival like the one about to begin, the better for the dignity of the French people. The Fine Art Building is governed exclusively by the Imperial Commission. It has been built by the French Government entirely. Here, therefore, the French people will measure the disposition of the Imperial Exhibition authorities towards them. Here, I am already informed, there will be free days. What will our Academicians say, when they learn that in Paris their works will be seen gratis.

The English Committee, in the Rue de Cirque, have requested me, through your columns, to inform the English public that letters addressed to the Poste Restante in their office should be prepaid. It is obvious that the Committee cannot undertake to keep an account current with any English exhibitor for postage. Besides, an unpaid letter is charged the old tariff of eightpence, whereas fourpence prepaid franks it. Other conveniences for exhibitors have been prepared by the Committee, headed by Mr. Cole. On the hot summer days the exhibitors' room will open upon a garden, where a tent is to be erected upon the lawn for their enjoyment. The upper rooms of the house—all splendidly decorated—are appropriated to various English committees of importance.

Not the least remarkable feature of the Exhibition-time in Paris will be the immense establishments now in course of construction, where counters are at the disposal of the rejected applicants for space, or for exhibitors who wish to sell articles similar to those they have in the *Palais de l'Industrie*. One of these establishments advertises fifteen hundred counters to let.

It may interest your readers to learn that the English engravings and water-colour paintings bid fair to be the first contributions arranged in the Fine Art Building. When I was last in the galleries there were not more than five or six French paintings upon the walls, but then many of these paintings will each take the side of an apartment. Horace Vernet's acres of canvas from Versailles; Gerome's colossal picture painted for the French Government, a portrait of the present Emperor five or six times the size of life; a colossal eagle; colossal groups of sculpture—everything immense, if not great. This passion for broad canvas reigns supreme in Paris just now. Every artist thinks that the more canvas he can set up the better chance he has of selling down to posterity The English paintings will generally be regarded as microscopic studies by the French. Here, a portrait only the size of life is a miniature.

For the last of May little, however, will be finished. Very energetic contractors are offering to prepare cases for the 20th of next month Still, skilfully-disposed drapery, striking sculpture in the Great Hall, an organ or two (I hear a fine one is to be contributed from England), perhaps some fountains, all kinds of gay fabrics temptingly disposed, will enable the Imperial Commissioners to present to visitors a fine picture for the opening day. We may all remember the state of the Great Exhibition on the 1st of May, 1851. Still the same excuses cannot be made in the present instance. Two years have been occupied upon the building, two years (or nearly this extent of time) have elapsed since the decree was published calling foreign exhibitors to Paris this spring. The time has been ample, both for exhibitors and Exhibition authorities; and it is to be regretted that so much has been driven off to the last moment. Even the architectural plans have suffered changes within six weeks of the opening day. [illegible] gallery he wanted, this want was as apparent six months ago as now.

But there is no good to be gained from an analysis of what might have done. The business still to be achieved, however, should be set about methodically and seriously, and I should be glad to [illegible] lesson on these points from our English Committee. The [illegible] of all the English exhibitors, in fact, excites no little jealousy.

Statue of Lord Jeffrey.—The colossal statue is now being put up in the Parliament-house for the reception of the late Lord Jeffrey, which has been executed by Mr. John Steel. The statue will occupy the upper of the two niches formed in the hall by the removal of the old benches occupied by the Lords of Session, and will be placed between the statues of the late Lord President [illegible] and the late Sir [illegible] Bart. sculptor.

Inverness Sailing Boats.—After the last meeting of the Institution of Civil Engineers, there was exhibited in the Lecture Room a model of a system, introduced by Mr. Chifford, for lowering sailing boats from the davits, evenly, quickly, and safely, in a gale of wind, and disengaging them without any risk of being dragged, or being dragged under by the speed of the vessel. The chief point is the employment of a block of a novel form, having three sheaves placed over each other, through and between which the lowering ropes pass in such a manner as to have a tight grip upon them, and yet so that, by letting all run free, the falls will run out in such a manner as to let the boat down on the water, on an even keel and quite free from the ship. The lowering can be accomplished by a man acting in the boat, and, though with a full [illegible] the descent can be checked at any point. It is evident that, by this system, the disastrous effects of undue haste in rushing to the boats, in cases of danger, can be completely obviated

EPITOME OF NEWS—FOREIGN AND DOMESTIC.

A grand installation of the Garter will be held on Wednesday next, when the Queen will confer the order on the Emperor of the French.

The Dowager Empress of Russia is about to visit Berlin.

Earl Granville, Lord President, and the Countess Granville, left London on Saturday last for Paris

A rumour prevails in Vienna that the Emperor Napoleon is to visit that city after his visit to London; also, that the Emperor Francis Joseph and Queen Victoria will at the same time visit his Majesty at Paris during the Exhibition

The Empress of the French has made a present to the Empress of Austria of a lace dress, which will be seen at the Exhibition of Paris, and the pattern of which was designed by the Empress Eugenie herself. The value of this dress is estimated at 300,000f

The Emperor of Russia remitted through the Swedish Embassy a sum sufficient to give every prisoner in the Lewes gaol 6d each for hot cross buns

General Sir John Burgoyne, G.C.B., arrived at Vienna on Saturday last.

A letter from St. Petersburg states that the Emperor Alexander intends to visit Helsingfors, with his brother Nicholas, before the commencement of operations in the Baltic

The health of Lord Haddo has been so much improved by the climate of Egypt as to encourage the expectation that his Lordship will be able to attend to his Parliamentary duties in the course of next month.

The King of Prussia intends shortly to go to Konigsberg, to be present at the jubilee about to be celebrated in commemoration of the foundation of that city, just 600 years ago, by King Ottokar. As the precise day on which it took place in the year 1255 is not known, the King will himself appoint the day for the celebration of the jubilee.

The Lord Chancellor will receive the Judges, Queen's Counsel, &c., on Monday next, the first day of Easter Term, at his Lordship's residence in Upper Brook-street

His Excellency the Baron Brunnow, late representative of Russia at the Court of St. James's, and continues at St. Petersburg. The Baroness and Mdlle. Brunnow are residing at Darmstadt.

A religious ceremony took place on Good Friday in the Chapel [illegible] a minutes before the service commenced the Emperor and Empress entered, habited as blacks; the Empress wore the Spanish costume. Except at the sermon the Emperor and Empress remained kneeling during the service, which lasted about an hour.

The Duke and Duchess de Brabant were to leave Alexandria on the 30th ult. for Jaffa, whence, after visiting Jerusalem, they were to return to Europe

The King of Sardinia has been indisposed for some days past, and, after being subjected to the usual treatment of bleeding several times, has now quite recovered

The installation of Mr. Layard, M.P., as Lord Rector of the University of Aberdeen, took place on the 5th inst.

Letters from Naples state that Cardinal Wiseman is to be appointed Librarian of the Vatican, in the place of Cardinal Mai

The *Invalide Russe* contains an account of a visit made by the Emperor to the military schools, in which his Majesty took formal leave of the pupils whom he had directed and commanded for a period of six years

The Portuguese Minister of Finance having resorted to the novel expedient of appointing a committee of noble ladies to raise a loan of £12,000 to redeem the Opera-house for the majority of Don Pedro, September next, the Lisbon capitalists were unable to resist such powerful applicants

The vacant Under-Secretaryship of the Colonial Department, which necessarily remained open until the bill for regulating the number of Secretaries of State and Under-Secretaries became law, has been confided to Mr. John Ball, M.P. for Carlow

A letter from Berlin, of the 4th inst., positively denies that Dr. Mandt, physician to the late Emperor Nicholas, has been obliged to leave St. Petersburg secretly. He is still there, the letter says, and in the same situation as before

At Weimar, counterfeit autographs of Schiller have been made use of in an audacious manner. The heirs of the poet are amongst the dupes.

The name of the Rev. Dr. Stanford is removed from the list of the Viceregal Chaplains, some person having communicated to Lord Carlisle that the rev. gentleman had been dismissed as Chaplain to the North Dublin workhouse for proselytising tendencies

A Swedish *savant*, Professor Edlund, of the Royal Academy of Sciences, has succeeded in making an improvement in the construction of the electric telegraph apparatus, by which it becomes possible to send messages by the same wire simultaneously in opposite directions

Augustus Cæsar Dodge, Senator from Iowa, has been nominated by the American President, and confirmed by the Senate, as Minister to Spain, Mr. Soulé resigned, and Breckenridge declined

Captain Casele, director of the Royal stables at Turin, has returned from Egypt with four magnificent Arab horses, two of which are a present from Abbas Pacha, son of the late Viceroy, to the King of Sardinia.

The Committee of the Napier Testimonial Fund have decided on the erection in London of a bronze statue of the gallant General. The height of the statue is to be twelve feet, on a granite pedestal eighteen feet high

The French Academy, at its last sitting, elected the Duke de Noailles, Director, and the Bishop of Orleans, Chancellor, for the present year.

The Governor-General of India has raised the salary of Dr. O'Shaughnessy, the superintendent of electric telegraphs in India, to £3600 per annum.

On the 31st of December last there were 33,960 vessels belonging to the several ports of the United Kingdom: the tonnage was 5,043,370, and the number of men employed 260,491.

A magnificent antique statue, in red marble, was purchased for the British Museum at the sale of M. Collet's collection at Paris. Ex-King Jerome attempted to become its purchaser, in order that he might present it to the Museum of the Louvre.

The Washington papers announce a default to the extent of 100,000 dollars made by a Government official. The delinquent was Governor Price, of New Jersey

On Tuesday last the Bishop of Ripon preached in the chapel connected with the Leeds Borough Gaol, to the prisoners, who joined heartily in the service.

The Rev. J. Coleridge Patteson, M.A., Fellow of Merton College, Oxford (son of Sir J. Patteson), has been appointed a missionary for New Zealand

A large addition has been made to the public park at Holyrood, by enclosing within it a field of about thirteen acres, situated north of the Duke's Walk, and east of the ground used for military exercise and parade.

It is stated by a writer in the *Boston Transcript* that nearly a million of dollars are accumulated in the treasury of Harvard University

A county meeting is to be held at the Shire-hall, Bedford, on the [illegible] object of establishing a juvenile reformatory institution.

Letters from Athens contain deplorable accounts of the progress [illegible] amongst the peasants of Greece

A second free library and museum, including a reading-room, are about to be established at Ashton-under-Lyne, in the Queen's-park, Manchester

The Exhibition of Belgique in Brussels has entirely failed. The idea of [illegible] to represent Russia was the thing that [illegible] abandoned.

The estimated population of England and Wales in 1854 was 18,617,000; the number of births, 634,550; [illegible] and of marriages, 159,000

Dogs are henceforth to be taxed in France: a law has just been passed by the Legislative Body, levying a duty, varying from one to ten francs per head yearly, on these animals.

The railway calls falling due this month amount to £815,205, of which [illegible] are called by foreign companies.

Six persons were poisoned at Cardigan on Friday by inadvertently taking a meal intended for killing rats. Four were recovered by medical aid, one [illegible] precarious state, and one has died

Trials for breach of promise of marriage have hitherto been almost unknown in France, but the Imperial Court of Nismes has just declared that the non-execution of a promise gives a right to damages.

A sum of 9400 florins has been received at the Hague, from Manchester, in aid of the sufferers from the late inundations in Holland.

One hundred and thirty-two children and adults were baptised on Easter Sunday at Christchurch, Watney-street, St. George's-in-the-East.

The snow still remains deep on the high mountains of the Jura, and in several parts the roads are impracticable. The mail-bags to Geneva are still conveyed in sledges part of the way, and will be, probably, for some time.

It is said Government have seriously entertained a proposal to divide the duties of the chair of Natural History in Edinburgh University.

MEN-OF-WAR'S MEN LEAVING PORTSMOUTH FOR THE BALTIC FLEET

WOMEN LEAVING "THE HARD," PORTSEA, FOR THE BALTIC FLEET.

THE COMMON HARD.

FEW people not born or bred in the locality imagine that they are out of Portsmouth proper when standing on the Common Hard; but the Common Hard is in Portsea: the history of the Common Hard is, nevertheless, to all intents and purposes, the history of Portsmouth. Now, the history of this place, important and interesting though it undoubtedly is, is not an excrescitation in which we propose at present to indulge. It is quite beside our purpose to discuss whether the first Henry or he of the lion heart was the earlier patron of Portsmouth. The Common Hard is a patent fact, and a great one, in its own and in its present and every-day condition is the matter we have to deal with. Speaking by the card, this spot—where the *cenue* of many a naval anecdote is placed, wherever two men-of-war's men meet on any part of the habitable globe is bounded on the north by the Dockyard-rites; on the south, by a mass of building, devoted to artillery stores; on the east, by a row of houses of an exceedingly diversified appearance, consecrated to Ceres and Bacchus—chiefly to the latter (they are fictured in our illustration of the embarkation of the Admiral); and on the west by salt-water. Standing with your back towards the houses, you have the *pass* before you, and, sloping down from this to the water's edge, you have, strictly speaking, "the Hard"—a patch of shingle, covered at high water with the said water, and at low water with sailors of all dimensions, and their friends. They who delight not in crowds had better avoid this place, on the arrival or departure of a fleet; but at any time one will be rewarded for a visit to the Hard, by a sight of the glorious old *Victory*, Nelson's own ship—the happy-named—from on whose quarter deck he fell death-wounded, and in whose cockpit he gave forth his last breath for the land he loved so well.

ANCIENT AND MODERN WARFARE.

WE have been assured, upon the authority of our venerable friend Robert Owen, that the Millenium of Peace and Brotherhood among all the Civilised Nations of the Earth will take place about the month of May next. We sincerely hope his prediction may be verified; but there are, we fear, much stronger grounds for believing that by that time the war now raging will have swept into its terrible vortex half the great States of Europe, and that the long interval of peace we have enjoyed may be followed by a protracted, a bloody, and an expensive war. And, after all, war is the normal condition of man, although little of its calamities have been experienced by the present generation till within the last few months. It occupies the most prominent place in the history of the world; and from the time man first came upon the earth, his hand has been against his fellow; so that we may take the firstborn of Adam as the original type of the tyrant and murderer. It may not be uninteresting to trace how this system of warfare and antagonism was carried on from the most remote antiquity, before the lights of science and modern invention and improvements showed us how to effect the greatest possible amount of destruction in the smallest space of time.

Clubs and stones were undoubtedly the first offensive weapons, and things to give the latter force were then added. The use of the bow is referred to in the 21st chapter of Genesis, for we find it stated of Ishmael, that "God was with the lad and he grew and dwelt in the wilderness, and became an archer." This is probably the earliest reference to the use of any regularly-constructed offensive weapon, as the date of this notice is supposed to have been about 1900 years before the birth of Christ, or nearly 4000 years ago. Many subsequent passages attest the continued use of the bow. The overthrow of Saul was owing to the Philistine archers and Israel, when blessing his sons, says of Joseph, "the archers have sorely grieved him, and shot at him and hated him." The companies that came to David at Ziklag were armed with bows, and could use the right hand and the left in hurling stones, and shooting arrows out of a bow. The Saracens, who were of the posterity of Ishmael, never set their hands to a plough, but got their living by the bow, and became very expert in its use. The Hiddekel, one of the four rivers named in Genesis, now called the Virgis, was named Teer by the ancient Persians, which signifies an arrow. It was so named either from the rapidity of its course, or arrows were named after it; and the inference in this case would be that arrows were used 4000 years before the Christian era. The Grecians derived their knowledge of the bow from the Scythians, and its use was considered the highest department of education. The arrows used were reeds or light wood, tipped with bone, or stone, or metal; they were barbed, and at times dipped in poison; but this practice was more frequent among barbarous nations. The Persian, Turkish, and Tartar bows resembled the Scythian in form, and they required considerable strength and dexterity in using them. It is singular that bows of a similar form, made of wood, should have been found among the Esquimaux Indians

In England the use of the bow was once carried to a degree of perfection that has never been rivalled. The Anglo-Saxons and Danes were acquainted with it from a very early period, although we are probably indebted to the Normans for its use as a military weapon. Our chroniclers do not mention archery till the death of Richard I., who was killed by an arrow shot from a cross bow, while besieging the Castle of Chalons. The death of William Rufus, some years previously, was caused by an arrow discharged from the ordinary long-bow, which glanced from a tree and killed the monarch. Under Edward III., the glory of the long-bow was in its zenith. At the battle of Cressy, 1346, a shower of rain slackened the strings of the Genoese cross bows, and rendered them unserviceable, while the English, being sheltered by their bows, gained a great victory. This and the victory of Poictiers, ten years later, was ascribed to the English archers. At the decisive battle of Halidon hill, against the Scots, in 1402, the armour of the Earl of Douglas, which was of the most perfect temper, was penetrated in five places: neither sword nor lance was used by the English, the battle was decided by the archers; and it was to them that the victory of Agincourt (1417) was also owing. In the reigns of Henry VII. and Henry VIII., the use of the cross-bow was prohibited by Acts of Parliament, while that of the long-bow was encouraged down to the time of Charles I. But although the English collectively were celebrated as archers, we have no such individual instances of dexterity as that recorded of William Tell: it is almost a pity to destroy the illusion of a romance, but it is narrowed down in Danish writer of the twelfth century, who ascribes the feat to Toko, a Dane. The tyrant Demtzian was said to be so expert that he could shoot arrows from a great distance between the fingers of a slave's hand. The extreme range of an English bow is said to have been 600 yards; but the greatest range in modern times has been 300 and 400 yards. The Turkish Ambassador, some years since, in presence of the Toxophilite Society, sent an arrow from a horn bow 480 yards. Contemporary writers tell us that Robin Hood could shoot an arrow a measured mile; but Firdausi (the Homer of Persia) tells a story that far exceeds this. When peace was made with the Scythian invader, one of the articles was, that the former should only have as much land as one of the Persian soldiers could shoot an arrow over. A hero ascended a lofty mountain near Tehrun and shot an arrow to the banks of the Oxus, a distance of between 500 and 600 miles! The modern suggestion is, that it must have been a golden-headed arrow

The cross-bow has been known for short 700 years, but it was, at first, confined to the defence of fortified places and for sea-fights. It was introduced into France by the first Crusaders, and was used in the time of Louis le Gros, 1108. William the Conqueror used the cross-bow in his battle at the battle of Hastings; and its effects were some time afterwards considered so fatal and cruel that its use was actually forbidden by the second Council of Lateran, in 1139, as hateful to God and unfit to be employed among Christians, and its continued use made churchmen regard the death of Richard I. by one of them as a judgment from heaven. The cross-bow kept its footing in our armies, notwithstanding the anathema, till 1572, when Queen Elizabeth undertook to furnish Charles IX. with 6000 men armed partly with long bows and partly with cross-bows. An ordinary cross-bow could shoot *point blank* at sixty yards; but, if elevated, at more than double the distance. The Cingalese have to this day a very ingenious one, which strings itself and discharges two arrows at a time until twelve, the number in the magazine, have been fired off

But at a much more remote period the bow and sling gave rise to other warlike combinations. In Deuteronomy, 1491 years before Christ, trees, we learn, were cut down "to build bulwarks against the city until it be subdued." And Uzziah made in Jerusalem "engines invented by cunning men to be upon the towers and upon the bulwarks to shoot arrows and great stones withal." According to Josephus, Uzziah was the inventor of this species of artillery. The primitive Grecians were unacquainted with the use of walls, and led a wandering life, their possessions remaining open to every invader. In this unsettled state they remained for several ages, till some superior minds suggested the idea of walls for protection. Within walls they were comparatively safe, because if it were not so, such a town as Troy could not have held out for ten years against 100,000 besiegers.

It is probable that the *Aries*, or battering-ram, was the earliest, as it is the simplest, of ancient engines. The name is derived from its being usually armed at the striking end with iron in the form of a ram's head Some persons have suggested that the Walls of Jericho were beaten down by this engine, the ram's horns being the horns of the battering-ram. The simplest form was a beam or mast, propelled by the united efforts of a number of men. When larger, it was suspended in a frame and worked by ropes and handles. Another sort was mounted on wheels, enclosed with hurdles and covered with raw hides to protect the soldiers while working. Some of these were of an enormous size. Vitruvius says, one used in the Parthian war was 120 feet long, being in fact composed of the largest trees hooped together with iron bands, and having iron heads of immense weight bolted to them. Josephus says, there was also a method of moving one so thick as to resist the repeated assaults of these powerful machines. It was not unusual to have fifteen hundred men working one of these engines.

Various stratagems were resorted to by the besieged to elude their effects—fire, stones, and missiles of every description were showered upon them. Sacks filled with chaff and wool were lowered down from the walls to deaden the effects of the blow—they were overthrown at times by undermining the foundations, and ropes were cut by long scythes fastened to poles; and, if no hope remained of defending the wall, a new one was raised within. The great defect of these ancient and formidable-looking machines was their small momentum or velocity. A very small body, if only moving with sufficient rapidity, may strike as forcible a blow as a very large one moving slowly; and this may be illustrated by the theory of projectiles, by which it is demonstrated that a cannon ball weighing 3 lbs., moving 1500 feet in a second, will produce as destructive effects as one weighing 50 lbs. which only moves 90 feet in a second. According to a French writer (Desaguliers), one of the largest battering-rams we read of in antiquity, weighing 18 tons, 180 feet long, and moved by 1000 men, would only be equal in effect to that of a 36-lb. iron ball fired from a cannon at point-blank distance. It may be assumed, then, that the force of a cannon ball is to a battering-ram as walls must be, or exceed that of the ancient *Aries*; but the momentum or impetus by which the latter communicated a shock to the whole building was far greater than the force of cannon-balls; and its power to shake or overturn walls and demolish buildings was much superior to that which is exerted by our modern artillery.

The ram was frequently used even in the fourteenth century; and Sir C. Wren found nothing superior to it for demolishing the walls of old St. Paul's previously to rebuilding it. Dionysius used the ram at the sieges of Rhegium and Meryta, in the years 370 and 388 B.C. The next memorable instance is the siege of Rhodes, by Demetrius Polyoretes, in the year 308 B.C., when he brought forward a variety of engines, employing in their management 30,000 men; but the siege was raised after continuing a management 30,000 men; but the siege was raised after continuing a whole year. Hannibal used engines at the siege of Saguntum, in 219 B.C.; and about the same time Marcellus laid siege to Syracuse. Archimedes was there at the time; and Marcellus having brought forward an amazing engine in eight galleys, the great mathematician destroyed it by discharging stones of enormous weight upon it, when it was at a considerable distance from the walls. He also used balistæ, scorpions, and a kind of crane lowered by a lever, which hoisted the Roman vessels by the prow and plunged them to the bottom of the sea. At the battle of Cremona the Fifteenth Legion used an extraordinary engine with dreadful execution against the troops of Vespasian. It was a balista of great size, which discharged stones of weight sufficient to crush whole ranks at once. Inevitable ruin must have ensued if two soldiers had not approached the engine unperceived, and destroyed the main springs. The Romans had regular batteries of these machines; and they had 300 catapultæ and 40 balistæ at the siege of Jerusalem. Beams of wood, and lances twelve cubits long, and stones 300 or 400 pounds weight were thrown by the latter; and as early as the Battle of Hastings they were used in the country. Under General Melville a balista was used at the siege of Gibraltar for the purpose of casting stones at the Spaniards, just over the edge of a rock, where shells could not reach them.

The discovery of gunpowder is of a very remote antiquity, but its practical application to the purpose of war is of comparatively recent date Bacon and Bertholdi Schwartz have been named as its discoverers, but Bahlel, the translator, of the Gentoo code, finds fire-arms, gunpowder and common mortars in use in India, which were supposed by some persons to be coeval with Moses Philostratus, in his Life of Appollnus Tyaneus, written 1600 years ago, refers to a people of India, who, at the time of the invasion of Alexander, used storms of lightning and thunderbolts to repel the enemy from their walls. In China its composition was known from the most remote antiquity; and the Arabs employed it at the siege of Mecca in 690. It was the same people who used it in their wars with the Spaniards, and in this way it was introduced into Europe It is urged that gunpowder has given intellectual nations a decided superiority over barbarous ones, by intimately connecting the progress of science with improvements in war; and, in our own day, however paradoxical it may appear, it has been held that whatever increases the powers of destruction in war is infinitely advantageous for the cause of humanity.

On the introduction of artillery, custom made many prefer the ancient engines of war. The construction of the new weapons was so clumsy and imperfect, and their results so uncertain, that there was a general aversion to them as being contrary to humanity, and calculated to extinguish military bravery in the breasts of the chivalrous knights of the period. John Barbour, Archdeacon of Aberdeen, is the first who refers to cannon in our country; and he says that "orakys of war" were first used by Edward III in his campaign against the Scots, 1327. The King subsequently used them at the battle of Cressy in 1346. In 1378 when the English unsuccessfully besieged St. Malo, 400 cannon are said to have been employed; but they are supposed to have been hand cannon, or culverins, carried by two men. In the reign of Henry V. 1413, 100 were given to make 7000 round stones in the quarries of Middleton, to be used for cannon of different sizes. The cannon employed by Mahomet II. at the Siege of Constantinople were formed of bars of iron hooped together lengthways with iron rings. They were used for discharging masses of stone, some of which it was said weighed 1200 lbs. To this day the Turks exhibit a partiality for very large artillery; and the Dardanelles is protected by cannon, some of which throw stone balls weighing 800 or 1000 lbs. Urban, a Dane, made a gun for the Greeks which cast a stone 1200 lbs. weight, but, after a few discharges, it burst. All the ancient cannon were unwieldly, and could only be fired a few times in the course of a day. Some of them were of the enormous length of 20 feet. We have ourselves the long 60-pounder at Woolwich, called "Queen Elizabeth's pocket pistol;" and at Edinburgh Castle the curious piece of artillery called "Mons Meg," to which many interesting traditions are attached. It is a fine piece of ordnance known in modern times was the mousquet-mortar cast at Liège, and used at the siege of Gibraltar in 1783. Its effects did not equal the expectations entertained of it; and, when making some experiments with it afterwards before Louis Philippe, it burst. Cannon have been made of wood, leather, coils of rope, and even of ice. In 1740 several were cast out of the solid ice at St. Petersburg, and fired repeatedly with ball and without bursting. The heaviest existing piece of ordnance is the Byapoor gun in India, which weighs forty-two tons. The greatest modern improvement in cannon is the removing some of the metal from the portion of the gun behind the trunnions, and adding it to the breech, increasing thereby the resistance to recoil

Hand guns, or small fire-arms, were first introduced into this country in 1471, when Edward IV., landing at Ravenspur, in Yorkshire, brought with him 500 Flemings armed with hand guns. The Portuguese, too, were aware of the importance of firearms and about 3000 foreigners in his pay, of whom the greater part were musketeers. The Spaniards used them in 1588, under Philip II., and at this period the Spanish armies were considered the best in Europe. These guns, but of weight so heavy that they were supported in a staff, shod with iron, and the stall sometimes had a spike or dagger at the head, as a protection against cavalry. They were used with a lighted match. When reduced in size they were called calivers, and after them came the more manageable arquebuse. The pyrites wheel lock was introduced about the reign of Henry VIII., and continued in use till the time of Charles II. The arquebusiers were armed with morions or steel caps, cuirasses, and tasets covering the thighs. Another arm, called the petronel, used in the reign of Queen Anne, but of weight so heavy that they were in the broad baudrick or belt worn over the shoulder. This arm was used at the siege of Rouen, by Henry IV. of France, in 1592. Pistols were first manufactured in 1544, in the reign of Francis I., at Pistoia, a city of Etruria. The German horsemen called *reiters*, had used them some time previously to their introduction into France. In the time of Edward VI., the loss and spike issuing from the centre of the shield was superseded by one or more short barrels, fired by a match-lock, and having an aperture covered with a grating above for the purpose of taking aim. These were also used in India, and some beautifully inlaid specimens were exhibited, with four concealed pistols, in the Exhibition Building at Hyde-park, in 1851. Pistols were frequently introduced into the butt-end of pikes, in the handle of the battle-axe, and the spiked-club, termed the "holy water sprinkler." These gradual innovations in the military system do not appear to have been generally approved of by the English. Their imperfect construction, and the badness of the powder, furnished some ground for the small account in which they were held. Nevertheless, the alarm created by the introduction of fire-arms was so great, that the men-at-arms became at last loaded with defensive armour as to be almost incapable of any offensive movement The knights had their armour so closely fitted, and so firmly screwed on, that it was almost impossible to kill them unhorsed. At the battle of Fontenoi, under Charles VII., a number of Italian knights who were overthrown and unable to rise, on account of the weight of their armour, could not be killed until they were broken up, like huge lobsters, with woodcutters' axes, by the servants and followers of the army. James I., speaking in praise of armour, said it not only protected the wearer, but prevented him from doing any injury to others. An anecdote in point is related of George IV.:—After the battle of Waterloo, it was proposed to make some changes in the dress of the Life Guards. The King ordered one of the soldiers to be sent for who had greatly distinguished himself by cutting down several French Cuirassiers. A variety of questions were asked him, when the King suddenly said, "Well, if you were going to have such another day's work as you had at Waterloo, how would you like to be equipped?" "Please your Majesty," said he, "in that case I had rather be in my shirt sleeves!" thus demonstrating the folly of loading the soldier with cumbrous defensive clothing, which impaired his activity and efficiency.

The most important appendage to the fire arm in modern times is the bayonet, which in the hands of the British soldier has almost invariably produced as striking an effect as the sword and shield of the Romans did in former times when opposed to barbarian warfare. A dagger or pike was frequently affixed to the end of the musket when the soldiers had exhausted their ammunition; but it is only in its present shape was first manufactured in Bayonne, and the method of fastening them is also of French invention. It was first used by Marshal Catenat, in 1693, at the battle of Marsaglia, and by means of it the slaughter was immense, and the rout of the allies complete. Marshal Tallard, at the battle of Spree, in 1703, and the Duc de Vendome, in 1705, at Calmata, in Italy, obtained victories by their means, and thus led to their adoption by other nations. The Spaniards were uniformly defeated by the bayonet alone in all their contests with the French, at the close of the campaign in 1794. During one of the campaigns in Flanders, the British army, under William III., was thrown into consternation at seeing the French fire upon them with fixed bayonets, but they rallied, and drove the enemy off the field. They were first used by the English soldiers in the reign of James II.: and in the reign of Queen Anne two horse grenadiers rode before her carriage with bayonets fixed by two rings to the muzzle of the musket. The general introduction of this weapon superseded the use of the pike, and, by the advice of Marshal Vauban, they were also laid aside in France.

The rifling the interior of the musket, or cutting straight or spiral grooves, to make the bullet go further and straighter to the mark —the introduction of percussion caps for discharging the fire arm —the substitution of a strong two-edged sword, which can be wielded in the hand as well as used as a bayonet—and the recent German invention of a musket or rifle which loads at the breech, and enables the soldier to fire at least six shots in the time taken to fire one by the ordinary method of loading, are the most important improvements in fire-arms of the present day; but a consideration of the relative merits of these new inventions would lead us further than we have at present space for.

LAMBETH ASTROLOGERS.—Lambeth has been noted as the residence of astrologers. At Tradescant's house, in South Lambeth-road, lived Elias Ashmole, who was Ashrey over in Lambeth. Simon Forman's burial is entered in the Lambeth parish register: and on the day he had prognosticated. Lilly says, Forman wrote in a book left behind him: "this I made the devil write with his own hand, in Lambeth Fields, 1599, in June or July, as I remember." Lilly, also, was in company with Forman, dwelt in Lambeth Marsh, and "resolved horary questions astronomically," a ladder which raised him to the gallery. At the back corner of Cloth alley lived Francis Moore, the astrologer, physician, and almanack-maker, and the original author of "Moore's Almanack." Next to Tradescant's house lived the learned Dr. Ducarel, one of the earliest Fellows of the Society of Antiquaries, and librarian at Lambeth Palace.—*Notes and Queries*.

AN INTELLIGENT JURY.—In an action Kingsmill Millard," tried at Taunton the other day, to recover £10 out of some land, Mr. Justice Crowder, in directing the jury that the plaintiff's case had been clearly proved by the defendant's evidence, observed that the defendant's counsel, in addressing Mr. Serjeant Kinglake, one of the plaintiff's counsel, as his "brother Kinglake." That jury, which was not one of the slightest, had, however, predetermined to have their own way; and to give a verdict against the learned Serjeant, against the evidence, and against the summing up of the Judge, and as a reason for doing so, while considering their verdict, one of them was heard to address another juryman in a low tone "are we to give a verdict that are counsel (meaning the learned Serjeant) brother? Does they think it is likely he was going to say anything against his own brother?" and with this conclusion, and in spite of opinions to the contrary, returned a verdict contrary to his Lordship's directions

EXPORTS.—The declared value of British and Irish produce and manufactures exported in 1854 amounted to £97,092,308, against £89,933,781 in 1853, £98,823,140 in 1852, £91,061,113 in 1851, £85,111,092 in 1850, £71,367,855. Between 1852 and 1853 there was a leap from £76,076,854 to £98,953,718. The foreign countries which are our largest customers appear to be the Hanse Towns, £7,093,934; Holland, £4,452,955; Russia, £4,226,404; Belgium, £3,371,317; France, £3,668,680; Portugal, £1,810,411; Spain, including her colonies, £2,979,775; Sardinia, £1,116,647; Turkey, £2,029,305; the United States and California, £23,858,427; Brazil, £4,186,407; Cuba, £1,144,942; Mexico, £1,246,730; and Canada, £1,749,597. Of the English Australia figures for £1,6,700, the Indies for £8,183,89-; the West Indies for £1,801,146; the Cape for £1,21[illegible]30; and the North American States for £8,288,5[illegible].

THE NEW YORK POLICE. The latest outgoings consequent on the murder of "Bill Poole," the well-known New York pugilist-cum-bully, induced the Know-Nothing or *par excellence* American party to demand a return of the nationality of the nine companies of the New York police force, in which they alleged foreigners were too numerous in proportion to native born. The return of the chief police officers, as presented at the city of New York, each consisting of 114 men, is as follows:—Native born Americans, 305 born in Ireland, 20 in England, Wales, and Scotland, 4 in Canada. Before, however, the returns were published, where they were born, but they are foreigners, and under the naturalisation laws of the United States, they are generally supposed to be native Americans. The chief himself, Mr. Kelso, was born at New York, and the only member of the police force who was born in Poole's native country, was Lewis Baker, the fugitive charged with the murder of Poole. Of the 114 officers there are no unnaturalised foreigners in the department, and only seven have been in the country for seven years; whilst the majority of them are natives of America of the first generation. Of the 1114 men of the police force of the city of New York, the only three born in prison, of which number twenty-four are Americans and fifteen foreigners

HAM FAIR. Among the many sights of Paris during Passion week, a visitor of more than one day's standing must go to the *Jour aux Jambons*, on the Boulevard Bonne. While the fish-market presents a scene of long lamps becomes, year by year, more magnificent, the Ham Fair, as people's mind of the town, revels in more than one of a quieter day. The traveller will at a very fair, quite an idea of the exhibition. No name under, but [illegible] in every conceivable variety of shape, is exposed to [illegible] stages of corpulence, lyons, and Jews, [illegible] waffle sides, the lordly tête [illegible] tongues and end-cuttles of Troyes; salted bacon—some yellow, some white, and some black, according to the one canary name of chair [illegible] from which they come; dried sausages, [illegible] hung in long festoons of variable compound under the generic term *chair à choux*. The respective merits of all these savoury provisions are warmly chanted in the vernacular by the [illegible] and [illegible] the [illegible] and [illegible] the [illegible] and [illegible]

NOTES OF THE WEEK.

The Easter holidays have been, so far, holidays indeed. Little news on any subject has come to us from either of the two great centres of interest. The Vienna Congress is at a stand-still, waiting the arrival of the Turkish Plenipotentiary and of the Czar's final orders to Prince Gortschakoff and M. de Titoff; and Lord Raglan has for the time intermitted the series of his meteorological despatches. All, however, leads us to consider this unusual quiet as a lull before a storm; and to calculate that in the course of the next week we shall learn tidings, both from the seats of War and Conference, of greater importance than any that the electric wires have flashed across Europe for many a long day. In the first place—without troubling the telegraph—we shall know on the 20th how the Chancellor of the Exchequer means to raise the wind: whether a loan will be thought necessary, or whether we shall be able to balance our expenditure with our income. The City rather believes in a loan, though not apparently with very great confidence. The West-end Clubbites are much more certain of its necessity, perhaps because with so many of the members of these establishments a state of borrowing appears the normal condition of mankind. Some few plain people, on the other hand, look to the statements as to the position of the national ledger already made by both past and present Chancellors, and by the Secretary of the Treasury, and ask themselves if, with a deficiency of less than three millions, it is *land* that the country should borrow money in open market. They say this would be like a man with £10,000 a year mortgaging his estate for £1000. Without putting much faith in the perfectibility of Government offices or officials, one may reasonably hope that there will be somewhat less mismanagement and money wasted this than last year; so that the prosecution of the war, if not less, may not cost us more. Besides, to speak in the theatrical phrase, most of the "properties" of our naval and military drama are procured and paid for, so that for the future the chief part of our expenditure should consist in the salaries of the company. However there is small profit in speculating on the matter, as we are sure to know the worst—or the best—on the 20th. We know that the Conferences at Vienna are to be resumed immediately, and we know that, with such important negotiators as Lord John Russell and M. Drouyn de Lhuys, who cannot be spared from their own countries one day longer than is absolutely necessary, there is no danger that the negotiations will be allowed to *trainer en longueur*; so here, too, in a week, the best, or worst, must be known. Then, again, before Sebastopol, there are now encamped a hundred thousand French and English—forty thousand Turks are at Eupatoria: it is impossible that such immense bodies of men, now tolerably healthy, and perfectly supplied in every way, can remain any longer in *statu quo*. So it is more than likely that the intelligence received in the next week will fill a wide page—pray Heaven it be not a bloody one! in the world's Fasti.

In the meantime, though there has been a cessation in the labours of Mr Roebuck's Committee, that column in the morning papers which, regular as the theatrical announcements, contains the "complaints from the Crimea," is as full as ever. I will shortly notice two of these communications: one which, though founded on an honourable susceptibility, does not appear to me to be justified; and another, which certainly *does*. The first is the remonstrance addressed by the officers of the Commissariat to Lord Panmure against a speech of Lord Palmerston on the 19th February, which they understand to contain the assertion that they were not gentlemen. Every one knows that the language used in the House of Commons is not always distinguished for grammar, and certainly very seldom for precision. It is, therefore, only right that the spirit of a speech should be considered to override what may appear to be the literal meaning. Interpreting this way, it is very clear that Lord Palmerston's intention (even judging merely from the single paragraph quoted in the letter—though I am far from justifying either the words or the tone, which seem to me ill-chosen and ill-judged) was to say what no one can deny that the Commissariat is not officered from those classes which, even in the largest sense, are considered to form the aristocracy of the country. Half the disputes in the world arise from the want of a precise definition of the meaning of words; and so it is here. "One of the gentry," and "a gentleman," sound something alike, but mean very differently. There is Sir John Fitzwallopper: he has been "had up" before the Bench half a dozen times for assaults on his servants; he is a low sot, and a dirty dog in money matters; yet surely he is one of the gentry, for he has broad lands, lives in a fine old-fashioned hall, and the Fitzwallopers came in with the Norman—but a gentleman—oh! certainly not. Now, when the Premier said the Commissariat was not usually officered by the gentry, he might not have said a wise thing, but he said the truth, and cast no imputation on anyone.

The other complaint—the just one—is conveyed in a letter to the *Times* from Messrs. Lang and Co.; who tell us that, by order of the Post-office, all letters addressed to persons connected with the Crimean Railway, and weighing less than a ½ oz., are charged *one shilling*, or four times as much as if the recipient was a military man. Now, why on earth should the navvy pay more for his letter than the soldier? Both are equally fighting their country's battle, only the one uses the bayonet and the other the spade—not by any means the less effective weapon of the two. Anyhow, there is a wretched cheeseparing economy about this regulation; a penny wisdom quite in accordance with the pound foolishness for which most departments of the Government have been lately so distinguished.

One of the peculiarities of our state of war is the difficulty of getting at the truth as to any matter connected with it. A paragraph, seemingly official, has been going the round of the papers, which asserts that the medals for distinguished service have been sent to the Crimea. Is Cassius to be believed, who, writing from the Junior United, says, "No such thing; the department is not aware when they will be ready for delivery." I'll take Cassius's word for a thousand pounds.

Tweedledum and Tweedledee—that is, Mr. Schallehn the leader, and the executants, of the Crystal Palace band—have had a fierce quarrel. The musicians have rushed into angry, if not grammatical, print; from which it appears that all but four of them have refused to serve any longer under Schallehn's banner. Musical or theatrical discords are the very last with which I should like to meddle, as the almost universal rule of them is "faults on both sides;" but this unanimity in a band of fifty three musicians belonging to all nations does not look well for the bandmaster.

The Emperor and Empress of the French are certainly coming, but not to stay so long as was at first expected and hoped. They will arrive next Monday. This will be no common Royal visit—no mere interchange of politeness and hospitality between Sovereigns. The coming of the French Emperor to our shores—he, the nephew of our great enemy—is a greater fact in the world's history than treaties signed or battles won. It is the seal on the alliance of France and England. It is the stamp upon an unwritten agreement, felt in the hearts and brains of millions, from Marseilles to the Orkneys, which sets forth that though, from time to time, inevitable clouds may obscure its meaning, the two great nations of the West will henceforth march together in the cause of charity, religion, and civilisation. A strange life has been that of the Emperor Napoleon—stranger than any told in romances. When he lands on our coast, when he passes through the streets of our metropolis—applauded, admired, respected by all—he will point out to his fair wife places more interesting to both than the old towers of Westminster, or the noble terraces of Windsor Castle. He will show her the house in King street where he passed much of his sorrowful exile; he will point out the pavement where, on a certain day, he braved even ridicule, in testimony that he owed a duty of gratitude to the country whose free soil had afforded him a temporary home. Verily, that special constable's staff is not the least honourable of the trophies won by Louis Napoleon!

THE THEATRES, &c.

Haymarket.—Mr. Planché has supplied Mr. Buckstone with an extraordinary extravaganza, called "The New Haymarket Spring Meeting, 1855," some account of which we gave last week. Here there is no fairy tale, but a sporting chronicle, in which "the fancy" claims unwonted license, partly allegorical and partly dramatic. In great part, however, the piece retains the usual character of Mr. Buckstone's Easter entertainments—that of a revue of theatrical doings, past, present, and to come. Among the allegorical characters *London* holds a distinguished place, personated by Mrs. Caroline White, sleeping in Guildhall, but awakened by *Old Time* (in the shape of Mr. Chippendale, to a sense of her position. Mr. Buckstone as *Lord Mayor's Fool* undertakes to help her out of perils for which Gog and Magog have no remedy. The Lord Mayor's Show in a fog serves first as a vision of instruction; and the *Moon* is invoked for advice and assistance by whom counselled, appeal is next made to *Westminster* (Miss Harriet Gordon). There is much in the mordant couplets of the *Fool* that reminds us of Mephistopheles' assumption of the character in the second part of Goethe's "Faust." *Belgravia* and *Tyburnia* are then introduced, and the rights of the West and East are interchanged between the high consulting persons. The various theatres are figured by horses running for the "Great Metropolitan Handicap, or London and Westminster Easter Stakes." A jockey dance ensues, which is concluded, as usual, with a magnificent tableau. The house was crowded, and the piece quite successful.

Princess'.—Mr. J. M. Morton is the compiler of the Easter piece for this house. It is entitled "The Mulcteer of Toledo," and founded on M. Adam's opera of the same name. As might have been expected, the plot is none of the strongest or the most exciting; but it is capable of elegant distribution, is not without a certain calm interest, is well placed on the stage, and is acted with grace, propriety and effect. Miss Leclercq performs the part of the *Queen of Murcia*, in the disguise of a peasant with all that charming *naïveté* which so frequently distinguishes the style of this excellent actress. Mr. W. Lacy enacts the sham muleteer, but real King, who guards the supposed peasant girl through all the perils of the journey, and seats her at last on the throne of Castile. Mr. Harley, as *Count de Pompolo*, one of the conspirators whom these disguises serve to defeat, was to the full as eccentric as he was intended; and Mrs. Winstanley, as the *Countess*, could not help being portly, and when carried off by the clumsy plotters instead of the heroine, found herself in a naturally amusing position, which, however, she somewhat exaggerated. The last scene of cross purposes is composed of a series of stage-situations skilfully contrived and efficiently executed. The perplexity arising from the confusion of the King with his brother, and which fact is to serve as the solution of all difficulties, is an ingenious contrivance of M Dennery, and productive of that surprise which is permissible enough in plays of intrigue, though frequently injurious in dramas of more importance. Expectation, as in Shakspeare's plays, is in them the preferable element, and we have scarcely ever seen it substituted with advantage. But each class of piece has its own conditions; and the present has been treated with the judgment and tact to be expected from the well-practised playwright who has acted as adapter on the occasion.

Adelphi.—Mr. Mark Lemon, as the author of the Easter piece at this house, has achieved a remarkable triumph. A five-act burlesque is a novelty in itself, and may serve to show, together with the instance of "Janet Pride," and other examples, that the pentad form the drama is again asserting its ancient prestige. The notion of embodying five legends in one burlesque is that carried out by the playwright in his "Entirely New Edition of the Fairy Tales of Mother Goose, with many original and highly-coloured illustrations." A slender but sufficient link of connection is established, so as to enable the *dramatis personæ* of the first tale to pass easily into the representatives of the succeeding ones; all being managed in such a manner that a culminating development is obtained, and thus an increasing interest preserved. The stories are all of the most esteemed folk-lore. First, there is Mother Goose's own narrative; secondly, "The Three Wishes;" thirdly, "Little Red Riding-Hood;" fourthly, "Cinderella;" and fifthly, "The Sleeping Beauty." We were glad to find that Mr. Beard has been added to the company. His rich and rare humour gave spirit and breadth to the pictorial burlesque, which was highly relished by the audience. Miss Woolgar was, as usual, great in masculine parts, and in one not only sustained a "terrific combat" with Mr. Paul Bedford, but danced a hornpipe as *Lively Jack*, in obedience to the just expectations of the British public. Miss Mary Keeley performed more than one heroine with nursery pathos; and Miss Wyndham, as *Mother Goose*, was the most superb representative of that pantomimic dame that we ever recollect. Altogether, this burlesque is very elegant, ingenious, and effective. The pictorial accessories were fine, and the costumes very pleasing.

Strand. The title of the burlesque at this theatre is "King Queer." The allusion to Shakspeare's great tragedy is obvious; and Mr Halford (who is the author of the piece) enacts the hero with that wonderful, and apparently involuntary, imitation of Mr. Charles Kean's style, which originally obtained for him an unexpected reputation. Miss Isaacs sustained a part which combined caricatures of *Cordelia* and the *Fool*, in which she sings many songs. The text is full of verbal wit, puns, and temporary allusions. The success was complete.

Astley's.—Mr. Nelson Lee has furnished the equestrian drama for the season, under the title of "The Field against the Favourite." The opposite stake is the venture on which one *Mr. Candour* hazards and loses his all. The horse is doctored by his own jockey, and exposed to the chance of being burned alive in his own stables. Ultimately, however, the repentant servant makes restitution, and furnishes the means of punishing his tempters and his master's enemies. The scenes in the circle were as usual, calculated to astonish, and the performances of the evening were successful, though the house was not so full as usual.

Other theatres have not gone to the cost this year of furnishing Easter pieces; and, in fact, owing to the state of the war, exist in rather an exceptional state. Things must "suffer a change" before theatricals can regain their wonted position. The Lyceum company exhibited on Easter Monday at Sadler's Wells. Mr. F. Robinson supplied the place of Mr. C. Mathews in "Husbands, Rejoice," and fairly won his spurs in the competition. The "Cosy Couple," and "Two Heads are Better than One," successfully followed. Mr. and Mrs. F. Matthews and Mr. Rouby acted with spirit. The audience was numerous, and it is likely that the company will prosper in their temporary asylum. The Olympic puts forth no novelty, "The Yellow Dwarf" sufficing for the present. Mr. George Vining and Miss Cashelton appeared (for the first time) as *Mr. and Mrs Howard*, in "Law for Ladies." Mr. Robson, in "Kill or Cure," was as effective as usual. The small amount of effort required at this house to ensure its progress may serve to show the advantage of good acting as the staple of attraction. There was likewise no novelty at the Haymarket, but Mr. Wright has been engaged for a few nights in "Victorine," "My Precious Betsy," and the "Wreck Ashore." At the Marylebone sub-management is at present regnant. "The Merry Wives of Windsor" was, on Monday, admirably performed. *Falstaff* was sustained by Mr. Barrett: the rest of the characters were undertaken by some whose names we recognise as lately pertaining to the St. James's company. Miss Rosina Wright (late of the Lyceum) also appeared in a "ballet divertissement." The list of pieces announced imply some ambition in the future, and we trust that the members of it may find their enterprise an improving one—to themselves individually as rising young artistes, as well as collectively in a more material sense.

The Royal Panopticon.—Among the Easter novelties produced at this excellent Institution was a lecture on "Life in Pompeii," by Mr Leicester Buckingham, illustrated by dioramic views, depicting the past and present appearance of that interesting city. After dwelling on the peculiar charm which belongs to the domestic life of antiquity, and the unique facilities which Pompeii affords for its study, Mr. Buckingham sketched briefly the topography and early history of that city; and then, transporting his auditors from Pompeii in ruins to Pompeii in the zenith of its glory, he gave a vivid picture of the outside aspect, and described the construction of its buildings, and the ordinary routine of daily life among its citizens, and concluded with a graphic summary of the most striking memorials of the sudden destruction of the city which the labours of the excavators have unveiled. The pictures comprised views of the Bay of Naples, and of the Ruins of the Gate of Herculaneum, and the House of Sallust; and Restorations of the Houses of Sallust and of the tragic poet, the Temple of Fortune, &c. The "Scenes of the War in the Crimea" have received considerable additions; among which the most important are a pictorial map of the territory now occupied by the besieging armies around Sebastopol, and illustrations of the Light Cavalry Charge at Balaclava, and the Hospital at Scutari. The illustrative lecture, delivered by Mr. Leicester Buckingham, conveys a concise sketch of the history and topography of the Crimea, and a succinct narrative of the leading incidents of the campaign. In addition to these leading features, the programme embraces lectures on various scientific and literary subjects; the gigantic electrical machine, with many brilliant experiments, lucidly explained by Mr Partington; the performances on the grand organ by Mr. Best; besides the luminous fountain, &c.

Old English and Patriotic Songs.—Mr. George Buckland nightly favours the visitors to the Polytechnic Institution with a brief lecture, bearing the above title, of which the vocal illustrations are, of course, the most attractive portion. These are but five in number; i.e., "The Old English Gentleman;" "The British Grenadier;" "The Leather Bottel," "Stand to your Guns," and "The Old Politician." Whether to praise Mr. Buckland more for his superior vocalisation, his skill as a pianist, or the humour which he throws into humorous songs, we cannot decide; but it is clear that his audiences admire greatly the declamatory power and the mimetic expression which he displays in rendering the two last-named compositions. This musical lecture is a decided success.

THE NEWSPAPER STAMP.

We stated last week that a memorial was presented to Sir G. Cornewall Lewis, Chancellor of the Exchequer, on the 4th of April, by a deputation of Yorkshire newspaper proprietors, in which they stated as their opinion that it would be a great advantage to the public, and a convenience to newspaper proprietors, as well as an actual and considerable gain to the revenue, if the proposed stamp on newspapers, to entitle them to transmission and re-transmission through the Post-office, were a halfpenny instead of a penny; and if there were also issued halfpenny stamped covers to entitle unstamped copies of registered newspapers to a single transmission through the post."

As regards the revenue part of the question, they show that the effect of the proposed law would be to cause newspaper proprietors to print the greater part of their impression on unstamped paper. It was not improbable, therefore, that the number of newspapers sent through the Post-office would at once be reduced at least one-half, and possibly two-thirds; and, as the expenses of the Post-office could not be reduced in anything like a corresponding proportion, the revenue may suffer more seriously than has been contemplated.

If, however, instead of a penny stamp for newspapers to entitle them to transmission and re-transmission through the Post-office, only a halfpenny stamp were required, the memorialists believe that an immensely larger proportion of the newspapers issued would be printed on stamped paper. The difference of the halfpenny would in many, if not in most, cases remove the inducement to prefer unstamped to stamped copies. It would practically equalise the cost of the stamped and unstamped copies, except in the places of publication. The Post-office, generally speaking, would then deliver newspapers as cheaply as they could be delivered in any other way. There might, in some cases, be a fractional difference (not, however, equal to the smallest coin in circulation) in favour of distribution by news agents or special messengers, but the difference would be so small that the reduction would be insufficient to induce newspaper proprietors to prefer the less troublesome mode of the Post-office; and their customers would probably wish to receive their newspapers along with their letters, by the post delivery, as at present. A halfpenny stamp would be universally approved, and scarcely any would think it worth their while to inquire if a cheaper mode of delivery could be found. Not only fourpenny and threepenny papers, but, probably, even twopenny papers, would print a considerable part of their impression on stamped sheets. Of course, when newspapers were sold (stamp unimpeded) at least a halfpenny cheaper than at present, the circulation would be stimulated, and a larger proportion would pass through the Post-office; still more would this be the case if the existing papers were issued at a greater reduction of price than a halfpenny, or if new publications should appear of a smaller size and lower price than the present. It may be confidently assumed that the tendency of a halfpenny stamp would be continually towards an increased consumption, while the tendency of a penny stamp would be continually towards a diminished consumption.

What would be the amount of the increase in the number of newspapers issued and sent through the Post office can only be matter of conjecture; but there are reasons for believing that the increase would be very great. According to a paper last printed by the House of Lords (No. 59), the number of stamps issued to newspapers in 1853, before the former reduction of the newspaper stamp, was 32,973,400, and the number issued in 1854 was 111,977,408; showing an increase in twenty years of 79,004,008, or 239 per cent.

The reduction in the price of the existing papers likely to take place now will not be quite so great in proportion as it was twenty years ago; but, considering the probability of new and smaller papers being published at a lower price, and that every reduction of price brings newspapers within the means of a much larger class of the population, while the progress of education is also augmenting the number of readers, it seems not improbable that, ere long, the number of copies of newspapers issued in this country will be threefold the present number.

It will not, therefore, be an over-estimate to compute that the number of newspapers printed on halfpenny stamps to clear the post would be at least double the number which now pass through the Post-office.

If, then, the effect of a penny stamp would be to reduce the number of stamped newspapers at least one-half, and the effect of a halfpenny stamp would be to double them, the difference between the two rates would be fourfold in favour of the cheaper. Of course, it is not meant that four times as many papers would be printed in the one case as in the other, but that four times as many would be printed on stamps to pass through the Post-office.

The practical question for the Government, in deciding between a penny stamp and halfpenny stamp, of course is, what would the newspapers yield in each case over the expenditure specially entailed upon the Post-office for that especial service. It is obvious that if the number of newspapers was reduced to one-half, the expenditure specially entailed by newspapers would not be reduced one-half; and, on the other hand, if the number was doubled, the expense entailed by them on the Post-office would not be doubled.

The opinion formed by the memorialists as to the reduction in the number of newspapers likely to be sent through the Post-office, if required to bear a penny stamp, entirely agrees with that expressed by Mr. Rowland Hill to the Commons' Committee. He stated that the number of newspaper stamps issued in 1849 was 79,000,000, and the number of papers computed to have passed through the Post-office was 65,500,000; and assuming that in future, if the stamp duty were repealed, and a newspaper paid a penny every time it passed through the office, he thought it a high estimate" to expect half the present number. Now the number of stamps issued in 1854 was 112,000,000; and if we adopt the same proportion as above, 93,000,000 would pass through the Post-office. But if, by the adoption of a penny stamp on the repeal of the ex-Post-office. But if, by the adoption of a penny stamp on the repeal of the excise, the number of papers sent through the Post-office was reduced to one-half, the number would then be 46,500,000, which, at one penny each, would yield £193,750.

They have thought it reasonable to calculate that with a halfpenny stamp the number of newspapers passing through the Post-office would be doubled. Instead of 93,000,000 there would be 186,000,000, which, at a halfpenny each, would yield £387,500.

As regards the public advantage and convenience,—

It is obvious that persons living in villages and country districts would save 1½d. on each paper which they receive, in case of the adoption of the proposed halfpenny stamp, either as compared with the present state of things, or with halfpenny stamp, either as compared with the present state of things, or with halfpenny stamp, either as compared with the present state of things, or with

DEPARTURE, FROM PORTSMOUTH DOCKYARD, OF REAR-ADMIRAL D

COMMANDER-IN-CHIEF OF THE BALTIC FLEET. — (SEE NEXT PAGE.)

EMBARKATION OF THE ADMIRAL.

FROM Portsmouth many a renowned sailor has gone on board his ship to lead the fleets of England to battle, to blockade the harbours of the enemy, or to keep watch and ward along the coasts of our island. The greatest amongst all

> the noble names that light
> Our history's gilded line,

Nelson, stepped on board the boat which conveyed him to his flag-ship, the *Victory*, from Southsea Beach;—at least such is the tradition of Portsmouth. Many hundreds of people crowded to the spot to see him off and bid him God speed: The present Commander of the Baltic Fleet took leave of the land in a manner quite consistent with his modest antecedents. He walked on board his boat from the Dockyard-stairs in the manner depicted by our Artist, who has given permanence to a scene which otherwise was not likely to make much sensation. But there is more significance in this incident than meets the eye at the first glance. What would we not give now for a literal transcript of that fact on Southsea Beach, in 1805, when the greatest sailor of all time went forth to fight his last and greatest battle?

OUR ARSENALS IN CHEAPSIDE.

THE quiet unimaginative inhabitants of "Cheape" will most probably raise their eyelids in mild wonder on being told that they have been all along (without knowing it) living amongst the arsenals in which are accumulated the most potent of our projectiles for attacking the forces and humbling the power of the Czar; but the diligent searchers after first causes must come at last to the conclusion that, however great may be the bravery of our soldiers and sailors, however long the range of our Lancaster guns, however formidable the entrenchments we may be at the moment throwing up at Sebastopol, it is in such places as Cheapside, and the surrounding streets, that the wealth and power, the sinews of war created, which gives England a position in the political world to which neither the extent of her surface, nor the numbers of her population, would otherwise entitle her. It is in such places she acquires the wealth which enables her to repair the first blunders of a campaign, to build successive fleets, to subsidise needy allies—in short, to do as she has always hitherto done, make every cause in which she once seriously embarks become in the long run a triumph to the national arms

The great city houses of London are in truth our arsenals, and are in themselves amongst the greatest wonders of the great Metropolis. The visitor will not find them in his Guide-book, catalogued along with Madame Tussaud and the Tower: neither will his eyes be arrested by their outward and visible signs as he travels pell-mell, through the main avenues of the City. The general rule here is to give down obscure lanes barred-and-locked doors and unpromising fronts, and, if he be not accompanied by one of the initiated, will never imagine that behind a line of dull and badly-cleaned windows, or up a flight of steps, whose only decoration is a few scattered straws, a perfect hive of busy bees is ensconced, and an immense traffic going on, under a system of organisation so perfect that, if it could only be transferred bodily to Whitehall, would set our Horse-guards, Commissariat, and Ordnance departments right in a week. London contains many establishments of this description, each employing its hundreds of hands, its hundreds of thousands of pounds capital, and acting as depôts for the textile products of the world, in which they are classified and priced, and then again distributed amongst the world's consumers. These establishments have not, as a general rule, arrived at their present dimensions suddenly, but have been of slow growth, the fruits of the labours of two or three successive generations of energetic men, who have thrown their whole lives into the task of rearing them, and, in some instances, very much curtailed their own natural longevity by their exertions. The rule is an unfrequent one, of some young Scot or English provincial arriving from the country with nothing but honesty, energy, and natural talent to recommend him, who, getting employment in a dry haberdasher's shop, marries his master's daughter, and, under the improved management, the retail shop gradually expands into the great City wholesale house. The first success attracts fresh capital, new names come into the firm, trade is extended, the house is enlarged, until at last the number of hands employed equals the staff of a public office, and the amount of trade done is reckoned annually by millions sterling

Sterne says—"If you want to paint captivity forcibly, you must take a single captive" To give the reader some idea of the extent and importance of these City houses, we will take one of those most close to Bow Church, not because it is more remarkable for extent or the amount of its trade than many of its neighbours, but because an accident has made us more familiar with its interior economy. In the right-hand corner of a New Jewry-street is a very unpretending door, leading to the extensive premises of Messrs. Copestake, Moore, and Crampton, *consorcels*, as the French would say, to the traffic in various descriptions of British lace, and the other lighter contributions to the female toilet. One would imagine that for so light a business a small establishment would suffice for an enormous trade, but the wisdom of the magnitude of London commercial operations may be formed when the reader is told that to the sale of lace, sewed muslins, millinery, and baby linen, a warehouse is devoted which, gradually enlarging, has run down the whole length of the yard, and at last burst into Change-alley on the glory of a handsome Italian front, towering three or four stories above all the neighbouring houses. Three hundred assistants of both sexes find constant employment in classifying and selling the goods, fifty-eight clerks are always kept busy recording their transactions in the ledgers, and the yard and area of travellers are perpetually beating up, not the covers, but the country towns, for that custom which is the life-blood of the establishment. Nothing can be more striking than the sight which bursts upon the visitor when he passes the comparatively quiet threshold, and finds himself in a labyrinth surrounded by respectable-looking young men, hurrying to and fro, jostled by people from all parts of the country, transacting business in all imaginable varieties of dialect, for an instant dodged and being crushed by one of the enormous "hits" which are perpetually moving the goods from the bottom to the top of the house, or *vice versâ*. Everything seems to his inexperienced eye to be at high pressure, and in complete confusion; but a little more careful examination will soon convince him that the most perfect system and organisation reigns throughout, and that the smallest article cannot pass from hand to hand without being regularly accounted for. The principle of all this is like the mainspring of a watch, simple enough; it is the number of details that, like the whole of the most useful machine, gives the appearance of complexity. The one department is allotted the receipt of the goods in bales as they come from the various factories. Having been duly entered here, they are dispatched in order to the different departments. One immense room, with numerous assistants, cuts the cotton cloth, one of the most laundry and cheap but most extensively used of the materials for female finery. This article, which is made by machinery, is, we believe, an exclusively English fabric, and is sold in vast quantities by the house. Another department is devoted to the Nottingham silk lace, also made by machinery, and for the production of which Messrs. Copestake and Company maintain a large factory in Nottingham. The universal black cap, which we suppose our maid-servants adopted out of compliment to our venerated Judges, has a department to itself; while the pillow-lace of Buckinghamshire, and the costly productions of Honiton, each give occupation to large portions of the building. The contents of two rooms we found particularly attractive. In one devoted to the finer descriptions of cambric and sewed muslin we found that the fine arts had been laid under tasteful contributions, in the preparations of exceedingly pretty little boxes, of different shapes and sizes, handsomely gilt and decorated, and having on their lids pictures coloured in imitation of enamel, and which, from their artistic appearance, we thought each filled with a dozen cambric handkerchiefs: and the theory upon which they are constructed affords an amusing illustration of the extent to which a knowledge and appreciation of human weaknesses must enter into the calculations of trade. These tempting little boxes are technically called "introduction goods;" and the shopkeeper of agreeable manners keeps them lying snug under his counter until his lady customer has completed the purchase she had come out shopping; then, if any lace happens to be required, it emerges through the silk, gauze, or muslin, and the pretty little boxes filled with the nicest possible embroidered handkerchiefs; and the husband must be a brute indeed who objects to the unpremeditated investment of the balance of his cheque in their purchase. The manufacturer of these boxes was originally a native of our Parisian neighbours, that was being the origin of the *Jour de l'An*, but now they are extensively made in London, quite as tasteful in appearance and much more solid in construction than the French originals. Higher up, and occupying another large apartment, are the dominions of Flora, appropriately presided over by the fairer members of the establishment. One room is devoted to the productions of English artists, and another to the French: and it would be hard to say to which must be given the palm of skill displayed in construction or brilliancy of colour. The whole region glows like a rich parterre, and has all the fragrance of a real garden, for modern art has contrived to impart the natural odour to the carnation and others of the sweet-smelling flowers. But, step softly as we may, although in about four pair of stairs, we are classic ground. In the room devoted to the gorgeous camelia, the drooping fuchsia, the glowing Paxton rose, the suggestive orange flower, and all the other bright-tinted productions of the Rue St. Denis, it is supposed that Milton was born—at least, decked with evergreens of the true City brown, reminds the spectator of those immortal flowers, with which—

> Tick as autumnal leaves that strew the brooks
> In Vallambrosa—

the "blind old man" has for all future ages decked the Garden of English poetic literature. However, we are describing a City house in the lace trade—not writing a rhapsody about Milton—so must leave the French flower-room, its famous bust, and its intelligent and obliging president, and ascend higher still to an extensive range of apartments situated in the upper atmospheric strata, and devoted to what, thank you, fair and gentle reader! to baby linen! and all the other paraphernalia of that interesting period in married life when the joy of the newly-made father makes him totally reckless of all pecuniary considerations. Here are such delicious morning-gowns, such captivating convalescent-caps, such delicately-embroidered baptismal robes (at fifteen guineas a-piece) for the young Astyanax, who is sure to be the image of his father. Here they lie piled in heaps, or ranged in rows, classed, ticketed, and numbered, nothing but material silk or muslin; but there is not one of these pretty miniature habiliments that is not destined to be the cynosure of the admiring eyes of a whole family, the herald of the best and holiest emotions—the harbinger of a life for weal or woe, for fame, fortune, or perhaps misery. The great variety, immense number, and often the minute size of some of the most valuable of all these articles keep the counting-house, with its twenty-eight clerks, employed in entering, crediting, and debiting, from year's end to year's end. The travellers are always on the move in town and country; and the buyers—another most important and generally well-paid class of functionaries—perpetually ransack all the markets at home and abroad for the newest patterns and the most attractive varieties of goods. On these gentlemen rests great responsibility; as to the judicious character of their purchases the prosperity of the house must be greatly indebted. On them also devolves the duty of marking the prices at which the various articles are to be sold at the retail dealers; so that, taking along with the travellers—the great distributors—these energetic and skilful collectors may be ranked as the main pillars of the house. The principals, like the landlord of an inn, are not often seen or heard of. Their pleasing duty is to provide the capital, and absorb the profits; and, as far as actual labour is concerned, they rest on the laurels they had gained in their struggle up the ladder, merely giving their experience and judgment in the selection of proper persons for the actual work. In the case of the house we have just been describing, one of the partners (Mr. Moore) most honourably and usefully devotes the comparative leisure he has earned by his earlier energy and industry to the foreign and manufacturing department of the Commercial Travellers' Schools—one of the most valuable and best-conducted charities of the metropolis.

LITERATURE.

FOOD AND ITS ADULTERATIONS; COMPRISING THE REPORT OF THE ANALYTICAL SANITARY COMMISSION OF THE "LANCET" FOR THE YEARS 1851 TO 1854 INCLUSIVE. By ARTHUR HILL HASSALL, M.D. Longman

Take an ordinary wine-glass, half fill it with common port wine—to operate with a larger quantity in the experiment about to be proposed might be dangerous. Turn the glass thus charged upside down over a red-hot fire. A flash of flame will immediately ensue, of such magnitude as to suggest that if you had exploded rather more port you would probably have set fire to the chimney. In fact, the port, so called, burns almost as if it were alcohol, simply because alcohol constitutes the greater part of it. This alcohol is not the spirit of the wine; it is spirit in the wine, most likely spirit of something other than wine, introduced into the wine to adapt it for the "British market." It is strange how almost every good thing imported into this country has to be deteriorated, in order to be "adapted to the British market." Foreign plays and operas even—ideal and mental food—require, it seems, to be "adapted," by mutilations and additions, to what, for goods of that description, is the "British market"—the British stage. Yet recent experiments have tended to show that this particular market desires no such adaptation, and is perfectly capable of appreciating the genuine article when presented to it. So, perhaps, the British market at large is able to exercise a sound judgment about material good things when it has the chance, and would like to have real port wine, for instance, sent to it, instead of the "adapted" beverage, so-called.

Port wine and foreign port, however, are the luxuries of the few; and if adaptation to the British market were limited to goods of that sort, it would not much signify to the great real British public. Port is adequately represented in the Legislature, port is strong in more senses than one, and can take care of itself. But tea, coffee, tobacco, snuff, vinegar, and pepper, with their purity or impurity, concern the mass of the people; and, considered as matters of popular consumption, are only too weak, both in quality and legislative influence. Unfortunately these and all or most other descriptions of aliment and condiment, are like wise "adapted" to the British market, and thereby very much the reverse of adapted to the British stomach, and every other organ of the British body constitution connected with, and dependent on, that vital one.

The adaptation of provisions for sale rather than for consumption, is, in a word, their adulteration. The adulteration of articles of food and drink has long been a matter of uneasy interest, and of strong, though vague, misgiving. Accum's "Death in the Pot," between thirty and forty years ago, awoke attention to the subject: which has since been more or less accurately explored by Mitchell, Normandy, Chevalier, Jules Garnier, and Harel; and has now at length derived a singularly lucid exposition from the researches, so far as they have extended—and that extent has been very large—of Dr. Hassall. The report of these inquiries fills between 600 and 700 closely printed pages of a large octavo, replete with details of the fraudulent contaminations commonly practised by the people's purveyors, at the people's expense of health and pocket.

Adulteration might be represented pictorially as a Cerberus: a monster with three heads. Under one head is compiled ample "adaptation" to a real or supposed demand of the popular palate, consisting in all manner of flavouring, pungent, or fragrant substances, as by mixing cayenne pepper with gin, or oil of vitriol with vinegar. The gin, to be sure, is generally bad gin in this case, and the vinegar bad vinegar; and the instances of adulteration, solely intended to suit the taste of the customer, are comparatively few.

"Adaptation" to the eye, by the addition of colouring matter, constitutes another head of adulteration. Pickles are dyed, confectionery is painted, with poison. Comparatively honest Italian-warehousemen put up green sandwiches of paper-hangings down right regardless of arsenic in the mind, to invite the public vision. The deception, rather than the gratification, of sight, is, however, more generally the purpose with which commodities are tinted; the colour being used to disguise their inferiority or impurity.

Adulteration under the third head is the most extensive species of that form of rascality. It simply consists in the process of diluting and weakening a saleable with a worthless article, in order that, the latter being sold at the same price as the former, the purchaser may be cheated out of the difference. Early allusion to this fraud will be found in the pages of Mr. Joseph Miller, who relates an anecdote, pretty well known, in reference to "watering the rum, wetting the tobacco, and sanding the brown sugar." All these operations are practised in this variety of adulteration, which, however, is seldom committed alone, but necessitates the perpetration, also, of one or the other, or both, of its kindred villanies. The coffee which has been adulterated with roasted carrot for the increase of its weight and bulk, requires to be furnished and dressed with burnt sugar, or "black jack," for the restoration of its appearance. The porter which has been lowered with water must have its taste reproduced by means of salt and worse substance.

The work of Dr. Hassall is not in any measure a compilation. The facts and disclosures contained in it are the results of strictly original investigation, of which the subjects have been veritable examples of the stock-in-trade of actual grocers, tea-dealers, tobacconists, bakers, confectioners, oilmen, butter and milk men, and other tradespeople who carry on business honestly or dishonestly, as the case may have been—the latter in a deplorably large number of cases. Not only were these investigations original in the sense of being personal; there was originality also in their method, by which, what has long been an obstacle to practical analysis, and a fruitful fraction for rogues, has been annulled.

By the help of modern chemistry, a wonderfully small fractional part of many substances contained in, or mingled with, some other substance may be discovered. The grave gives up its secret to the chemist, who detects the minutest particle of arsenic in the body of the victim long murdered. But every body who is poisoned by an agent so responsive as arsenic to chemical tests [illegible] of the vegetable class soon decompose, and cannot be recomposed, or reproduced. If they contain permanent active principles the quantity of these is commonly too small to admit of any demonstration which is practically trustworthy. Much of the vegetable rubbish with which agricles of food are poisoned, in a comparatively mild degree, by adulteration, is indigestible by chemical science. Sloe-leaves among tea defy the examination of the detective chemist. He may demonstrate the tea not to contain as much of its active principle, "theine," as it ought; he may prove that its quality is bad, but he cannot show why: he cannot distil from the fragments of the "leaf" the produce of the British blackthorn. But the problem that baffles chemistry is solved by vegetable anatomy. The microscope supplies the short-comings of the crucible and the test-tube. The root, leaf, stalk, bark, flower, fruit of each plant, herb, or tree, has their peculiar structure, distinguished by peculiar combinations in the minutest portion of each of those parts. The fragment of tea presents a different arrangement of cells, vessels, and other parts, from that exhibited by the piece of sloe leaf; and the difference is distinguished with certainty by the aid of the microscope.

All vegetable substances consist mainly of the same chemical [illegible] carbon, oxygen, hydrogen, and in some instances nitrogen. Most of them, so nearly alike in chemical composition as to be indistinguishable from each other, are so different in their structure, degree as to be, some nutritious, and others noxious, if not poisonous. Articles of food which are the same thing to the chemist, may be very different things to the consumer. Arrowroot is a form of starch; but wheat-flour contains another form of starch, and potato flour constitutes a third, to which may be added tapioca-flour, and the flours of all other farinaceous substances. [illegible] that chemistry has to say of these various articles is that they are starch: which in the superior article it sayeth not, it only knows that it is not found indiscriminately blue by iodine. But the microscope [illegible] that the starches consist of granules having distinct shape and structure; in each variety of starch; so that, not only has the arrowroot granule a different appearance from the potato starch and other forms of starch, but the granules of different kinds of arrowroot differ also markedly among themselves in that particular. Thus, in a sample of mixed starches sold as arrowroot we are enabled, by the microscope, to discover the several starch granules of which the stuff is compounded.

Dr. Hassall, as chief analyst to the *Lancet* Commission on the Adulteration of Food, the credit is due of having first brought microscopical in aid of chemical analysis, for the investigation of the subject in hand. What with chemistry, and what with microscopy, he has done [illegible] to disabuse us of some inveterate hallucinations. Perhaps we [illegible] ourselves that we were drinking tea. The supposition was only partially correct. We were imbibing an infusion of some tea (and a very little), but of a much greater quantity of sycamore, horse-chestnut, and plum-leaves; of stuff called "tea-tea" in Chinese sophistication, consisting of tea-dust and ordinary dust); of catechu and paddy-husk, mingled with exhausted tea-leaves "faced," or polished, with black-lead, and coloured with indigo, Prussian-blue, turmeric, Chinese-yellow, China-clay or kaolin, and soapstone or French chalk. Under the name of ground coffee we were taking a compound of chicory, roasted wheat and rye, burnt beans, acorns, and mangel-wurzel. Induced by the recommendation of a Chancellor of the Exchequer to try chicory as a

substitute for coffee, we have in fact made a more extensive trial of divers parched cereals—carrot, sawdust, mahogany ditto, ferruginous earths, and burnt sugar. With good arrow-root, in small proportion, we have eaten sago, potato, and tapioca starches, and bad arrow-root in large proportion. Dutch, French, and Sicilian fish, and British sprats, smeared with bole Armenian and Venetian red, have entered our stomachs under the denomination of anchovies. Our bread has contained a considerable proportion of mashed potatoes, water, and alum: the latter of the two last-named ingredients having been added thereto to the end of incorporating therewith as much as possible of the former. On that bread we have spread butter, through which, also, much water was diffused by the medium of salt. Our cooks, imagining that they were flavouring our food with cinnamon and other spices merely, qualified them much more with cassia, flour of various kinds, ground rice, linseed-meal, mustard husks, deal sawdust and salt; and our devilled biscuits have been seasoned with a mixture truly diabolical, of Cayenne pepper with ground rice, mustard-husks, deal sawdust, salt, brickdust, and red lead. Commingled with the cocoa and chocolate wherein we have trusted, we have partaken of several sorts of meal, of sugar, chicory, and of red ochre and of other ores of iron. We have smoked water, sugar, and treacle with our tobacco. Gin-and-water, made pungent with capsicum, has been passed off on us for neat gin; diluted stout has commended itself to us as entire by the smack of cocculus indicus, sweet flag, quassia, capsicum, coriander, ginger, and grains of paradise. We have treated children to marmalade made chiefly of apples or turnip, and—if we have ever been thoughtless enough to give them coloured confectionery, we have administered to them cochineal, lake, red lead, vermilion, Indian red, gamboge, lemon and orange (tinted) yellow, chrome yellow, indigo, Prussian blue, verditer blue, artificial ultramarine, carbonate and arsenite of copper, umber, sienna, Vandyke brown, white lead, and plaster of Paris: these poisons being somewhat mitigated by dilution with a little flour and sugar.

The list of the substances of which we may have unwittingly partaken, or occasioned others to partake, might be swelled to an extent, for some id—, wherecf we must refer the reader to Dr. Hassall's book. There are, however, some adulterations, besides those above specified, so deleterious as to demand especial notice. One of the worst of these is the contamination of pickles and preserves with copper, which is very general, and frequently so intense as to render the articles quite poisonous. Green preserves and pickles are purposely impregnated with this metal in order to heighten their colour, though and similar confections it is often derived from the copper vessels in which they are improperly prepared. Another most dangerous falsification is that of snuff; several sorts of which, in addition to chromate and bichromate of potash, chrome yellow, umber, and red and yellow ochre, are largely imbued with oxide and chromate of lead. This substance—and the same may be said of copper, and other pernicious metals—is what is called a cumulative poison—that is, when taken for a length of time continually in small quantities, it tends to accumulate in the system till that is saturated with it, when its presence and agency are manifested by the most fearful results. Thus, lead produces paralysis, especially of the wrists, and some striking cases are related by Dr. Hassall in which this affection was clearly traceable to the use of snuff which had been poisoned with salts of that mineral.

A remarkable and very flagrant adulteration is that of mustard, which is nearly always fraudulently mixed with wheat flour to an immense amount, and coloured with turmeric, inasmuch that such an article as genuine mustard is hardly to be obtained.

It may be some relief to those whom the foregoing citations of the *Lancet* Commission's disclosures may have made rather uncomfortable, to state that some dark suspicions generally current of the horrors of adulteration have not been verified. Bread has not been found to contain ground bones; nor have calves' brains been detected in milk, for the [illegible] new [illegible]. We are shocked to learn that brown sugar [illegible] and that [illegible] flour—contains, among divers impurities, the spurules of minute fungi, or toadstools, and other minute bodies of an animal nature, called *acari*—all, or mostly, alive and creeping, visible to the naked eye, and when magnified disgustingly ugly. The moral of this information is that it is advisable to use loaf or crystallised sugar exclusively, in preference to brown.

Apprehension may also in a measure be calmed by the consideration that the publication of the *Lancet* Commission Report has already made towards abating the evil against which they were directed. Mr. Wakley, with admirable courage, decided on publishing, after due notice given, the names and addresses of those tradesmen of whom the articles submitted to analysis were purchased. This bold design was thoroughly carried out; and really after reading the lists of "respectable parties," whose goods are noted for the most shameful adulteration, one is disposed, in walking through many a splendid street, to regard a large number of the shops on either side of it as the dens of so many thieves. At one might have viewed the smaller establishments on the right and left of Field lane, while Field-lane was. Now, however, that attention has been drawn to the practices of the finer, but not less dishonest, shopkeepers, they will probably find that the eyes of the public upon them, and so far restrained in their dealings by the like salutary apprehension to that which controls their humbler brethren in the "low neighbourhoods," when conscious of being under the eye of the policeman. Moreover, the Volume of Reports being precisely illustrated with woodcuts of the microscopical details, and containing ample and clear chemical directions also, will, doubtless, tend to popularise the analysis of food, and thus to check or limit its sulteration. A microscope, which will fully answer the purpose, can be provided for six guineas, and with that sum the reader of Dr. Hassall's book, almost any paterfamilias might be his own analyst. It might be worth the while of many a struggling philosopher to set up the business of performing analyses of commodities on moderate terms—any rare microscopical examinations might be charged extra.

The Volume of Reports is dedicated to Sir Benjamin Hall, and certainly its argument loudly demands the attention of the Board of Health. To purify the atmosphere and clear the water are not the only sanitary requisites, greatly needed though they are; and how great the necessity of the genuine liquid is, and what a diluted sewage London is supplied with instead, are points strikingly illustrated in the pages before us. But to prevent the vitiation of food and manufactured drinks is equally necessary for the health of the public. The evil may be injured by the adulteration of nutritive substances to an extent that few perhaps imagine. The effects of "cumulative poisons" have been already adverted to: how do we know that diseases called malignant—such as cancer—may not be referable to some such causes? Those horrible visitations, typhus and pestilence of *some* poison in the system. How did it get there? By any more likely conveyance than that of corrupted food? The maladies in question principally affect the poor, who are also the chief victims of adulteration; and protection from the impurity of the poor man's food is a primary duty.

Legislative interference to put this evil down should clearly exact severe penalties against it. Adulteration in its mildest form is more than equivalent to theft or forgery; it is not only stealth of money, but also plunder of the stomach. Nothing but fear of the cord will restrain the miscreants capable of adulterating provisions from picking a pocket or committing burglary. The admixture of noxious substances with human food corresponds precisely to robbery, aggravated by assault with intent to do grievous bodily harm. It deserves exactly the same sentence, and ought to be punishable with a long term of imprisonment and hard labour, or of penal servitude.

Dr Hassall's book contains a rich fund of information respecting its subject matter, conveyed in plain, straightforward terms. Those who want to understand the tricks of trade which it exposes, and wish to render themselves even with the dishonest tradesmen, should read this volume. There are few such whom its perusal will not induce to possess themselves of it as a book of reference.

THE PHYSICAL GEOGRAPHY OF THE SEA. By M. F. MAURY, LL.D., Lieut. U.S. Navy. Sampson Low, Son, and Co.

Our readers are aware that nearly three-fourths of the earth's surface are covered by the sea, and that this apparent obstacle to man's progress, at the borders of which he shrank back terrified, is made by art to be to his foot what the atmosphere is to the wing of the bird. On its yielding plain he now sails or steams quickly, and with ease, whithersoever he will. The great highway of nations, as the sea has in consequence been appropriately called, has its own laws, which he must study to use to advantageously for his purposes. But though it has long been known that the winds which blow over it follow (in some districts at least) a settled and ordained course, and that its currents can impede or can be turned to the profit of the mariner, only lately have these great phenomena been considered worthy of scientific observation. Numerous theories have indeed been propounded of the trade winds and other regular winds, and of currents, such as those which continually set into the Mediterranean and into the Red Sea; and now and then a reflecting philosopher has suggested some doubt to be cleared up by ship-captains. But till lately the men who cross and recross the ocean, and pass their lives on its unrecording waves, no more thought of studying its phenomena than mail-coachmen thought of studying astronomy or natural history as they passed on the roads. Apart from the general impulse to gather and diffuse information, now making itself sensibly felt throughout the civilised world, Lieut. Maury, the author of the book before us, has the great merit of giving this new direction to the thoughts and labours of the increasing maritime population of every country. From his connection with the astronomical department of the United States Government he was led to notice the great want of correct knowledge of the winds and currents which assist or impede navigation, and he suggested such forms by which every navigator could record his experience of winds and currents on a uniform system. He invented a language that should speak to the eye and at once tell the direction and the force of the wind of different phases had taken the first navigators in the track—and the following another and leaving great parts of the ocean wholly unvisited) the more was he convinced of the necessity of gathering further information. His first charts, meagre and unsatisfactory, showed some few spots continually frequented, like the sea off Sandy Hook or the Start of Dover, and all the facts concerning them tolerably well known; but they also showed vast blank spaces, of which nothing whatever was known. To encourage ship-masters to make the required observations, to every one who gave a copy of the wind and current charts, and the sailing directions founded on the experience already acquired, who would undertake to send an abstract of his log to the National Observatory at Washington. The consequence was remarkable and encouraging. "In a little while there were more than a thousand navigators engaged, day and night, and in all parts of the ocean, in making and recording observations according to a uniform plan." Several Governments lent their aid to promote Lieut. Maury's plan, and the thousand navigators are likely soon to be increased to many thousand. Great Britain alone has upwards of 30,000 vessels: the United States have almost as many; all other nations together have scarcely as many as either of them, but supposing they have—and the number of ships is increasing very fast in almost every maritime nation—there may soon be almost a thousand observers scattered over every part of the ocean, and in the course of their duty recording observations of winds and currents, and all the physical geography of the ocean in a uniform manner. Such a vast army of natural philosophers was never before enlisted in one cause, and the great success they are likely to achieve appears the more certain from the fact that the progress of knowledge has been at all times and all places great in proportion to the number of observers. The ocean, the poet's emblem of eternity; the winds that blow over part of it; the ceaseless agitations of its waters, carrying seeds, and plants, and animalcule from pole to pole—it being no more at rest in any one part than the blood is ever stagnant in the animal body—will all, in the course of time, be recorded, and the ocean and the atmosphere will be as well known as any part of the land. To prepare the way for these continuous inquiries, to point out the matters most worthy of being noted, and to assist this great army of observers, is one of the objects of Lieut. Maury's present work.

Another great object is to show how much has already been done to generalise the knowledge at present collected, and to point out some curious conclusions deduced from it. To show how much art may be promoted by superintending and apparently trivial observations, we should like to quote largely from Mr. Maury's eloquent pages. This pleasure, however, is forbidden by our space, and we must limit ourselves to reminding our readers that many of the rapid voyages now continually made between Australia and England, between the United States and Australia, and between Canton and London, are in part due to ships being better constructed, but in greater part to the recorded observations of winds and currents, which have enabled the captains more advantageously to shape their course. Our readers are aware that the race betwixt the *Marco Polo* and other ships over a course of many thousand miles, has been so equal as to make it doubtful which ship was the victor. Similar sorts of races have taken place from New York to San Francisco, and the ships, following the ground tackle for ever going on in all animals, are represented by analogous processes. in the ocean which circulates like blood, and in the atmosphere, which is part of the ground and exquisite machinery—clouds, and day and night, all contributing to the growth, the deposits, the abrasions, and the assimilation, and preserving in harmony the exquisite adaptation of the ocean. Comparative anatomists have traced one homologous form through all animal life, from the smallest creature up to the highest man, and in the less anomalous things we wonderful we see the analogy to be traced in the formation of the earth. There are larger animals on the surface than man, but less approximative to perfection. After man the next greatest perceptible objects in creation as wholes, endowed with motion, are the earth, the planets, the sun, and stars. Deducing from the ceaseless flow of the ocean and the atmosphere an analogy between the earth's existence and animal life—an analogy between the earth and all other stellar bodies being apparent—the conviction arises that one homologous form pervades all creation. These, however, are some of the merely curious and speculative results of inquiries which began in the lowest practical utility, which keep steadily in view the promotion of safe and speedy navigation, and which continually lead to practical suggestions of the highest value. By them several distant voyages have already been shortened from a sixth to a third, and though we may never "tame the winds," which will still "blow as they list," when we know thoroughly their habitual course and direction, and their successive changes in all quarters, by means of Lieutenant Maury's army of observers, we shall be able to profit by them as we profit by the tides in our rivers and on our shores to attain our ends. Of some books the publication comes, after a lapse of time, to be considered an event in the history of mankind. Bacon's "Advancement of Learning," Newton's "Principia," "Locke on the Understanding," Smith's "Wealth of Nations," Malthus' "Law of Population," are of this description; and we err greatly if Lieut. Maury's book will not hereafter be classed with them, and if he be not ranked with the great men who have taken the lead in extending and improving knowledge and art. His book displays, in a remarkable degree, like the "Advancement of Learning," and the "Natural History" of Buffon, profound research and a magnificent imagination.

THE LATE MRS. ARTHUR NICHOLS.

(THE AUTHORESS OF "JANE EYRE.")

THIS lady, formerly Miss Brontë, but better known under her *nom de plume* of Currer Bell, whose lamented death we have recently had occasion to notice, was the daughter of the Rev. Patrick Brontë, of Haworth, in Yorkshire, and wife of the Rev. Arthur Bell Nichols, of the same place. She commenced her literary career, in 1846, with a collection of poems, written in conjunction with her two sisters, which made its appearance under the title of "Poems by Currer, Ellis, and Acton Bell." The volume produced some sensation at the time; less, perhaps, from any extraordinary power or originality that it some thought to display, than from the peculiarity of the names affixed to what purported to be the general patronymic, and which, as the public quickly discovered, were designed to cover rather than to reveal the identity of the respective authors. The circumstances connected with this singular but now deeply interesting literary partnership will be given most fitly in the words of that member of the little band who has so recently passed from amongst us:—"About five years ago," writes Miss Brontë in 1850, "my two sisters Anne and myself, after a somewhat prolonged period of separation found ourselves reunited, and at home. Resident in a remote district, where education had made little progress, and where, consequently, there was no inducement to social intercourse beyond our domestic circle, we were wholly dependent on ourselves and each other, on books and study, for the enjoyments and occupations of life. The highest stimulus, as well as the liveliest pleasure, we had known from childhood upwards lay in attempts at literary composition. We had very early cherished the dream of becoming authors; this dream we sometimes pursued, even when distance divided and absorbing tasks occupied us, now suddenly acquired strength and consistency. It took the character of a resolve. We agreed to arrange a small selection of our poems, and, if possible, get them printed. Averse to personal publicity, we veiled our own names under those of Currer, Ellis, and Acton Bell; the ambiguous choice being dictated by a sort of conscientious scruple at assuming Christian names plainly masculine, while we did not like to declare ourselves women, because—without at that time suspecting that our mode of writing and thinking was not what is called "feminine"—we had a vague impression that authoresses are liable to be looked on with prejudice; we had noticed how critics sometimes use for their chastisement the weapon of personality, and for their reward a flattery which is not true praise. The bringing out of our little book was hard work. As was to be expected, neither we nor our poems were at all wanted; but for this we had been prepared. At the outset. Though inexperienced ourselves, we had read the experience of others. Through many obstacles a way was at last made, and the book was printed. It did not obtain such favourable criticism as a school town; but ill-success failed to crush us: the mere effort to succeed had been a wonderful zest to existence, it must be pursued. We each, therefore, set to work on a prose tale." The elder sister, Emily, produced "Wuthering Heights;" the younger sister, Anne, "Agnes Grey;" and Miss Brontë herself, a prose narrative in one volume, which, unlike the efforts of her sisters, did not at that period succeed in meeting with a publisher. But, though it failed of actual success, it was declined (for business reasons) by the last firm to whom it was offered so courteously, its merits and demerits were discussed in a spirit so enlightened, that this very refusal incited that author more, perhaps, than a less cordial acceptance would have done. The novel of "Jane Eyre," at which she had been patiently working while her other story had been plodding its weary way round London, was, in the course of a few weeks, finished. "Friendly and skilful hands took it away," says the author, and, in the Autumn of 1847, within a month of its completion, this remarkable novel issued from the press. The public, at once recognising the power and genius of the writer, gave the work such a reception as must have proved a compensation for previous disappointments, and was calculated to serve and strengthen her for renewed exertion in that path of literature which she had marked out for the exercise of her talents

But the triumph of success on her own part, was damped by the lessened recognition granted to the works of her sister-coadjutors; a shadow mingled with the sunshine. Neither authoress, however, allowed herself to sink for a moment under want of encouragement. Energy nerved the one, and endurance upheld the other: they were both prepared to try again. But a great change approached them swiftly. "Affliction came," wrote the bereaved sister, "in that shape which to anticipate is dread—to look back on, grief. In the very heat and burthen of the day the labourers failed over their work." Two months of hope and fear passed painfully by; and the day came at last when the beloved of many hearts was to pass away. The young author of "Wuthering Heights" finished her mental labours with her first book, and died of consumption, in December, 1848. Scarcely had the grass grown green over the grave of Emily, when the second sister, Anne, was called to follow. She lingered for scarcely half a year; and, in the month of flowers found her own resting-place in the quiet churchyard which they had all trodden so often together. In concluding a touching tribute to the memory of her sisters, Miss Brontë observes, "I may sum up all in saying that for strangers they were nothing; for superficial observers less than nothing; but for those who had known them all their lives in the intimacy of close relationship, they were genuine, good, and truly great." Years have passed away since these words were penned, and now time's love and of sisters are again reunited; the void is destined to be with the living. Married only last July to Mr. Arthur Nichols, the Curate of her native place, Charlotte, the youngest of the three sisters, and the last of a family of six, died during the night of Saturday, the 31st of March, at her father's house, Haworth Vicarage, which had continued her home during the short period of her married life. Like those who had preceded her, she passed quickly away, but leaving a name which will survive, if we mistake not, in the memories of many during the present generation

There are few instances to be found in the literary history of the time in which an unknown writer has taken firmer hold at once on the public mind than the authoress of "Jane Eyre." The startling individuality of her portraiture, based in life, however strange and wayward that life may be, fixes them on the mind, and seems "to dare you to forget." Successions of scenes, rather than of story, are dashed off under a fit of inspiration: until the reader, awed as it were by the presence of this great mental power, draws breath and considers it must be truth, though perhaps not to be recognised among the phases of any life he may have known, or scenes he may have witnessed.

In the year 1849 appeared Miss Brontë's second novel, "Shirley." The story is laid in the dales of Yorkshire, the features of which are presented with the minute knowledge of a close observer. The incidents of the tale are associated with a picture of life in the outlying manufacturing districts at the close of the last war, when want and misery on the part of the governed and lack of knowledge and sympathy on the part of the rulers threatened to put out the light that science was bringing to bear on the arts of life; when labour and machinery were declared to be sworn antagonists, by the strong-handed multitude. Many stirring events of the war of classes cross the history of two young girls, the Allegro and Penseroso of the tale—one, a brilliant heiress, frank and fascinating, whose nature has expanded beneath the sunshine of prosperity, wins hearts at pleasure, but pines for the one which is long in coming; the other, silent and thoughtful, nurtured under the shadow of an unobservant and preoccupied father, reveals her sweetness, like the perfume of a flower, to all but himself. The sober flirtations of grave men are amusingly represented, and the strong feeling for earnest overmastering truth painted as by one who had proved and rated it at its true worth.

Miss Brontë's third and last novel, "Villette," appeared in 1853; and, unlike her preceding works, was marked by no stirring incidents—no romantic details. It is simply the history of life in a foreign school; but that little world is made to contain the elements of a deeper interest than humanity itself. Although not calculated, from its deficiency of story, to be as universally popular as "Jane Eyre," it met with high appreciation, as a remarkable result of that high order of genius which imparts its own powerful fascination to the detail of events of the simplest character. Currer Bell may almost be said to have founded a school of fiction in which the "flower is shown in the bud," and the child literally made "father to the man;" in which some young spirit, starved of sympathy, turns inward and revenges the injuries of the world, in secret and disdain of the many; isolated and self-concentred, till the well-spring of love, frozen, but not dried up, bursts its bonds under the influence of the first warm sunshine of affection, and expends itself with the reckless prodigality of a miser suddenly turned spendthrift.

COPYRIGHT OF SERMONS.—In a postscript to a Fast-day sermon just published by the Rev. Mr. Binney, that gentleman complains of the unauthorised publication of his lectures and sermons. These are pirated, collected, and made into a book, and he has had the mortification of seeing a new volume announced as by him, with a title he never authorised nor heard of, in a way he could not control, and with a view to profits in which he had no share

EMBARKATION OF THE ADMIRAL.

FROM Portsmouth many a renowned sailor has gone on board his ship to lead the fleets of England to battle, to blockade the harbours of the enemy, or to keep watch and ward along the coasts of our island. The greatest amongst all

> the noble names that blight
> Our history's gilded hue,

Nelson, stepped on board the boat which conveyed him to his flag-ship, the *Victory*, from Southsea Beach;—at least such is the tradition of Portsmouth. Many hundreds of people crowded to the spot to see him off and bid him God speed: The present Commander of the Baltic Fleet took leave of the land in a manner quite consistent with his modest antecedents. He walked on board his boat from the Dockyard-stairs in the manner depicted by our Artist, who has given permanence to a scene which otherwise was not likely to make much sensation. But there is more significance in this incident than meets the eye at the first glance. What would we not give now for a literal transcript of that fact on Southsea Beach, in 1805, when the greatest sailor of all time went forth to fight his last and greatest battle?

OUR ARSENALS IN CHEAPSIDE.

THE quiet unimaginative inhabitants of "Chepe" will most probably raise their eyelids in mild wonder on being told that they have been all along (without knowing it) living amongst the arsenals in which are accumulated the most potent of our projectiles for attacking the forces and humbling the power of the Czar; but the diligent searchers after first causes must come at last to the conclusion, that, however great may be the bravery of our soldiers and sailors, however long the range of our Lancaster guns, however formidable the entrenchments we may be able to throw up round Sebastopol, the people, in such places as Cheapside, and the surrounding streets, at the wealth around, the renown it has ever created, which gives England a position in the politicel world to which neither the extent of her surface, nor the numbers of her population, would otherwise entitle her. It is to such places she acquires the wealth which enables her to repair the first blunders of a campaign, to build successive fleets, to subsidise needy allies—in short, to do as she has always hitherto done, make every cause in which she once seriously embarks become in the long run a triumph to the [illegible].

The great city houses of London are in truth our arsenals, and are in themselves amongst the greatest wonders of the great Metropolis. The visitor will not find them in his Guide-book, catalogued along with Madame Tussaud and the Tower; neither will his eyes be arrested by their outward and visible signs as he travels paying through the main avenues of the City. No: as a general rule he must dive down obscure lanes, or thread deserted-looking streets to find them, and, if he be not accompanied by one of the initiated, will never imagine that behind a line of dim and badly-cleaned windows, or up a flight of steps, whose only decoration is a few scattered straws, a perfect hive of busy bees is ensconced, and an immense traffic going on, under a system of organisation so perfect that, if it could only be transferred bodily to Whitehall, would set our House-guards, Commissariat, and Ordnance departments right in a week. London contains many establishments of this description, each employing its hundreds of hands, its hundreds of thousands of pounds capital, and acting as depôts for the textile products of the world, in which they are classified and priced, and then again distributed amongst the world's consumers. These establishments have not, as a general rule, arrived at their present dimensions suddenly, but have been of slow growth, the fruits of the labours of two or three successive generations of energetic men, who have thrown their whole lives into the task of rearing them, and, in some instances, very much curtailed their own natural age by their exertions. The habit is not unfrequently that of some young boy or English provincial arriving from the country with nothing but honesty, energy, and natural talent to recommend him, who, getting employment in a busy haberdasher's shop, marries his master's daughter, and, under his improved management, the small shop gradually extends into the great City wholesale house. The first success attracts fresh capital, new names come into the firm, trade is extended, the house is enlarged, until at last the number of hands employed equals the staff of a public office, and the amount of trade done is reckoned annually by millions sterling.

"If you want to paint captivity forcibly, you must take a fragile picture." To give the reader some idea of the extent and importance of these great City houses, we shall take one situated close to Bow Church—not because it is more remarkable for extent or the amount of its trade than many of its neighbours, but because an accident has made us more familiar with its interior economy. In the right-hand corner of Bow Churchyard a very unpretending doorway leads you into the extensive premises of Messrs. Copestake, Moore, [illegible] which, to the casual observer, would say, to the traffic in various descriptions of British lace, and the other lighter contributions to the female toilet. One would imagine that for so light a business a well-established warehouse for an experienced salesman would be an idea of the magnitude of London commercial operations may be formed when the reader is told that to the sale of lace, sewed muslins, millinery, and baby linen, a warehouse is devoted which, gradually enlarging, has run down the whole length of the yard, and at last found its Canaan in the glory of a handsome Italian front, towering three or four stories above all the neighbouring houses. Three hundred and more stands of both sexes find constant employment in classifying and selling the goods, fifty-eight clerks are always kept busy recording their transactions in their ledgers, and from morning to night travellers are perpetually beating up, not the covers, but the country towns, for that custom which is the life-blood of the establishment. Nothing can be more striking than the sight which bursts upon the visitor when he passes the comparatively small threshold, and finds himself in the spacious surrounded by respectable-looking young men, hurrying to and fro, jostled by people from all parts of the country, transacting business in all imaginable varieties of dialect, or in imminent danger of being crushed by one of the immense "lifts" which are perpetually moving the goods from the bottom to the top of the house, or *vice versâ*. Everything seems to his inexperienced eye to be at high pressure, and in complete confusion; but a little more careful examination will soon convince him that the most perfect system and organisation reigns throughout, and that the smallest article cannot pass from hand to hand without being regularly accounted for. The principle of all this is like the mainspring of a watch, simple enough; it is the number of details that, like the wheels of the same useful machine, give the appearance of complexity. To one department is allotted the receipt of the goods in bales as they come from the various factories. Having been duly entered here, they are dispatched in order to the different departments. One immense room, with numerous assistants, shelves the cotton nets, one of the most elaborate and cheap but most extensively used of the materials for female finery. This article, which is made by [illegible], is, we believe, an exclusively English fabric, and is sold in vast quantities by the house. Another department is devoted to the Nottingham silk lace, also made by machinery, the manufactory of which Messrs. Copestake and Company maintain a large factory in Nottingham. The universal black cap, which we suppose our maid-servants have adopted out of compliment to our venerated judges, has a department to itself; while the pillow-lace of Buckinghamshire, and the costly productions of Honiton, each give occupation to large portions of the building. The contents of two rooms we found particularly attractive. In one devoted to the descriptions of caudles and sewed muslin we found that the fine arts had been laid under tasteful contributions, in the preparations of exceedingly pretty little boxes, of different shapes and sizes, handsomely gilt and decorated, and having on their lids pictures coloured in imitation of enamel, and of a very respectable degree of correctness. These are each filled with a dozen cambric handkerchiefs; and the theory upon which they are constructed affords an amusing illustration of the extent to which a knowledge and appreciation of human weaknesses must enter into the calculations of trade. These tempting little boxes are technically called "imprudence goods:" and the shopkeeper of agreeable manners keeps them lying snug under his counter until his lady customer has completed the purchases for which she had come out shopping; then, if any loose inappropriated change appears glistening through the silk purse, or against the red sides of the *porte-monnaie*, out come the pretty little boxes filled with the nicest possible embroidered handkerchiefs; and the husband must be a brute indeed who objects to the unprompted investment of the balance of his purse in such pleasing articles. The manufacture of these boxes was originally a monopoly of our Parisian neighbours, they use being to contain the gifts of the *Jour de l'An*, but now they are extensively made in London, quite as tasteful in appearance and much more solid in construction than the French originals. Higher up, and occupying more than one large apartment, are the dominions of Flora, appropriately presided over by the fairer members of the establishment. One room is devoted to the productions of English artists, and another to the French; and it would be hard to say in which of the two the palm of skilfulness in construction or brilliancy of colour. The whole region glows like a rich parterre, and has all the appearance of a real garden, for modern art has contrived to impart the natural odour to the carnation and others of the sweet-smelling flowers. But step softly: there are, although but about four pair of stairs, on [illegible]. In the room devoted to the gorgeous camellia, the drooping iris, the glowing Parisian rose, the suggestive orange flower, and all the other bright-tinted productions of the Rue St. Denis, it is supposed that Milton was born, and the best, decked with evergreens of the true City brown, reminds the spectator of those immortal flowers, with which

> Those artificial leaves that strew the brooks
> In Vallambrosa—

the "blind old man" has for all future ages decked the garden of English poetic literature. However, we are describing a City house in the lace trade—not writing a rhapsody about Milton—so must leave the French flower-room, its famous bust, and its intelligent and obliging president, and ascend higher still to an extensive range of apartments situated in the upper atmosphere strata, and devoted to wool, thank you, fair and gentle reader!—in holy linen! and all the other paraphernalia of that interesting period in married life when the joy of the newly-made father makes him totally reckless of all pecuniary considerations. Here are such delicious morning-gowns, such captivating convalescent-caps, such delicately-embroidered baptismal robes (one fifteen guineas a piece) for the young Astyanax, who is sure to be the image of his father. Here they lie piled in heaps, or ranged in rows, classed, ticketed, and numbered, nothing but material silk or muslin; but there is not one of these pretty miniature habiliments that is not doomed to be the cynosure of the admiring eyes of a whole family, the herald of the best and holiest emotions—the harbinger of a life for weal or woe, for fame, fortune, or perhaps misery. The great variety, immense number, and often the minute size of some of the most valuable of all these articles keep the counting-house, with its fifty-eight clerks, employed in entering, crediting, and debiting, from year's end to year's end. The travellers are always on the move in town and country; and the "buyers"—another most important and generally well-paid class of functionaries—perpetually ransack all the markets at home and abroad for the newest patterns and the most attractive varieties of goods. On these gentlemen rests great responsibility; as to the judicious character of their purchases the prosperity of the house must be greatly indebted. On them also devolves the duty of marking the prices at which the various articles are to be sold at the retail dealers; so that, taken along with the travellers—the great distributors—these energetic and skilful functionaries may be ranked as the main pillars of the City house. The principal, like the landlord of an inn, are not often seen or heard of. Their leading duty is to provide the capital, and absorb the profits; and, as far as actual labour is concerned, they rest on the laurels they had gained in their struggle up the ladder, merely using their experience and judgment in the selection of proper persons for the actual work. In the case of the house we have just been describing, one of the partners (Mr. Moore) most honourably and usefully devotes the comparative leisure he has earned by his earlier energy and industry to the defence and maintaining of the Commercial Travellers' Schools—one of the most valuable and best-conducted charities of the metropolis.

THE *Espoma* says:—"The persons employed at the Palace complain that they have not received their salaries for February and March; but this is not surprising, since the Queen herself has not yet been paid her allowance for the month of January."

AN ANTEDILUVIAN TOAD.—A live toad, in a torpid state, was recently dug out of "hard pan" at Rontland, Vermont, some fifteen feet below the surface, where he must have lived for centuries. On being laid on the grass he soon revived, and kept [illegible] to give the worms of the nineteenth century a specimen of antediluvian skill in "snapping them up."

AN IMAGINATIVE DIPLOMATIST.—The Vienna correspondent of the *Independance Belge* states that one of the members of the German Powers died the other day on one of the Plenipotentiaries of the Congress, and of course expected to find him deep in notes and protocols. To his surprise he found the defunct before a blazing fire, tranquilly reading Schiller's beautiful poem of "The Bell." "I will write to my Government," exclaimed the Envoy, "that this is the manner in which the Congress makes progress."

PLUNGE MANCHIKOFF.—The death of Menschikoff seems to be [illegible] doubtful, but the matter is still a mystery. He is said to have been wounded by an English shell on the 18th of February, and to have sunk at last under the effects of the blow. According to the current statements, he was carried to Bagcherai, and thence to Simpheropol, with the view of being transported by easy stages to Odessa. He accordingly started from Simpheropol on the 8th, but became so much worse on the way, that he was obliged to remain at Perekop, where he died a few days after the master whom he had so much influenced and so unscrupulously served." *Letter from the Crimea.*

NATURALISING A RUSSIAN.—The master of the *Jessie Mitchell*, lately discharging guano in Leith Docks, from the island of Leone, relates a humorous scene which occurred under his own eye in that island. The brig *Atlantic*, seized and sold in Leith as a Russian prize, left the island of Leone on a day or two prior to the arrival of the *Jessie Mitchell*. One of the Russian crew had deserted from the *Atlantic*, and boarded himself on the island, but he afterwards discovered himself to the seamen, and declared his desire to renounce his allegiance and become a British subject. How to effect the transformation was a puzzling question, but quickly suggested itself to the mate of the *Jessie Mitchell*, her crew, along with the seamen on shore, met in solemn conclave, and their united wisdom determined that as water is now emblematic of purity, and its efficacy progress has been proven and acknowledged in every country, it was the only medium which could effect the momentous change, making a Russian into a true British subject. The conclave next [illegible] bounded to a small distance from the vessel, while the crew (of which they formed themselves, about three yards apart, each with a bucket, while the poor Russian commenced walking round the margin of the creek, repeating the form of abjuration taught him by the mate, who, poor fellow, knew not a word of English, and admitted him, with all the honours, to their society.

AN ANSWER TO A QUERY OF THE CZAR.—The *Journal de Daugé* (Maine-et-Loire) relates the following act of courage performed by one of the sharpshooters of the Crimea, and related by himself in a letter to his mother:—"I must explain to you that at about 100 or 120 yards from our trenches the Russians had placed a stake as a mark for their guns, in order that the shot by which it was there should reeochet on our works. By this means two of our guns had been dismounted, and ten or a dozen of our artillerymen killed. It was necessary at all hazards to remove this mark, and for that purpose a man was to be found who would resolve to sacrifice his life, for he would have to pass under a well-supported fire from twenty pieces of cannon. There was, however, one brave officer in the mine's favour, and there were some large blocks of stone lying here and there which might shelter him from the fire of the artillery; but, on the other hand, he might fall into an ambuscade of the Russians who advanced close to the mine, or might be killed by an advanced sentinel. My Lieutenant had been for twenty minutes talking with a *Chef d'Escadron*, who had asked whether among his riflemen he did not know a man who would undertake the mission which I have just mentioned to you. The Lieutenant told him he would undertake to find him a man; [illegible] and proposed the enterprise to me, and five minutes sufficed for me to [illegible] what I had to do. I thought of you, my excellent mother, and of my Little sister Mariette; for I could feel at that moment how dear you were again. I then jumped over the trench and went towards the town, and my heart, I can assure you, was beating strongly. I at last reached the spot, laid hold of the stake and pulled it up, and was off like a flash of lightning on the shoulder, and I fell into the arms of my Lieutenant, who received me with the greatest enthusiasm. A regret was immediately made to the General-in-Chief, and I was myself presented to him by the Lieutenant-Colonel of the army, for my *sang froid* and my courage. I cannot describe to you what I felt who. I found myself proclaimed for the decoration; I was wild with joy and if God is kind enough to preserve me in the terrible combats which are to [illegible] you my decoration, as I owe more at by your warm fireside. *Tout à vous et pour toujours*, you JOHN VICTOR PICAULT."

SIR JOHN BURGOYNE.—He left the Camp to-day (March 21), proceeded to Kensale, where he took a passage by the mail-steamer, on his way to England. All kinds of opinions and acts have been attributed to Sir John will be his own here a peri, tending the earlier operations of the siege, but no one has ever doubted that he is the real head which the veteran General displayed in the prosecution of the works so far as he could control them. If his manner exhibited that stoical apathy and hard fierceness which distinguish the few remaining disciples of "the Great Duke," his activity and personal energy were beyond his years. Whether he was for an immediate assault after we arrived before the place—whether he originated the famous flank march to Balaclava, which has since been taken into popular favour—whether he originated any of the other plans which commended the layout—whether he resolved the early defences, grown up under his eye in masterly style—whether he left the right in command of Lord Raglan, and the left in that of Sir John Campbell, both able to state to those who have a right to ascertain the truth, but, in justice, be remembered that Sir John Burgoyne was in communication and in confidential position from the time he joined the army at Gallipoli, when Brigadier-General Tylden was in command of the Royal Engineers, up to the moment that he was relieved from responsibility by the recent arrival of Sir H. Jones. Sir John, Lascertainly, failed to command success, however much he may have deserved it. We can only hope that the efforts of his successors may be more fortunate [illegible] the tree falls, so must it lie." On his return to England, the Inspector-General of Fortifications will have an opportunity of vindicating himself from the charges which have been made by his enemies against his professional character. He can, at all events, let the country know whether his friends, who have maintained that Sir John had both real power and control over the Engineer works, and should therefore have little or no responsibility, were right or wrong. The most serious accusation which has been made against him is that he permitted the enemy to throw up the tremendous works which have now so long defied our science and our artillery; that he did not prevent them, and that we underrated their strength, and held out strong hopes that, after a couple of days' cannonade and bombardment, the place must fall. It was generally stated and believed that Sir John and we should be in Sebastopol forty-eight hours after our batteries opened fire; and never shall I forget the disappointment, almost akin to astonishment, of the groups of excited spectators as they returned to their tents on the evening of the 17th October from the front, where the Russian batteries were still vomiting forth fire and smoke; or their deeper or more painful sensations, expressed by many an emphatic phrase, when next day, and the day after, the enemy one red with redoubled energy and power. We felt we had no prophet among us.—*Letter from Balaclava.*

LITERATURE.

FOOD AND ITS ADULTERATIONS; COMPRISING THE REPORT OF THE ANALYTICAL SANITARY COMMISSION OF THE "LANCET" FOR THE YEARS 1851 TO 1854 INCLUSIVE. By ARTHUR HILL HASSALL, M.D. Longman.

Take an ordinary wine-glass, half fill it with common port wine—to operate with a larger quantity in the experiment about to be proposed might be dangerous. Turn the glass thus charged upside down over a red-hot fire. A flash of flame will immediately ensue, of such magnitude as to suggest that if you had exploded rather more port you would probably have set fire to the chimney. In fact, the port, so called, burns almost as if it were alcohol, simply because alcohol constitutes the greater part of it. This alcohol is not the spirit of the wine: it is spirit in the wine, most likely spirit of something other than wine introduced into the wine to adapt it for the "British market." It is strange how almost every good thing imported into this country has to be deteriorated, in order to be "adapted to the British market." Foreign plays and operas even—ideal and musical as they require, it seems, to be "adapted," by mutilations and additions, to what, for goods of that description, is the "British market"—the British stage. Yet recent experiments have tended to show that this particular market desires no such adaptation, and is perfectly capable of appreciating the genuine article when presented to it. So, perhaps, the British market at large is able to exercise a sound judgment about material good things when it has the chance, and would like to have real port wine, for instance, sent to it, instead of the "adapted" beverage, if possible.

Port wine and foreign operas, however, are the luxuries of the few; and if adaptation to the British market were limited to goods of that sort, it would not much signify. But [illegible] British public. Port is adequately represented in Dr. Hassall's pages, and so is [illegible] and [illegible] can take [illegible] But [illegible] vinegar, [illegible] pepper, with their purity or impurity, concern the most [illegible] and, indeed, are as matters of popular consumption, [illegible] both in quality and in relative influence. Unfortunately these, and all our other descriptions of aliment and condiment, are likewise "adapted" to the British market, and thereby very much the reverse of adapted to the British stomach, and every other organ of the British bodily constitution connected with, and dependent on, that vital one.

The adaptation of provisions for sale rather than for consumption, is, in a word, the adulteration. The adulteration of articles of food and drink has long been a matter of unusual interest, and of strong, though vague, suspicion among the people. Arcana's Exposure, between thirty and forty years ago, awoke attention to the subject; which has since been more or less accurately explored by Mitchell, Normandy, Chevalier, Jules Gumet, and Hard; and has now at length derived a singularly lucid exposition from the researches, so far as they have extended, and their extent has been very large of Dr. Hassall. The report of these inquiries fills between 600 and 700 closely-printed pages of a large octavo, replete with details of the fraudulent contaminations commonly practised by the people's purveyors, at the people's expense of health and pocket.

Adulteration might be represented pictorially as a Cerberus—a monster with three heads. Under one head is comprised simple "adaptation" to a real or supposed demand of the popular palate, consisting in the admixture of flavouring, pigment, or fragrant substances, as by mixing Cayenne pepper with gin, or oil of vitriol with vinegar. The gin, to be sure, is generally bad gin in this case, and the vinegar bad vinegar; and the instances of adulteration, solely intended to suit the taste of the customer, are comparatively few.

"Adaptation" to the eye, by the addition of colouring matter, constitutes another head of adulteration. Pickles are dyed, confectionery is painted, with poison. Comparatively honest Italian warehousemen put on genuine aspect to drowsy tight rogues in the same line, spirits, in red mud, to invite the public vision. The deception, rather than the gratification, of sight, is, however, more generally the purpose with which commodities are tinted; the colour being used to disguise their inferiority or impurity.

Adulteration under the third head is the most extensive species of that form of rascality. It simply consists in the process of diluting and weakening a valuable with a worthless article, in order that, the latter being sold at the same price as the former, the purchaser may be cheated out of the difference. Early allusion to this fraud will be found in the pages of Mr. Joseph Miller, who relates an anecdote, pretty well known, in reference to "watering the rum, wetting the tobacco, and sanding the brown sugar." All these operations are examples of this variety of adulteration, which, however, is seldom committed alone, but necessitates the perpetration, also, of one or the other, or both, of its kindred villanies. The coffee which has been adulterated with potato-flour for the increase of its weight and bulk, is required to be roasted with burnt sugar, or "black jack," for the restoration of its appearance. The porter which has been lowered with water must have its taste reproduced by means of salt and worse substances.

[illegible] of Dr. Hassall is not in any measure a compilation. The [illegible] disclosures contained in it are the results of strictly original investigation, of which the subjects have been veritable examples of the stock-in-trade of actual grocers, tea-dealers, tobacconists, bakers, confectioners, oilmen, butter and milk dealers, and other inadequate carrying on business, honestly or dishonestly, as they have been—the latter in a deplorably large number of cases. Not only were these investigations original in the sense of being personal; there was originality also in their method, by which, what has long been a desideratum to practical analysis, and a fortification for knaves, has been surmounted.

By the help of modern chemistry, a wonderfully small fractional part of many substances contained in, or mingled with, some other substance may be discovered. The grave gives up its secret to the chemist, who detects the minutest particle of arsenic in the body of the victim long murdered. But everybody who is poisoned is not poisoned by an agent so responsive as arsenic to chemical tests. Most poisons of the vegetable class soon decompose, and cannot be recomposed, or reproduced. If they contain permanent active principles the quantity of these is commonly too small to admit of any demonstration which is practically trustworthy. Much of the vegetable rubbish with which agricles of food are poisoned, in a comparatively mild degree, by adulterators, is undiscoverable by chemical science. Sloe-leaves among tea defy the examination of the detective chemist. He may demonstrate the tea not to contain as much of its active principle, "theine," as it ought; he may prove that its quality is below the standard of the finest and most delicate form of the Chinese leaf the produce of the British blackthorn. But the problem that baffles chemistry is solved by vegetable anatomy. The microscope supplies the short-comings of the crucible and the test-tube. The root, leaf, stalk, bud, flower, fruit of each plant, herb, or tree, has its peculiar structure, discernible by microscopical examination in the minutest portion of each of those parts. The fragment of tea presents a different arrangement of cells, vessels, and other parts, from that exhibited by the piece of sloe-leaf; and the difference is distinguished with certainty by the aid of the microscope.

All vegetable substances consist mainly of the same chemical elements—carbon, oxygen, hydrogen, and in some instances nitrogen. Many of them, so nearly alike in chemical composition as to be indistinguishable from each other, are so different in their active properties as to be, some nutritious, and others noxious, if not poisonous. Articles of food which are the same thing to the chemist, may be very different things to the consumer. Arrowroot is a form of starch; but wheat-flour contains another form of starch, and potato-flour another, and so third, to which may be added sago and tapioca-flour, and the flours of all other farinaceous substances. [illegible] says to any of these various kinds of flour that they are starch; which is the superior article it saveth not, it only knows that they are all to a certain indiscriminate degree alike. But the microscope shows that the starches consist of granules having distinct shape and structure in each variety of starch; so that, not only has the arrowroot granule a different appearance from the potato-starch and other such granules, but the granules of different kinds of arrowroot differ also markedly among themselves in that particular. Thus, in a sample of mixed starches sold as arrowroot we are enabled, by the microscope, to [illegible] granules of which the staff is compounded.

To Dr. Hassall, as chief analyst to the *Lancet* Commission on the Adulteration of Food, the credit is due of having first brought microscopical in aid of chemical analysis, for the investigation of the subject in hand. What with chemistry, and what with microscopy, he has done much to dissipate one of the worst hallucinations. Perhaps we flattered ourselves that we were drinking tea. The supposition was only partially correct. We were imbibing an infusion of some tea (and a very little), but of a much greater quantity of sycamore, horse-chestnut, and plum-leaves; of stuff called "Bohea" (a Chinese sophistication, consisting of tea-dust and ordinary dust); of catechu and paddy husk, mingled with exhausted tea-leaves "faced," or polished, with black-lead, and coloured with indigo, Prussian-blue, turmeric, Chinese-yellow, China-clay or kaolin, and soapstone or French chalk. Under the name of ground coffee we were using a compound of chicory, roasted wheat and rye, burnt beans, acorns, and mangel-wurzel. Induced by the recommendation of a Chancellor of the Exchequer to try chicory as a

substitute for coffee, we have in fact made a more extensive trial of divers parched cereals—carrot, sawdust, mahogany ditto, ferruginous earths, and burnt sugar. With good arrowroot, in small proportion, we have eaten sago, potato, and tapioca starches, and had arrowroot in large proportion Dutch, French, and Sicilian fish, and British sprats, smeared with bole Armenian and Venetian red, have entered our stomachs under the denomination of anchovies. Our bread has contained a considerable proportion of mashed potatoes, water, and alum: the latter of the two last-named ingredients having been added thereto to the end of incorporating therewith as much as possible of the former. On that bread we have spread butter, through which, also, much water was diffused by the medium of salt. Our cocks, imagining that they were flavouring our food with cinnamon and other spices merely, qualified them much more with cassia, flour of various kinds, ground rice, linseed-meal, mustard husks, deal sawdust and salt; and our deviled biscuits have been seasoned with a mixture truly diabolical, of Cayenne pepper, with ground rice, mustard husks, deal sawdust, salt, brickdust, and red lead. Commingled with the cocoa and chocolate wherein we have trusted, we have partaken of several sorts of meal, of sugar, chicory, and of red ochre and of other ores of iron. We have smoked water, sugar, and treacle with our tobacco. Gin-and-water, made pungent with capsicum, has been passed off on us for neat gin; diluted stout has commended itself to us as entire by the smack of cocculus indicus, sweet flag, quassia, capsicum, coriander, ginger, and grains of paradise. We have treated children to marmalades made chiefly of apples or turnip, and if we have ever been thoughtless enough to give them coloured confectionery, we have administered to them cochineal, lake, red lead, vermillion, Indian red, gamboge, lemon and orange (tinted) yellow, chrome yellow, indigo, Prussian blue, Antwerp blue, artificial ultramarine, carbonate and arsenite of copper, umber, sienna, Vandyke brown, white lead, and plaster of Paris; these poisons being somewhat mitigated by dilution with a little flour and sugar.

The list of the nominations of which we may have unwittingly partaken, or occasioned others to partake, might be swelled to an extent, for some idea whereof we must refer the reader to Dr. Hassall's book. There are, however, some adulterations, besides those above specified, so deleterious in the demand express notice. One of the worst of these is the contamination of pickles and preserves with copper, which is very general, and frequently so intense as to render the articles quite poisonous. Green preserves and pickles are purposely impregnated with this metal in order to heighten their colour, though the fraud is peculiar nevertheless it is often derived from the copper vessels in which they are improperly prepared. Another most dangerous falsification is that of snuff; several sorts of which, in addition to chromate and bichromate of potash, chrome yellow, umber, red and yellow ochre, are largely imbued with oxide and chromate of lead. This substance—and the same may be said of copper, and other pernicious metals—is what is called a cumulative poison—that is, when taken for a length of time continually in small quantities, it is apt to accumulate in the system till that is saturated with it, when its presence and agency are manifested by the most fearful results. Thus, lead produces paralysis, especially of the wrists, and some striking cases are related by Dr. Hassall in which this affection was clearly traceable to the use of snuff which had been poisoned with salts of that mineral.

A remarkable and very flagrant adulteration is that of mustard, which is nearly always fraudulently mixed with wheat flour to an immense amount, and coloured with turmeric, inasmuch that such an article as genuine mustard is hardly to be obtained.

It may be some relief to those whom the foregoing citations of the *Lancet* Commission's disclosures may have made rather uncomfortable, to state that some dark suspicions generally current of the horrors of adulteration have not been verified. Bread has not been found to contain ground bones; nor have calves' brains been detected in milk, for the sophistication of which recourse has in the main been restricted to the "cow with the iron tail." Economical housekeepers, however, will be shocked to learn that brown sugar—besides being falsified with starch and flour—contains, among divers impurities, the sporules of minute fungi, or toadstools, and other minute bodies of an animal nature, called *acari*—all, or mostly, alive: creeping, visible to the naked eye, and with a mealy-bug disgustingly ugly. The moral of this information is that it is advisable to use loaf or crystallised sugar exclusively, in preference to brown.

Apprehension may also in a measure be calmed by the consideration that the public analysts are themselves the objects of attack, and aim towards abating the evil against which they were directed. Mr. Wakley, with admirable courage, decided on publishing, after due notice given, the names and addresses of those tradesmen of whom the articles sold to analysts were purchased. This bold design was thoroughly carried out; and really after reading the lists of "respectable parties," whose goods are noted for the most shameful adulteration, one is disposed, in walking through many a splendid street, to regard a large number of the shops on either side of it in much the same light as one might have viewed the smaller establishments on the right and left of Field-lane, while Field-lane was. Now, however, that attention has been drawn to the practices of the finer, but not less dishonest, shopkeepers, they will find that the eyes of the public are upon them, and they will be restrained in their dealings by the like salutary apprehension to that which controls their humbler brethren in the "low neighbourhoods," when conscious of being under the eye of the policeman. Moreover, the Volume is being profusely illustrated with woodcuts, of the microscopical details, and containing ample and clear chemical directions also, will, doubtless, tend to popularise the analysis of food, and thus to check or limit its adulteration. A microscope, which will fully answer the purpose, may be had for a few pounds; and with that and the tests given in Dr. Hassall's book, almost any paterfamilias might be his own analyst. It might be worth the while of many a struggling philosopher to set up the business of performing analyses of commodities on moderate terms: many such microscopical examinations might be cheaply made.

The Volume of Reports is dedicated to Sir Benjamin Hall, and certainly its argument loudly demands the attention of the Board of Health. To purify the atmosphere and clear the water are not the only sanitary re-thinks, greatly needed though they are; and how great the need of the genuine liquid is, and what a diluted sewage London is supplied with instead, are points strikingly illustrated in the pages before us. But to preserve the vitiation of food and manufactured drinks is equally necessary for the health of the public. This may be injured by the adulteration of nutritive substances to an extent that few perhaps imagine. The effects of "cumulative poisons" have been already adverted to. how do we know that diseases called malignant—such as cancer—may not be referable to some such cause? These horrible diseases indicate the presence of *some* poison in the system. How did it get there? By any more likely conveyance than that of corrupted food? The maladies in question are found in the poor, who are also the chief victims of adulteration, and protection therefrom is the province of the legislature.

Legislative interference to put this evil down should clearly exact severer penalties against it. Adulteration in its mildest form is more than equivalent to theft or forgery; it is not only stealth of money, but also plunder of the stomach. Nothing but fear of the crank or the treadmill deters the rascals capable of adulterating provisions from picking a pocket or committing burglary. The admixture of noxious substances with human food corresponds precisely to robbery, aggravated by assault with intent to do grievous bodily harm. It deserves exactly the same sentence, and ought to be punishable with a long term of imprisonment and hard labour, or of penal servitude.

Dr. Hassall's book contains a rich fund of information respecting its subject matter, conveyed in plain, straightforward terms. Those who want to understand the tricks of trade which it exposes, and wish to render themselves even with the dishonest tradesmen, should read this volume. There are few such whom its perusal will not induce to possess themselves of it as a book of reference.

THE PHYSICAL GEOGRAPHY OF THE SEA. By M. F. MAURY, LL.D. Lieut U.S. Navy. Sampson Low, Son, and Co.

Our readers are aware that nearly three-fourths of the earth's surface are covered by the sea, and that this apparent obstacle to man's progress, at the borders of which he shrank back terrified, is made by art to be to his foot what the atmosphere is to the wing of the bird. On its yielding bosom he now sails or steams quickly, and with ease, whithersoever he will. The great highway of nations, as the sea has in consequence been appropriately called, has its own laws, which he must study to use it advantageously for his purposes. But though it has long been known that the winds which blow over it follow (in some districts at least) a settled and ordained course, and that its currents can impede or can be turned to the profit of the mariner, only lately have these great phenomena been made the worthy of scientific observation. Numerous theories have indeed been propounded of the trade winds and other regular winds, and of currents, such as those which continually set into the Mediterranean and into the Red Sea; and now and then a reflecting philosopher has suggested some doubt to be cleared up by ship-captains. But till lately the men who cross and recross the ocean, and pass their lives on its unrecording waves, no more thought of studying its phenomena than mail-coachmen thought of studying astronomy or natural history as they passed on the roads. Apart from the general impulse to gather and diffuse information, now making itself sensibly felt throughout the civilised world, Lieut. Maury, the author of the book before us, has the great merit of giving this new direction to the thoughts and labours of the increasing maritime population of every country. From his connection with the astronomical department of the United States Government he was led to notice the great want of correct knowledge of the winds and currents which assist or impede navigation, and he suggested certain forms by which every navigator could record his experience of winds and currents on a uniform system. He invented a language that should speak to the eye and at once tell the direction and the force of the wind at different times; and he set as the strength of the current—should description of the navigator, and the time of the year at which observations were made. He induced old sea-captains to rummage up their long forgotten logs; and, from materials gathered from them, he constructed a series of wind and current charts, which gave to the young ship-master at a glance a great deal of the experience of many clever or celebrated voyagers. The more information he got (many instances occurring of zig-zag routes being followed across the ocean for which no person could assign a reason except that others had taken the first navigators in the track—one by following another and leaving great parts of the ocean wholly unvisited) the more was he convinced of the necessity of gathering further information. His first charts, meagre and unsatisfactory, showed some few spots continually frequented, like the sea off Sandy Hook or the Strait of Dover, and all the facts concerning them tolerably well known; but they also showed vast blank spaces, of which nothing whatever was known. To encourage ship-masters to make the required observations, to every one was given a copy of the wind and current charts, and the sailing directions founded on the experience already acquired, who would undertake to send an abstract of his log to the National Observatory at Washington The consequence was remarkable and encouraging. "In a little while there were more than a thousand navigators engaged, day and night, and in all parts of the ocean, in making and recording observations according to a uniform plan." Several Governments lent their aid to promote Lieut. Maury's plan, and the thousand navigators are likely soon to be increased to many thousand. Great Britain alone has upwards of 26,000 vessels; the United States have almost as many; all other nations together have scarcely as many as either of them, but supposing they have—and the number of ships is increasing very fast in almost every maritime nation—there may soon be ninety thousand observers scattered over every part of the ocean, and in the course of their duty recording observations of winds and currents, and all the physical geography of the ocean in a uniform manner. Such a vast army of natural philosophers was never before enlisted in one cause; and the great success they are likely to achieve appears the more certain from the fact that the progress of knowledge has been at all times and all places great in proportion to the number of observers. Long ago Locrain, the poet's emblem of eternity; the world, that blow over part of it; the ceaseless agitations of its waters, carrying seeds, and plants, and animalcule from pole to pole—it being no more at rest in any one part than the blood is ever stagnant in the animal body—will all, in the course of time, be recorded, and the ocean and the atmosphere will be as well known as any part of the land. To prepare the way for these continuous inquiries, to point out the matters most worthy of being noted, and to assist this great army of observers, is one of the objects of Lieut. Maury's present work.

Another great object is to show how much has already been done to generalise the knowledge at present collected, and to point out some curious conclusions deduced from it. To show how much art may be promoted by unpretending and apparently trivial observations, we should like to quote largely from Mr. Maury's eloquent pages. This pleasure, however, is forbidden by our space, and we must limit ourselves to reminding our readers that many of the rapid voyages now continually made between Australia and England, between the United States and Australia, and between Canton and London, are in part due to ships being better constructed, but in greater part to the recorded observations of winds and currents, which have enabled the captains more advantageously to shape their course. Our readers are aware that the race betwixt the *Marco Polo* and other ships over a course of many thousand miles, has been so equal as to make it doubtful which ship was the victor. Similar sorts of races have taken place from New York to San Francisco, and the ships, following the course of the wind and current charts, have arrived within a few hours of each other. Voyages are not only shortened many days or weeks by the knowledge gathered by Lieut. Maury and his army of observers, they are rendered in a great measure safe, and are performed with almost as much punctuality as journeys by land

Saying so much only of the utility of the pursuit, let us now say a word about what is considered at present as merely curious. Poets have dreamed of "a thousand fearful wrecks dead men's skulls—grinning anchors—heaps of pearls, and vast treasures that lie scattered at the bottom of the ocean;" but, while wrecks and drowned treasures, even after the ocean has been traversed for centuries, can only be, in the more frequented and dangerous parts, as grains of sand to the Alps, the bottoms of the ocean presents to the sounding-lead of the navigator many magnificent specimens of knowledge far surpassing all that ever glowed in the fancy of Shakspeare. It brings to our notice the "very ribs of the solid earth." Running between Cape Race, in Newfoundland, and Cape Clear, in Ireland, the existence of such a great rib has been ascertained. It is now called the telegraphic plateau; and a company purposes to make it the site of a submarine telegraph across the Atlantic by the plan of a very ingenious machine for sounding, invented by Lieutenant Brooke, of the United States Navy, some of the materials of which this plateau is formed have been brought to hand from a depth of more than two miles, and subjected to microscopic examination. Professor Bailey, of West Point, has ascertained that all these materials consist of microscopic shells; not a particle of sand or gravel exists in them. They are made up of perfect little calcareous shells (*Foraminifera*), and a small number of siliceous shells (*Diatomacea*). The ocean teems with life, and wherever there is life there is death or, as Lieut. Maury says, "Where there is a nursery, hard by there will be found a graveyard: but it never occurred to us before to consider the surface of the sea as one wide nursery, its every ripple a cradle, and its bottom one vast burial place" "Animalcule, that make the surface of the sea sparkle and glow with life," "are secreting from its surface solid matter," and filling up the cavities below. The little marine insects which build up great coral walls are the architects of the new lands in the Pacific. Many marl beds, and many parts of chalk cliffs, are, in some solid earth, are composed of the remains of similar small creatures to those which have been brought up from two miles below the surface of the sea. On Lieut. Maury's showing, which we cannot follow in detail, this life and death in the ocean is the means of preserving the purity of its waters. The rivers are always conveying to it, in matter, and the microscopic organisms of the deep-sea lead secrete it, and become themselves the basis of the solid earth Lieut. Maury supposes, too, that the birth-place of these organisms may be the Gulf of Mexico, or some recover region, borne by the Gulf Stream, or other currents of its species, to a very distant burial-place. The examination of the currents of the ocean, and of the deposits at its bottom, as revealed by the sounding ball and rod, carries us, like the researches of the geologist, but more directly and immediately, back to the formation of the world. We see, in short, the mind's eye, creation at work If this be only a curious, it is, at least, a splendid, fancy, and well worth studying, in all its details, in Lieut. Maury's eloquent pages

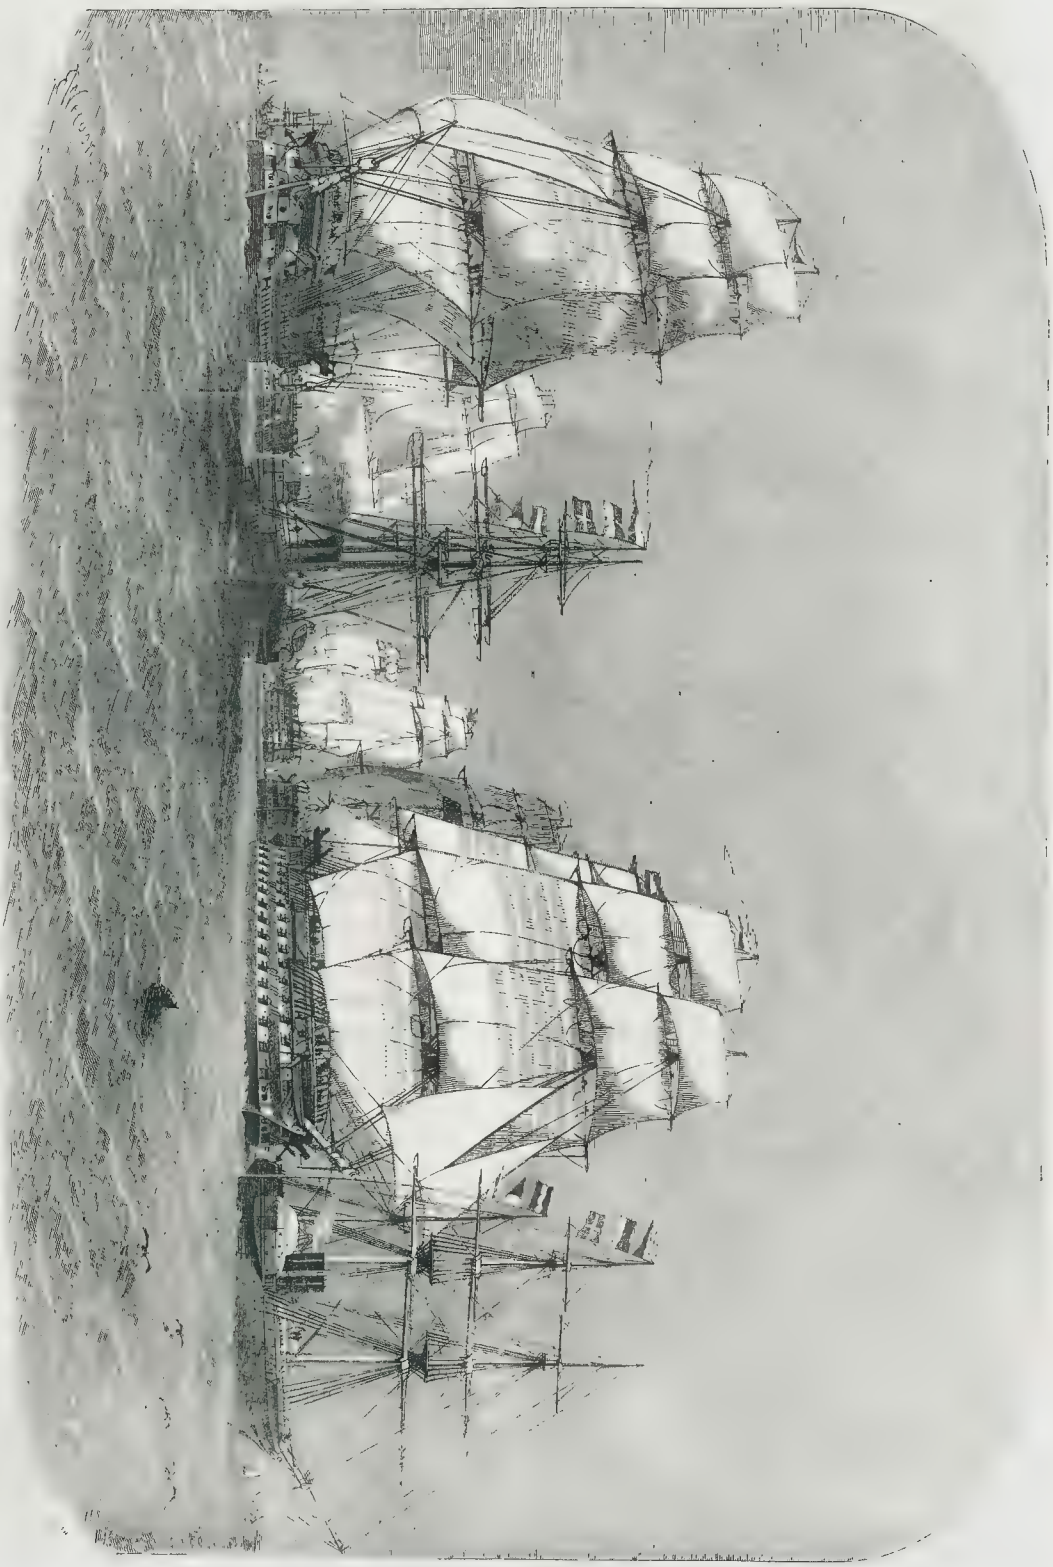
One leading point of great speculative importance must be referred to. The author speaks of the great heart of the ocean beating time to the seasons, and palpitating to the winds and rain, to the clouds and the sunshine; and continually invests the earth with the attributes of life The great processes of secretion, assimilation, abrasion, and decay, that are for ever going on in all animals, are represented by analogous processes, in the ocean which circulates like blood, and in the atmosphere, which is part of the grand and exquisite machinery—clouds, and day and night, all contributing to the growth, the deposits, the abrasions, and the assimilation, and preserving in harmony the exquisite adaptation of the ocean. Comparative anatomists have traced one homologous form through all animal life, from the smallest creature up to the highest, and it would be less anomalous than it seems to trace the analogy to be traced in the formation of the earth. There are larger animals on the surface than man, but less approximative to perfection. After man the next greatest perceptible objects in creation as wholes, embrace with motions are the tides, the currents, the abrasions, and the stars Deducing from the ceaseless flow of the ocean and the atmosphere an analogy between the earth's existence and animal life—an analogy between the earth and all other stellar bodies being apparent—the conviction arises that one homologous form pervades all creation. These, however, are some of the merely curious and speculative results of inquiries which began in the lowest practical utility, which keep steadily in view the promotion of safe and speedy navigation, and which continually lead to practical suggestions of the highest value. By them several distant voyages have already been shortened from a sixth to a third, and though we may never "tame the winds," which will still "blow as they list," when we know thoroughly their habitual course and direction, and their successive changes in all quarters, by means of Lieutenant Maury's army of observers, we shall be able to profit by them as we profit by the tides in our rivers and on our shores to attain our ends. Of some books the publication comes, after a lapse of time, to be considered an event in the history of mankind. Bacon's "Advancement of Learning," Newton's "Principia," "Locke on the Understanding," Smith's "Wealth of Nations," Malthus' "Law of Population," are of this description; and we err greatly if Lieut. Maury's book will not hereafter be classed with them, and if he be not ranked with the great men who have taken the lead in extending and improving knowledge and art. His book displays, in a remarkable degree, like the "Advancement of Learning," and the "Natural History" of Buffon, profound research and a magnificent imagination.

THE LATE MRS. ARTHUR NICHOLS.

(THE AUTHORESS OF "JANE EYRE.")

THIS lady, formerly Miss Brontë, but better known under her *nom de plume* of Currer Bell, whose lamented death we have recently had occasion to notice, was the daughter of the Rev. Patrick Brontë, of Haworth, in Yorkshire, and wife of the Rev. Arthur Bell Nichols, of the same place. She commenced her literary career, in 1846, with a collection of poems, written in conjunction with her two sisters, which made its appearance under the title of "Poems by Currer, Ellis, and Acton Bell." The volume produced some sensation at the time; less, perhaps, from any extraordinary power or originality that it was thought to display, than from the peculiarity of the names affixed to what purported to be the general patronymic, and which, as the public quickly discovered, were designed to cover rather than to reveal the identity of the respective authors. The circumstances connected with this singular and now deeply interesting literary partnership, will be given most fitly in the words of that member of the little band who has so recently passed from amongst us:—"About five years ago," says Miss Brontë in 1850, "my two sisters and myself, after a somewhat prolonged period of separation found ourselves reunited, and at home. Resident in a remote district, where education had made little progress, and where, consequently, there was no inducement to social intercourse beyond the domestic circle, we were of necessity dependent on ourselves and each other, on books and study, for the enjoyments and occupations of life. The highest stimulus, as well as the liveliest pleasure, we had known from childhood upwards lay in attempts at literary composition. We had very early cherished the dream of becoming authors; this dream, never abandoned, even when distance divided and absorbing tasks occupied us, now suddenly acquired strength and consistency. It took the character of a reverie. We agreed to arrange a small selection of our poems, and, if possible, get them printed. Averse to personal publicity, we veiled our own names under those of Currer, Ellis, and Acton Bell; the ambiguous choice being dictated by a sort of conscientious scruple at assuming Christian names positively masculine, while we did not like to declare ourselves women, because—without at that time suspecting that our mode of writing and thinking was not what is called "feminine"—we had a vague impression that authoresses are liable to be looked on with prejudice; we had noticed how critics sometimes use for their chastisement the weapon of personality, and for their reward a flattery which is not true praise. The bringing out of our little book was hard work. As was to be expected, neither we nor our poems were at all wanted; but for this we had been prepared at the outset. Though inexperienced ourselves, we had read the experience of others. Through many obstacles a way was at last made, and the book was printed, it did not obtain much favourable criticism, and as several known; but all success failed to crush us;—the mere effort to succeed had been a wonderful zest to existence; it must be pursued We each, therefore, set to work on a prose tale." The elder sister, Emily, produced "Wuthering Heights;" the younger sister, Anne, "Agnes Grey;" and Miss Brontë herself, a prose narrative in one volume, which, unlike the efforts of her sisters, did not at that period succeed in meeting with a publisher. But, though it failed of actual success, it was declined (for business reasons) by the last firm to whom it was offered so courteously, its merits and demerits were discussed in a spirit so enlightened, that this very refusal cheered that author more, perhaps, than a less cordial acceptance would have done. The novel of "Jane Eyre," at which she had been patiently working while her other story had been plodding its weary way round London, was, in the course of a few weeks, finished. "Friendly and skilful hands took it very soon after

THE BALTIC FLEET AT ANCHOR AT SPITHEAD.



THE BALTIC FLEET LEAVING SPITHEAD.

DIVIDEND DAY AT THE BANK OF ENGLAND.

THE days when our great-grandmothers hoarded their small savings in old stockings, or interlarved the family Bible with bank-notes, or filled cracked teapots with golden guineas, have passed away long since: these ancient depositories of our small wealth—the stocking, the Bible, and the old cracked teapot—are quietly left to their more legitimate uses; and now-a-days we prefer in their stead the safer channels of investment—the savings' banks, or the shares of the various leviathan railway companies, or the Transfer-books of the Bank of England.

The small investors in the Government Funds are quite a class of themselves. Ordinarily timid to a fault, they can never bring themselves to put faith in any other mode of laying out their money. In their minds the stability of the Bank has something to do with the solidity of its masonry; and they would as soon expect each separate stone of the heavy pile to tumble about their ears as entertain a hint of the insecurity of the interest on their stock, or of the safety of the stock itself. "No, no! we're all right here! Savings-banks may be all very well: but then look at the Toddlerumbleton Savings-bank; didn't that go all to smash? and poor old Martha Munns, didn't she—and old Griddle the shoemaker, didn't he—and didn't a host of others, all lose every penny? And then Railways! Why, you remember young Spofflington—to be sure he wasn't anything very bright—but didn't he buy those shares in the Great Moonymuffincup Grand Trunk Railway; and didn't they turn out worth noth ing square than the old cracked teapot, and more secure than the plethoric old stocking of yore.

Let us take a stroll to the Bank when the Dividends have become payable, and let us watch the various people who come in to receive their half-year's interest. Here they are, pouring in from east, west, north, and south. From perfumed Belgravia, as well as from resident Whitechapel; from the trim suburbs, as well as from the more distant rural retreat. Hither they have come in every kind of conveyance, carriage, cab, fly, phaeton, omnibus, spring cart, and pony chaise. Here is the well-appointed carriage with its high-conditioned horses, and its tall well-fed footman, whose "fatted calves" excite the admiration or the envy of repentant City prodigals. There, mark the two dowagers getting out of the hired glass coach in which they have come periodically almost on the same day any time these—here's no saying how many years. Observe, too, that decrepit old man, who is lifted out of the cab: nothing on earth would induce him to grant a power of attorney to his banker, or broker, or anybody, to receive his simple dividends for him; the cost of a "power" would ruin him, besides he would be cheated, robbed, brought to beggary. No, as long as he can crawl he will come to take his own money, though it should kill him to get here

Let us go inside. See! what is the matter with the dumpy little woman, who is performing quite a pantomime with her head and hands, and a kind of *pas d'indignation* with her feet? Oh! she has asked for the dividend on an amount of stock, and the clerk has told her he has no such sum in her name. She is horrified; and is explaining to the clerk how she gave the money to her broker some Wednesday we just four months and a week; she "minds it exactly;" for, says Mr. Scrip, the broker, says he, 'Shall we say, spinster, ma'am?' which as this lady by the side of me—who is one of the most respectablest of ladies, and has lived in the best of family—knows as I"——. But the clerk has no time to listen to what she said to Mr. Scrip, and she trudges off quite "just and furious" to give the unfortunate Mr. Scrip "a bit of her mind;" only to come back, however, all smiles and smirks, to beg "a thousand pardons" of the clerk for having asked for the dividend on a wrong amount of stock.

Observe that pale, harassed-looking woman, who is looking round her continually, as though she feared some one might be watching her. She is married; and her husband, who is a drunkard, ill-treats her. She works hard, and, unlike many women, earns very good wages at her employment, whatever that is. If her husband knew how much she gained, the worthless fellow would thenceforth lead an idle life, depending on his wife's exertions for his subsistence. The poor wife, therefore, is put to all shifts to conceal her gains—not so much on her own account as for her boy, a fine little fellow, whom she is training up in all good ways. She has managed, from time to time, to save a tolerable sum, as a nest egg, in case of need, but she has invested it in her *maiden name*, adding to it an opportunity offered. Her visits to her broker, or to the Bank, therefore, are made in fear and trembling, lest her husband should have suspected and followed her, and become possessed of her secret, which would only be a preliminary step to his seizing upon her little hoard, and getting drunk till the proceeds of its sale became exhausted. This fear has always prevented her taking even her dearest friend into her confidence, and she has carefully hid away, or destroyed, every memorandum of her little investments. Perhaps she may die before her husband, and her secret may die with her; if so, her maiden name will go to swell the list of Unclaimed Dividends, and, ten to one, the stock may never be claimed

This is not a solitary case of the kind; or of investments made clandestinely for some special purpose, although some have not had the excuse of being such "pious frauds" as the above.

One day, some years ago, a fashionably-dressed young lady called at the office of a broker, bringing with her a letter of introduction from a gentleman holding a high Government appointment, who was a personal friend of the broker. The letter merely stated that Miss G. wished to make a small investment in the Funds, and requested Mr. B.'s (the broker's) best attention on her behalf. The young lady mentioned Mr. B. to purchase about twenty pounds' Stock, and to add it to the amount (some two thousand pounds) already standing in her name, as Miss ——ruly, G., of Blank-street, Blank-square; which was done accordingly, and she went away, calling the same afternoon for the stock receipt. A few days afterwards she came again to the broker, and said that she had determined on laying her money out on mortgage; [illegible] therefore, should sell Mr. B. therefore effected the sale, and she went over to the Bank with him to [illegible] the requisite transfer of the stock. She signed the book, the broker [illegible] the money [illegible] and [illegible] she was departing; when, just at the moment of her leaving the broker's office, the [illegible] man who had given her the letter of introduction entered, and on seeing her said, "Ah! Mary, how are you? How are all at home?" It was remarked by Mr. B. that she trembled violently, and seemed very much overcome at the appearance of her friend; which circumstance, and the name by which she had been addressed, created some suspicion in the broker's mind, who immediately called [illegible] said to the gentleman

"[illegible] you not call the young Lady Mary?"

[illegible] did. What else should I call her?"

"[illegible] name is Emily

[illegible] the other, looking [illegible] the broker, "you [illegible]

"[illegible] Emily"

[illegible] pounds stock for her, and [illegible]

[illegible] deuce she has: Emily G. is her sister. Mary has forged her [illegible] and has thus robbed her sister of almost all she possessed. [illegible] with my humanity; for we must get hold of this misguided girl [illegible] cracked her home she had not been there. They then sought [illegible] relatives of her relatives and friends, acquaintances, but she was not to be found. They imagined she might be hiding away in some lodging, and, day by day, caused advertisements to be inserted in the [illegible] papers, carefully worded, beseeching her to return, and all should be forgiven. This course was unsuccessful, and they then advertised for her in her actual name, offering rewards for any information respecting her. They never, however, saw her again; and, strange to say, not the slightest clue has ever been obtained of her from that hour to the present time; nor is it known whether she be alive or dead, although five-and-thirty years have elapsed since her singular disappearance. It [illegible] out of consideration for her, never claimed the stock, or declared the forgery, but put up with the loss. For the same reason, the notes which Mary had received from Mr. B., the broker, were not stopped; but in spite of all precautions, found their way to the Bank, to ascertain whether any of them had been paid in. Not one has ever passed through the Bank, and the whole affair remains a mystery.

The annals of such an establishment are, of course, full of [illegible] examples of every grade and description, of [illegible] which the [illegible] of the Bank requires to be perpetually on guard. In some few instances brokers themselves have figured as the forgers or actuators of the fraud: and two or three, in former times, under the old Draconic laws, paid the penalty of their misdeeds at the scaffold. In 1794 a rather effeminate-looking young man called on a broker, and request him to sell a large amount of scrip (about £15,000); but was told by the broker that before he could act for him, some introduction, as is customary, was necessary. Just at that moment a Mr. Lyons was passing through the Alley (for there was then no Stock-Exchange, and all bargains in the Funds were transacted in Change-alley). The young man, on seeing him pointed him out to Mr. Martin (the broker to whom he was applying to sell the scrip), saying that Mr. Lyons knew him well. Martin accordingly went to Lyons, who spoke very highly indeed of the young man, as possessing considerable property; but expressed himself chagrined that he should apply to Martin, as he (Lyons) had always hitherto acted as the young man's broker. Martin was satisfied; the new client left the scrip with him, and Martin sold part of it the same day. The next day was a holiday, and Martin, having little to do, was looking over and arranging his papers and securities, when something peculiar about the scrip caught his eye. He immediately went over to the Bank, and discovered that the whole was a forgery.

The effeminate *young man* was the sister of Lyons, who was the forger of the document, and who had, of course, laid the plan of proceeding just as it had been carried out, though, fortunately, with a less successful issue than he had anticipated. He was apprehended, tried, pleaded guilty, and suffered the penalty of his crime. The sister, however, escaped.

Before that time, as early as 1762, another stock-broker, one John Rice, had suffered the extreme penalty of the law; and, subsequently, in 1811, Mr. Benjamin Walsh, a member of Parliament, and also a member of the Stock-Exchange, stood at the bar of the Old Bailey, on a charge of having defrauded his clients, Sir Thomas Plomer, of a sum of £16,000. He was found guilty, but certain points reserved for the opinion of the judges, were given in his favour, and he was discharged; he was, however, expelled the House of Commons.

A singular trick is said to have been practised not very long since, but for the authenticity of the circumstances we are unable to vouch. The anecdote, however, is a curious one, whether true or not.

One day, a lady, who had just received the amount of her dividends (between two and three hundred pounds), in bank-notes, had just left the Rotunda, and was entering into her carriage in Bartholomew-lane, when a person, without a hat, and with a pen behind his ear, apparently a clerk from the Bank, rushed down the steps of the entrance on that side, and hurriedly apologising to the lady, stated, almost out of breath, that the numbers of the notes, which she had just received, had been omitted to be taken; that the omission, he feared, would cost him his situation, unless the lady would kindly allow him immediately to remedy the error. Would she come back with him? Or, he would spare her all trouble, if she would entrust the notes to him. He would take them back to the Rotunda, copy the numbers, and return with them in two minutes. The lady unsuspectingly gave him the notes, and waited in her carriage—it is impossible to say how long. The pretended clerk never returned, and on the lady going back to the Rotunda to make inquiry, the trick was, of course, discovered.

It was in 1717 that the Bank of England first undertook the business of keeping the transfer books and paying the dividends of the National Debt. The present system of transfer, however, was not adopted until 1783. In the early stages of the Debt, when a loan was contracted, tallies were given to the several contractors; and when a sale was made of any portion, the name of the buyer was endorsed on the tally, and the endorsement afterwards registered in the books kept by the Government.

The sum received by the Bank for conducting the transfer business and paying the Dividends was, previously to 1756, £562 10s. for every million of the Debt; in that year the allowance was reduced to £450 per million; in 1808 it was still further limited to £250 per million on all the hundred millions, and £300 per million on all that exceeded that sum. On the renewal of the Bank Charter in 1833, this last allowance was reduced by £120,000 per annum; and the amount now received by the Bank for transacting the Government business is, we believe, £70,265 per annum.

PARIS EXHIBITION.—The precise number of exhibitors for the Paris Exhibition is not at present known; but it is decided that [illegible] are to be [illegible] there [illegible] 17,000 or 18,000—rather more than in London. Of them, not fewer than from 7000 to 8000 are French; from England there will be from 3000 to 3500; from the Zollverein, upwards of 2000; from Austria, 1800; Belgium, 600 to 700; Switzerland, 400 to 500; and Spain, 300 to 400.

AMERICAN MUSKETS FOR FOREIGN USE. There is great activity at present among American gun-manufacturers, induced in part by the war in Europe. The *Bunker Hill* (Vermont) *Journal* says that the Robbins and Lawrence Company, of Windsor, have just contracted for the manufacture of muskets to the amount of some four or five hundred thousand dollars. The contract is made for a company in London, and the arm to be manufactured is the Minie rifle, with such modifications as Baron Rothschild will require. An additional force of two or three hundred men. The *Boston Chronicle* has the following:—"Aside from the extensive contract from the English Government for gun-machinery, now nearly completed, the Massachusetts Arms Company's Works at Chicopee Falls, we learn that another of our enterprising gun-manufacturers has lately received a contract from the same source for about 30,000 rifled muskets. The muskets are to be rifled with three grooves, and to carry a heavy conical ball, which makes them, in fact, a modification of the Minie rifle. A similar musket, or perhaps the old pattern altered, will be made, and sent over to the service of the Turkish government. Large interests as in many, our New England gunmakers will reap considerable advantage from it, as the English Government has not the facilities at their command for the manufacture of the new arms as fast as they would like to have them, they seek our

MORTAR PRACTICE.—Considerable curiosity has been evinced in consequence of its being understood that a very large "sea-service mortar," which have been placed in a battery constructed on the site of the Western Redoubt, on the right flank, were to be opened on the town. Numbers of people visited the spot during the day, and, after waiting for a considerable time, returned disappointed. Just before sunset, however, when [illegible] say no less than two hundred French and English officers, of all ranks, and men, were [illegible] red at the shot, two shells were thrown with great effect. The first of them went quite into the middle of the town, falling in a square [illegible] between some houses, and the explosion was terrific, sending up a huge mass of dust and dirt; they probably thought one of their own mines had been sprung. As the rest had [illegible] out of the range of our guns, the consternation of the unfortunate inhabitants must have been very great, and they were distinctly seen rushing out of their houses. The second shot struck a building, and it is quite the regular thing for the Russians to return our fire, it was very amusing to see the whole [illegible] which had been watching the operations, scampering off in all directions, most of them laughing, and some almost [illegible] with delight at the successful issue of the first experimental practice of the new guns. [illegible] the fire, however, was not returned, and it appears [illegible] was decided [illegible] for the present one; a move about with an [illegible] to formerly it would have been far more pleasant. *Letter from the Camp*

KINGSTON BRIDGE.—Mr. E. P. Bouverie, who has long represented the borough, having accepted the office of Vice-President of the Board of Trade, a new election became necessary; and, accordingly, it took place on Saturday last, when he was returned without opposition. Mr. Bouverie, in his address to the electors, made some remarks on the war. He considered that peace with foreign countries was the essential condition of our prosperity and welfare. But, at the same time, he believed that the war in which we were at this moment engaged was justifiable, on the only ground on which it could be justified—namely, that it was just and necessary. He believed that what was referred to in the term "balance of power" was a combination of the different States in Europe for the protection and security of the various interests. It was just the same in reference to the nations of the world as it was in respect to the civil government of a community. What was the reason, for instance, that any person could walk the streets in the most perfect security, and feel that life and property were not liable to be assailed? It was because all had combined to protect themselves from the aggression of those who might be desirous to attack them. It was the same with States. Unless France and England, and those other kingdoms which occupy a leading position, were to consider it a combination for the defence of their weaker brethren from those who [illegible] in the line of empire, we should soon see the whole of Europe in confusion and our very existence as a State endangered by the use of the enormous [illegible] He would say, then, that the war was necessary, because at this moment it might be satisfactorily concluded. In the only [illegible] it could be justified—namely, that it was necessary. He believed that what was [illegible] would have met it hereafter under far more [illegible]

[illegible] All warning to the contrary notwithstanding, the "Old Lady of Threadneedle-street" has already resorted to the soothing opera, and one of the [illegible] on daily leaving their native shore for the far west by the Atlantic Steamers from Waterford leave each week, carrying with them their full complement of emigrants. On Friday, one vessel left the Sister Isle, Liverpool with 150 passengers, and all bound for America, with the exception of two families, who are going to Australia. The Roman Catholic clergy at home and in the United States have been for some time past exerting their powerful influence to induce the Irish peasantry to give "fatherland" and [illegible] as their [illegible] respect of bettering their condition in the model republic until at last [illegible] is given to the formidable organisation of the "Know Nothings." The reverend advisers, however, see no objection to the emigrants to the United States, which, strange to say, are now regarded as the Paradise of Ireland, where all creeds and classes can enjoy perfect liberty, although under the "shadow of the [illegible]" From the province of Connaught, too, the city is still "full to the throttle," and [illegible] Ireland is powerless to stay the flight of [illegible] [illegible] of the [illegible] in the number of hands was [illegible] many years to be felt. Ireland, with a double want they were a year or two ago

The *Schonberg*, a ship of 2400 tons register, was launched at Aberdeen on Thursday week. This ship—which is the largest sailing-vessel ever built in England for the merchant service—is to be employed in the trade between Liverpool and Australia.

TO CORRESPONDENTS.

ANTI-FLOGIN should apply to a publisher of American books—as Mr. Chapman, King William-street, Strand.

A Correspondent, Camden-town, is recommended to send his Numbers of the ILLUSTRATED LONDON NEWS to be bound by Messrs. Leighton, Son, and Hodge, Shoe-lane, Fleet-street

CATHERINE GREENWAY, Warwick, will find in Mr. Tooke's elaborate work, "The History of Prices," that the average price of wheat per quarter from 1760 to 1847. Since 1847 she will find it in the *Statistical Abstract*, annually published by the Government.

G. W., Manchester.—One of the largest trees in Greenwich-park is a chestnut-tree, the bole of which measures 18½ feet in circumference; it is near the "Wilderness pond.

E. B., Brook's Club The new district church of St. Mark, Albert-road, Regent's-park, is in style, Gothic of the thirteenth century, with a tower and spire, with very fine east and west windows, the former resembling the west window of Tintern Abbey. Architect, Thomas Little; amount of contract, £6766. No. 319 of the ILLUSTRATED LONDON NEWS contains a view of the Church, with description.

LINT.—We have received a communication from a hat manufacturer, [illegible] to the article in our Journal of March the 17th. The writer states that the making of hat is far from wearisome or unhealthy; and that he is not aware of any employment in which females at the age of from sixty to seventy years, can earn fifteen shillings per week, except in the making of hat.

B. C.—A Broker is an agent of traders, and cannot be called professional. Brokers often trade themselves. In the city of London brokers are licensed, and the licenses cannot be sold. A broker's business connection may be worth something; and, under certain circumstances, at his death, may have a money value, and may be sold

F. Tracie.—We have seen and heard several explanations of the use of "M or N" in the first answers given to the Church Catechism, and the Liturgy. The most reasonable explanation, to our thinking, is given in No. 39 of *Notes and Queries*, by Mr. Arna, who at once considers "M or N" to have been used as the initials of any particular words; they are the middle letters of the alphabet, and at the time the Prayer-book was compiled, it seems to have been a common fashion to employ them in the way in which we now use the first letters. Hereafter, it may be acquired of what words the letters "A B," "M or N," were used in their Acts of Parliament, are the most

N. N. [illegible] The Act of [illegible] which [illegible] £8 per cent Stock was created, provided [illegible] should be further reduced to 3 per cent, which [illegible]

POPULAR EDUCATIONAL WORKS,
Published at
MILFORD-HOUSE, MILFORD-LANE, STRAND, LONDON
Extract of a letter from the Reverend T. Wilkinson, her Majesty's Inspector of Schools

Stanwix Vicarage, Carlisle, Jan. 19, 1855.
Dear Sirs,—I beg to offer you my sincere acknowledgment of your kindness in sending me the parcel of Books. They are indeed valuable additions to our Educational Helps and I shall not fail to recommend them throughout my various tours of inspection.—I am, Dear Sirs, yours very truly, T. WILKINSON.
To Messrs. Ingram and Co., Milford-house

Now ready, 8vo, cloth, price 6s.,
ALGEBRA. A TREATISE on the ELEMENTS of ALGEBRA, for the use of Schools and Private Students. By G. ALEXANDER, B.A., and T. WYS, B.A.
This work is adapted to the latest improvements on the majority of school-books. It is the work of exceedingly well-prepared and careful men, who have done that which will entitle them to the thanks of both teachers and pupils. It is correctly as well as [illegible] as it was their aim to make it. It is clear and precise as was predominantly necessary. The best and most noted Examination Papers have been reported to the text has been revised by eminent Graduates, and the most perfect collection of exercises we ever saw, has been obtained from the numerous first-class school books of the day. The Answers to Examples are appended at the close of the work.—Nonconformist.

ARCHITECTURE (The ILLUSTRATED LONDON ARCHITECTURAL, ENGINEERING, and MECHANICAL DRAWING BOOK). By R. S. BURN. With numerous Engravings. Demy 8vo. [illegible]

THE TURKISH CAVALRY CAMP AT EUPATORIA.

THE TURKISH CAVALRY CAMP AT EUPATORIA.

WE have to thank a Correspondent at Eupatoria for the accompanying Sketch of the location of the Cavalry Camp, the extreme left of the Turkish position :—"The long building on the left," says our Correspondent, "is a Russian barrack, deserted, unroofed, and the masonry partially pulled down to assist in forming the adjoining batteries. Next is shown the extreme of the breastwork, which extends round the whole town. The pickets are seen on the hills; and, to the right, the town of Eupatoria. This position is covered from the advance of the enemy by the guns of her Majesty's ships *Lynx* and *Valorous*, which vessels are within easy range of the plain, over which such advance must be made, as we proved yesterday, March 16, by a shot from our Lancaster gun, which put a body of Russians (who had made their appearance, and, no doubt, deemed themselves out of range) to the right about, thus showing that the much abused gun-boats are of some service in the Black Sea. The *Lynx* exhibits signs of the Russian's former attentions to her, in her fished foremast, which was badly wounded by a 32 lb. shot in the action of the 17th October, 1854, at Sebastopol."

ATTACK ON SOUJAK.

OF this spirited affair the official account has already appeared. We are now enabled, by an obliging Correspondent, to illustrate the scene, accompanied by further details:

H.M.S. ——, Soujak Bay, Tuesday evening, March 13, 1855.

I send you a short account of the most stirring day's work we have witnessed and shared in since we arrived in the Black Sea. On the *Highflyer's* joining, to relieve *Leopard*, the Captain of the latter (Giffard), who had previously examined the fortifications of this place, thought that an attack on it, in concert with the Circassians, might have very beneficial effects, and seriously annoy the enemy. We left Kertch on Sunday evening, the squadron consisting of *Leopard*, *Highflyer*, *Swallow*, *Viper* (gun-boat), and a French steamer, the *Fulton*, mounting three guns. We arrived here yesterday morning, but with bad weather brewing, and unable to attack the forts at once. We anchored in the bay; and the *Leopard*, with her heavy guns, began shelling the place, which had no guns to reach us. An advanced post and stockade which the Russians had at the head of the bay, opposite the town, was evacuated by them, under protection of a detachment, with a field-piece, sent from the town, to cover their retreat from the Circassians, who appeared in numbers in all directions, from behind every stone. We saw them skirmishing with the Russians as the latter first advanced and then retreated into the town, but too far off for us to hit them, particularly as it was blowing very fresh. The Circassians very soon took possession of this advanced post and stockade, and set fire to it, after demolishing the few buildings it contained; and it was a fine sight during the night, which was very dark. This morning about eight, there being little wind, we weighed by signal, and went in at the batteries. We attacked the weak point of the Russians, where they could bring only ten or eleven guns to bear on us, mounted on low "earth works," made apparently of sand—the most formidable kind of thing for ships to attack. We anchored at, I imagine, something less than a 1000 yards off; but it was difficult to judge, as the smoke from the first gun hung over us, and during the whole of the action we could very seldom see the enemy's guns. But they fired well, and with great rapidity: we suffered much in hulls and rigging, though apparently their heaviest guns were 24-pounders—many were only 12-pounders. It is a marvel to me that our loss in men was so small: *Leopard* had one man killed; his head knocked off by a shot; the *Highflyer* had two very slightly wounded; *Swallow*, luckily, had none hurt, though she was hulled in six places—one between wind and water, but no ball penetrated through her side—and two since picked out proved 12-pounders: her foremast was shot through, maintopmast rendered useless, and one or two ropes were carried away. *Leopard* and *Highflyer* were struck in many places—the latter principally aloft—maintopmast, maintopsailyard, mainyard, foremast, boats, lower rigging, and almost every rope in the ship shot away. We were about one hour under fire, and the damage done in so short a time was marvellous. The Frenchman was struck only once, in the hull, as he was very well placed out of the chief line of fire. The gun-boat kept at a distance, and was struck only once; but that smashed her chronometer. We came out by signal; but *Swallow* could not get away quite so quickly as her consorts, and we expected to see all the fire centred on her. The *Viper* gallantly kept in to cover her as in going out she could bring no gun to bear. But only two shots were fired at her, and it is clear that the enemy were silenced. Had there been a little more wind to clear the smoke away, and allow our fellows to point their guns better, we should have done our work in half the time. But the Circassians failed us, and made no attack, allowing themselves to be kept in check by some small guns that the Russians kept firing at them. Their forte is guerilla warfare. We anchored beyond range on coming out; the Captains went out in the *Viper* for a reconnaissance, and landed to meet the Circassians, who collected in great numbers. From a high position a good survey of the town was obtained. It was completely deserted. The inhabitants and the whole garrison (about 3000) were encamped outside the town, and out of reach of fire. It was ascertained that great damage was inflicted; and the best effect of our attack will be—besides the encouragement given to the Circassians in this first active step to aid them—the preventing the Russians from withdrawing the garrisons of Soujak or Anapa to reinforce their Crimean army, as they have been doing lately.

A subsequent letter says:—

We have learnt that, the night after, the Circassians did attack the Russians, and took an officer and some men prisoners; also that we had done them (the Russians) much damage, and that they lost many killed and wounded in the action. Moreover, we have reason to believe that they are preparing to evacuate the place—retreating to Anapa, their last stronghold in Circassia. They seem to have left the forts and earthworks untouched after the action, which they never would have done had they any intention of remaining in the place.

ATTACK ON SOUJAK BY THE "LEOPARD," "HIGHFLYER," "SWALLOW," "VIPER," AND "FULTON.

THE ILLUSTRATED LONDON NEWS

No. 738.—VOL. XXVI.] SATURDAY, APRIL 21, 1855. [WITH A SUPPLEMENT, SIXPENCE.

LETTERS ON THE WAR AND THE EASTERN QUESTION.—(No. IV.)

(From our Special Correspondent.)

VIENNA, April 14, 1855.

ANOTHER week of delays. The Third Point is the giant in the path. It blocks the way, perplexes the bold, alarms the timid, and demands that vigorous treatment which few seem disposed to give it, until favourable news from the Crimea shall reduce its dimensions. M. Drouyn De Lhuys and Ali Pacha having arrived, and the Conference being *au complet*, and having no one else to wait for, a meeting was held on Monday last. But Point Number Three had taken possession of the Council Chamber. There it stood, shapeless, indistinct, and terrible; a bugbear to Austria, a stumbling-block to Russia, a formidable difficulty to England and France; and an object of curiosity not unmixed with alarm to the Ministers of the Ottoman Porte. There it still stands; and the Conference has been adjourned to give the Russian Ministers time to receive the fresh instructions from St. Petersburg for which they have applied.

Diplomatic secrets are well kept in Vienna. Not even stock-jobbery can find them out. Indeed, if they are not to be closely kept in this city—which is the very fountain head and University of Diplomacy—the Alma Mater of intrigue and chicanery, where are they to be kept? Not to have matriculated here is to have small standing and character in the astutest and insincerest of all professions; and here, therefore, above all places

VISIT OF THE EMPEROR AND EMPRESS OF THE FRENCH.—THE GRAND CORRIDOR IN WINDSOR CASTLE.—(SEE PAGE

in the world, secrecy—if it be desirable—may be most successfully imposed by the high priests of the calling upon the neophytes that minister in bureau and council-chamber. To pretend to know in what manner the Ministers of the Allied Powers expect to induce Russia to consent to the diminution of her naval preponderance in the Black Sea, is to pretend a knowledge which is strictly confined to those high personages themselves, and which they have agreed not to communicate until the Conferences are concluded. But although nothing can be positively known, much that must, *ex-necessitate*, be true can be surmised by those who make contemporary history their study. In addition to this a good deal may be ascertained by those same principles of induction which led Adams and Leverrier to the discovery of the planet Neptune long before that distant globe had been seen by the eyes of mortal man.

The bare facts of the week are few; but they are suggestive. M. Drouyn de Lhuys—besides having had interviews of some duration with the Emperor Francis Joseph and with Lord John Russell—was, soon after his arrival, closeted for two hours with the veteran Prince Metternich, the Nestor of the Austrian empire, as well as of European diplomacy. What passed between them is, of course, a secret. This much, however, it may be permitted to observe The Prince, though of great age, and too old to pay visits, is glad to receive them; is in full possession of all his mental faculties; and adheres to the anti-Russian policy of his earlier years, and which he has consistently and ably advocated since 1815. The distrust, if not hatred, of Russia which M. de Metternich feels is shared by every subject of the Austrian monarchy, having German blood in his veins, who has not been bribed by the ribands, stars, and cresses, or the gold, of the Emperor Nicholas. Upon the subject of this systematic bribery and corruption I shall have some interesting details to communicate on a future occasion. In the meantime, it is considered a favourable circumstance that M. Drouyn de Lhuys should have had this little conference of his own with so distinguished a statesman as Prince Metternich. For a longer period than any other servant of the Austrian Crown, the Prince has combated the malignant influence of Russia; and he has, in his old age, the satisfaction of knowing, that, if at one time he was wiser than his countrymen in this respect, he no longer stands alone, but has millions to agree with him.

Nor has this been the only conference bearing upon the great question which has been held during the week. Almost every day, in the inner cabinet of Count Buol, there has been an assemblage of diplomatists (at which no Russians have been present) to debate *en succursale*, but without official character, upon the knots and difficulties which, failing the sword, the cunning and facile fingers of the men of red tape are expected to untie. It is believed that Messrs. Gortschakoff and Titoff have in reality received the full instructions from St. Petersburg for which they are supposed to be waiting, but that they are glad of any opportunity or excuse for postponement; having an expectation that, by a judicious delay in approaching the Third Point, means may be found to open the door for the admission of Prussia to the Conferences. In this, however, it is likely that they will be disappointed. Although there are rumours afloat, derived from the Belgian and German papers, that the policy of Austria and Prussia will no longer be divergent, it is not probable that the King of Prussia has become so courageous as to resign the leadership of Germany to his Austrian rival. There is an old proverb which says that "you cannot make a silk purse out of a sow's ear." In like manner, no circumstances can make a safe politician or wise statesman of the King of Prussia. He flounders in a double set of difficulties, where an honest and single-minded man would get rid of one or both, by the force of his honesty and singlemindedness—things unattainable by him, whom the Czar Nicholas first called "Cliequot." Whether the rumour alluded to means that Prussia is to join the Western Powers, or that Austria is to detach herself wholly or in part from the policy of Great Britain and France, would only be of use to inquire if the rumour had any foundation.

But leaving Prussia to the dishonourable isolation in which the irresolute policy of the King has placed a nation that still claims to be a leading State in the comity of the world, it is apparently but too certain that Austria fears to take the final leap. She hates Russia—but she dreads war. She would rejoice to see the Czar humiliated and beaten by the armies and fleets of England and France. She would be delighted at the fall of Sebastopol. She would sing Te Deums and clap hands for joy at the decisive triumph of the Allies by land or by sea—in the south or in the north—in Finland or in the Chersonesus. But she dreads that an active participation in a war which might last for many years would entail upon her such financial sacrifices as would inevitably lead to bankruptcy. In one phrase, though a somewhat vulgar one, Austria "is not up to the mark." But the people of England may be assured that she will ultimately come, or be forced up to it, if no successes of our arms shall expedite the solution of the question, or if the Czar shall not yield all that is asked of him.

It is not only because the Emperor and his Ministers, backed by public opinion, sympathise with the Allies; it is not only because the well-understood interests of Austria are more intimately, perhaps, than even those of Great Britain and France, involved in the defeat and punishment of Russia, and point to them as absolutely essential to her well-being as well as to the tranquillity of all Europe that, *coute qui coute—per fas aut nefas*, with a good grace or with a bad one, with reluctance or with alacrity, with compunctious misgivings or with cheerful courage, she must cast in her lot with Civilisation and the Allies against Barbarism and the Muscovites. There is another and possibly still more cogent reason why Austria must no longer stand shilly-shallying upon the brink of the great war-current without boldly plunging into it. That reason is a financial one. Austria fears war because her finances have been sorely mismanaged; because she has not recovered from the shock of the revolutions of 1848 and 1849; and because the necessary expenses of the struggle would in all probability adjourn *sine die* those fiscal reforms and commercial developments which alone can save her from insolvency. But her neutrality, if such an abdication of her rights and her interests were possible, would lead to the same catastrophe. Without being at war with Russia, she maintains on a war footing a magnificently-appointed army of 600,000 men—of whom at least 250,000, if not 300,000, might be disbanded if peace were restored to Europe. Within the last twelvemonth she has expended a sum not far short of 300,000,000 of florins (or nearly £25,000,000 sterling) in the *matériel* of war necessary to fit this noble army for the field. Her baggage-waggons, her guns of large and small calibre, her ammunition, her warlike stores of every kind, are the admiration of her own officers and of all strangers who have studied the art of war. And is all this expenditure to be incurred for the barren office of a looker-on? By leaving France and England to fight the battles of the world, she would have to keep up the same forces as she does now and has done for two years. She could not spare a single soldier. If her armies do not fight, they will be compelled to watch; and watching, if not altogether so safe and so honourable to a great Power, will be almost equally expensive as coming to blows. In such a case, too, Austria would get nothing in return for her immense expenditure but the contempt of Europe, and of her own subjects. She would sink in the scale of nations; while the grim figure of Revolution would stalk in her footsteps, and darken her future history. That Austria would, in any circumstances, make common cause with Russia is a supposition not to be entertained for a moment. Could she be safely, honourably, and cheaply neutral, it is possible—though not at all probable—that she would decline to draw the sword. But even were her policy swayed by no higher than mercenary considerations, she could not be neutral. For the same reasons she could not be hostile to the Allies. Sooner or later she must "take the leap;" and perhaps M. Drouyn de Lhuys, in accordance with Lord John Russell, will find arguments of sufficient cogency to induce her to take it upon that famous point—"Number Three"—which now retards the Conference, and keeps all Europe in suspense and anxiety.

From the semi-conferences or consultations which have taken place during the week in Count Buol's cabinet at the Foreign-office, Lord John Russell and M. Drouyn de Lhuys seem to have kept themselves studiously aloof. Yesterday Lord John Russell and the French Minister betook themselves for a holiday excursion to Reichenau, amid the Sommering Alps, to visit the railway, which is at this point a marvel of engineering skill, and to inhale the fresh breezes and enjoy the beautiful scenery of the Schneeberg, or snowy mountain. They returned this morning at ten o'clock, no doubt like lions refreshed to attack, if need be, that still greater giant, the "Third Point." An attempt appears to be made in England by a portion of the factious press to throw discredit upon the mission of Lord John Russell, by the statement that his Lordship does not speak French. This statement is untrue. His Lordship, as is well known to his own circle, and as it ought to be known in England, is at no loss in this respect. The only member of the Conferences who does not possess the necessary accomplishment of that language is Arif Effendi, the Turkish Ambassador.

The Conference did not meet to-day, and will not, it is expected, assemble before Tuesday.

THE WAR. THE FRENCH EXPLANATION.

OUR readers are aware that the *Moniteur* is the organ of the French Government, and that everything which appears in its pages, though it may not be designated official, has the sanction of the authorities. Hence, great importance is attached to two papers lately published in that journal the first describing with scrupulous exactitude the Eastern expedition, its objects, and the military operations; the second describing the negotiations entered into to obviate or terminate the strife. They are said, especially the first, to have been revised by the Emperor, and both together form an historical narrative of great value. They are to be considered as an explanation given by the Emperor to the French, and acknowledging, therefore, the continued supremacy of that people to whose votes he owes his crown. The first begins by setting forth the cause of war. Russia had violated treaties, invaded a territory, disdained and threatened Europe. Her armies were occupying the Principalities, were advancing on the Danube, and had even marched out the halting places of a victorious march on the Balkans. Russia found an unexpected obstacle in the heroic defence of the Turks. But the struggle was an unequal one. It was then France and England, loyally united, did not hesitate to send their fleets and armies to the East, to defend there the integrity of the Ottoman empire, the respect due to treaties, the equilibrium of Europe, and the cause of civilisation.

The Emperor traced out instructions for the illustrious Marshal in whose hands the sword of France was about to be placed, recommending him to bestow the greatest care on the health of the troops, to spare them as much as possible, and not to come to an engagement unless he had made sure of two-thirds at least of the favourable chances.

Gallipoli was selected as the landing-place, the *place d'armes* and the point to which the French were to retire after advancing to the Balkans, should a retreat be necessary. The Marshal was to come to an understanding with Omer Pacha and Lord Raglan as to marching to meet the Russians on the Balkans; or to seize the Crimea; or to land at Odessa or any other part of the coast of the Black Sea. We know that these chiefs selected Sebastopol for their point of attack. The instructions stated, with great foresight: "The capture of Sebastopol ought not to be attempted unless you are provided with at least half a battering-train and a great many sacks of earth. When you approach that place do not neglect to seize Balaclava, a small port situate four leagues to the south of Sebastopol, and by means of which communications may be easily kept up with the fleet during the continuance of the siege." The Marshal was enjoined always to keep his forces united, but to concert every movement with the English Commander-in-Chief.

The allegation that, after the retreat of the Russians, the Allies ought to have acted upon the Danube and entered Bessarabia is thus disposed of:—"Let us put the matter in the most straightforward manner possible. Without the co-operation (*concours*) of Austria, our army could not advance upon the Danube without incurring the risk of a most fatal catastrophe. We must not forget that our base of operations was the sea. Losing this we risked everything, and compromised everything. Military science and common sense both entered their protest against undertaking operations with 60,000 Anglo-French and 60,000 Turks in an unhealthy and impracticable country, having no means of transport, without any reserves of artillery or organised park—no depôts of eatables or munitions at Schumla, Varna, or Silistria. All these resources indispensable at the commencement of a campaign, cannot be improvised in a few days, when those who have the management of affairs are 800 leagues distant from their country. These resources might have failed us completely. We should have found ourselves in front of an army of 200,000 men waiting for us on their own ground; or else retreating before us, trying to entrap us into a still more dangerous position, giving us no other alternative than that of a most disadvantageous battle or an impossible retreat. A simple reconnaissance of two days in the Dobrudscha, which cost us more than a most murderous combat, is a proof of what we have advanced. Again we repeat it, a campaign beyond the Danube and on the Pruth is not possible without the co-operation of Austria."

The expedition to Sebastopol having been made the subject of deliberation at Paris and London, and treated at last as a fact, Marshal St. Arnaud received hints to make himself thoroughly acquainted with the nature and amount of the Russian forces in the Crimea; find out whether these were too formidable; and land in a spot which may serve as a basis for future operations. The place recommended was Kaffa, as offering great advantages. The commanders, however, to whom the discretion was left, resolved to land at some few leagues distant from Sebastopol. "The glorious battle of the Alma," the document continues, "seemed to prove that they were right. But in the moment of victory they saw clearly enough that without a port they could have no base of operations. Influenced by that irresistible instinct of preservation which never deceives those who listen to it, they directed their course to Balaclava, on the south of Sebastopol. It was clear, too, that the army could not live in the enemy's country without being in direct communication with the fleet. But the consequence of retreating towards the south was to give up the northern heights—in other words, to abandon the idea of investing the fortification. The Anglo-French army, in fact, was not sufficiently numerous to invest the place completely. It was necessary to limit our operations to the southern portion of the town. * * At the very commencement of this difficult enterprise the Russians took two measures—very efficacious for themselves, and very regrettable for us. The first was the strategic movement of Prince Menschikoff, who, instead of shutting himself up in Sebastopol, marched towards Simpheropol—afterwards took the field, and kept up his communication with the fortress. The second was the bold resolution to sink most of the ships of war—a measure which enabled the enemy to render the port inaccessible to our fleets, and to acquire for the defence of the place from five to six hundred guns thus set at liberty, together with their ammunition, and to employ their seamen as gunners at the batteries. Thus, although the guns on the town on the first presented a formidable aspect, new batteries were raised as if by enchantment, and our feeble siege artillery could not extinguish the fire of the besieged. This situation was a serious one. The Generals-in-Chief contemplated it with that calmness which exalts a character to the level of the most difficult responsibilities."

The document enters at length into the principles to be followed in sieges, and explains the impossibility, under the circumstances, of fully investing Sebastopol, the difficulties of the ground, and the many advantages possessed by the Russians; and concludes:—"The history of modern States does not present an example of a more difficult, more glorious enterprise, or one which, by the very grandeur of the obstacles it presents, agrees more nearly with the importance of its object, and that of the States engaged therein. The siege of Sebastopol has scarcely any analogy with any other in military annals. To attack a place which is not invested, when the enemy, superior in numbers, may recruit himself with more provisions and ammunition, and when he keeps the field, is an act of audacity which could be attempted only by England and France united for an object necessary for Europe."

The Second Document, which relates more especially to the negotiations, repeats the statement that Russia was the aggressor, and says she wanted a pretext for quarrel, which she found in the dispute with Turkey about the concessions to the Latin Church, making "the tomb of the Saviour a stepping-stone in her stride towards dominion." "Russia," it is affirmed, "wanted to rule at Constantinople; it was necessary to prevent her. Russia, sovereign of the Black Sea, having only to put out her hand in order to grasp the Bosphorus, wished to put the Mediterranean under the dominion of the Sebastopol fleet. While advancing towards the Dardanelles, she advanced her frontier to the shores of the Mediterranean. Wherever her vessels could go her preponderance was certain. From her inaccessible ports she could reach all empires and all kingdoms. Not only had France and England arrived in Russia—not only was Germany being crushed under the enormous weight placed upon her—but Greece, Italy, Spain, Egypt, and all the secondary States, found at the same time their security and their independence extinguished.

"Strange to say, Europe had shut her eyes to the enormous danger extending this northern invasion. In 1828 France and England united with Russia, in burning at Navarino the Turkish fleet, and had destroyed there the force which protected the West. At that period we sought an ally at St. Petersburg, instead of seeing there an enemy both to our influence and our civilisation. In 1853 a fleet had started from Sebastopol, with 12,000 men on board, and disembarking them in Italy had brought the French and Russians into collision in the Mediterranean. This warning, however, deserved to be remembered, for it proved that Russia, by the possession of the Straits, could reach the entrance of the Adriatic from the Euxine. To Admiral Tschakoff the Emperor Alexander gave instructions on the 19th April, 1812, which showed that Russia then contemplated turning to good account the military genius of the Sclavic races, such as those of Servia, Bosnia, Dalmatia, Montenegro, Croatia, Illyria; all of whom, once armed and organised on a military footing with the Hungarians, dissatisfied with the proceedings of their Government, offered an excellent means of disturbing Austria.

"This incendiary plan," says the paper, "could not issue more seasonably from its recess in the archives of St. Petersburg in order to demonstrate to Europe, and especially to the Cabinet of Vienna, the immense interest all the world has in finally placing a barrier against a policy which, so completely justified, by means and ends, the forecast of the Emperor Napoleon I. Should the heirs of Peter the Great ever hold sway at Constantinople, by their power in the Black Sea, Austria, hemmed in, surrounded on all sides by the strong arm of Russia, would be at the mercy of an enterprise such as the one conceived by the Czar Alexander and the Emperor Nicholas. Hungary, expanding its action through the Danube, would be delivered up to all the excitements of its remembrances. The Adriatic Sea, exposed to the sudden attack of a Sclavic coalition, would cease to be the channel and the rampart of the Austrian empire, and the key of the Gulf of Trieste might pass, by a surprise, from Vienna to St. Petersburg. There is then nothing more lawful, more essential, or more just before God and the universal conscience, than this resistance, the signal of which was given by the two Maritime Governments of the West, in the month of April, 1854. England and France drew the sword in behalf of all States.

"The Emperor, opening the Legislative Session of 1854, had said in his speech—

"'Europe now knows beyond all doubt that, if France draws the sword, it will be so because she is constrained to do so. It knows that France has no idea of aggrandisement. She wishes solely to resist dangerous encroachments. Moreover, if, proclaiming it loud, the age of conquest has passed away never to return; for it is not by widening the limits of its territory that a nation can henceforth be honoured and powerful; it is by taking the lead in generous ideas, and by causing the empire of right and justice everywhere to prevail.'

"This solemn declaration left no doubt as to the character of the war.

"Germany, however, came to no decision, and, while notes and counter-notes passed between Vienna, Berlin, and St. Petersburg, the war continued, and developed crimes: France and England strove before Sebastopol for the common cause, and were lavish of their blood to secure the independence and stability of Europe. Finally, Austria asked us whether we would consent to treat again on the basis of the four guarantees. There was much hesitation on the part of the two Allied Powers. The importance, however, of an alliance with Austria for peace as well as for war prevailed. The treaty of the 2nd December was the result of this policy. It was, therefore, out of respect for Austria, from a desire of alliance, defensive and offensive, and to give Germany an unequivocal proof of our moderation, that we agreed to open the negotiations on the basis of the four guarantees, reserving to ourselves, however, the right of introducing any other conditions which might arise from a change of war. * * * * * *

The third of these conditions, that which has for its object the putting a stop to the predominance of Russia in the Black Sea, is the most important and the most contested. Russia has converted the Black Sea into a Russian lake. She has founded there naval establishments of the first rank; she has accumulated there, with as much perseverance as secrecy, considerable naval forces, and it may be said that by this exclusive domination in the Black Sea she has laid permanent siege to Constantinople. This state of things is incompatible not merely with the integrity of the Ottoman empire, but also with the security of entire Europe.

"France and England, therefore, are completely justified in demanding of Russia the limitation of her power in the Black Sea."

"But," it is said—"You ask of Russia a concession, which at the most could be the price of the surrender of Sebastopol, and this place is still occupied by the Russian army." To this it is replied, putting the success of the Allies in a strong light—

"It is true we have not yet taken Sebastopol, but what has Sebastopol meanwhile become for Russia? It is no longer a naval fortress, for its fleet, which is either sunk at the entrance of the port, or shut up behind that impassable barricade, has been withdrawn from the struggle. The Black Sea is the field of battle, which we have conquered, or, if you please, which you have abandoned to us. The Russian flag can no longer show itself there. The vessels of France, England, and Turkey plough it in all directions. Its dominion has been transferred. It has passed from Sebastopol to Constantinople.

"Who compels us to restore this pledge? Is not this a situation the best for us? And not only do we occupy the Black Sea; we besiege Sebastopol, we are in a fortified position at Kumiesch and Balaclava. Omer Pacha is intrenched at Eupatoria. Odessa is menaced by our fleets. What can Russia do? Can it long submit to the blockade which is about to seal up all its ports in the Black Sea and the Baltic, without damage to its moral power, and without ruin to its commerce? Can it exist under this paralysis which strikes at the vital principle of return—free movement—free action, the right of export and exchange of products, and which condemns it to isolation, sterility, and impotence in the immensity of its empire?

"To demand of Russia to limit its naval forces, or to restrict them to what—that is to say, to exclude from it all ships of war, to whatever nation they may belong, is thus to say much less than we have already acquired by war, and which it rests with us to keep without effort. What is necessary in order that Russia shall no longer return to the Black Sea? Our vessels of each of the three maritime nations, France, England, and Turkey. Such a squadron would suffice to occupy the Black Sea, and transfer its sovereignty from the Crimea to the entrance of the Bosphorus.

"That which Russia has lost, that which it cannot recover by war, however long continued, is its preponderance in the East. That which it may fairly demand is a proper share of influence in the affairs the world. That which is demanded of her it is the right and duty of Europe to require. Let her grant it and the repose of the world is assured.

"One final word in terminating this paper. It is a new and perhaps a bold thing to speak of the military and diplomatic conduct of the war while the army is fighting and diplomatists negotiate. We have been of opinion that this is the very time for usefully proclaiming the truth to the country. Truth is dangerous only to the weak; and when one has right and power on one's side, it becomes those who speak at tranquillises those who hear

NOTES OF THE WEEK.

On Monday morning—favoured by a day which overhead was bright, clear, and hot as if it had been July, although the national fog persisted in shrouding with more than ordinary imperviousness the shore and cliffs of Dover—the Emperor of the French landed on English ground. No one doubted that the people of England would receive with acclamations (taking into account the national propensity for hurrahing everything and everybody) the man whose stanchness and straightforwardness, whose good and great qualities, have done more than ever in the same time was done before towards the destruction of national prejudices and dislikes; but, I think, no one could have anticipated anything like the continuous ovation which must have rung in the Emperor's ears almost without ceasing from Dover to Windsor. The thing was incredible; there really never was anything like it. The great sight—or, I would rather say, the great hearing—was in the London streets. The order had been given to the escort and carriages to go from the Bricklayers' Arms to the Great Western station at a trot; but this was altered by Louis Napoleon himself, and the procession passed through the streets at a slow walk. Thus he and his beautiful wife showed themselves fully and closely to the multitudes thronging the streets, whose enthusiastic cheers they were not slow to return by salutes which appeared to have far more in them than mere courtly condescendence. Yet there were not wanting those who breathed more freely when they knew that the cortége had passed without accident through the streets of the metropolis, for they bethought them that, though a blessing to the immense majority, the Emperor Napoleon had been a scourge to some few of his subjects. Many a man thought of the Communists, the Red Republicans, who, exiled from their own, have sought a refuge in our country; they knew that one desperate or insane man may set at nought all the prudent cunning of the police, and even the better protection of an immense popularity, and they shuddered at the idea of a possible crime. Little enough, probably, of this danger thought Louis Napoleon, accustomed almost daily to encounter similar risks in Paris—whether riding like a private gentleman with a single groom, or, as he may be seen nearly every fine day, walking arm-in-arm with his wife, like a *bon bourgeoise de Paris*, in the Bois de Boulogne; but others thought of it, and were not sorry when the thing was over. It was calculated that their Majesties would reach the Paddington station soon after five; but owing to the slow pace adopted they were nearly an hour later; consequently, the Queen must have been kept waiting for her guests—a trying thing as we all know for a housekeeper; but, as there is little doubt that her Majesty in the same circumstances, would have done just the same as the Emperor, it is to be hoped she did not much mind it.

I should estimate that, of the immense amount of cheering which greeted the Imperial pair between Dover and Windsor, about 40 per cent was especially to the address of the Empress. It was no wonder—how well she looked—how fit for her great position!, Undeniably beautiful—dignified, yet not haughty, but at the same time modest and graceful—the sort of person of whom, if met in any crowd or public place, you would ask, "Who is she?"—this Empress Eugenie—this granddaughter of a Scotch laird

I cannot help, for a moment, getting back to the war; the rather that by the last accounts we hear that the Allied forces were hard at work before Sebastopol, "administering" 13-inch shells, "exhibiting" 64-pound and other shot, for the benefit of the fortifications and garrison; all which promises a result of some kind, probably to be known before this paper is printed. May it be fortunate! The ubiquitous "own Correspondent" tells us that while Prince Albert was waiting on Dover pier for our illustrious visitors he occupied his time with an examination of a militia-man's shako. The day was warm, but in the Crimea, some month or two hence, the thermometer may be expected to stand thirty or forty degrees higher. Did his Royal Highness ask himself how, in such a temperature, with a knapsack and accoutrements to carry weighing from sixty to seventy pounds, a tight red coat, a tight pair of trousers, and an ill-fitting pair of boots to wear, he would like to have on his head during a long march that wonderful mass of wood and leather? And apropos to that, we hear that the detachments of the Guards who left for the Crimea last week, carried with them nothing but the regular St. James's full-dress clothing and coat, tight red coats, bear-skins, and Brown Bess. It is a wonder to me how a man can fight at all in hot weather with this accoutrement. I am not a particularly delicate person, but I am convinced that, if I were dressed in the full fig of the Horse Guards, any two active street boys of thirteen or fourteen would have no difficulty in taking me prisoner.

Parliament sits again, and on Monday there was a sort of *omnium gatherum* night, when everybody ventilated his own particular small grievance. One member criticised Mr. Cope's pictures, which seemed an odd subject to bring before the House; and Mr. Wilkinson drew a sad picture of the stationery furnished to the members, declaring that it took six pens to write a note, whereat honourable members cheered as if he had even understated the grievance. The most interesting part of the business was the bringing forward by Sir William Molesworth of the estimate for Parks and Palaces. A large sum is annually voted for this department of the public service, and is most likely, on the whole, properly expended; yet there are always several little things which ought to be done, and which would not cost much, which, just because they are little things, are never attended to For instance, by the sides of the walks in Hyde-park a breadth of half a dozen or more yards meant to be grass has, between dry weather and foot-traffic, become a bare, hard stratum of soil. In its present state the turf will never spread over it again. Why are not the Park labourers ordered to loosen the surface, sow it with grass seed, and protect it in the usual country fashion, by strewing it with old thorn-bushes? Then the walk on the north side of the Serpentine—uneven, coarsely gravelled, with the roots of the trees which overshadow it allowed to remain exposed—might surely be put in a better plight. In these small matters few gentlemen's parks are so ill-cared for as those which belong to the nation. It is said that permission to let chairs for hire—after the fashion of Paris—has always been refused by the authorities. If true, what unmitigated absurdity! And if there are to be no chairs, why are there not more benches?

Almost every musical man or woman has a pet *maestro* whom he or she asserts to be the first in the land; but, putting these multitudinous special favourites out of court, if their votes as to the first living English composer were taken, they would almost unanimously poll for Sir Henry Bishop. Few have written so much music; and of course with such facility. Though he has hardly ever written anything without merit, there is much inequality in his compositions, but in such—his glees and ballads—he is *facile princeps*, certainly without an equal in this, and perhaps in any other day. There is the "Chough and the Crow," "Mynheer Van Dunk," "Under the Greenwood Tree," "Where the Wind Blows," and a dozen others. What have we like them—good as they are, equally to the educated and uneducated ear, popular in the street boy's whistle, or accompanied by the musician's piano? And here is Sir Henry Bishop, who for nearly half a century has charmed all ears, whose mere name is an answer to foreign skits at English want of musical taste, old, sick, and *poor*. Yes, very poor—in want in debt. No doubt he has been improvident; no doubt age and sickness need not in his case have been embittered by poverty; yet let me hope that the carelessness of his youth may be forgotten by those who are in a position to relieve the distresses of his age. The profession, of which Sir Henry Bishop is an ornament, have not been slow in coming forward to his relief, and I am given to understand that a series of concerts are about to be given not only in London, but also in the principal provincial towns, in the hope of realising a sum sufficient to place him beyond the reach of poverty for the remainder of his life, and perhaps even to make some provision for his family.

THE DEPARTURE FOR SYRIA.

(LE DEPART POUR LA SYRIE.)

To Syria young Dunois will go,
That gallant, handsome knight,
And prays the Virgin to bestow
Her blessing on the fight.
"Oh! thou who reign'st in heaven above,"
He prayed, "grant this to me—
The fairest maiden let me love,
The bravest warrior be."

He pledged then his knightly word,
His vow writes on the stone,
And following the Count, his lord,
To battle he has gone.
To keep his oath he ever strove,
And sang aloud with glee:
"The fairest maid shall have my love,
And honour mine shall be."

Then said the Count, "To thee we owe
Our victory, I confess;
Glory on me thou didst bestow,
I give thee happiness:
My daughter, whom I fondly love,
I gladly give to thee;"
She, who is fair all maids above,
Should valour's guerdon be."

They kneel at Mary's altar both,
The maid and gallant knight;
And there with happy hearts their troth
Right solemnly they plight.
It was a sight all souls to move,
And all cried joyously—
"Give honour to the brave, and love
Shall beauty's guerdon be."

ORIGINAL.

Partant pour la Syrie,
Le jeune et beau Dunois
Venait prier Marie
De bénir ses exploits:
"Faites, reine immortelle,"
Lui, dit-il, en partant,
"Que j'aime la plus belle,
Et sois le plus vaillant."

Il trace sur la pierre
Le serment de l'honneur,
Et va suivre à la guerre
Le comte, son seigneur.
Au noble vieux fidèle,
Il dit en combattant:
"Amour à la plus belle,
Honneur au plus vaillant."

"On lui doit la victoire
Vraiment," dit le seigneur;
"Pui que tu fais ma gloire
Je t'erai ton bonheur.
De ma fille Isabelle
Sois l'époux à l'instant;
Car elle est la plus belle,
Et toi le plus vaillant."

A l'autel de Marie
Ils contractent tous deux,
Cette union chérie
Qui seule rend heureux.
Chacun dans la chapelle
Disait en les voyant:
"Amour à la plus belle,
Honneur au plus vaillant."

The music of this song, which was composed by Queen Hortense, mother of the present Emperor Louis Napoleon, is now the national air of the French Empire. The words are attributed to M. de Laborde. The date is 1809.—*From the "Illustrated Book of French Songs," Translated by John Oxenford, Esq.*

Training for the Great Affair.—For some days there has been a great stir in the Balaclava front. It is not yet exactly known whether Sir C. Campbell is acting on secret information received from the Russian Camp, or indulging the wakefulness of his own nature, or whether it has plan to get the troops into training for severe operations; but certain it is that, during the last few days, the division in the Balaclava front has been turned out regularly between three and four o'clock in the morning. At that hour aides-de-camp have raged in all directions, and from the backs of their horses held converse with officers commanding in encampments, whom they roused in their tents. And the trumpet and the bugle have sounded, the drums have echoed the note of alarm and instant preparation, and the discordant music of the Turks has risen up from the foot of the hill, where the followers of the Prophet eat their pilaff and smoke their pipes in the rear of Sir Colin Campbell's camp. The batteries have been all on the alert; the cavalry drawn up in dense columns, have been seen looming in the far distance of their camp; and the Guards, descending from their hills, near Balaclava, have marched up to support the Highland Brigade in the task of standing under arms for a couple of hours. That task performed, our gallant troops imitate the example of that King of France of whom nursery history records that he marched up a hill, and, having accomplished that feat, marched down again. It is now generally understood that the manœuvre is a measure of discipline rather than of precaution, for the best-informed assure me that the Balaclava front will in future turn out every morning one hour before daylight. The troops so mustering have a great deare to advance into the plain and reconnoitre the Russian position; and really there appears no reason why we should any longer be left in uncertainty of the exact strength of the force before us. If turning out early in the morning is a good thing for the spirit and discipline of the soldiers, surely a march across the hills and a little skirmishing would still further raise their spirits, confirm their discipline, and improve their health far more than standing under arms during the cold, misty, and fever-rife hour of a Crimean sunrise. Thus do they say and sing at the Camp. It is always the old story: the war-horse champing the bit and pawing the ground. Besides there are many fresh troops out who sicken at the mention of Alma, Balaclava, and Inkerman, but long to have a Balaclava or Inkerman of their own.—*Letter from Kadikoi, March* 25.

A monument to the memory of the Piedmontese students who fell in the Italian war of independence in 1848-49 was inaugurated in the chapel of the University at Turin on the 30th ult.

DINNERS TO THE MUNICIPALITY OF PARIS.

On Monday evening the Lord Mayor entertained at dinner, in the Egyptian-hall, the Prefect of the Seine and the other gentlemen connected with the municipality of Paris, who are now on a visit to the metropolis. The company numbered nearly 200, and included, besides the chief magistrate of the city of Paris, M. Delangle, President of the Municipal Council; Senator Thayer; Senator Germain Thibault, Secretary of the Paris Chamber of Commerce; M. Ferrier de Tourrettes, private secretary to the Prefect; M. Millie, Engineer of Bridges and Roads; his Highness Prince Gholab Mahmood, his Highness Prince Ferozeshah, the Right Hon. Lord Mayor of Dublin, and a deputation from the corporation of Dublin, &c.

The loving cup having passed round, the Lord Mayor gave "Her Majesty the Queen," which was received with the usual tokens of loyal affection.

His Lordship then called upon his guests to honour with enthusiasm the toast of "The Emperor and Empress of the French," and in a few brief sentences referred to the firmness of character which distinguished the Emperor, and the grace and beauty which adorned the Empress.

Loud and repeated plaudits greeted the names of the Imperial visitors, and the company continued standing while the band played the French national air, "Partant pour la Syrie."

The Prefect of the Seine, in responding, referred to the acclamations with which the toast had been received, and expressed the gratification which he felt at the enthusiastic reception that had been accorded to their Majesties.

The Lord Mayor next gave "His Royal Highness Prince Albert, Albert Prince of Wales, and the rest of the Royal family"—a toast which it is scarcely necessary to say was duly honoured.

The Lord Mayor, in proposing "The Health of his Excellency the Prefect of the Seine," declared he felt proud of the opportunity of receiving the chief magistrate of the City of Paris in the civic room, while he augured from the confidence which the Emperor and the Prefect had shown in the English alliance, by their visit to this country at the present moment, ultimate success in the enterprise which the Allied armies had undertaken, and eventually an honourable and lasting peace. Turning to the Prefect, he assured him that, although the English could not boast of those refinements which characterise the French nation, they felt the honour of his presence, and extended to him a hearty welcome.

The Prefect of the Seine, when the prolonged applause was hushed, addressed the company in English, as he wished (he observed) to say to them with confidence in my interpreter—heart to heart—how much he felt the admirable reception they had met with from the English population (Loud applause). In conclusion he proposed "The Health of the Lord Mayor," which his Lordship acknowledged.

Several other toasts were proposed; and the company separated at eleven o'clock.

On Tuesday evening the Sheriffs of London and Middlesex (Henry Muggeridge, Esq., Alderman, and Charles Dequmus Crosley, Esq.—gave a magnificent entertainment at the Albion Tavern, Aldersgate-street, to the Prefect of the Seine, M. Delangle, Senator Pelouse, Senator Thayer, Senator Germain Thibault, M. Perrier de Tourette, and M. Millé. There were also present the Lord Mayor, Sir R. W. Carden, Sir J. Duke, M.P.; Alderman Cubitt, M.P.; T. Hankey, Esq., M.P.; Sir J. Key, Bart., and a number of other gentlemen. Mr. Sheriff Muggeridge, who presided, having proposed the usual loyal toasts, which were duly responded to, Mr. Sheriff Crosley proposed "The health of the Emperor and Empress of the French," which was drunk with the greatest enthusiasm. The Prefect of the Seine, in returning thanks, expressed his strong conviction that the interests of both countries, and especially the interests of humanity, pointed out the alliance of England and France as the surest means of preserving the peace of the world. The Prefect was loudly cheered throughout his speech, and, at the conclusion of it, the company, upstanding, gave three hearty cheers and one cheer more for the Emperor and Empress of the French. The other toasts were "The Prefect of the Seine," "The Members of the Legislative and Municipal Bodies," "The Sheriffs and Corporation of London," &c. The company did not separate till near midnight.

The Weather in the Crimea.—March, which came in as a lion, is not exactly going out as a lamb; but its exit certainly bears a resemblance to that of a very quiet animal. For the season, the weather is splendid. None of those drenching, flooding, deluging rains which were announced, and which it now appears existed only in the muddled brains of the natives and the orthodox hearts of the Greeks, whose wish was father to the thought. March has been dry enough to satisfy the most fastidious taste, and our roads are as hard and compact as swingeree and lovers of hard gallops can desire. Storms of wind we have had, especially at night, and very cold winds too, more particularly in the early part of the month. But almost each day has been an improvement on the previous one; the wind has lost its sharpness, if not its violence, and while at times the gusts sweep you all but off your legs, or off your horse, they do not chill you. The mornings and evenings are misty; but the noon-day sun is oppressively hot, and gives us warning of the heat of the summer. Each hour of March sunshine (fully equal to the sunshine of May in Bulgaria) warns officers to order out cargoes of flannel coats and trousers, Irish poplins, brown hollands, glove-leather boots, and other articles of clothing invented for the convenience of persons exposed to extreme heat. A speculative merchant in the sutlers' camp has sent home for a large quantity of Wenham Lake ice, and untold numbers of bottles of ginger-beer and soda-water; but, unless the speculator's ideas of the consumptive powers of the army are of the most extended description, I fear the supply will hardly meet the demand. If the heats of March are a fair criterion of the heats of June, then will the army be subjected to a heat by far more intense, though certainly much less dangerous to health, than the heat of Dewna valley and hills.—*Letter from the Camp, March* 30.

WINDSOR CASTLE.

STATE BEDCHAMBER.

The State apartments appropriated to the Royal visitors at Windsor are not entirely unknown to the public: they are those thrown open to view by the gracious permission of her Majesty at stated periods. The various paintings—of which there is a rich and rare collection by ancient masters—around the walls of these splendid apartments have in most cases retained the position in which the visitor has seen them for some time; the chief difference being in the furniture of the rooms. The chairs, tables, ottomans, and sofas have been re-gilt. In several instances new carpets have been added, chandeliers hung, caskets, cabinets, &c., displayed. From the lateness of the hour at which the arrangements were completed, we are only able to give a slight Sketch of the State Bedchamber The bedstead was originally presented to George IV., when Prince Regent, by the reigning Monarch of France. The whole has been richly decorated, under the superintendence of Mr. Crace. The dome is covered with green satin, having gold cords running up to the centre, a gilded cornice surrounds the base of the cupola, and from this hangs a valance, in festoons, of purple satin, edged with a beautiful gold fringe; the curtains are of the same green satin, with a purple border, upon which has been rendered the old embroidery of the former hangings. The bed-posts are gilded, as well as the footboard—the centre of which has an eagle displayed, wrought in needlework—over and upon which are placed the initials "L. N." and "E. I;" the ground is of the same materials as the curtains; the interior of the cupola or dome is lined with cream coloured satin, and so are the curtains.

THE ZUCARELLI ROOM

This apartment was set apart for the Emperor as a morning-room. It is well known by the paintings of Zucarelli around its walls, which are of crimson damask, the curtains of the same colour. There are portraits of the Georges, Henry Duke of Gloucester, and the Prince of Wales. The furniture is of white and gold, with crimson damask coverings. The carpet has a blue ground, with a trellis pattern of oak-leaves, of gold colour, within which is the garter and red rose: this border is a white ground, with floral ornaments upon it. Cabinets, vases, and caskets adorn this room.

THE GRAND CORRIDOR

The Grand Corridor in Windsor Castle is, from its great length and peculiar form, most striking. It runs along two sides, the north and east, of the building, and faces the great Quadrangle, and communicates with the beautiful rooms set apart for the use of Royalty, and the suite of "State" rooms, St. George's Hall, the private Chapel, &c., &c. The Corridor is, for its length, somewhat too low, but at the angle of junction, the point selected for our Illustration, the ceiling is considerably higher than in the other portions, and this variation, with the effect caused by the peculiar form and consequent arrangement of architectural lines of this spot, renders it extremely picturesque and highly pleasing. At this angle there are doors leading on the one side to the staircase used by her Majesty; and on the other to a beautiful room hung with the richest Gobelins tapestry. The corridor, throughout its entire length, is lined with pictures, very many of them of great beauty and interest as high works of art; and there are very many portraits of illustrious statesmen, warriors, and other, celebrities Busts in bronze and marble; bronze statues and groups, vases, ormoulu candelabra, cabinets of rich buhl-work, most elaborately-carved ebony cabinets and chairs, oak settees and chairs, and a profusion of gilding on furniture, walls, and ceiling, combine to render this corridor an extremely beautiful promenade, as well as a museum of art.

THE IMPERIAL VISIT.—DEPARTURE OF THE EMPEROR AND EMPRESS FROM PARIS.

THE EMPEROR'S VISIT.

THE DEPARTURE FROM PARIS.

THE quiet manner in which the Emperor Napoleon and his Imperial Consort took their departure from Paris on Sunday last formed a striking contrast to the enthusiastic excitement with which they were received on their arrival in London. At a quarter past one the Emperor and Empress and their suite, with an escort of Cent Gardes, left the Tuileries, and proceeded up the Rue de la Paix and the Boulevards to the terminus of the Northern Railway, where a vast assemblage waited their arrival, and greeted them with cries of "Vive l'Empéreur!" "Vive l'Impératrice!" They were received at the railway station by Baron James de Rothschild and other directors of the railway; MM. Troplong and De Murny, Presidents of the Senate and Corps Legislatif; and several Ministers and officers of State. Baron de Rothschild took his seat in the Imperial train, which left the station at forty-five minutes past one o'clock, under the direction of M. Petiet, the chief engineer.

On arriving at Clermont the train halted, when the Mayor and some officers of the army met the Emperor, with whom they conversed for a few minutes. The station was decorated with flags, and the Imperial monogram of "N" and "E." The same ceremony occurred at Longuion, and each important town between Paris and Calais, where the authorities had prepared in a similar way for the reception of their Majesties; and on each occasion crowds of people assembled and greeted the Imperial travellers with cheers.

On arriving at Calais, at 8 45 p.m., the Emperor and Empress, with their respective suites, immediately proceeded to the state apartments provided for them at Dessin's Hotel. A body of troops had been marched down to the railway station as early as seven o'clock, and these formed three sides of a square, enclosing the avenues of the station; whilst a detachment which was posted under the station formed a lane from the train to the Royal carriage outside. This lane was carpeted with green cloth, whilst its sides were decorated with the national flags, and over the entrance were crossed the British Ensign and the Tricolour flag, enclosing the inscription, "Vive l'Empéreur! Vive l'Impératrice!" When a gun from a battery outside the terminus announced the approach of the train, another and another succeeded, the band of the National Guard struck up a welcome, and at length the Imperial carriage was slowly wheeled into the terminus.

The Emperor and Empress were received by a brilliant assemblage, including the Prefect of Arras, the Sub-Prefect of Calais, the principal military officers, Admiral Chabannes, and all the captains and other officers of the French and English Royal Mail Steam-packet service, and the British Consuls for Calais and Boulogne. Their Majesties, on descending from the Imperial carriage, were received by this group of officials, and then, attended by them, the Emperor and Empress walked slowly down the platform. Attended to the Imperial carriages, their Majesties proceeded immediately to Dessin's Hotel, amidst crowds of spectators, through triumphal arches and illuminations. After they had arrived at Dessin's some presentations took place, and then some consultations, and soon after dinner the Emperor and Empress retired.

EMBARKATION AT CALAIS.

The authorities of Calais were early on the *qui vive* on Monday morning, and scarcely ever a finer day dawned. Everything looked suspicious; scarcely a breath of wind unfolded the tricolour, and there was scarcely a ripple on the water, certainly not sufficiently to "roughen into a wave." The Admiralty tender *Vivid* arrived from Dover, with Rear-Admiral Eden and Sir Robert Peel, and having arranged everything with Admiral Chabannes, the steamers made all ready for departure. As it was understood that the *Pelican*, small screw vessel, had been selected for the honour of conveying their Imperial Majesties, no particular anxiety was manifested as to who should be first at Dover. The 100-gun screw-ship *Australia*, however, got away at eight o'clock. The Royal Mail steam-packet *Queen* was the first to leave the harbour. She left at a quarter past nine, having been engaged specially to carry over the deputation from the Council of Paris to the Corporation of London.

At half-past nine precisely the Imperial carriages, with the Emperor, Empress, and suite, arrived alongside the *Pelican*, their progress from the hotel being marked by the acclamations of a vast assembly. Their Majesties were received by the French Admiral; the British Ambassador, Lord Cowley; Baron Rothschild, Sir Robert Peel, Marshal Baraguay d'Hilliers; the British Consul at Calais, Mr. Bonham; M. Petut, the Chief Director of the Northern of France Railway; M. Vissandier, and the district and local authorities. After the exchange of gracious salutations, the Empress was conducted on board the *Pelican* by Admiral Chabanne, the Emperor performing the same courteous office to the Princess d'Essling. Both their Majesties looked remarkably well. The Emperor was attired in the uniform of a Marshal of France; the Empress wore a small chip bonnet, a broad plaid silk dress, with a little graceful grey hood.

The Royal squadron wound their way out of the harbour one after the other in pretty style, and were received in the roads by a Royal salute from the French men-of-war, and then joined by the *Black Eagle*, with Sir Charles Wood, Rear-Admiral the Hon. M. F. F. Berkeley, C.B., the other Lords of the Admiralty, and by the steam-packet *Empress*, with the chief officials of the port and district, they formed in picturesque order, and proceeded at the full speed of the *Pelican*. As she left the shores of France, everything was bright and agreeable, and a most comfortable, if not a speedy passage, was predicted. The *Empress* had on board the band of the National Guard of Calais; and, as she ranged up at a respectful distance astern of the Imperial steamer, their Majesties were gratified by hearing the performance of the band under the most advantageous circumstances. But, unfortunately, in the course of a quarter of an hour after departure a dense fog came sweeping over the Channel, so thick as almost to obscure

STATE BED-CHAMBER, WINDSOR CASTLE.

MORNING-ROOM, WINDSOR CASTLE.—(SEE PRECEDING PAGE.)

EMBARKATION OF THE EMPEROR AND EMPRESS AT CALAIS, ON BOARD THE STEAM-SHIP "PELICAN."

each of the ships from the sight of the other. Under these circumstances the *Empress* was hailed from the *Pelican*, and ordered to become the *avant courrier* of the squadron; and thus from that hour she proceeded at about two cables' length ahead of the *Pelican*, and leading the way across. The fine screw-corvette *D'Assas* was on the quarter port, the *Black Eagle* on the starboard quarter, and the *Vauld* bringing up the rear; the other vessels of the squadron parted sight, if not company. For two hours, making slow progress, the squadron continued their way across, notwithstanding the fog, prudently edging away a little to the eastward, so as to avoid the fleet and the numerous vessels on the look-out for them, occasionally stopping for a cast of the lead, and attending to the many reports of guns ahead, astern, and, as it appeared, sometimes all around them—ship answering ship, to discover by *sound* the position they could not make out with the *eye*. They thus proceeded their way along until all at once the *Empress*, by her fog-whistle, gave the signal of land; and, simultaneously, the heads of the *Empress* and *Pelican* were turned down the Channel. The land was not seen until very near; and so close was it, that the *Black Eagle* and the French corvette had to turn for safety. Having made the land, however under the Foreland, they easily crept down the coast, the *Empress* keeping in shore in three fathoms water; but nothing more was seen of the *Black Eagle* or the *D'Assas* for some time.

At length Dover was reached; the *Pelican* proceeded with her Imperial freight alongside the Admiralty pier, and the *Empress* into the harbour.

PREPARATIONS AT DOVER.

Meanwhile, by dint of the highest possible pressure on artist and artisan of every kind, the worthy burgesses of the worthy borough over for the reception of their illustrious visitors had been completed early in the morning. Triumphal arches appeared, duly decked with verdant laurel; Imperial cyphers had been wrought in choice flowers; and naval, military, and civic dignitaries were all arrayed in their best, and panting with nervous eagerness to do the honours in their several departments. One slight drawback there was in the hopes of a successful pageant, and that was the presence of a dense, damp, and truly national fog, that hung like a pall over Shakspeare's Cliff, and obscured the fortifications in shadowy mystery.

At nine o'clock the Mayor and Corporation of Dover presented a loyal address to Prince Albert, to which he made a suitable reply, and then everybody proceeded to the esplanade of the hotel. This place was strictly guarded by the militia, and a long boarded platform, covered with crimson cloth, stretched from it all along the Admiralty pier to the landing-place. The platform was, of course, strongly palisadoed on both sides, and strictly kept by the police; but still the crowd pressed densely, and bright eyes might be seen to twinkle, and sometimes unduly long noses to protrude through the chinks which the local artisans had with prescient good nature left all along the paling. With the help of our gallant militia a very respectable show was made, the several corps exhibiting a perfect military air, and a very high state of discipline.

The pier was covered with ladies, the *élite* of the town, and the landing-place with officers in varied and brilliant uniforms, in addition to which the band played over their programme more than once before the arrival of the Imperial party. Not more than one or two civilians were permitted to stand upon the landing-place, always excepting the Corporation, who crowded round the steps, and excluded the view from those who stood immediately behind them; but from this observation the Mayor and Recorder must be excepted, as both were in attendance on the Prince.

Notwithstanding the clanking of bells and the booming of guns, both from the fleet and the heights, and notwithstanding occasional gleams of sunshine, which would obstinately struggle through, the curtain of vapour that hung heavily on the face of the Channel refused to be lifted up. The outer harbour by degrees became dotted over with boats full of sightseers, anxious, through the gathering gloom, to have a near view of the landing. On the pyramids of granite and cement with which the pier and ground adjoining are loaded, many thousands of people had perched themselves. Had the day cleared up, with the fleet in the offing and the fine line of coast fully revealed, the *coup d'œil* would not have been without a certain amount of scenic effect; but at 150 yards distance the largest object became undistinguishable, and as the time approached when the Imperial squadron might be expected the assembled spectators listened attentively for the grand music of the Royal salute which was to herald their advent. It broke forth at twenty minutes past eleven o'clock, first from the fleet in the offing, followed by a sharper and more stunning reverberation from the batteries on the heights. Every eye was strained through the gloom to catch the advancing outlines of the Imperial squadron. The Prince Consort, attended by his suite, hastened down to the point of debarkation. His Excellency the French Ambassador, with the Countess Walewska and the Secretaries of the Embassy, was speedily on the spot, and barge after barge from the fleet struggled through the fog to give a nearer welcome to the august strangers. Still, however, they came not. Steamer after steamer left the inner harbour freighted with spectators, their alarum-whistle screaming through the murky air. It began to be conjectured that the engines of the *Pelican* had broken down, or that some other accident had befallen her, for more than an hour had elapsed since the firing of the Royal salute, and yet no sign of the squadron. A wherry, manned by crack oarsmen, had gone out as far as the fleet, and brought back word that the salute had been fired by mistake, in honour of ships which had passed on their way through the Channel.

THE LANDING AT DOVER.

The position was becoming rather awkward, and to wile away the time his Royal Highness the Prince Consort entered into a careful examination of the weight and shape of the shako worn by the Militia, consulting with Lord Chelsea, and giving open countenance to the popular belief in the interest which he takes in the subject. The band of the Royal Bucks had apparently exhausted all its selections of music for the occasion, Lord Alfred Paget had put off in a man-of-war's boat on a cruise for information, and things were rapidly approaching what the Americans call a "fix," when through the fog the *Pelican* suddenly appeared, within a hundred yards of the landing-stage, preceded and marshalled on her way by the *Empress* mail-packet. The *Pelican* carried the English flag at the fore, the Imperial standard at the mainmast, and the tricolour waved from the staff on the poop. On her arrival the bands struck up "Partant pour la Syrie." The Emperor and Prince saluted each other, the troops presented arms, and from the heights on the land and the multitude on shore the joyous cheers of a genuine English welcome resounded. Close to the Emperor and Empress might be observed the portly form of Marshal Vaillant, Minister of War: and there were also on board the Grand Chamberlain of the Empire, Monsieur the Duke D'Esseling, the Countess de Montebello, the Baron de Malaret, the Count de Montebello, Aide-de-Camp, and other members of his Majesty's household. The *Pelican* having been brought alongside the landing-stage, a gangway was immediately run out. As soon as it had been adjusted his Royal Highness Prince Albert took his station on the top of it. Thereupon the Emperor and Empress at once disembarked, the former shaking hands with his Royal Highness in the most cordial manner, and the ladies curtseying most gracefully. Their Majesties at once recognised the Count and Countess Walewski; and the Emperor then received the respectful congratulations of the Mayor of Dover, to whom he addressed some observations.

As soon as the ceremonial observances connected with the landing were over, the Prince Consort and his illustrious visitors proceeded without delay to the Lord Warden Hotel, the fine apartments of which had been suitably prepared for the occasion. On their way to the hotel the inhabitants of the town and the gentry of the neighbourhood greeted them enthusiastically: they did their Majesties full to acknowledge very graciously the tokens of hearty welcome which at all hands they received. Their Empress leant on the arm of his Royal Highness the Prince Consort, and the Emperor walked by their side, the suite forming a species of procession after them. It must have been a great relief to the Prince when the *Pelican* hove in sight with her precious freight, for she was at least an hour and a half behind time; nor had the voyage across been accomplished without serious peril.

The Emperor and Empress landed well, and appeared highly gratified by the reception which was given him on all hands. But the Empress bore the marks of fatigue, seemed to have slightly suffered from the voyage, and was rather pale. Her mild blue eyes, and the gentle expression of her face, spoke her thanks, and told the thousands around how deeply she was affected by their warm and cordial greeting. Both on the landing of their Imperial Majesties and their entrance into the hotel the usual salutes were fired by the guns on the heights and at the Castle

On ascending the grand staircase at the Lord Warden, Mrs. Hakes, the wife of the proprietor, had the honour of presenting to the Empress a magnificent bouquet, which her Majesty was graciously pleased to accept.

The police arrangements, under Capt. La Val Mondier (Metropolitan Police) and Inspector Bray (A Division), were admirable, and reflected great credit upon those highly efficient officers.

THE LORD WARDEN HOTEL

This splendid establishment, the property of the South-Eastern Railway Company, by the exertions of Mr. Hakes, the proprietor, assisted by his talented manager, Mr. A. Hastier, was entirely remodelled for the occupation of the illustrious visitors. Immediately on Mr. Hakes' return from Windsor, where he was summoned to receive the commands of her Majesty, he commissioned Mr. Chaffin, of Oxford-street, to fit a suite of apartments with appropriate splendour.

The bed-chamber prepared for his Royal Highness Prince Albert was on the right hand of the great western corridor, next the grand staircase, furnished in mahogany and velvet; the dressing-room adjoining being furnished *en suite*. The suite of rooms right and left of the western corridor, from his Royal Highness's apartments to the sea front of the hotel, were appropriated to the members of the Prince's suite. The three grand State rooms, looking over the sea and forming the whole front of the hotel on that side, were entirely refurnished with richly-carved walnut inlaid with fancy woods and mounted with ormoulu; the chairs, settees, and lounges being covered with the richest crimson satin, trimmed with gold.

The first of these apartments was fitted up as an elegant drawing-room for the Prince; the next, as a saloon; and the third, as the drawing room appropriated to the Emperor and Empress. The velvet, carpets, and table-covers, and the embroidery of the lace curtains, are very superb. Next to the State rooms, on the right side of the east corridor, is the dressing-room fitted up for the Empress, which is superbly furnished *en suite* with the State rooms, with the addition of the toilet, which is of crimson satin, overlaid with lace with rich flounces of Mechlin. Next in order is the Emperor's dressing-room, furnished with a suite of carved walnut, with crimson satin coverings, trimmed with gold. The noble coffee-room on the ground floor was appropriated to the *déjeûner*, and fitted with a dais, on which their Majesties and his Royal Highness Prince Albert received the address of the Corporation. The floral decorations here, as elsewhere, reflect great credit on Mr. Epps, from whose establishments at Ashford, Maidstone, &c., the flowers and shrubs were forwarded.

PRESENTATION OF THE DOVER ADDRESS.

Their Majesties and the Prince having partaken of a hasty luncheon, descended to the grand saloon of the hotel, where the Mayor and Corporation, the members for the borough, and various civic officers awaited them, for the purpose of presenting an address of congratulation to their Imperial Majesties on their arrival in this country. Their Majesties received the address standing—the Empress being on the left, and Prince Albert on the right of the Emperor. In the interval that had elapsed from the landing her Majesty had changed her travelling attire for a dress of large plaid tartan silk, black lace shawl, blue drawn silk bonnet, and black silk veil; and it was gratifying to observe that slight as had been her rest it had assisted greatly to refresh her and to call back to her cheek its wonted bloom.

The Corporation having entered the room advanced to the foot of the dais, when Mr. Bodkin, the Recorder, proceeded to read the following address :—

TO THEIR IMPERIAL MAJESTIES NAPOLEON III. AND EUGENIE, EMPEROR AND EMPRESS OF FRANCE.

May it please your Majesties,

We, the Mayor, Aldermen, and Burgesses of Dover, approach your Majesties with feelings of the most profound respect, deeply sensible of the honour conferred upon us in being graciously afforded the opportunity of expressing to your Majesties the hearty welcome with which we greet your arrival in this country to visit our beloved Queen

It is our earnest hope that this auspicious event may tend to strengthen and perpetuate the cordial union which, happily for the progress of freedom and civilisation, now exists between France and Great Britain, and that the just and necessary war in the prosecution of which the combined fleets and armies of both nations are gallantly co-operating may, through the blessings of Divine Providence, be speedily terminated to a secure and honourable peace.

We rejoice that your Majesties have been pleased to select this ancient port for debarkation; we shall cherish a lively remembrance of the honour that has thus been added to the many of a similar kind proudly recorded in our annals.

We devoutly pray that you, Sire, may long guide the destinies of France, and reign in the hearts of a loyal, happy, and contented people; and that you, Madame, may long live to share the throne which your virtues so highly adorn, affording solace and relief to your august consort amid the cares inseparable from the elevated position he occupies.

Given under our corporate seal, at Dover, this 16th day of April, 1855.

The Emperor listened with deep interest to the reading of the document, and in the latter portion of the address, when the Recorder addressed himself to her Majesty, the Empress was considerably affected, and, beneath a look of graceful modesty, appeared with difficulty able to restrain her emotions. At the conclusion of the address, his Majesty made the following reply in English:

I am exceedingly grateful that your Queen has allowed me to find such an occasion of paying my respects to her, and of assuring you of my sentiments of esteem and sympathy for the English people.

I hope our relations will always remain united as they now are, in peace as in war. I think it will be for the welfare of the whole world, as well as for their own prosperity.

I am exceedingly thankful for your kind words, and the good reception you have given to me and to the Empress; and I hope you will be the interpreters of our sentiments to your countrymen.

It was with some difficulty that the grave and learned representatives of the municipality, with his worshipful the Mayor, were restrained, as they retired backwards from the presence of his Majesty, from giving expression to their feelings of exuberant enthusiasm; and it was only when the magic word "etiquette" was whispered, that a more enthusiastic member of the Corporation, who had already delivered himself of "One—two—three," was awed into silence, and prevented from inflicting upon their Majesties the remainder of a genuine round of Kentish fire.

THE JOURNEY TO LONDON.

The Mayor and Corporation having withdrawn, his Royal Highness Prince Albert at once conducted his guests to the railway station, which immediately adjoins the hotel. The interior of the station had been tastefully decorated for the occasion with flags and evergreens, and the platform was kept clear by a guard of honour consisting of troops of the line. All the arrangements connected with the Royal train were as complete as could be desired, and conferred great credit upon Captain Barlow and the other officials. Immediately, the Lord Chelsea, one of the directors, presented a very beautiful bouquet to the Empress previous to her departure.

The Emperor and Empress, Prince Albert, Lord Alfred Paget, General Grey, and Colonel Seymour occupied the Royal carriage; and the Countess Walewska and the ladies in attendance on the Empress occupied the second Royal carriage. The enthusiasm of the ladies and gentlemen who had been fortunate enough to obtain tickets of admission to the station was not less than that which had been previously displayed by the crowds who lined the way from the pier to the hotel. The train left the station at a quarter to three o'clock, and arrived at the Bricklayers' Arms station at ten minutes to five, having completed the entire distance of eighty eight miles in two hours.

It is impossible to exaggerate the enthusiasm which was displayed by persons congregated at the several stations, or occupying the sides of the railway as the train passed. At Tunbridge, where a delay of five minutes occurred in taking in water, the station was crowded to such an excess as to cause considerable anxiety lest some accident should occur. The ladies swarmed and clustered round the carriages, and the gentlemen forced their way along the narrow and crowded platform, in a state of excitement which has seldom been equalled. At the Reigate and the children of the Philanthropic School, and at Norwood, those of the Industrial School, were drawn up at the station. At Croydon the Cadets of the Addiscombe School hoped to have seen the train stop at the station. Heedless of their hopes, and preparations, and gay decorations, the train dashed on, and a row of shadowy and indistinct objects were seen by the passengers in the train, which appeared to be the Cadets themselves; and amid the noise of the train was heard a momentary sound of music, which was conjectured to proceed from a band being engaged. At the Screaming and shrieking, the train dashed along its iron path, giving to its passengers here and there glimpses of children and rustic peasants by the side of the road—youth sending forth its shout of welcome, age swelling the chorus of exultation, the rich and the poor vieing with each other in loud hurrahs, and delicate ladies essaying to rival the applause of the more hardy sex. The whole of the progress from Dover to London was, in fact, one continued ovation.

THE ARRIVAL AT THE BRICKLAYERS' ARMS STATION.

The preparations at the Bricklayers' Arms station were worthy of the great event they were intended to honour. The right hand up-platform was entirely covered with scarlet cloth, and along the back of the platform, near the wall, were placed rows of elegant plants and tastefully-selected flowers, the perfume from which imparted a delicious fragrance to the atmosphere. Upon the rails facing the lower portion of the platform, along which the Imperial cortège had to pass, were erected seven tiers of seats rising above one another, and alternately covered with red and white cloth, for the accommodation of about 1000 of the friends of the railway officials and other privileged individuals, but into which, during the afternoon, 1500 persons contrived to cram themselves in some unaccountable manner. Above the platform, and from the roof to the top of the raised seats hung suspended the English Royal and the French Imperial standards, the English, French, Belgian, Sardinian, Spanish, Turkish, and various other national flags. The roofs of the railway carriages, the windows of the booking and other offices, and, indeed, wherever it was possible to fit or balance a human being, were positively alive with elegantly-dressed ladies and gentlemen.

At a few minutes before five unusual excitement was observed at the upper end of the platform, and at a given signal the band of the Coldstreams struck up "Partant pour la Syrie" as the Royal train moved along the platform. The Lord Mayor and the Sheriffs, Mr. Byng, the Deputy Chairman of the Company; the Directors; Mr. Browne, the Railway Superintendent; the Station Master, and the other officials in attendance, advanced to the Royal carriages to receive the illustrious visitors.

His Royal Highness Prince Albert left the carriage first, and assisted the Empress to the platform, the Emperor following immediately behind, the Royal and Imperial suites following in the rear. The Imperial cortège proceeded along the platform, the Empress leaning on Prince Albert, and the Emperor walking on the right hand of Prince Albert, a little in the rear. As they proceeded in front of the raised seats they were cheered most enthusiastically. Both the Emperor and Empress bowed courteously in acknowledgment of the compliment, and the Emperor seemed much affected by the enthusiasm of his reception, and displayed considerable agitation while he remained on the platform. The Empress also seemed sensible of the honour that was paid to them, but she retained her self-possession throughout. As the cortège passed along the platform the scene was striking and impressive in the extreme; the deafening cheers of the spectators, the martial march of "Partant pour la Syrie," the variously-coloured uniforms of the Royal and Imperial attendants, and the many-coloured dresses of the ladies on the raised seats, waving to and fro as the wearers endeavoured to get the best and longest view of the Imperial visitors, more especially the Empress. Upon arriving at the lower end of the station, Miss Coles Child, the youthful daughter of one of the directors, presented the Empress with a magnificent bouquet, which she accepted most graciously. Upon emerging from the station the Life Guards and the Coldstream Guards presented arms. They were received by the people with the most deafening cheers. Six open Royal carriages were in waiting to convey the Royal suite to the Paddington station, the four first of which were surrounded by outriders in red liveries. Prince Albert entered the Royal carriage first, and assisted the Empress to take her seat, who with the Emperor occupied the back seat, his Royal Highness Prince Albert sitting in front; the different suites occupying the remaining carriages according to their rank and precedence. The whole cortège left the station about ten minutes past five, escorted by the squadron of Life Guards, and were immediately followed by the Coldstream Guards, who fell in the rear of the Royal carriages. Great interest was manifested by the visitors at the station in viewing the state carriage which conveyed their Imperial Majesties to London, and, owing to the kind indulgence of the officials, ladies and gentlemen continued to swarm in and out of it like bees for upwards of an hour. The carriage certainly well repaid the trouble of inspection, it being the most gorgeous and elaborate of the kind probably in England.

THE PROGRESS THROUGH LONDON

The Imperial and Royal travellers, on leaving the terminus, proceeded, with the Royal suite, in six of her Majesty's carriages and four, with outriders in scarlet livery, escorted by a detachment of Life Guards, *en route* to the Great Western Railway

Upon the cortège reaching the curve of the road at the Elephant and Castle, one tremendous cheer greeted their Majesties, which they graciously acknowledged by bowing to the assembled crowd. A great number of flags and streamers were suspended across the Westminster-road; and the front of Cooke's (Astley's) Amphitheatre was decorated with flags, and many private houses exhibited streamers and banners.

Some fear was apprehended that the old rickety bridge of Westminster would not be sufficiently strong to bear the weight of the thousands who were expected to line it. In order, therefore, to prevent accidents, vehicles were allowed to keep close to the lower side of the footpaths, which caused many thousand persons to seek a more commanding view in a different spot. A line of streamers Union Jacks and the national standard, together with the French flag—stretched over the centre of the bridge, and the shouts of the numerous workmen employed in forming the new bridge, as the Emperor and Empress passed over, were deafening in the extreme. The proprietors of the Watermen's Steamboat-pier, at the Middlesex side of the bridge, also hoisted the Allied colours as the Imperial procession passed over the bridge.

In Parliament-street every window and balcony was crowded with company, and great pains had evidently been taken in the way of floral and other decorations to do honour to the Imperial visitors, who were loudly cheered as they passed along. From this point of view the immense multitude assembled in Trafalgar-square had a most imposing appearance

The wide thoroughfare of Whitehall, crowded in every part, and displaying, besides the Tricolour and Union Jack, the flags of all nations (the enemy's alone excepted), presented a scene of great animation and gaiety. The Admiralty was fitted up with seats over the portico, and a splendid military band was stationed there, while the side seats were filled with the aristocracy. As their Imperial Majesties passed, the band struck up several English and French airs. The Chapel Royal, the Horse Guards, the premises of the Poor-law Board, and Richmond-terrace, were all crowded with the *élite* of the metropolis, who cheered and applauded to the echo the distinguished visitors as they passed along.

CHARING-CROSS

This point of the route, from the great facility it afforded for observation, and the ample room given by the area of Trafalgar-square, was eagerly sought by a large number of persons at an early hour in the afternoon, who took up their position west of the south and west of the Nelson column, and treble lines extended from end to end. The view of Parliament street from the rising ground from which it was overlooked had a very unique and gay appearance—for as far as the eye could reach were to be seen Union Jacks and Tricolours intermingled with other emblems of a national character. Overhanging the carriage-way near to the Admiralty might be seen an immense Union Jack, and in close proximity was the Tricolour surmounted by wreaths of laurel. The appearance of the whole was of great richness, and attracted great attention.

The front part of Trafalgar-square becoming crowded, a nearer approach to the line of procession was secured by a number of persons forming a circle near King Charles's statue, where an excellent and close view could be obtained, free from interruption. On the arrival of the cortège at this spot, or even before its arrival, a long and loud shout rent the air, and never perhaps was a more truly English and hearty welcome given to any one than was accorded to the Emperor and Empress as they neared this spot that perpetuates the fame of one of her greatest heroes. The Emperor Napoleon and Empress Eugenie appeared to be highly gratified at this cordial greeting, and frequently addressed observations to his Royal Highness Prince Albert, as if to express the pleasure they experienced at such manifestations. The Emperor bowed frequently to the assembled multitude, and the Empress was equally condescending in her acknowledgments.

COCKSPUR-STREET.

The cheering that was so general, and, indeed, so unanimous at Charing-cross, suffered no diminution on the arrival of their Majesties in Cockspur-street; for they had scarcely entered it when the members of the Union Club and their friends testified the pleasure they experienced at seeing his Imperial Majesty and his illustrious consort in the British capital, by loud and general cheering, which was gracefully responded to and acknowledged. Almost immediately adjoining, Waterloo-house presented a display of beauty and fashion that could scarcely be surpassed in the line of the route. The balcony, extending the whole length of the front of the building, was tastefully covered with scarlet cloth, surmounted by a canopy, and in this place was accommodated a large body of elegantly dressed ladies, who waved their handkerchiefs as the illustrious visitors approached.

PALL-MALL.

Perhaps at no part of the route was there more interest manifested to get a glimpse of their Imperial Majesties than was exhibited by the numerous and highly respectable class of persons who crowded Pall-mall and the approaches leading thereto. The members of the Senior United Service Club had evidently made up their minds to give the Emperor a hearty greeting, and many were the veterans that assembled on this occasion to do honour to the ruler of France, with who n many of them were on the most intimate and friendly terms during his sojourn in England.

Every window of the establishment facing Pall-mall, or the space leading to the Duke of York's Column, was crowded by members and their friends, who hailed their Imperial Majesties with the most enthusiastic cheering. The balconies of the Athenæum Club were crowded with elegantly-dressed ladies; and the Travellers and Reform seemed to vie with each other in the display of their galaxy of beauty. From the unfinished state of the new Carlton Club, but little accommodation could be afforded in the present temporary building for visitors, but still there was a tolerably fair sprinkling of members; and it is almost needless to say that they received the illustrious visitors in a most enthusiastic manner. The Ordnance Office departed from its habitual cold official routine observed on great public events, and for the time seemed desirous to emulate with its opposite neighbour, the Army and Navy Club, in its display of beauty and fashion. The two prominent elevations nearest to Pall-mall, and the gallery or balcony over the portico of the main entrance, were filled with company; and the "Red, White, and Blue" were exhibited and displayed in all directions.

To describe all that occurred up to St. James's Palace would be but to repeat what has been said above, for nothing could be more gratifying than their reception as they passed the various club-houses, but more especially that of the Guards, who rendered the Emperor and Empress all the homage due to their exalted station.

ST. JAMES'S-STREET.

At the bottom of St. James's-street, a vast number of persons were assembled, and a long line of carriages occupied the entire space between Marlborough-house up to the entrance to the court-yard of the Palace. As soon as the cortége turned into St. James's-street, the ladies who crowded the windows of the Conservative Club-house were marked in their demonstrations of welcome; nor were the gentlemen who accompanied them less warm in their greetings. The populace were loud in their cheering, and evinced a marked desire to give a welcome to the illustrious visitors becoming the occasion. The other club-houses—consisting of Arthur's, White's, Boodle's, and Brooks's—were also crowded with company, a large proportion of which were ladies, who received the Emperor and Empress with the loudest acclamations. The arrangements throughout the line by the police were most excellent.

PICCADILLY.

The scene along this great thoroughfare as the procession passed was exceedingly picturesque. Each side of the road was crowded with persons on foot; Bolton-street was filled with carriages, containing members of the nobility and gentry; Clarges-street and that part of the Green-park overlooking the public road were crowded with males and females. Both houses at the corner of Bolton-street were well filled with visitors; and Stratton-house, the residence of Miss B. Coutts, had the front balconies elaborately fitted up, and were filled with members of the aristocracy—the first-floor consisting almost exclusively of ladies. The other establishments of the nobility in this thoroughfare were also well filled; and so was the roof of Apsley-house, the residence of the Duke of Wellington; the occupants cheered in the loudest possible strains the Emperor and Empress and the Royal Prince as they passed the building.

HYDE-PARK.

Taking the exciting and imposing scenes that presented themselves from the Bricklayers' Arms station to the top of Piccadilly, they furnish but a faint idea of what was witnessed in Hyde-park: they even eclipsed the memorable year of 1851, when her Majesty and his Royal Highness Prince Albert opened the Great Exhibition, as far as the number of carriages filled with company were concerned. Upon entering Apsley-gate some thousand spectators were found, who lined every inch of ground that afforded standing room for a pedestrian; at the same time, the promenades immediately facing were studded with human beings, and it was with great difficulty that the spectators could be prevented from trespassing upon the centre of the carriage road. Grand and imposing as the scene at this point was by such a vast assemblage of members of the aristocracy, it was nothing to be compared to what took place on the north bank of the Serpentine, where something approximating to ten or twelve thousand carriages lined the road, and thousands upon thousands of pedestrians took every available space on the footpaths. Each carriage was filled with from four to eight persons, the principal proportion being ladies.

About five minutes past six o'clock a cry was raised, "The Emperor is coming!" and in a few minutes afterwards the procession passed the Royal Humane Society's Receiving House, the assembled thousands giving a cheer that, literally speaking, rent the air. At the same time the Union Jack was hoisted from the vessel in command of the Prince of Wales's Model Yacht. The procession then passed along the carriage road, to the Victoria-gate, and proceeded on *route* to the Great Western Railway terminus at Paddington.

ARRIVAL AT THE GREAT WESTERN RAILWAY STATION AT PADDINGTON.

The gates were opened at half-past three, and the several entrances were admirably arranged, the admissions being by white, green, and yellow cards. The company were, however, condemned to stand the whole time, and the patience of the fair sex was only equalled by the curiosity which made them brave the heat and crowding with marvellous stoicism. There must have been some 2000 or 3000 elegantly-dressed ladies and gentlemen on the platform.

Every railway whistle, every sound of a bell, which applied to the ordinary traffic, served to excite the hopes of many that the Imperial guests were near at hand. But disappointments followed quickly upon each other, until twenty minutes past six o'clock, when the band struck up the air of "Partant pour la Syrie," and his Imperial Majesty appeared, accompanied by the Empress and his Royal Highness Prince Albert—the Empress leaning on the arm of his Royal Highness. Their appearance was the signal for a deafening shout of applause and welcome. Her Imperial Majesty was handed into the carriage by his Royal Highness Prince Albert, followed by the Emperor, the suite occupying the carriage immediately behind; the other carriages in front being occupied by the Royal servants and those of his Imperial Majesty. His Majesty very graciously acknowledged the welcome he received; and, on the carriage starting, both he and her Majesty stood up and made their repeated obeisances to the company. The guard of honour received their Majesties with the usual formalities; the cortége quickly vanished from the view of a host of spectators of every grade and class—the bridge and all places near the shed being crowded with people; and the train proceeded on its rapid course to the Palace of Windsor.

THE ARRIVAL AT WINDSOR.

At half-past three o'clock her Majesty, attended by her Grace the Duchess of Wellington, went out for a carriage airing, passing beneath the triumphal arch in Castle-street, and proceeding through the town, in order to witness the extensive preparations which had been made for the illumination.

The appearance of the Great Western terminus was very beautiful, and presented a *tout ensemble* never before witnessed in the Royal borough. The profusion of banners, the forests of laurel, the decoration arch, were in the highest sufficiently remarkable; but when to these are added the great number of children and youths belonging to the schools—the thousands of spectators who were accommodated on the Castle Hill and on the platform of the railway station—it may readily be conceived that the scene was most animating. The band of the Grenadier Guards, preceding the guard of honour, which was composed entirely of Foot Guards, arrived at half-past four o'clock. They were shortly afterwards followed by a troop of the 2nd Life Guards, under the command of Colonel Williams, to form the escort for the Imperial visitors from the station to the Castle. The Life Guards were loudly cheered by the assembled multitude, who waited with admirable patience the arrival of the much-expected train. At intervals the bands played several lively airs, and the national school children gave "Partant pour la Syrie" in very good style.

There was a sort of notion at Windsor that the Emperor would arrive at a quarter after five o'clock, and hence expectation began at an unreasonably early hour. However, half-past five, and six, and half-past six passed away, and the multitude was forced to content itself with watching certain alterations made in the arrangement of the flags of the triumphal arch, which, we may observe, was in a state of perpetual improvement throughout the day. Expectation, however, was kindled afresh by the report, spread like wildfire, to the effect that the Emperor was at Paddington. Again the time seemed to grow long, the approaching evening began to sober that brilliancy of the sky which had so auspiciously distinguished the day, and the work of illuminating the lamps on the arch was deliberately commenced. The very fine arches were designed from plans drawn by Mr. J. F. Bedborough, one of the magistrates of the borough, and chairman of the committee of management, and entirely executed by him in their erection.

At this juncture there was something almost painful in the anxiety of the multitude, when, about seven o'clock, the report of a gun was heard, and everybody wakened into new life. That gun proclaimed that the Emperor was in sight on the railroad; the lamplighter of the arch speedily descended, and the thrilling sensation that the great event of the day would in a moment take place ran through the crowd like a galvanic shock.

The prophecy of the gun was soon fulfilled. The Emperor and Empress, with Prince Albert and their suite, arrived a few minutes afterwards, and it seemed but the work of a moment for them to alight, to leave the door of the waiting-room, so imposingly decorated by the "Welcome to Windsor" inscribed amid a thick mass of laurels on the opposite shed, to enter their carriages amid the shouts of the national school children, to receive the second inscribed "Welcome" from the smaller arch, and to pass through the large arch in Castle-street, where their eyes were greeted by "Vive l'Empereur," "Vive l'Impératrice," "Napoleon," "Eugenie," "Welcome." The thunder of applause that rolled through the multitude as the carriages passed was something marvellous, the intensity of the feeling receiving an additional stimulus from the momentary character of the "sight." The whole affair scarcely lasted a second, but then everybody had a "good look" at the Empress, and a "good look" at the Emperor; a thousand curiosities that had been raging for a week past were at once assuaged, and, of course, everybody was delighted. Indeed, so very enthusiastic was the delight that a fresh allowance of applause was lavished anew as each carriage of the cortége followed the Emperor up Castle-hill, and every one of the attendant visitors had reason to be satisfied with his share of the "reception."

In the evening the illuminations were a new source of attraction. The Town-hall, with lamps twined about the columns, and marking out the windows, and the two arches, which blazed with brilliancy, were dazzling objects, which could not easily be exceeded even in our own huge metropolis.

THE EMPEROR'S STUD.

The stud of the Emperor, which is probably now the finest of that of any Sovereign in Europe, is at all times an object of great interest to persons visiting Paris who are connoisseurs in such matters. The fame of his Majesty's horses brought the Duke of Wellington, the Master of the Horse to the Queen, at an early hour on Tuesday morning to the stables set apart for the portion of the stud which the Emperor has brought over with him. His Grace, accompanied by M. Gamble, the *premier piqueur* to the Emperor examined the whole of the animals with much interest, and expressed himself highly delighted with them. In fact, no person visiting the stables could fail to be struck with the beauty, symmetry, and strength which some of these horses possess. Of the sixteen chargers and riding-horses which have been brought over, every one is English, and they have nearly all been purchased in England. His Majesty's favourite charger, Philips, is a remarkably fine animal; in his slower paces there is a richness of movement which is rarely to be met with, and his gallop is worthy of an Emperor. Sir Walter Scott is a splendid brown horse, principally used by the Emperor for his private riding, and as a "hack" is exceedingly fine in any and all of the three paces. Conyngham, a fine handsome chestnut, was recently purchased by the Emperor from the Marquis of Conyngham. He is now in training for the Emperor's use either as a "hack" or as a charger. Ajax, a splendid, noble-looking hunter, is a rich dark chestnut in colour, and is almost constantly ridden by the Emperor at Fontainebleau and Compiègne. He is also an exceedingly valuable horse, a very large sum having been paid for his purchase. Adonis was recently purchased from Mr. Mason, of London, for a very large stake. He is a rich dark brown, and has been given by the Emperor exclusively to the service of Colonel Fleury. As a hack he is probably unequalled in Europe; his action is something magnificent, and at the review of the household troops he was admired by all who had an opportunity of witnessing his noble and spirited movements. Chesterfield is a brown horse, purchased at a high price from the Earl whose name he bears, and is a splendid hunter. Oxonian and Perfection the one a brown and the other a bay—are remarkable not less for their quiet qualities as chargers than for their fine symmetry and general excellent appearance. Six of the Emperor's horses were ridden by the members of the suite at the review. His Majesty was mounted on his favourite charger Philips; Colonel Fleury on Adonis; the Duc de Montebello on Ajax; Colonel Edgar Ney, son of the Marshal of brave memory, on Chesterfield; the Marquis de Toulongeon on Oxonian, and M. Rouher on Cromwell. Marshal Vaillant, the French Minister of War, was mounted on his old favourite grey charger. Among the horses brought over there is no one for the special use of the Empress, as it was not expected that her Majesty would take any equestrian exercise during her visit. Although there are two fine horses in the stud appropriated to her Majesty's use, the Emperor is anxious to obtain for the Empress one of still greater beauty than he already possesses, and it is stated that he has expressed his intention of giving a sum of 1000 guineas for any really perfect and suitable charger which can be purchased in the United Kingdom. The remainder of the Emperor's horses which he has over here are for the use of the piqueurs and Imperial grooms, and there is not one of them but would be worthy of the establishment of the first nobleman of the land. Prince Albert's favourite charger, Deemsa, is also a splendid animal, and may most worthily compare with the Emperor's charger for symmetry and action. The horse of which so much has been said as having been refused by Prince Albert, and which has been incorrectly stated to be the finest in the Emperor's stud, is named Perfection. His name, however, is somewhat too flattering. He is not, in truth, perfection, for he has a very important blemish, which consists in a weakness and great tenderness on one part of the back, caused by a fall while in stable. The defect was first discovered by Prince Albert, and great care is now constantly required in order to prevent the hurt producing injurious consequences.

ARRIVAL AT THE CASTLE.

Their Imperial Majesties the Emperor and Empress of the French arrived at seven o'clock on Monday evening at the Castle, alighting at the Grand Hall, where the Queen, accompanied by the Prince of Wales, the Princess Royal, the Duke of Cambridge, and the Prince of Leiningen, received her illustrious guest.

Prince Albert, attended by Major-General the Hon. Charles Grey, Lord Alfred Paget, and Colonel Seymour, accompanied their Majesties, having proceeded to Dover on Sunday evening to meet the Emperor and Empress.

A detachment of the 2nd Life Guards, under the command of Major Howard Vyse, formed the escort from the Great Western Railway station to the Castle, where a guard of honour of the 94th Regiment, with their band, was on duty in the Quadrangle, and paid the usual honours on the arrival of the Royal cortége, the band playing "Partant pour la Syrie."

The illustrious party occupied several open pony carriages.

The Yeomen of the Guard, the grand halberdiers, under the command of Captain Macdonald, the Exon in Waiting; Viscount Sydney, the Captain, and Colonel Fitzmaurice, the Adjutant of the corps, also attended.

The Great Officers of State and the Household (in levee dress) and the Ladies and Maids of Honour in Waiting were in attendance the Queen at the Grand Hall. Viscount Palmerston, First Lord of the Treasury, and the Earl of Clarendon, Secretary of State for Foreign Affairs, were also present.

The Queen, taking the arm of the Emperor, and the Empress that of Prince Albert, followed by the Prince of Wales, the Princess Royal, the Duke of Cambridge, and the Prince of Leiningen, passed up the Grand Staircase through the Music-room into the Throne-room, where the younger members of the Royal family were assembled; and subsequently proceeded to the Reception-room, where the ladies and gentlemen of the household of the Queen and the Prince were presented to their Imperial Majesties.

The Emperor and Empress presented to the Queen and Prince Albert the following ladies and gentlemen of their suite:—The Princess d'Essling, the Countess de Montebello, the Baroness de Malaret, Marshal Count Vaillant, the Duke de Bassano, Count de Montebello, Colonel le Comte Ney, Colonel Fleury, Marquis de Toulongeon, and Count Tascher de la Pagerie.

After the presentation of the respective Courts, at which Viscount Palmerston and the Earl of Clarendon, Secretary of State for Foreign Affairs, were present, the Imperial and Royal personages proceeded to their private apartments.

THE DINNER PARTY.

Her Majesty gave a dinner in the evening in St. George's-hall. The company included their Imperial Majesties the Emperor and Empress of the French, her Royal Highness the Duchess of Kent, his Royal Highness the Duke of Cambridge, his Serene Highness the Prince of Leiningen, the ladies and gentlemen of the household, the Imperial suite, and a select party.

The band of the Grenadier Guards attended during dinner in the gallery of the Hall, and on the entrance of the illustrious guests commenced playing "Partant pour la Syrie." The band afterwards performed a number of favourite pieces.

The Emperor and Empress of the French occupy the State apartments of the Castle, and the ladies and gentlemen in their suite occupy rooms in the west front and north front.

The Marchioness of Ely and the Hon. Mary Seymour, Lady and Maid of Honour to the Queen, will attend the Empress during her visit to her Majesty; and Earl Somers, Lord in Waiting to the Queen; Lord Alfred Paget, Clerk Marshal; and Lieut.-General Sir Frederick Stovin, Groom in Waiting, will attend the Emperor while the guest of her Majesty.

MEET OF THE ROYAL BUCKHOUNDS AT SALTHILL.

Windsor was awake at an early hour on Tuesday, and its loyal inhabitants were astir with the morning sunshine, in spite of their festivities and illumination of the previous evening. A general notion prevailed that her Majesty and the Empress and the Empress Eugenie would accompany the Emperor to the "meet" of the Royal buckhounds, appointed at Salthill. Rumour and fancy conjoined had imagined a bevy of fair huntresses as well as huntsmen; and her Majesty being a good equestrian, and the Empress, as reported, partial to the chase, the good people of Windsor, and some thousands of expectant strangers from London, were all agog for a procession *en grand costume* to Salthill.

Shortly after ten this rumour became corroborated by the departure of several of the Emperor's suite in hunting costume; then followed the hounds and huntsmen, with the Earl of Rocksborough at their head, and shortly after the stag, in the usual deer-cart. The bridge and the walls of Eton College were thronged with spectators; and a multitude of equipages of every degree sped swiftly along the road towards Slough, where the Great Western Railway had already deposited the contents of two or three special trains.

The place selected for the "meet" was the well-known "Montem." Here, and on the rugged ground about, all the picturesque features and gay grouping of a "meet" was to be seen. But neither her Majesty nor the Empress nor the Emperor came; so, after a few moments of blank disappointment to the gazers, the hounds threw off in a field to the right of Botham's. Away went the horsemen in gallant style; but in about ten minutes the deer came back, and the hounds running over the ground, as the stag leapt into the hollow of the railway, the whole field were at fault, returning exactly to the point whence they had started. They found and lost again within sight; but at last, after a few zigzag turns, got into clear running, and bore away in the direction of Farnham, where the stag was ultimately drowned. Those not engaged in the sport now returned to Windsor to await the leading event of the day—the anticipated Review in the Great Park—as well as to enjoy the bustling and animated scene which the town presented, from its triumphal arches, the many flags waving in all directions, the amateur bands of music parading the streets, and the numerous officers, in every uniform of the service, passing to and fro.

THE PRESENTATION OF ADDRESSES.

Three o'clock was the hour appointed by his Majesty for the reception of the various addresses of congratulation which were to be presented to him. The state carriages of the Lord Mayor and Sheriffs were in waiting at the station of the Great Western Railway, to convey the Lord Mayor, Sheriffs, and other members of the Court of Lieutenancy to the Castle. The whole of the members of the deputation were dressed in their full uniform, and attracted considerable notice as they proceeded on their way to the Castle. The Governor and Company of the Bank of England also were full Court dress. The Mayor and Corporation of Windsor wore their robes and gowns.

The first deputation which had the honour to be received by his Majesty was the Court of Lieutenancy of the city of London. The Commissioners were introduced to the Emperor in the Reception-room, and presented an address, which was read by the Lord Mayor.

His Imperial Majesty returned a most gracious answer. The mover of the address, Colonel Wilson, and the seconders, Mr. Moon and Sir Moses Montefiore, were then presented to the Emperor.

A deputation of the merchants, bankers, and traders of London was then introduced, and presented an address of congratulation to his Imperial Majesty.

The address was read by Mr. T. M. Wegueliu, the Governor of the Bank of England. The Emperor returned a gracious answer.

The Corporation of the borough of Windsor followed, and were introduced to the Emperor in the Reception-room, and presented an address of congratulation to his Imperial Majesty, to which he made an appropriate reply.

The Emperor was attended at the reception of the addresses by the following officers of his suite:—Marshal Count Vaillant, the Duke de Bassano, Count de Montebello, Colonel Le Comte Ney, Colonel Fleury, Marquis de Toulongeon, and Le Comte Tascher de la Pagerie. His Imperial Majesty was also attended by Earl Somers, Lord Alfred Paget, and Lieutenant-General Sir Frederick Stovin. The Emperor wore the uniform of a French General, with the grand cordon and star of the order of the Legion of Honour.

The Sheriffs of London and Middlesex, Mr. Alderman and Sheriff Muggeridge and Mr. Sheriff Crossley, accompanied by the City Remembrancer, had an audience to know his Majesty's pleasure as to the reception of an address from the Corporation of the city of London, when the Emperor was pleased to appoint Thursday next at Guildhall. The Lord Mayor, the Recorder, the Sheriffs, and the Remembrancer, were introduced, and requested the honour of the presence of their Imperial Majesties the Emperor and Empress at an entertainment at Guildhall, on Thursday next, on the occasion of presenting the address to the Emperor. His Imperial Majesty was graciously pleased to accept the invitation for the Empress and himself.

REVIEW IN THE GREAT PARK.

During the interval occupied by the presentation of these addresses, the military had collected on the review ground. The Blues, the 1st and 2nd Life Guards, the Carabiniers, and two troops of the Royal Horse Artillery, had already taken up a position in Queen Anne's Ride Ground—a large plot of open land situate in Windsor Great Park, and excellently adapted for the purposes of a review. The troops marched there with their bands playing, and carried off with them a vast number of people from the over-crowded streets. But the intervening time had also brought down by the railways many additional thousands of sight-seers; and, the Castle being the general focus of attraction, every movement that could be seen there excited the greatest interest. The saddle horses for the Emperor, Prince Albert, and their suites, were taken into the Quadrangle, and next the Queen's beautiful pony carriages were brought in.

Soon after, from the Quadrangle into the Home-park, issued forth the Royal and Imperial cortége—consisting of the Emperor, Prince Albert, and the Duke of Cambridge, on horseback, with a numerous staff and suite, followed by her Majesty and the Empress, with the attendant nobility, in five pony phaëtons-and-four and several other Royal carriages. This was a glorious sight; as the brilliant party egressed from the George the Fourth's gate into the Home-park, countless numbers awaited their approach in the Long-walk, drawn up on each side of the road under the trees. Here first, a splendid following of the nobility and gentry's carriages was enabled to attach itself. Here first, also, broke forth a volley of rapturous cheers, which were continued afterwards along the whole line; and here, also, a numerous squadron of gentlemen on horseback, members of the suite, in their red coats, and others from the neighbourhood, or the counties adjacent, united themselves to the procession, expressing by loud hurrahs their gratulations to her Majesty and her visitors.

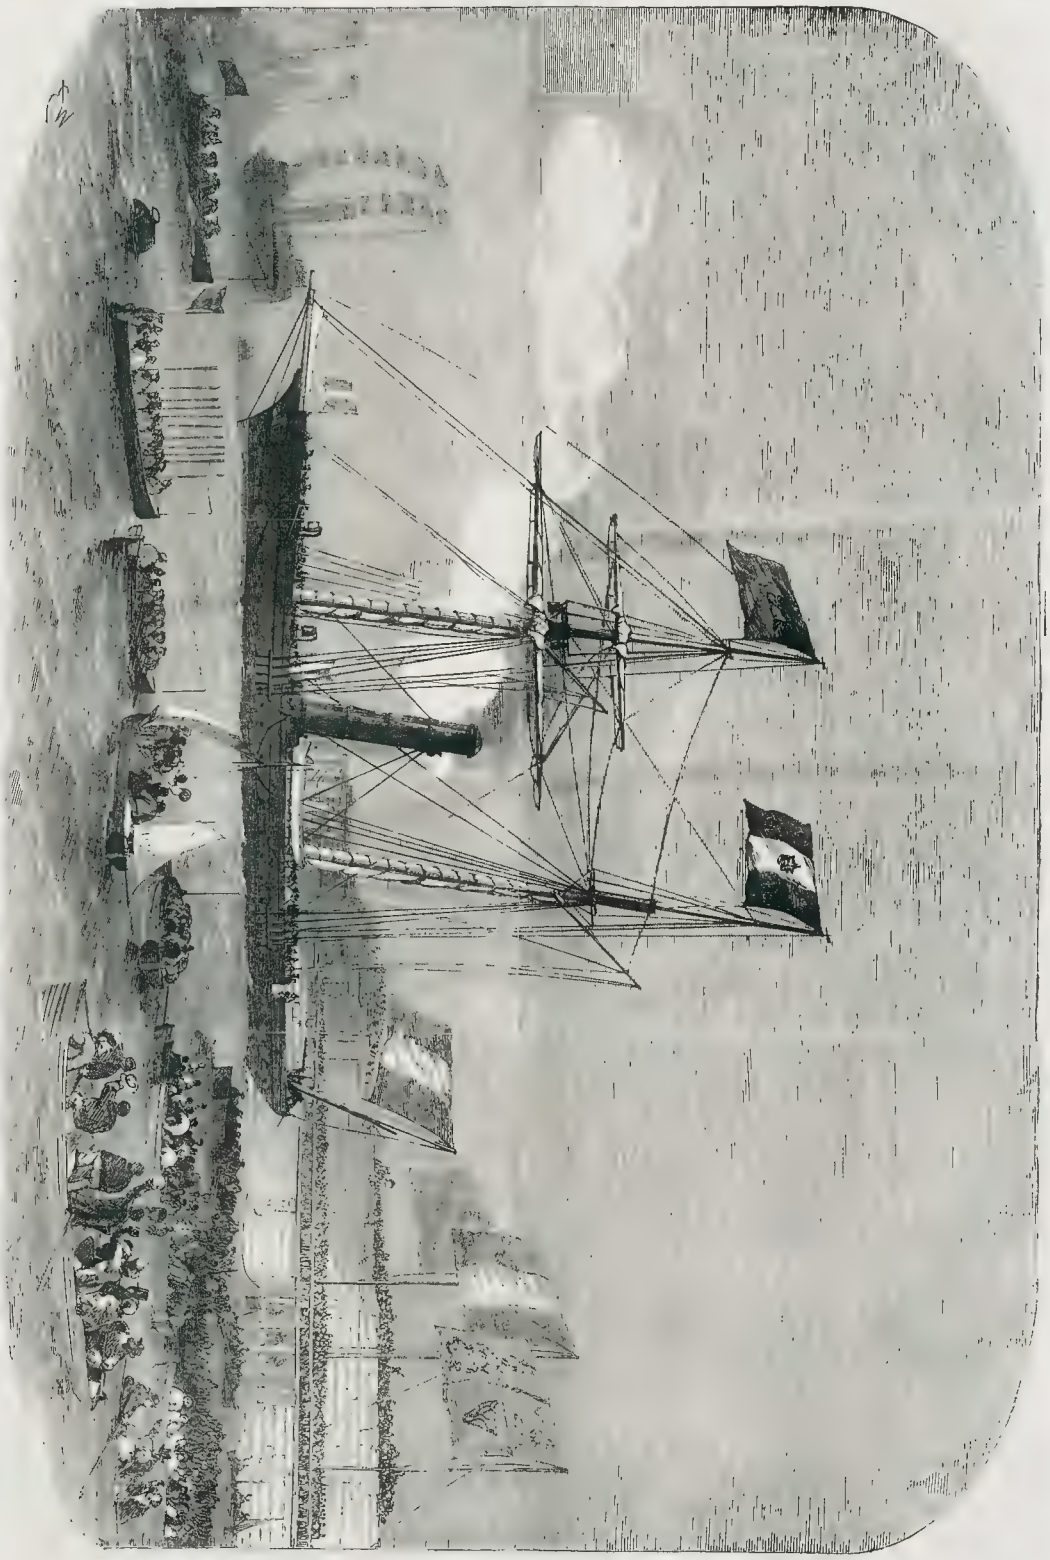
Looking back upon the cortége from "The Double Gates," and up the Long-walk towards the Castle, the carriages speeding along seemed but specks upon a ribbon. As they advanced, and, in time, broke into a quicker gallop, the eye could comprehend the extent of the procession, whose approach inflamed the public with excitement, and was accompanied all its way by a swelling chorus of cheers that rolled onwards with it towards the spectator.

In the Long-walk the centre was occupied by the far-extending line of Royal carriages, in advance of which, the Emperor, Prince Albert, and the Duke of Cambridge were seen riding upon the greensward on the side, relieved by their magnificent suite. Loud and vivid were the cheers; shouts also of "Vive l'Empereur!" were frequent from the numerous French gentlemen and other foreigners who had been attracted to Windsor by the spectacle. When the cortége turned the corner from the Double Gates, and proceeded at a rapid pace across the Park, towards Queen Anne's Ride, Prince Albert rode on the right side of her Majesty's carriage, and engaged in lively conversation with the Empress Eugenie. The Emperor rode on the left, by the side of her Majesty. Both the Royal ladies looked remarkably well and pleased. They wore dresses of a light colour, with dark scarfs and veils, her Majesty having on a green bonnet, and the Empress one of a blue colour.

The scarlet liveries of the outriders, the glittering uniforms of the attendant officers—French as well as English—and the troop of horsemen, splendidly mounted in the rear, gave the "progress" of the party to

(*Continued on page 380.*)

"THE PELICAN" STEAM-SHIP APPROACHING DOVER.



ARRIVAL OF THE EMPEROR AND EMPRESS AT DOVER.

IMPERIAL PARLIAMENT.

HOUSE OF LORDS.—MONDAY.

Lord Ravensworth took the oaths and his seat among the Peers.
The Charitable Trusts (1855) Bill was read a second time.

HOUSE OF COMMONS.—MONDAY.

Mr. Price, Mr. Brand, and Mr. Bouverie took their seats on re-election respectively for Gloucester, Lewes, and the Kilmarnock Burghs.

Mr. BOUVERIE stated that a bill on the subject of limited liability in commercial partnerships was in preparation, and would be shortly introduced.

METROPOLITAN LOCAL MANAGEMENT BILL.

Sir B. HALL moved the second reading of this bill.

Sir D. LACY EVANS presented a petition from Westminster, praying for certain corrective clauses in the measure.

Mr. MACKINNON thought the great defect of the bill was that it devolved its working on the vestries. Clause 103 gave immense powers to vestries, and clause 113, which empowered them to raise money, required consideration.

Mr. W. WILLIAMS was of opinion that the bill would best be worked by a central body, with the Lord Mayor at its head, supported by a limited number of other boards acting in harmony with it.

Mr. PELLATT saw an improvement in the bill since it had been printed. The hon. member suggested its reference to a Committee; and, alluding to the impossibility of fairly discussing the second reading in so thin a House, threatened to move the adjournment of the House if the President of the Board of Health would not take his advice.

Mr. T. DUNCOMBE, following up this allusion to the aspect of the House, observed that it was not every day a French Emperor and Empress visited this country (Hear, hear). To the present bill he should give his hearty support.

Mr. BUTLER and Mr. BRADY thanked the Government for the present measure.

Sir DE LACY EVANS also expressed the obligations of his constituents for the bill.

Mr. LABOUCHERE inquired whether any bill for the reform of the City of London Corporation was in course of preparation?

Sir G. GREY replied that a measure on the subject would be introduced during the course of the Session.

The motion was then agreed to, and the bill, having passed the second reading, was ordered to stand over committal on Monday, the 30th inst.

The House having resolved itself into Committee of Supply, Mr. Fitzroy was moved into the chair, and took his seat accordingly as Chairman of Committees, in the room of Mr. Bouverie.

CIVIL SERVICE ESTIMATES.

The Civil Service Estimates were then brought forward by Mr. WILSON, but on the first vote

Mr. W. WILLIAMS urged a complaint against the haste with which votes for money were pressed, at a time when the House (from extraneous attractions) was scantily attended, and when hon. members had only had the Estimates placed in their hands a few hours. He moved as an amendment that the Chairman should report progress.

The expediency of proceeding with the supply votes was enforced by Mr. WILSON and Sir W. MOLESWORTH; and after a miscellaneous discussion, a division was called on, on which there appeared—

For the amendment, 3: against, 126: majority, 123.

Several votes for the maintenance of the Royal and public palaces, parks, and gardens, were put and agreed to.

Upon the vote of £123,000 in further payment for works at the new Houses of Parliament, Sir W. MOLESWORTH stated the purport of a report and estimate obtained from Sir C. Barry, showing that there had been expended upon the new Palace of the Legislature up to the present time a sum of £1,680,000. About £173,000 additional would be necessary to complete the works already sanctioned by the House; and the execution of some supplemental works, which the architect considered highly advisable, would require £631,000. The total cost of the new Houses would thus reach two and a half millions sterling.

HOUSE OF LORDS.—TUESDAY.

The Cambridge University Bill was read a second time, and the Dean Forest Bill was read a third time and passed.

HOUSE OF COMMONS.—TUESDAY.

Mr. PEEL stated, in answer to Colonel North, that it was not intended to deduct Income-tax from the gratuities allowed to wounded officers.

LORD JOHN RUSSELL'S RETURN.

Sir J. PAKINGTON asked the Home Secretary, in the absence of Lord Palmerston, if he could now inform the House when the Secretary of State for the Colonial Department would return to this country?

Sir G. GREY replied: I believe that the noble Lord will leave Vienna in the course of the present week—at the end of the week; and from the latest information received, I have reason to believe that he will be in England on the 27th or the 28th of the present month (Hear).

THE MEDICAL DEPARTMENTS—ARMY AND NAVY.

Col. BOLDERO moved for a Select Committee to inquire into the state of the medical departments of the ARMY and NAVY. The gallant officer condemned the system pursued in both services, and quoted largely from the evidence given before the Sebastopol Committee in proof of his assertions. He complained that the surgical service was composed of extremely old and very young men; while in the Navy, though the qualification for surgeons was lower than in the Army, still, on account of the neglect with which they were treated, young men refused to enter as assistant-surgeons; and the Admiralty had shipped mere boys under the name of dressers.

Sir J. TROLLOPE seconded the motion, and traced the deterioration of the medical department to the abolition of the Medical Board, and placing the whole medical service under the management of one man as Medical Director. To show the working of this system, he stated that a retired army surgeon, Dr. Davy, brother of the eminent chemist, who had been for two years in Turkey, volunteered to return to active service and proceed with the army to Turkey; but, after months of neglect, received a reply from Dr. Andrew Smith, stated that he could not be replaced on full pay. The hon. Baronet traced this insulting treatment to the fact that Dr. Smith had formerly been under Dr. Davy's command, who was obliged to report him for incompetency.

Mr. PEEL admitted the importance of the subject, but thought the appointment of a committee on this subject was, for the present at least, inopportune, as the Sebastopol Committee had at least half its time taken up with this very question. He stated that many of the evils complained of had already been got rid of, and mentioned many changes which were either carried out or determined on. Among others, he stated that Dr Andrew Smith had been allowed to retire from his post of Medical Director, and that a Medical Board, with a civilian at its head, was about to be substituted.

Dr. BRADY supported the motion.

Admiral BERKELEY denied that there was any lack of assistant-surgeons afloat in the Baltic or the Black Sea fleet.

Colonel NORTH supported the motion.

Mr. ELLICE did not see what was to be gained by two committees sitting on the same subject at the same time.

Mr. MUNTZ and Mr. M. CHAMBERS supported the motion.

Sir G. GREY denied that the Government were opposed to inquiry. All they proposed was to wait till this subject had been inquired into by the Committee already sitting.

Sir G. PECHELL supported the motion, though he defended the state of the Army.

Colonel BOLDERO replied; after which the House divided, when the motion was rejected by a majority of 73 to 69. This narrow division was hailed with great laughter and cheering.

SUNDAY TRADING.

Lord R. GROSVENOR next rose to move for leave to bring in a bill for the prevention of unnecessary Sunday trading in the metropolis. As he understood the bill would not be opposed, he postponed the explanation of its details till the second reading.

Lord ERRINGTON seconded the motion on religious, social, and economical grounds.

Leave was given to bring in the bill, which was brought in accordingly.

Mr. E. DENISON obtained leave to bring in a bill for the education of out-door pauper children.

The Convention with Sardinia Bill was read a third time and passed.

HOUSE OF COMMONS.—WEDNESDAY.

Several petitions were presented from newspaper proprietors, praying for the adoption of a halfpenny newspaper stamp.

A great many petitions were presented praying for the repeal of the bill of last Session relative to the sale of beer.

Mr. SPOONER presented petitions from various places against any grant whatever to the College of Maynooth.

The Intestacy (Scotland) Bill, the object of which is to assimilate the law of Scotland on that head to the law of England, was read a second time.

The Fee Farm Fisheries (Ireland) Bill was rejected, on its second reading, by a majority of 126.

Some conversation took place on the Tenants' Improvement Compensation (Ireland) Bill, which was put an end to by the Speaker at a quarter before six.

ADJOURNMENT OF THE HOUSE.

On the motion of Mr. SCRATTON, seconded by Mr. FRENCH, it was agreed that the House at its rising do adjourn until Friday, in consequence of the visit of the Emperor of the French to the City to-morrow.

The House then adjourned at ten minutes before six until four o'clock on Friday.

THE SILENT MEMBER.—(No. XIII.)

An event like the visit of the Emperor and Empress of the French was sure to take possession of everybody's mind; and those minds which are under ordinary circumstances most vacant are—perhaps because they have most room to spare—invariably most full of such an incident as that which has just happened. At the time of my present writing, all—including the Tower guns—may be said to have gone off extremely well; and even the English climate has so far adapted itself to the brilliance of the occasion. Perhaps the new Smoke Act may have had some effect in diminishing the density of the London atmosphere, and relieved the metropolis from that air of gloom which used to engender a sort of melancholy feeling, that might be most appropriately described as the vapours, on all who entered the City. Their Imperial Majesties have, indeed, had a busy week of lionising; and British lionising is no joke when the operation is joined in by all classes of the community. The affair has been managed so skilfully, that the attraction has been not only brought within the reach of every rank and every pocket, but those who have empty pockets, or none at all, have had an opportunity of witnessing a portion of the series of spectacles in which the Emperor and Empress have figured. From the occupant of the ten-guinea stall at the Royal Italian Opera to the temporary tenant of the gratuitous kerbstone in the streets, all have had the means of catching a sight of our illustrious visitors. Odd stories are told of the anxiety shown to procure the privilege of getting on to the stage of the Italian Opera, and, if wealth and rank could have gratified their wish, the scene in the *Critic*, in which a nobleman is discovered in the disguise of a "beefeater," might have been realised. Many a possessor of wealth and title would have gladly given a handsome sum, and voluntarily surrendered himself as a prisoner—in the opera of "Fidelio"—if he could have been allowed to go forward in a pair of stage fetters, wearing the dishevelled wig, the tattered garments, and all the other attributes of a long (theatrical) captivity, in order to bask during the chorus of prisoners in the brilliant sunshine of royalty that illumined the Italian Opera on Thursday evening. Many a member of the aristocracy of wealth would cheerfully have purchased the place of linkman outside the doors of the theatre for that eventful night, if money could have been used as the golden link to bring him into even momentary contact with an Emperor and an Empress.

In the midst of all this gaiety, we hear that the bombardment has recommenced against Sebastopol; and that our great guns in the diplomatic line at Vienna have missed fire. Many feared, from a rather doubtful article in the *Moniteur*, that the Allies were about to raise the siege: but, instead of this, they have been making a fresh attempt to lay low the city. The diplomatic mission was always expected to fail, and Lord John Russell will, it is said, be at home next week—affording a new illustration of the connection between "quick returns and small profits." The return of his Lordship will be acceptable to those who require his services at the Colonial-office; but a return of the expenses incurred in this fruitless mission will not be very agreeable—at least to those who will be obliged to pay the cost of it.

However valuable the Militia may be in the defence of the country—and there is no doubt that the force in question, when called upon, will do its duty—there is something very disagreeable in the knowledge that some of these men are walking about with their bayonets, of which they occasionally make a premature and improper use, while the police have strict orders not to interfere with them. With all due regard for the Militia as a whole, it must be admitted that its ingredients are not all of the very best kind; and the hand that has tried everything, and failed, or has been too idle to try anything at all, is not exactly the hand that should be entrusted, except while under discipline, with the command of a bayonet. Some recent cases show that there are men among the Militia who are beginning to use their weapons against, instead of in defence of, their own countrymen, and some serious assaults have been the result of the double absurdity of allowing militiamen when off duty to wear their side-arms, and not allowing policemen when on duty to interfere with militia-men. Now that a good deal of mischief has been done, fresh orders will probably be given; and it must be hoped, therefore, that no more very serious calamities will ensue before the "departments" have had time to go through all the cumbrous machinery of countermanding the alleged orders which have been the cause of some very deplorable incidents.

The administration of criminal justice has recently not worked altogether in such a satisfactory manner as can be desired. The discharge of the jury that could not agree on the criminality of a lady shoplifter, and the arguments that are presumed to have prevailed with six of the jurymen who refused to find her guilty, must open a very wide door to the escape of all classes of female delinquents. According to the argument of counsel, by which the jury must be supposed to have been influenced, all women, at certain times and at a certain age, are not morally responsible for their acts; and, if this is to be accepted as a sound conclusion, it will be difficult to prove when a woman ought to be punished for any violation of the laws of society. It has been said in an influential journal that a costermonger's wife would have got off just as easily as the physician's lady; an assertion which is, I fear, founded on the knowledge of what ought to occur, rather than on the expectation of what would really happen. For my own part, I believe that the costermonger's wife would have been found guilty, without any one having thought for a moment about her time of life; and that the old saying, as to the possibility of driving through an act of Parliament in a coach and six, has been partially realised. I suspect, however, it would not have been so easy to drive through the law with a costermonger's cart as with a physician's carriage. Already there are disagreeable symptoms of the spreading of a malady which the law, or rather those employed in administering the law, have been too ready to recognise. At Clerkenwell police-court a "respectable" woman, with plenty of money in her pocket, has been charged with stealing an article worth eight shillings from a shop in Hatton-garden. She might, with the assistance of an "able advocate," have got off, on the new ground that has been adopted for the defence of female delinquency, but the magistrate seems to have prevented the defeat of the ends of justice, by dealing summarily with the accused, who confessed her error and begged for mercy. If counsel had been at hand to defend her and bully the magistrate, the tables might have been turned, though the Bench would probably have done its duty, in spite of the hired abuse of the advocate, or the anonymous threats of an "appeal to the Home-office," from those who seem to wish that the liberty of the subject should be secured—especially if the "subject" happens to be guilty—by making the magistrate the mere minion of the Minister.

If juries in criminal matters are blameable for inclining so far on the side of mercy as to lose sight of the side of justice, they are still more reprehensible when, in the event of a difficulty in nicely adjusting the balance, they refuse to allow the turn of the scale in favour of the prisoner. I do not say that the jury in Burnnelli's case have not acted conscientiously; for I have no doubt that the verdict delivered is quite in accordance with conscience, and with the best judgment that could be given to the facts of the case; but I confess, if the report is accurate, the medical testimony as to the sanity of the prisoner is so contradictory as to admit of a doubt of which, I think, he ought to have had the benefit. The conductors of the prosecution have been censured for omitting to call a witness who, it is alleged, would have proved the insanity of the accused; while it is urged, on the other hand, that it is not the duty of the prosecution to call a witness in favour of the prisoner. In a legal and professional point of view, it may be true enough that they who prosecute are not bound to defend; but it is equally clear in a moral point of view that no honourable man can make to himself a party to the prosecution of one of whose innocence he knows that there is existing evidence. For my own part, I do not believe the rumour that proof of Burnelli's insanity was within reach of the prosecution; for, though there have been flagrantly discreditable cases in which advocates have thought it consistent with professional duty to resort to calumny and other contemptible means, for the purpose of saving the guilty, there is, I think, no instance on record where a barrister has wilfully employed a *suppressio veri* in order to obtain the condemnation of the innocent.

THE LOAN.

The expectation which had, since Friday, occupied the attention of all persons connected with monetary affairs, was, on Monday, brought to an issue by the promulgation of the intentions of the Chancellor of the Exchequer. Speculation had been rife in the interim as to the mode to be proposed. Would the Loan to be raised be added to the Consolidated Fund, or would it come out in the form of Terminable Annuities? Or would it be provided for partly by the one and partly by the other? Nobody professed even to guess at the Chancellor's views, and not one man of Change ventured to hint that he was in the secret. Those who ordinarily have everything from "undoubted authority" were silent on this occasion; and those who, at other times, "don't mind telling you confidentially," now either forgot to confide in you, or found nothing to confide. Each man had, of course, his own pet crotchet; each mounted his hobby, upon which he was prepared to ride full tilt against all the windmill giants which any Chancellor of the Exchequer might set up. Each could recount to you his own projects, but of the project of the Minister of Finance none could speak.

As we have said, Monday afternoon brought all doubts and surmises to a close by the publication of the following plan:—

1. The Loan to be for the sum of sixteen millions of pounds.

2. For every £100 subscribed in money, the contractors to have £100 Three per Cent Consolidated Annuities, and a Terminable Annuity for thirty years, ending on 5th April, 1885.

The biddings to be made in the Terminable Annuity.

3. The interest on the Three per Cent Consolidated Annuities to commence from the 5th of January, 1855, and the Terminable Annuity to commence from the 5th of April, 1855.

4. The days of payment, and the proportions of the contributions to be paid, to be as follows:—

On Tuesday, April 24, deposit of £10 per cent.		
May	22	£15
June	19	£10
July	17	£15
Aug.	21	£10
Sept.	18	£10
Oct.	16	£10
Nov.	20	£10
Dec.	18	£10

5. For each instalment after the deposit, a proportional amount of Stock to be created for the contributors.

The Stock payable on the deposit to be created at the same time with that which will be due on the last instalment, when the Terminable Annuity will also be written in to the contributors' names in the books of the Bank of England.

6. The biddings to be made at the Treasury on Friday, April 20, at ten o'clock.

About one-tenth, therefore, of the Loan will be raised on Terminable Annuities for thirty years, and the remainder in Consols. To have attempted to obtain any very much larger portion on the former mode of security would have been difficult; and, under all the circumstances, we believe the mode adopted to be the best, and characterised by more judgment than has been the wont of Chancellors of the Exchequer in general.

The Loan was inevitable: to provide for the expenses of the war by means of ordinary taxation had perhaps become, from public opinion, an impossibility.

Let us hope that we shall not need a further loan to carry on the war. The last war cost us £601,500,843; at an annual charge for interest of £22,829,696; having continued from 1793 to 1816—a period of twenty-two years. On the commencement of that war the Debt was only £19,350,148; with an annual charge of £9,208,495; and, at its conclusion, it had increased to £840,850,491; the annual charge being £32,038,191.

THE INDIAN TELEGRAPH.—The electric telegraph has just been carried as far north as Attock, and will be at Peshawur in three months' time, a distance in direct line of 1000 miles from Calcutta, and the like from Bombay, and 1000 from Madras; so that the three Presidencies could be communicated with simultaneously, and in a few minutes' time by the Afghan frontier, the only point in the whole circuit of our Eastern dominions where serious troubles or annoyance can arise.

THE LIME-BURNERS.—The Russians have been greatly puzzled, and are exceedingly angry, with the proceedings of our lime-burners in front of the Third Division. The volumes of smoke arising from the kilns have attracted their notice, and they have shelled the quarries several times, to the discomfiture of Major-General Barnard's poultry in the rear of the quarries. One shell grazed the General's tent; another burst among his little temporary establishment of cocks, hens, and ducks, and is said to have injured some of them, and the General has had to shift his quarters. The navvies who were burning the lime took the exigencies of their position with great coolness, and continued their operations with expressions of private opinion to themselves to fight the Russians with in the interval of lime-burning. The Russians evidently think the smoke arises from some works connected with the railway; and although the Malakoff tower is concealed by the quarried stone before it—it full two miles from their batteries, they direct shells at it now and then during the day.—*Letter from the Camp, March* 30.

A FEMALE SPY.—For some days past nothing has been talked of but the arrest of a young Russian woman: she had been remarked several times before, as her frequent walks appeared to be in the trenches. The rumour originated for some time, and the General at last was informed of the fact. He ordered a stricter watch to be kept, as he thought it could be only a spy disguised in woman's attire. At six o'clock on the morning of the 28th the same woman presented herself in front of our men while they were at work. She was of tall and majestic stature, and held an extinguished lantern in her hand, and seemed to examine the works with much attention. Some perceived that she had a sheet of paper half open, in which probably she noted all the observations she could collect. At the sight of our soldiers and officers she quickened her pace, and entered a sort of ravine which is at the extremity of the French trenches. As soon as she reached that spot she began to run, but the commandant sent two Zouaves in pursuit, and they soon overtook her. Two hours after she was conducted to General Canrobert. Her examination was not long: she promptly replied that it was for the good of her country, and to avenge the death of her husband, Beninoff, killed at the Alma, that she acted thus; and, moreover, that she felt no regret. She was then searched. The searchers found in one of her pockets a paper book, containing several details on the state of our batteries, the number of men employed, the number of guns in the batteries, &c.; and in another pocket a double-barrelled pistol, and a letter addressed to Prince Menschikoff. After the visit she was shut up in an apartment of the General's headquarters, under the guard of two soldiers, until such time as she can be sent to Russia.—*Letter from Kamiesch, March* 30.

PREPARATIONS FOR THE BOMBARDMENT OF SEBASTOPOL.—To day two more 10-inch mortars were sent to the front, with about fifty or sixty tons of powder, 300 rounds of filled shell, and 200 rounds of empty 10-inch. To-day, also, the greater part of the crew of the *Leander*, 50, came on shore and joined the Naval Brigade, near head-quarters. These men will be distributed at the heavy guns in the different new works. Their appearance as they landed was uncommonly picturesque and warlike; each man dressed in blue, with his cutlass and revolver at his side, and in the centre one of the Quartermasters with the "Union." To add still further to the imposing nature of the procession, two sailors—one with a tin can and the other with a fiddle—marched at its head, enlivening the way with "Jack's Alive," "Cheer, Boys, Cheer," &c., and, accompanied by such tunes, and joking and laughing with themselves and all they met, the blue-jackets rolled off in high glee to share in the bloody dangers of the trenches. Wherever they go they will do their work well, for in the management of our large siege guns the artillerymen are not to be compared to them. At the same time that the sailors landed 5000 Turks were sent up to head-quarters, each man carrying a long fascine. There are not less than 10,000 or 12,000 of these fascines already piled near Lord Raglan's house, and a ship now in harbour has about 1500 more from Sinope, and other ships are expected. The object of this new work is the same of construction, or, as far as I can ascertain, contemplated, for which such enormous numbers would be required, and I am, therefore, led to the conclusion, that they are wanted for the storming of the Russian batteries. Each of these batteries is surrounded with a deep fosse, which the storming party fill with fascines provided for the purpose, and are thus enabled to cross without the hindrance and delay which scaling-ladders always occasion. Orders were received at Balaclava to-day to prepare ships for the reception of wounded, and to the general hospital the same intimation to have beds ready was also given. The *St. Nicholas*, *Orient*, and the *George Pollock* transports will be fitted up with all dispatch, each for the reception of between 200 and 300 wounded; and the general hospital, with the wooden huts which have been built for the purpose, will accommodate about 300 more. These additions to the four regular hospital-ships, besides one or two temporary hospital-ships now in harbour, ought to accommodate a larger number of wounded than we would get by a mere bombardment of Sebastopol; but if a general assault of the whole place is contemplated, the necessity for hospital accommodation will be fearful. All out here seem agreed that the bloody horrors of Inkerman will fade to a mere skirmish before the storming of the town and forts of Sebastopol. Zouaves, it is said, with a party of Tirailleurs d'Afrique and Chasseurs de Vincennes, are to storm the Malakoff the night after opening fire; and to the English has been allotted the Mamelon. These may be mere rumours, but they are universally believed here, and will very likely prove true. The plan of the assault is, no doubt, to concentrate the fire of our batteries upon the Malakoff works and Mamelon, and storm directly a sufficient number of their guns are disabled to enable us to do it with the smallest loss. From the Mamelon the town can be commanded at every point; and, with the Malakoff towers in our possession, the Redan would be untenable to the enemy, and the dockyard at our mercy.—*Letter from the Camp, April* 2.

TOWN AND TABLE TALK ON LITERATURE, ART, &c.

WHAT remuneration Sir Charles Barry is to receive in his capacity as Architect of the New Houses of Parliament is still a fruitful subject of disagreement between Sir Charles and the Treasury. His claim is made, we believe, in three per cent on the expenditure, and this, on the outlay of the present time, would give him, it is said, fifty-four thousand pounds. This is thought, by some, to be too large a sum; by others it is thought just enough; and by Sir Charles himself it is called, if anything, under the mark. There was, it appears, a kind of implied understanding when the works commenced that the architect's remuneration should be twenty-five thousand pounds. But this disputed stipulation was made twenty years ago, when the works, it was wildly supposed, would not cost one-third of the sum already spent upon them, and the time of erection would be at least within one-half the period that has not yet seen the Palace completed. It is quite clear that twenty-five thousand pounds is a very inefficient sum for the twenty years' labour of so skilful an architect as Sir Charles Barry; that fifty-four thousand is nearer his proper reward; while it is equally obvious that the system must be bad which has suffered Sir Charles to dream of sums very different in amount from those contemplated to be paid by the Lords of the Treasury.

Two pieces of good news transpired in the Commons the other night. The beautiful Diana fountain in Bushey-park is to be forthwith restored; and that unsightly hole in Hyde-park, occasioned by the abstraction of good gravel, and the partial filling up of it with mud and something worse, is no longer to be a public eyesore. Gravel is to be got elsewhere, and the pit is to be restored to its original level of turf.

They are making a mess of the long-promised building in Fetter-lane for our Public Records. The fault is not with the architect, but with the Master of the Rolls. The Master is accepting the contents of every public repository, and is crowding costly shelves—designed for other purposes—with useless papers, fit only for the mill. When once he has accepted, the Master has no power to destroy. Public offices are only too glad to empty their old and useless papers into the lap of the Rolls, and the result is that there is now very little chance of our seeing the contents of the Tower, of the Chapter-house, and of the Rolls' Chapel, within any part of Mr. Pennethorne's new building. Sixty-one thousand three hundred and twenty pounds were never voted for the safe keeping of useless papers, but for the better preservation and use of those real records, than which no nation can produce a nobler series than ourselves.

Artists are talking of a very admirable series of portraits commenced by Mr. E. M. Ward, R.A., partly for his own pleasure, and partly with a view to publication. The idea is excellent, and the execution in Mr. Ward's happiest manner. He has commenced a series of full-length portraits of our eminent living authors. Each author is seated in his own study, surrounded by those books and faces with whom he is accustomed to hold almost daily converse. Six are already finished—Lord Mahon (now Earl Stanhope), Mr. Macaulay, Mr. Hallam, Sir Bulwer Lytton, Mr. Dickens, and Mr. Thackeray. Men who know all six are divided in their opinion which is the best portrait—all are so good. The pictures are of a cabinet size; and will, we hear (and are happy to think), be engraved in a fitting style of art. What would not one give for a Shakspeare and Ben Jonson set; a Milton and Marvel set; a Dryden and Otway set; a Pope and Swift set; a Johnson and Boswell set; a Scott and Byron set—of portraits akin in spirit to these by Mr. Ward. It is high time that in our school of portrait-painting a painter's column and curtain should give way for some thing more real, more appropriate, and quite as pictorial.

The cost of a park and pleasure-ground is no light matter. It is not every well-to-do-in-the-world person who can afford to keep a luxury of the kind. The expenditure required to maintain our parks is incredibly large. Sixty-six thousand pounds were expended in one year, ending March 31st, 1855, on our parks and pleasure-grounds, and the income derived therefrom was barely above six thousand pounds. The three parks in London that immediately join one another—St. James's, the Green, and Hyde Parks—consume £20,000 of the £60,000; the Regent's-park is maintained at a yearly cost of £5500; and the Victoria-park at a yearly cost of £2300.

Sir William Hooker is petitioning Parliament for more accommodation to the greenhouse plants removed from temperate climates to the uncertain atmosphere of Kew Gardens. The claims of the war should not be put forth as any reason for the rejection of a petition like this, in which the public is so largely interested. The cost of Kew to the country is fifteen thousand pounds a year; and in the season the visitors who frequent its greenhouses and walks—returning pleased and instructed very from eight thousand to ten thousand a day. Many students desirous of information about economic and other plants throughout Europe have come to reside at Kew, for months at a time, with the sole purpose of studying in these well-stored gardens, of which Sir William Hooker is the indefatigable Director. Think very favourably, if you please, Mr. Chancellor of the Exchequer, of our judicious Hooker and his "sma' request."

This mention of the living Director at Kew reminds us that we have just lost by death the Director of the Metropolitan School of Science applied to Mining and the Arts. Sir Henry De la Beche was the painstaking founder and parent of this school, from its infancy in Craig's-court to its removal to its present quarters in Piccadilly. His successor should, if possible, be a still better man. We await with interest the name of the new Director. The appointment is in the gift, we believe, of the President of the Board of Trade—the salary £1100 a year.

We are not quite sure but what there is a very fair foundation for the complaint about the British Museum put forth in the following letter:—

(To the Editor of the ILLUSTRATED LONDON NEWS.)

April 17th, 1855.

SIR,—Seeing the interest you take in matters connected with the Library of the British Museum, I venture to hope that you will express your opinion on the following facts.

My object in resorting to the Reading-room was the consultation of several elaborate works on Harmony and others on Music in general; but, though all published prior to 1850, not one could I find in Catalogue. With a view of testing the Music Catalogue, I last week took a column of advertisements of music in the *Times* for December, 1849; but, out of thirty-nine pieces, only five (and those all with words) were mentioned. Indeed, the Music seems composed entirely of pieces with words; those lighter compositions, such as quadrilles, marches, &c., are scarcely to be found at all.

Can you inform me if it is optional with music publishers to forward copies; or, if not, is any distinction made in the class of music required to be forwarded?

You will perhaps have remarked that the Music Catalogue seems never to receive any additions, and that it is seldom consulted—probably because those who have done so do not desire the musty old ballads which seem to have found such favour with the compiler

I am, Sir, your most obedient servant.

ONE WHO HOPES FOR BETTER THINGS IN THE NEW ROOM.

The "musty old ballads" unnecessarily condemned by our Correspondent are curious records of bygone times, and well merited the descriptive catalogue which has made them really serviceable.

THE SOLDIERS' DRESS IN THE CRIMEA.—A fear has been expressed that the men will not be allowed to wear the white quilted chako covers which the Bulgarian cholera forced upon the coy martinetism of the Peninsular veterans. I believe that is an idle fear. The absurd objectors to this necessary head covering were conquered through the force of circumstances; and, though they may still survive, they will not again dare to display their foolish faces to the light of day. The campaign, short as it has been, has justified all those reforms of costume and habits which were so urgently demanded and so reluctantly conceded at its commencement. The British soldier, emancipated from the trammels of the collar and stock, permitted to wear the beard God gave him, and to move about in his light and easy Russia leather boots, now that he is neither overwrought nor underfed, looks a happy, strong, and prosperous creature. War is forming its own men, and the military education of the nation, so much neglected, is making rapid strides.—*Letter from the Camp.*

CHESS.

TO CORRESPONDENTS.

C F S. They shall be returned shortly

M de R., Paris.—A private communication has been dispatched

M de R——r.—Your letter was unfortunately mislaid. It shall be replied to immediately

F——ve la Chapelle.—The inquiries have been answered by letter

M. von H., Brussels. Many thanks. The "Concordance" is minutely exact, and will greatly facilitate reference.

A F., Florence.—We are still without any news of the long-promised transcripts. Pray forward them, through the accustomed channel, with all convenient expedition.

M D., Paris, is cordially thanked for his obliging offer, of which we shall gladly and frankly avail ourselves whenever an opportunity to do so occurs

BOOKWORM.—A copy of "Ginsrilo," first edition, 8vo, 1697, would be a bargain at the cost you name. As to Durchi's "Sachrida" and Severino's "Giuoco da Scacchi," they throw little or no light upon the ancient form of the game, and are not of much interest or value to any one.

F. J., Norwood.—You must apply by letter to the publisher, Mr. Little, enclosing a Post-office order for the period you wish to receive the paper. The subscription is 26s. per annum

W. C. C.—We referred to one of your own Problems, not to the Solution of our Enigma.

AN OLD SUBSCRIBER.—A Bishop can generally draw the game against a Rook, although there are a few equivocal cases where the latter wins. See the "Chess-Player's Handbook," p. 439

B J F.—Stanford's Problem is extremely pretty, and shall have insertion.

SAINTHILL, W. G., MCD., PHIZ.—Yes; quite correct.

CHESTER.—Mr. Hodgson's Opponent we retained no copy.

DERBYON.—The key-move of Enigma 918 is *B to Q 2nd*. Your Variation shall be examined.

D. G. B. Your Solution of Mr. Bolton's little gem is the true one

F. L. Derby.—A player having advanced a Pawn to his 5th sq is at liberty to exchange it for any piece (a King, of course, excepted) which he may choose, without regard to the pieces he has at the time on the Chess-board.

AN AMATEUR.—In Castling on the King's side you place your Rook on the K B sq. When Castling on the Queen's side the Rook is placed on the Q sq.

J. C; Seaham; S. L., Falmouth.—You are mistaken. Try once more.

AMATEUR, RAMSAY.—In the position given White could not win.

SOLUTION OF PROBLEM No. 581, by Salopienne, Marbry, Photographer, Andy, Mus D. G., Beliddan, J. Minshull, Mona, Jeannes, W. Prescot, are correct.

SOLUTIONS OF PROBLEM No. 582, by Derveon, M. P., Andy, Napoleon, G. T. W., B. A., Castell, W. C. C., F. T. Derby; J. Minchin, Phiz, Ernest, S. P. Q. R., Philo-Chess, Cambrensis, Gregory, Punch, Peregrine, Argus, Oldfogus, A. E., Omicron, Eton, Philip, Eldon, Mites, Civis, F. A. S., Omega, Rex, Pebbles, Mus., Trinity Coll., St. George, Nuro, Oldbuck, Admirer, Subscriber, are correct.

SOLUTIONS OF ENIGMAS, by Derveon, F. T., Derby, Phiz, Dux, Maltravers, Delta, T. W. W., D. D., Pedagogue, M. G., P. H. S., Ontario, M. P., Gregory, are correct. All others are wrong.

SOLUTION OF PROBLEM No. 580.

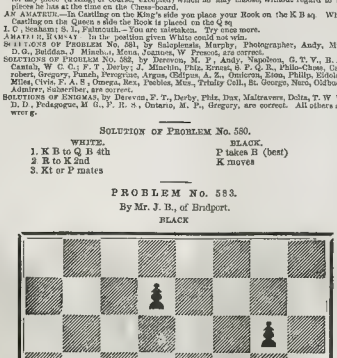
1. K B to Q B 4th	P takes B (best)
2. R to Q 2nd	K moves
3. Kt or P mates	

PROBLEM No. 583.

By Mr. J. B., of Bridport.

BLACK



WHITE

White to play, and mate in three moves.

THE Emperor Alexander has conferred decorations on almost all the personages of distinction who have been sent to congratulate him on his accession to the throne. To General Prince Bernhard Solms Braunfels, from the King of Hanover, he has given the order of St. Alexander Newski; to Count Munich, the Marshal of the Court of the Grand Duke of Oldenburg, that of the White Eagle; to General Baron Salabas, sent by the Emperor of Austria, the same order; to the Swedish General Count Sandtzig, the Grand Cordon of the order of St. Anne; and to General Haynau, the Minister of War of the Elector of Hesse Cassel, the same decoration.

FOREIGN ANIMALS FOR THE PARIS EXHIBITION.—The ship *Africa*, Captain O'Neill, arrived in the Mersey on Sunday last, from Bombay, had on board two Surat bulls of "high caste," intended for the Paris Industrial Exhibition. The animals are of a snow-white colour, and have exceedingly stronger developments. They are very fine in the hanks, with necks hanging below the knee, and very long, heavy ears. The animals attracted considerable attention in Liverpool.

ARREST OF DR. LANG IN AUSTRALIA.—This gentleman, who is well known in this country by the frequent visits he paid here, and the lectures that he delivered, has been committed to prison in Geelong, on a charge of writing letters "calculated to bring the administration of justice into contempt." The Doctor, it appears, felt keenly the result of a trial in which his son, Mr. G. D. Lang, late manager of the branch bank of New South Wales at Balarat, was convicted on a charge of having embezzled the funds of the bank to the extent of £10,000. In a letter which he wrote in the *Melbourne Argus*, he did not hesitate at classing Sir W. A'Beckett with the infamous Judge Jeffreys, and denounced the trial as a proof that justice was polluted.

REMARKABLE DISCOVERY.—About a fortnight ago, as some persons were clearing and trenching a piece of waste ground for a garden at Tynrach, Perthshire, a small Druidical circle, close upon the highway, was disclosed to the gaze of the stranger by the removal of masses of broom and bramble that had hitherto concealed it. This olden temple is about 18 feet in diameter, and quite entire, each of its huge stones standing erect and in its proper place; but there is an additional interest attached to it from the fact that, while digging and levelling the interior, four huge urns, about two feet in height and one foot in diameter at the mouth, were exhumed, full of calcined bones, besides three or four stone coffins, formed of thin, unshapen slabs, evidently from the adjacent ground, and likewise containing the mortal remains of the ancient Caledonians of a pre-historic period. Unfortunately, either from the extreme brittleness of the urns, or a want of care on the part of the labourers, the whole were broken to pieces, but enough still remain to show that they were of the very coarsest manufacture, in shape remote from classical, and with no pretension to decoration but a profusion of scratchings without method on the outside of the upper portion of each. The coffins were equally unceremoniously dealt with; but it is worthy of remark that they lay in no particular order in reference to the compass, but, if anything, rather inclined to south and north—indeed, one of them lay exactly in that direction.

A SMITHFIELD MARKET INCIDENT IN THE CRIMEA.—During the afternoon Balaclava was considerably enlivened by the antics of a wild bull, which for about an hour held complete possession of the place. The lean kine, which are issued for fresh provisions now, are generally tame enough, Heaven knows; but occasionally, and especially in the ships from Asia Minor, wild cattle are caught on the plains by means of a lasso, in the use of which all the people along the coast are very expert. These young bulls, when first caught, are perfectly savage and ungovernable, and are always slaughtered on board the vessel before landing. By mistake, however, one was landed to-day, and he instantly took charge of the town. The soldiers were interested in the hunt, which was a thing exactly suited to their taste, and as the bull formed part of their rations, they chased him with peculiar zest and keenness. But the bull was cool and wary, and three or four who wished to get nearer were soon taught the value of discretion in connection with their valour, and were capsized heavily and severely bruised. Fortunately the animal had no horns, or the consequences would have been most serious. As it was, his head did missile enough, and kept everyone at a respectful distance, whilst the refractory brute promenaded amongst the huts at leisure. Everywhere he went the soldiers from the tops of walls and huts showered down stones enough to kill and bury him, but they only half beat as well aimed as they were well meant; but none succeeded in bringing him down. Occasionally, when hit harder than usual, he turned, stood at bay for a moment, then charged his assailants, who of course scattered in all directions. In the midst of these abortive efforts to slay him some very imprudent individual called out to fire, and instantly, without the least reference to the people about, half a dozen shots were directed against the unfortunate animal. One sergeant, within six feet of the bull, missed his aim, but shot a private of the 71st through the knee instead. After this mishap the indiscriminate volleys were discontinued, and the bull, taking to the hills, was at last killed by a rifle shot from an officer of the Guards. Now that much of our fresh meat comes from Asia Minor, these cattle *émeutes* are not uncommon, though they never went to such lengths as to-day.—*Letter from Balaclava, April 2.*

EPITOME OF NEWS—FOREIGN AND DOMESTIC.

The drawing by the Princess Royal at the Pall-mall Exhibition, for which £200 have been offered, was timidly valued by her Royal Highness herself at one guinea!

The Emperor of the French has, through M. Casabianca, purchased several estates on the territory of Civita Nova. It appears that he intends to purchase a villa in the neighbourhood of Ancona, where M Casabianca will take up his residence.

The Cortes approved a Budget of Civil List granting to the Queen of Spain 28,000,000 reals; to the King, 1,000,000 reals; the Princess of Asturias, 1,000,000 reals; and the Duchess de Montpensier, 1,500,000 reals.

The Emperor of the French has presented to Mr. Wyld a gold snuff-box, with his cipher in diamonds, as a souvenir of his visit to the model of Sebastopol. The Queen of Spain has also decorated Mr. Wyld with the Order of Carlos III.

When the Poles had to swear allegiance to the new Czar a change was made in the form of the oath. In 1825 the Poles took the oath to "the Emperor of Russia and King of Poland;" now there have been added the words, "and to the Grand Duke of Finland."

Major-General the Hon. Yorke Scarlett, commanding the Cavalry Division, has left Balaclava for England, having been summoned home on account of the serious illness of his wife.

A memoir of the Rev. Sydney Smith, by his daughter, Lady Holland, is promised in a few days by Messrs. Longman.

The Emperor Alexander has ordered the Minister of the Imperial Household to leave untouched the apartments of the late Emperor; and for the present, for the sake of economy, no change will be effected in the State apartments, nor in those which the present Emperor occupied during his father's illness.

The Prince of Prussia has left Coblentz for Berlin, in obedience to an order of the King, to take part in conferences relative to the mission of General de Wedell.

The Earl of Listowel has made a grant to the nuns of the Presentation Convent in Listowel of the land on which their convent is erected.

The Princes Bonaparte, of Rome, have been invited to Paris by the Emperor, and are not likely to return to the former city, as their villa and their palace in town are offered for sale.

Mr. Lionel Gisborne has settled the conditions on which an English company will undertake the construction of a submarine telegraph from Constantinople to Alexandria.

The Duke de Brabant is expected at Beyrout: he will visit Constantinople, where a brilliant reception awaits him.

Muchlis Pacha has given in his resignation as chef-d'état-major, and has left Eupatoria in consequence of a quarrel with Omer Pacha.

Under the will of Miss Anne Thompson, formerly of Shackville-street, and lately of Brighton, eleven hospitals and charitable institutions are left residuary legatees; and it is calculated each will ultimately get nearly £1400.

Judge Helfenstain, of Pennsylvania, has left his coal estate at Shamokin, Pa., estimated to be worth one million and a half of dollars, for the benefit of the poor of New York, Philadelphia, and Baltimore.

On the 6th inst. Reschid Pacha was at Alexandria, his object being to obtain men and money from the Government, to assist in carrying on the war.

Dr. William Aitken, Demonstrator of Anatomy in the University, and Pathologist to the Royal Infirmary at Glasgow, has been appointed assistant Commissioner at the hospitals on the shores of the Black Sea.

Iskender Bey is rapidly recovering: he has lost only the tips of three fingers of his right hand, the forefinger being uninjured; he will therefore be able to wield the sabre with as much vigour as heretofore.

Professor Macnochie has resigned the chair of Civil Law in the University of Glasgow, and Sheriff Skene has received the appointment of the Crown to that office.

Madame George Sand continues her autobiography in the pages of the *Presse*. She is at present recounting her youthful experiences while in a convent—having, it seems, narrowly escaped taking the veil.

The *Kendal Mercury* states that Miss Martineau is engaged, in the intervals of ease, upon her autobiography.

On Tuesday next Mr. W. M. Thackeray will lecture at Dee's Hotel, Birmingham, under the auspices of the Birmingham and Midland Institute, on "Humour and Charity."

The Directors of the Crystal Palace intend to have an exhibition illustrative of the arts and manufactures, and of the manners and customs of India, China, and other Oriental countries, in a Court to be set apart for that purpose.

The *Moniteur* announces that the Universal Exhibition at the Palais d'Industrie will be opened on the 1st of May; and that no articles for exhibition can be received after the 20th instant.

Several Inspectors of the Metropolitan Police will be stationed in Paris during the opening of the Exhibition, in order to keep watch on the English *chevaliers d'industrie*, who are pretty sure to abound

A number of persons have been arrested at Grenelle on a charge of being engaged in the construction of a new "infernal machine."

Persons who can speak English, together with the Danish, Swedish, or Russian tongues, are greatly needed for the Baltic Fleet, as interpreters.

A company has been formed in Buenos Ayres to light that city with gas.

Nearly 2000 colliers are on strike at Wigan, in consequence of the late reduction of wages. Large and tumultuous assemblages of the people are prohibited

The quantity of zinc used in Paris last year in the manufacture of small pistols for caulkers was 83,000 kilogrammes; and the quantity of the same article for the small round mirrors with covers, and for spectacle-cases, reached to 200,000 kilogrammes

Several officers of the French Navy are engaged at present in visiting and taking plans of the ports of Britanny, Scotland, and Belgium.

According to recent returns, there is a very great falling off this season in the production of beetroot sugar in France.

Government is about to issue a commission to inquire into the condition and management of lunatic asylums in Scotland.

Adulteration in wines and other liquors is taking place to an enormous extent, both in Paris and in some of the wine-growing districts of the departments

A young man who acts as a clerk to an influential firm in Glasgow was swindled out of not less than £414 in bank notes the other day, by a parcel of card sharpers, in one of the carriages upon the Edinburgh and Glasgow Railway.

During the existence of the potichomania, the glass-works at Sèvres alone have made 800f. of vases a day, and the crystal works at Clichy have for more than twelve months employed the greater number of their workmen on smaller articles

The steamer *Atlantic*, which arrived at Liverpool on Thursday morning, from New York, is reported to have brought one million and a half of dollars

The last link to the chain of continuous railway communication between Paris and Marseilles is completed, and was opened for passengers on Sunday last

Her Majesty's discovery-ship *Enterprise*, Captain Collinson, C.B., was at the Cape of Good Hope on the 17th of February, and her arrival in England may be expected in a few days.

Several contemporary painters, foreigners as well as Frenchmen, will have specimens of their *talens* in the Paris Exhibition. MM. Ingres, Horace Vernet, and Delacroix, are expected to have compartments, in which the whole of their principal works will be collected.

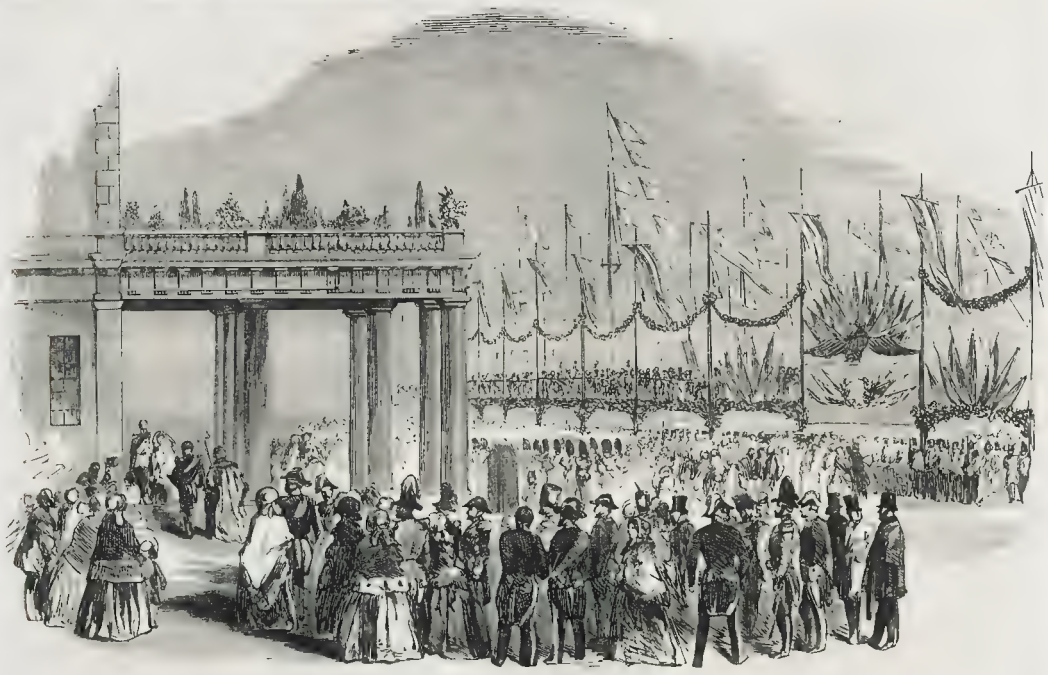
The estate of Strichen, in Aberdeenshire, has been sold by Lord Lovat for the sum of £140,000. This is from £20,000 to £30,000 beyond what could have been obtained a few years ago, when it was offered in three several lots, but failed to attract purchasers.

The journeymen carpenters of Orleans have followed the example of those of Rennes, and struck for an advance of wages. The authorities have interfered, and six of the ringleaders of the movement have been arrested.

A number of Prussian deserters have lately arrived at Metz, and requested permission to join the expeditionary army of the East. Not fewer than seventeen arrived in one day last week.

A boy in one of our London ragged schools having shown a great taste for acquiring languages has been sent out as an interpreter to Balaclava, and frequently has the honour of dining with Lord Raglan.

Orders for between 2000 and 3000 cast-iron guns up to 16-pounders, with a large quantity of shot, are in the market just now, for the merchant service in the East Indies. One Glasgow ironfoundry has contracted to supply 1400 of them, with shot to suit.



RECEPTION OF THE EMPEROR AND EMPRESS AT THE LORD WARDEN HOTEL, DOVER.

(*Continued from page 375.*)

the review-ground very much the appearance of some triumphal procession The Royal and Imperial party and staff found the troops all drawn up in line, down the front of which they passed, and returned along the rear. The carriage conveying the Queen and the Empress then came back to the Flag-staff, and the horses were taken out of all the Royal carriages, to prevent accidents.

A great crowd of people of distinction from the neighbourhood, with an immense number of other persons on foot and horseback, who already occupied a portion of the ground, here received the Emperor and Empress with acclamations.

The troops which were to be reviewed consisted of the 2nd Regiment of Life Guards, the Horse Guards (Blue), and the Carabiniers. The 94th Regiment of Foot kept the ground, and a company of Grenadiers and Coldstream Guards served as a guard of honour to their Majesties. From an elevated position the illustrious visitors had an opportunity of witnessing the manœuvres of the troops subsequently to the inspection. Upon the arrival on the ground of the Emperor and Prince, the brigade of cavalry regiments, which were drawn up in two lines, were inspected. Accompanied by Lord Cardigan, who was in command of the brigade and who was most enthusiastically cheered upon the ground, Colonel Forrester, and a numerous staff, they rode along the front and down the rear ranks, the ladies in attendance and other members of the suite following in open carriages. The inspection over, the three regiments of cavalry broke up into open squadrons, and walked past the illustrious visitors, followed by two troops of Horse Artillery, and reformed in their first position. The brigade next marched past by "threes," formed into squadrons, and marching off "left wheel," formed close columns of squadrons, took up a fresh position, and afterwards trotted past in columns of troops. They then took up a fresh position, changed front, and galloped past by troops, re-forming in the position which they occupied on the ground on the arrival of the Emperor. This portion of the inspection being concluded, a sham fight—if such it could be called—took place.

There being no force on the ground but cavalry and artillery, no movements, of course, could take place, except those which indicated the uses to which these arms can be applied for the purposes of war. The thousands of visitors who were assembled around had, therefore, to suppose not merely the existence of an unseen enemy, but also to imagine that, acting in combination with the cavalry, were large masses of infantry. The duties of cavalry in connection with active warfare—consisting mainly in marching and countermarching, forming and re-forming, and taking up fresh positions, for the purpose of covering the advance or protecting the retreat of troops—were those which on this occasion could only be displayed. If the visitors had fancied that the large crowds assembled on the ground formed part of an immense army, and that opposed to the cavalry, they would have further to imagine that the cavalry were the rear-guard of a Russian army, vanquished after an obstinate engagement, and com-

ARRIVAL OF THE EMPEROR AND EMPRESS AT THE BRICKLAYERS' ARMS RAILWAY STATION.

THE EMPEROR AND EMPRESS LEAVING THE GREAT WESTERN RAILWAY, AT WINDSOR

pelled by the Allied forces to withdraw. The Carabiniers, who occupied the centre of the line, first sent out a column of skirmishers; and then two troops of artillery on the right flank opened fire, and, as the smoke gradually cleared off, the long lines of cavalry could be seen falling back. The infantry having it must be supposed fallen back in good order, pursued by the artillery and covered by skirmishers of Light Cavalry. Still a fire might were supposed to be pouring down upon the retreating forces, and pressing them somewhat hard, when the Blues charged in line in excellent order, broke the columns of troops, and retired preventing, as must be supposed, further molestation from that quarter. The artillery upon the centre of the line protected the Blues as they fell back. The skirmishers of the Carabiniers having been recalled, the whole ground occupied by the centre was left bare by the ardour of the charge, and penetrating further into the Allied lines became broken, and had to retire in confusion; but thanks to the artillery which thundered away from their flank, regained their lines. Defeated on their right, though partially successful on the centre, the Allied masses now shifted their attack, and commenced pursuing the enemy on his right. The artillery was immediately seen flying across the field, and at once opened a rapid and terrific fire in that direction. The Horse Guards Blue then advanced for the purpose of making a reconnoissance as to the exact position and objects of the Allies, and upon returning to the position the whole brigade broke up into columns of troops, and with a change of front took up a fresh position in the direction of the attack. The whole line then made a most brilliant charge, the Carabiniers retiring in columns of squadrons from the right, and the Blues "threes about." Having re formed, a squadron of Horse Guards (Blue) made a final charge and withdrew. The retirement of the enemy's forces being thus effected, and having established to the satisfaction of the thousands of spectators who were probably unable to distinguish or appreciate the nature of the various movements—the truth of the great military axiom with respect to the difficulty of securing and protecting a retreat, the whole of the brigade formed in line, and with the proud consciousness which must invariably attach to men who are victorious in a great cause, and who have secured the objects for which they have striven, triumphantly advanced in review order, the bands playing appropriate marches. Thus ended the military manœuvres of the day. The Emperor and Prince passed along the lines, followed by the Royal carriages, the united bands playing the National Anthem, the colours being drooped, and the men saluting in the usual style. The different regiments marched off the ground to their respective barracks, the bands playing, and the vast mass of spectators gradually dispersed.

In the evening the Queen gave a grand dinner in St. George's Hall. The company included their Imperial Majesties the Emperor and Empress of the French, the Prince Napoleon, their Royal Highnesses the Duchess of Cambridge, the Princess Mary, their Royal Highnesses the Duke of Cambridge, his Serene Highness the Prince of Leiningen, and a select party of the nobility. The band of the 2nd Life Guards attended and played during dinner. Her Majesty had afterwards an evening

THE EMPEROR AND EMPRESS PASSING THE ARCH AT THE ENTRANCE TO WINDSOR CASTLE.

party. For the accommodation of the Queen's visitors a special train on the Great Western Railway was provided, which left Paddington at half-past eight o'clock, and was in readiness at twelve o'clock to convey her Majesty's guests back to town.

THE CHAPTER OF THE GARTER.—THE INVESTITURE OF THE EMPEROR OF THE FRENCH

Animated by the mere hope of catching a glimpse of his Majesty and his Imperial Consort, Windsor was again the point of attraction for some thousands of strangers, who flocked to the Castle, and besieged every avenue and approach. But the proceedings of their Imperial Majesties were confined entirely to the interior, and those persons only were admitted to which the public have not the privilege of being admitted. For a considerable period during the forenoon the Emperor and the Empress, the Queen, Prince Albert, and the Duke of Cambridge, took walking exercise in the Slopes; and at three o'clock the Queen held a Grand Chapter of the Order of the Garter, for the purpose of investing the Emperor of the French with the insignia of this most noble Order. The Knights Companions were robed in the Guard-chamber, and afterwards passed to the Grand Reception room. Her Majesty the Queen and his Royal Highness Prince Albert were conducted by the great officers of State to the Throne-room, followed by the Duke of Cambridge and the Prince of Leiningen. The Queen and their Royal and Serene Highnesses wore the purple velvet mantle, the crimson velvet hood, and the splendid collar of the Order. The train of her Majesty, the Sovereign of the Order, was borne by the Pages of Honour in Waiting. The Queen wore also a diamond diadem. The Knights Companions were called over by Garter King of Arms, when the following answered according to their order of seniority:—The Marquis of Exeter, the Duke of Richmond, the Marquis of Lansdowne, the Duke of Buckingham, the Marquis of Salisbury, the Duke of Cleveland, Earl De Grey, the Marquis of Abercorn, the Marquis of Hertford, the Duke of Bedford, the Earl of Clarendon, Earl Spencer, Earl Fitzwilliam, the Duke of Northumberland, the Earl of Ellesmere, and the Earl of Aberdeen. The Knights appeared in the mantle and collar of the Garter, and the others wore their respective robes with their chains and badges. The Knights Companions and Officers entered the Throne-room and took their seats at the table, the Queen being seated in a chair of State at the head; a second (vacant) chair of state being on the right hand of her Majesty. The Prelate of the Order stood on the right of the Queen, the Chancellor on the left; while the Registrar, Garter, and Black Rod remained at the bottom of the table

The ceremony commenced by the Chancellor reading a new statute, by command of the Queen, dispensing with the existing statutes of the Order of the Garter in as far as required for the especial purpose therein mentioned, and ordaining and declaring that his Imperial Majesty Napoleon III., Emperor of the French, be declared a Knight of this Order, any statute, decree, rule, or usage to the contrary notwithstanding. By the Queen's command, the Emperor of the French was conducted from his apartments through the Music-room and Grand Reception-room, between his Royal Highness Prince Albert and his Royal Highness the Duke of Cambridge—the two senior Knights Companions present. Preceded by Garter, King of Arms (bearing the ensigns of the Order upon a crimson velvet cushion) and by Black Rod. The Queen and the Knights of the Garter received his Imperial Majesty standing; and the Emperor, passing to the head of the table, took a seat in the chair of State, on the right hand of her Majesty. The Empress of the French, the Prince of Wales, the Princess Royal, Prince Alfred, the Princess Alice and the Duchess of Cambridge and the Princess Mary, had been conducted to the Throne-room, before the entrance of the Queen, for the purpose of witnessing the august ceremony. The Empress and the Duchess of Cambridge were ushered to seats near the Throne. The Queen announced to the Emperor of the French that his Imperial Majesty had been elected a Knight of the Most Noble Order of the Garter. Garter King of Arms, kneeling, presented the Garter to the Sovereign, and her Majesty, assisted by his Royal Highness Prince Albert, buckled it on the left leg of the Emperor, the Chancellor pronouncing the admonition. Garter King of Arms presented the Ribbon with the George, and the Queen put the same over the left shoulder of the Emperor, the Chancellor pronouncing the admonition. The Queen then gave the accolade to the Emperor; and his Imperial Majesty received the congratulations of his Royal Highness Prince Albert, his Royal Highness the Duke of Cambridge, his Serene Highness the Prince of Leiningen, and each of the Knights Companions present. The Chapter being thus ended, the Knights Companions were again called over by Garter, and retired from the presence of the Sovereign with the usual reverences. Her Majesty accompanied the Emperor to his apartments, followed by the Empress and Prince Albert, and attended by the ladies and gentlemen of the Royal suites. The Queen and Prince afterwards returned to their own apartments.

A guard of the hon. corps of Gentlemen at Arms was in attendance upon her Majesty the Queen at the Chapter-room; and a special guard of honour of the hon. corps was on duty, in attendance upon his Imperial Majesty the Emperor of the French, at his apartments and at the Chapter-room. The Yeomen of the Guard lined the Grand Staircase, the Vestibule, and the Music-room. The Queen's footmen, in state liveries, were stationed in the Vestibule. A guard of honour, consisting of two companies of the Grenadiers and one company of the Coldstream Guards, with the band of the latter corps at their head, marched into the Quadrangle, where they took up position, and on the termination of the investiture saluted and retired.

At five o'clock the Imperial visitors and their Royal host drove to Virginia Water. The Queen, with the Duchess of Kent and the Princess Mary of Cambridge, in an open carriage and pair, took the route which leads through the Great Park, preceded by the Duke of Cambridge, the Prince of Wales, and Prince Alfred on horseback; and followed by another equestrian party, consisting of Colonel Fleury, Colonel Edgar Ney, Lord Alfred Paget, and other gentlemen of the Royal household and Imperial suite. The Emperor, the Empress, and the Prince Consort were understood to have taken a different route for the purpose of giving their Imperial Majesties an opportunity of seeing his Royal Highness's Flemish farm. A large number of persons in carriages, on horse back, and on foot, lined the beautiful avenue known as the Long-walk, and demonstrated their respect for her Majesty and the Duke of Cambridge by the warmest acclamations.

In the evening the Queen gave a State dinner, at which all the gentlemen appeared in uniform or Court dress, the members of orders of knighthood wearing their respective insignia. The magnificent service of gold plate was used on this occasion. The middle of the table was adorned with a number of beautiful épergnes and vases in gold, while on two buffets at each end of St. George's-hall, in which the banquet was served, were displayed, on a background of rich crimson, a variety of beautiful specimens of art in the precious metals, in shields, tankards, jewelled cups, vases, tazzas, and other articles of vertu in the Royal collection. The buffets and the table were brilliantly lit by numerous wax-lights in candelabra of silver-gilt, the St. George candelabrum forming the centre ornament. Opposite to this candelabrum, at the table, were seated—on the one side her Majesty the Queen and his Imperial Majesty the Emperor of the French, and on the opposite side her Imperial Majesty the Empress and his Royal Highness Prince Albert. Behind the Royal party on each side were stationed a special guard of her Majesty's honourable corps of Gentlemen at Arms. Two yeomen of the guard were posted at each end of the hall, at the flanks of the buffets. After the banquet, Earl Spencer, the Lord Steward of her Majesty's Household, gave, by command of the Queen, the toast of "The Emperor and Empress of the French."

The Queen and Prince Albert, the Emperor and Empress, with the Royal family and her Majesty's guests, retired to the Drawing-room at an early hour, where the Queen received the evening party.

(Continued on page 387.)

THE LARGEST EMERALD IN THE WORLD.—The largest emerald in the world, the companion of the far-famed Koh-i-Noor, has arrived in London, and is now at the establishment of Mr. Hunt, 22, Bruton-street. It is the property of his Highness the Maharajah Dulleep Singh, and has been brought to this country by Sir John Login. It is to be mounted with his Highness's jewels. The emerald once formed the chief ornament of a costly horse-trapping which figured conspicuously in the late Runjeet Singh's magnificent Oriental military cavalcades.

PARIS EXHIBITION.—Amongst the locks and fireproof safes sent by Messrs. Chubb and Son for exhibition is one of their patent detector locks with six key, of elegant design and workmanship, meriting especial attention. The lock is of a large size, suited for the door of [illegible] cased in walnut-wood, covered with ornamental [illegible] escutcheon of elaborate and highly-finished design. The handle of the key is composed of [illegible] French imperial work, enclosing the initial of his Majesty the Emperor of the French, surmounted by the Imperial crown. The whole [illegible] out of wrought steel, and will bear comparison with [illegible] and ingenious

THE EMPRESS OF THE FRENCH.

AMONG the many romantic incidents that have marked the life of the Emperor Napoleon III., not the least extraordinary was his marriage with the beautiful and accomplished lady who is now the guest of the Queen. The course he took in this respect was distinguished by the same boldness, self-reliance, and originality that have characterised the chief events of his career. In his address to the Senate and Legislative Body announcing the choice he had made, he sketched in a few masterly strokes his motives and independence. "I have preferred," he said, "the woman whom I love, and whom I respect, to one who is unknown, and whose alliance would have had advantages mixed with sacrifices." In taking this course the Emperor at least avoided the rock on which his uncle wrecked his fortunes; and, although there were not wanting enemies who censured him for not having married the daughter of some soldier purely French in origin, the mass of the people recognised in this abandonment of the customary Royal alliance a new tie binding them to their Ruler.

The Empress Eugenie, in all respects but her not being of some sovereign Royal house, is in every way fit to fill the place she occupies. "She who has been the object of my preference," said the Emperor, on the occasion already referred to, "is of distinguished birth. French in heart, by education, by the recollection of the blood shed by her father in the cause of the Empire, the last, as Spaniard, the advantage of not having in France a family to whom it might be necessary to give honours and fortune." In respect of her origin and ancestry, indeed, the Empress Eugenie may claim to take rank with the proudest and noblest of Europe. Her great-grandfather, on her mother's side, was Mr. Kirkpatrick, of Closeburn, in Dumfriesshire—a gentleman of large landed property. His son, Mr. William Kirkpatrick, went to Malaga as British Consul, and there married the daughter of Baron Grevenenne. His eldest daughter, Maria, married the Count de Montijo; and of this marriage the Empress was born. The Kirkpatrick family is of great antiquity in Scotland, and various members of it figure in the bloody records of that kingdom.

It is, however, on the father's side that the ancestry of the Empress are the most illustrious. As Countess de Teba, she is a Grandee of Spain, and belongs to the ancient and illustrious house of Guzman, which dates from the very foundation of the Spanish monarchy. Among her ancestors was the famous Alonzo Perez de Guzman, surnamed *El Bueno*, who, in 1295, so heroically defended Tarifa against the Moors. They had taken prisoner his son, and threatened to kill him before his father's eyes, unless he yielded. From the ramparts he saw them preparing to execute their threat, while his son supplicated him with extended arms. "Never," exclaimed Guzman, "will I surrender the city confided to my charge. Let my son die, but my honour must remain unsullied." Throwing them a sword, he cried to them, "Use it, if you dare!" In a few moments the head of his son rolled on the ground, and, at the cry of horror raised by the soldiers, he said, on being told that his child was dead, "What! is it only that? I thought the enemy must be giving the assault!" The family ever afterwards adopted the motto, "My King is worth more than my blood."

The Empress also counts among her ancestors the celebrated Gonsalvo de Cordova, the greatest captain of his age; as also Antonio de Léva, the greatest General of the Emperor Charles the Fifth. One of the female ancestors was Luisa Francesca de Guzman, the wife of the Duke of Braganza, afterwards King of Portugal; and the blood royal of Spain also flows in her veins. She has certain collateral claims to the Spanish crown; in this respect, standing next to the Duke of Medina-Coeli, who regularly, at each coronation in Spain, makes a formal protest against the usurpation of his rights.

The father of the Empress, the Count de Montijo, embraced the cause of Napoleon when the latter entered Spain. He was an officer in the French army, and distinguished himself at the battle of Salamanca. Later, he was made a member of the Senate of Spain, being Grandee of Spain in right of no fewer than six titles. He died in 1839.

The Empress Eugenie was born at Madrid, but was partly educated in England—at Bristol, we believe—and resided, during her infancy and youth, alternately at Madrid, London, and Paris. Here it was that her beauty and accomplishments, which made her the ornament of every circle she frequented, attracted the attention of the Emperor, who at once saw in her the fitting Empress. The course of a throne were less the attraction for Madle. de Montijo than the admiration she had conceived for the Emperor's character. On both sides the marriage was one of affection. Of the ceremonial that attended it we gave at the time the most ample details. Since she has occupied the throne of France, the Empress has conciliated the respect and love of the French people. Her beauty, her unaffected cheerfulness of disposition, and, above all, her many virtues, endear her to the nation. Her charity and benevolence are already the theme of universal praise, and long before her elevation she had given proofs of extraordinary kindness of heart. On one occasion, passing at the moment when a poor workman fell from a scaffold, she stopped her carriage, alighted, and herself rushed to succour him. Hundreds of such anecdotes pass from mouth to mouth in Paris, while her larger and more public charities offer an example to the French ladies which they are not slow to follow.

ACCIDENT TO EARL GRANVILLE.—On Tuesday evening as Earl Granville was driving in his cab from the House of Lords to the Great Western Railway terminus at Paddington, on his way to Windsor Castle, on a visit to her Majesty, to dine with the Emperor and Empress of the French, he met with an accident, which happily was unattended by serious results. The noble Lord, President of the Council, it appears, was pressed for time; and, being anxious to catch the train, urged his horse to a pace so rapid that he lost all control over the animal, which at length carried the cab against a lamp-post. In the collision Earl Granville and his groom were both thrown out of the cab; the horse, a high-spirited animal, commencing to kick furiously, breaking both the shafts off short. Earl Granville was much shaken, but fortunately not seriously hurt. He availed himself of the bonnet of a friend then passing, and proceeded on his route to the railway terminus. The horse was uninjured, but the vehicle was greatly damaged.

FRENCH DARING-PROUD.—In the intervals between the sorties of the enemy the soldiers amuse themselves in the trenches in playing pitch and toss, or cards, or at bowls—the Russian balls serving as the bowls. Sometimes, too, to try the skill of the Russian riflemen, who are in ambuscade at fifty or sixty yards from the trenches, a soldier will put his cap on the head of a pasquy; and when the man hits it, which he almost always does, they host up a canteen, to signify that he deserves a drink for having fired so well. Four days ago eight of the soldiers were playing at dice in the trenches, and all at once a shell fell in the midst of them. *Qui vive?* cried one, with a laugh; and the moment after it was ascertained that of their party one was killed and six wounded. The other evening a sentinel, who was peeping through a hole in the parapet, cried, "Here are the Russians coming!" "Are they far off?" asked the others. "Not very!" answered the sentinel. "Well, when they are quite close tell us!" was the answer; and the man remained quietly seated. Presently the sentinel cried, "Here they are!" On which each man seized his musket, and, after firing a volley over the parapet, proceeded to attack the Russians with the bayonets, and in a few seconds routed them.—*Letter from Kamiesch, March 28.*

ROBBERY OF THE DEAD.—A painful sensation has been caused in Bristol by the sacrilegious violation of the vault in which for several centuries have reposed the remains of the Smyth family, of Ashton-court, situated about three miles from that city. It appears that there must have been at least seven or eight persons engaged in it; and, from the artistic manner in which the vault was laid open, it is quite plain that some mechanicians were engaged to conduct the operations. The object of the plunderers is pretty well known. Owing to some family differences, the aunt of the late Sir John and Sir Hugh Smyth resided by herself. She was of somewhat eccentric habits; and it was currently reported at the time of her funeral that a quantity of jewels were interred with her, and that, the body having been embalmed, the heart was placed within the coffin, enclosed in a silver box, and that the breastplate, handles, &c., of the coffin were of pure silver. The sacrilegious villains cut open the lead coffin of the late Sir John Smyth, and also that of the late Lady Smyth. The former they must have had some difficulty in removing from its position, as it took four men to replace it. They were disappointed, however, in their anticipations of plunder, the leaden coffin in which are contained the remains of the Dowager Lady Smyth remaining intact. It is supposed, also, that they were disturbed, as they left a dark lantern behind them, and some massive silver ornaments, which had been appended to the exterior of one of the coffins.

EXPEDITION TO THE INTERIOR OF SOUTH AFRICA.—By the *Antelope*, just arrived from the Cape of Good Hope, the agent of Mr. Chas. J. Anderson (not Andrews, as printed last week) writes that Mr. Green had been seriously ill at Walvish Bay, and that, consequently, it was very doubtful whether he would be able to prosecute his journey to Lake Ngami

MIRAGE OFF HASTINGS.—On the rising of the fog from the sea, the afternoon of the 16th, the ships in offing off Hastings were reflected in the most varied and grotesque forms. In one case a double reflection was seen; in others, the ship was reflected only once, reversed; and in others, where the fog was thinner, only topgallant-sails and royals were to be seen. The pla[illegible] half an hour

NAVAL AND MILITARY INTELLIGENCE.

THE *Duke of Wellington*, 131, flag of Rear-Admiral Dundas, sailed from Spithead on Monday afternoon to join the Baltic fleet.

WITHIN the last two months no less than ten whole companies of artillery have sailed for the Crimea, and many of them have already arrived at the seat of war. Last week 5000 infantry left the shores of the United Kingdom to reinforce our battalions in the Crimea. Early in May there will be full 6000 British cavalry at the seat of war

A REPORT having reached Dover on Monday evening that the *Amsterdam*, a fourth line-of-battle ship, was ashore off the South Foreland, instant orders were issued for the *Orion*, *Pylades*, *Cuckoo*, *Olio*, *Falcon*, *Harrier*, *Centaur*, and *Phœnix* to proceed to the assistance of the stricken distress. They instantly got up steam, and were quickly under way. On reaching her she was found to be high and dry on a ledge near St. Margaret's Bay, about three-quarters of a mile from a place known as the "Old Stairs," and about five miles to the north-east of Dover Castle, and under the cliff north-east of the South Foreland. The *Sprightly*, paddle-tender, was ordered to take a 24-inch hemp cable from the *Neptune*, whilst the Commander-in-Chief, Sir T. Cochrane, went himself to the scene of disaster in the *Fire Queen*. The *Sprightly* got alongside soon after eight o'clock, and found the *Amsterdam* was fast in 16 feet water, with a list to starboard in shore, and with only about 12 feet of water around her. The French corvettes were busily engaged in laying out warps and hawsers, so that, on the rise of the tide, at half-past eleven p.m., they should all heave with a will. She came off easily, and anchored in safety about a mile from the shore. The gallant crew then instantly set to work, got topmasts and topgallants on end, set up their rigging, and by nine a.m. on Tuesday the ship was again ready for sea.

THERE was a general muster of the City of Dublin Regiment of Militia on Saturday last, to ascertain whether any of the men were willing to volunteer for service in the Mediterranean. The men were formed in hollow square, when the Colonel addressed them in explanation of the course before them, mentioning the amount of bounty which was offered, namely, £3 to each man. The officers, on being asked if they would volunteer, walked into the centre of the square, with the exception of the doctor, Surgeon Leech. The men were then told off in companies, and individually asked, when it appeared that the great majority had volunteered to accompany their Colonel wherever he was going. There was loud cheering on this being announced. It appears that not more than three-fourths of any militia regiment will be required, the remainder is to stay at home and act as a dépôt.

The Galway Militia volunteered *en masse* on Friday for foreign service, the offer which was declined a few days previously by the Armagh regiment. Volunteering from the Kilkenny Fusiliers commenced on Saturday.

AN enormous quantity of shot, guns, and shell, rifles, pistols, and common arms have been supplied from the Royal Arsenal, Woolwich gun-wharf for the equipment of the Baltic fleet, and a very large supply of Colt's revolving pistols has also been provided there for the same service.

LAUNCH OF TWO FLOATING BATTERIES.—On Tuesday afternoon two large floating batteries constructed for the Government) were launched from the yard of Messrs. C. J. Mare and Co., at Blackwall. The scene was an animated one, and the fineness of the weather attracted a crowd of spectators. The first vessel, the *Meteor*, was launched soon after half-past one, and the second, the *Thunder*, a few minutes after two o'clock. These floating batteries, or enormous gun-boats, as they may be called, present a very imposing appearance. Their length between the perpendiculars is 172 feet 6 inches, their extreme breadth 45 feet 18 inches, and their depth in hold 14 feet 7 inches. Their tonnage is 1469. They are constructed with iron sides 4 inches to 4½ inches in thickness, and pierced for twenty-eight 10-inch Lancaster guns, carrying 84-pounders. The decks are of 9-inch oak, the beams being 12 inches square, and only their breadths apart. One peculiarity worthy of notice is that the mooring ports are below the water line. The extreme draught of water (with everything on board) will be 7 feet 9 inches. The *Meteor* and the *Thunder* were launched with the steam up. Their engines are high pressure, and of 300-horse power. The remainder of these floating batteries are in course of construction for her Majesty's Government in other yards, making five in all. On Tuesday the *Meteor* and the *Thunder* steamed down to Woolwich, where they will await the pleasure of the Lords of the Admiralty

THE LOSS OF HER MAJESTY'S SHIP "TIGER."—The court-martial which was opened at Portsmouth on Thursday week on board the flagship *Victory*, to try Lieutenant Hair and Mr. Edington (the sailing-master), of her Majesty's late ship *Tiger*, for the loss of that vessel on the morning of the 12th of May last at Odessa, was brought to a termination to-day. Having read their commission, the council called witnesses to character; after hearing which, the president (Rear-Admiral Martin) ordered the court to be cleared and, after four hours' deliberation, on the re-admission of the members and of the press, L. Worthan, Esq. (Deputy-Judge-Advocate), read the verdict of the Court, which was to the following effect:—"That the ship *Tiger* was run on shore in consequence of having been unskilfully conducted as she approached the coast of Odessa, and that, after the ship had been run on shore, the measures resorted to to get her afloat were very injudicious; but, in respect to the surrender of the *Tiger* to the enemy, that, as the ship was aground without any hope being entertained of floating her off, and as she was exposed to the enemy's guns, which had set her on fire, and upon which the guns of the ship could not be brought to bear, in consequence of such surrender, the court is further of opinion that no blame is imputable to Lieutenant Royer, since he acted under the immediate direction of his Captain, and the Court doth adjudicate him to be acquitted." The Court is further of opinion that Mr. Frances Edington is blameable for the want of caution which was exhibited by him in approaching the shore near Odessa; but, in consideration of his previous good character and long service, doth adjudge him to be only severely reprimanded; and the said Lieutenant Royer is hereby acquitted; and the said Francis Edington be, and is, hereby severely reprimanded. The Court was then formally dissolved

---

BURIAL OF THE DEAD BEFORE SEBASTOPOL

Camp before Sebastopol, March 30th, 1855.

I beg to enclose a Sketch of a subject so interesting that I think you may possibly consider deserving of a place in your journal. I will briefly repeat the circumstances which gave rise to this scene:

On the night of the 22nd instant the enemy made a very vigorous attack upon the whole line of the Allied intrenchments; and, though it was everywhere repulsed, it was not made without considerable loss on both sides. During the following day the plain was strewed with dead, both in front of our left and right attacks, but more especially in front of the Mamelon, a new and important work, which our ever-active enemies have recently thrown up in advance of the Redan and Malakoff Towers, and which, with a chain of rifle-pits in its front, has since furnished a constant bone of contention between them and our allies.

On the 24th a suspension of hostilities for two hours was agreed upon to enable both sides to bury their dead. It was intended that none but the burying parties should be allowed to pass beyond the works; but so great was the anxiety to tread on ground hitherto too closely guarded by the enemies' sharpshooters to admit of such trespass, that numbers on both sides pressed eagerly to the front, as soon as white flags of truce were waving on our batteries. English, French, and Russians intermingled in courteous intercourse, and much badinage, mixed with compliments, passed between them, notwithstanding the bloody scene around. "When are you going to take Sebastopol?" was the oft-repeated question of the Russian officers. "Not just yet," was the reply of an English officer; "we are at present too busy with our railway." The answer of a French officer was perhaps more polite, though no less significant. "Et quand prendrez vous Sebastopol?" "Mais jamais, Monsieur, vous etes trop braves." "Et quand alles vous quitter la Crimée." "Mais jamais, Monsieur," was still the reply

During this time the scene was most striking; and, in the accompanying Sketch, I have endeavoured to represent some of its points. On the right is the body of a gallant officer of Zouaves, which had been extracted from the ruins of a parapet thrown down by the enemy during their temporary success. On the left is seen part of this parapet, still occupied by the French covering party. In the centre of the picture is the Mamelon, its sides thronged with parties carrying the ghastly and distorted dead to a soldier's grave; and, in the distance, on the left, may be observed the ruined Round Tower, formerly demolished by our Lancaster guns, but now surrounded by a most formidable earthwork, and yet further strengthened by a deep trench and abattis along its front. Conspicuous from his height amongst the group on the right, is a Russian officer of distinction, wearing a long black pouche over his uniform. In general, I may observe, the Russian officers were well and carefully dressed; so much so as to lead some to conclude that they were got up for the occasion—a thing which assuredly could not be had to the charge of many in our own ranks.

The flags of truce continued flying long after the appointed hour; but at length, as the last of the burying party withdrew within our respective lines of defences, they were lowered, and the immediate crack of the rifle and boom of heavy artillery proclaimed that peace was at an end

H. I. WILKINSON, Capt. 9th Regt.

In consequence of a duel which recently took place at Madrid between two newspaper writers, the journalists of that city have decided that in order to prevent such affairs in future, a tribunal of honour, composed of two members, shall be nominated every month, to decide on [illegible] quarrels which may arise between gentlemen of the [illegible]

As there has been no selling-off whatever in connection with the firm of John Williams and Company since its commencement, 28 years ago, the present will be found worthy of notice, the stock of SILKS and GENERAL DRAPERY being the largest in the Metropolis

SOYER'S REGISTERED COOKING UTENSILS (as described in his "Shilling Cookery for the People") are manufactured and sold, wholesale and retail, by DEANE, DRAY, and Co., London-bridge. Established A.D. 1700 Illustrated priced lists post free.

EDMUND SPILLER'S BACHELOR'S KETTLES, all sizes, from 3s each, to the largest, to fit the Self-acting COOKING APPARATUS, from 1s 6d each. Edmund Spiller, Inventor, 98, Holborn-hill, London.

BIRD'S BAKING and FERMENTING POWDER, for Making the Finest Bread without Barm, in answer to innumerable Inquiries, the Public is informed that this valuable preparation can now be had wholesale and retail, at Messrs Fortnum and Mason's Italian Warehouse, Piccadilly, London; at Messrs Perry and Wood's, Grocers, King-William-street, City, London; and from the Inventor and Sole Maker, ALFRED BIRD, Purveyor to the Queen, Birmingham.

GENUINE COCOA of the FINEST QUALITY.—Cocoa has been designated by physicians of eminence as one of the richest articles of food, containing nourishment and, when properly prepared, is justly endorsed for its peculiarly valuable invigorating properties. So long, however, has been the ability to render this article a beverage manufacturing, and so strenuous the competitive efforts thereby excited, that the most flagrant adulterations have been resorted to.

The evils with which so boneful a system is fraught are strikingly manifest to the medical profession, who, therefore, unanimously prescribe its pure state as an article of diet, frequently recommend it to invalids as a medicinal agent in promoting health. The result, however, too often rendered nugatory by the impurity of the article supplied.

The magnitude of our legitimate business as tea-dealers necessarily precludes our devoting a single moment to the consideration of cocoa; we have, therefore, completed arrangements with the highly-talented firm of Messrs. Henry Tayler and Co., Leeds, whose many years experience in the preparation of this article, and their uncompromising determination to manufacture only from the choicest nuts, and to rigidly eschew admixture and (pernicious) vegetant as in recommending their "Genuine Trinidad Cocoa," price Tenpence per pound.

SIDNEY, WELLS, and CO., Family Tea-men, 8, Lad gate-hill

THE BEST FOOD FOR CHILDREN, INVALIDS, AND OTHERS.

ROBINSON'S PATENT BARLEY, for making superior BARLEY-WATER, is highly recommended by the faculty for the advantage of her Majesty and the Royal Family; but has become of general use to every class of the community; and is acknowledged to stand unrivalled as an eminently pure, nutritious, and light food for infants and invalids: much approved for making a delicious custard-pudding; and excellent for thickening broth or soup

ROYAL MEDICAL BENEVOLENT COLLEGE.

NOTICE is hereby given, that the ELECTION of PENSIONERS and FOUNDATION SCHOLARS is appointed to take place in LONDON, on THURSDAY, the 10th of JULY next

The Candidates, Members of the Profession duly qualified Medical Men, who have been in practice in England or Wales five years from the date of their diploma, or the Widows of such

Candidates for Foundation Scholarships must be the sons of duly qualified Members of the Profession, or the Orphans of those deceased

The Names of Candidates will not be received after the 1st of May next

The Governors vote by ballot, either personally or by proxy, having votes in the proportion of One for every Guinea subscribed annually, every Ten Guineas at one time, or Fifty Guineas as collected. Voting papers, containing a list of the Candidates and particulars relative to each Candidate, will be forwarded to every Governor one month previously.

Those gentlemen whose Subscriptions are due will oblige by remitting them at their earliest convenience, as the Annual Governors' Meeting is appointed to be held on the 10th of JULY.

Members of the Profession who may be desirous of having their Names added to the LIST of BENEFACTORS are requested to make early application to the Council JOHN PROTHERO, Treasurer.

Office, 37, Soho-square, April 5, 1855

ROYAL MEDICAL BENEVOLENT COLLEGE.

At a MEETING of the COUNCIL of the Royal Medical Benevolent College, held on the 7th of March, 1855—Sir JOHN FORBES, M.D., in the Chair—the following resolution was unanimously adopted:—

"That LADIES presenting a Donation of Five Guineas, on or before the Opening of the College, on the 6th of JULY next, be considered Life Governors."

The Council deeming the Opening of the Institution a suitable occasion on which to secure the moral and pecuniary support of a large body of persons friendly to the cause with a view of facilitating their election, it has been determined that Collectors be appointed in London on or before the time specified shall be constituted Life Governors. It is not probable that another occasion of sufficient importance to assist a similar step will occur, the Council therefore hope that this exceptional measure will be taken advantage of by supporters and contributors, whose interest in the Institution they are most anxious to conciliate

LADIES availing themselves of this privilege will be entitled to a VOTE at the ELECTION of PENSIONERS and FOUNDATION SCHOLARS, which is appointed to take place on the 10th JULY next.

JOHN PROTHERO, Treasurer

Office, 37, Soho-square, April 5th, 1855

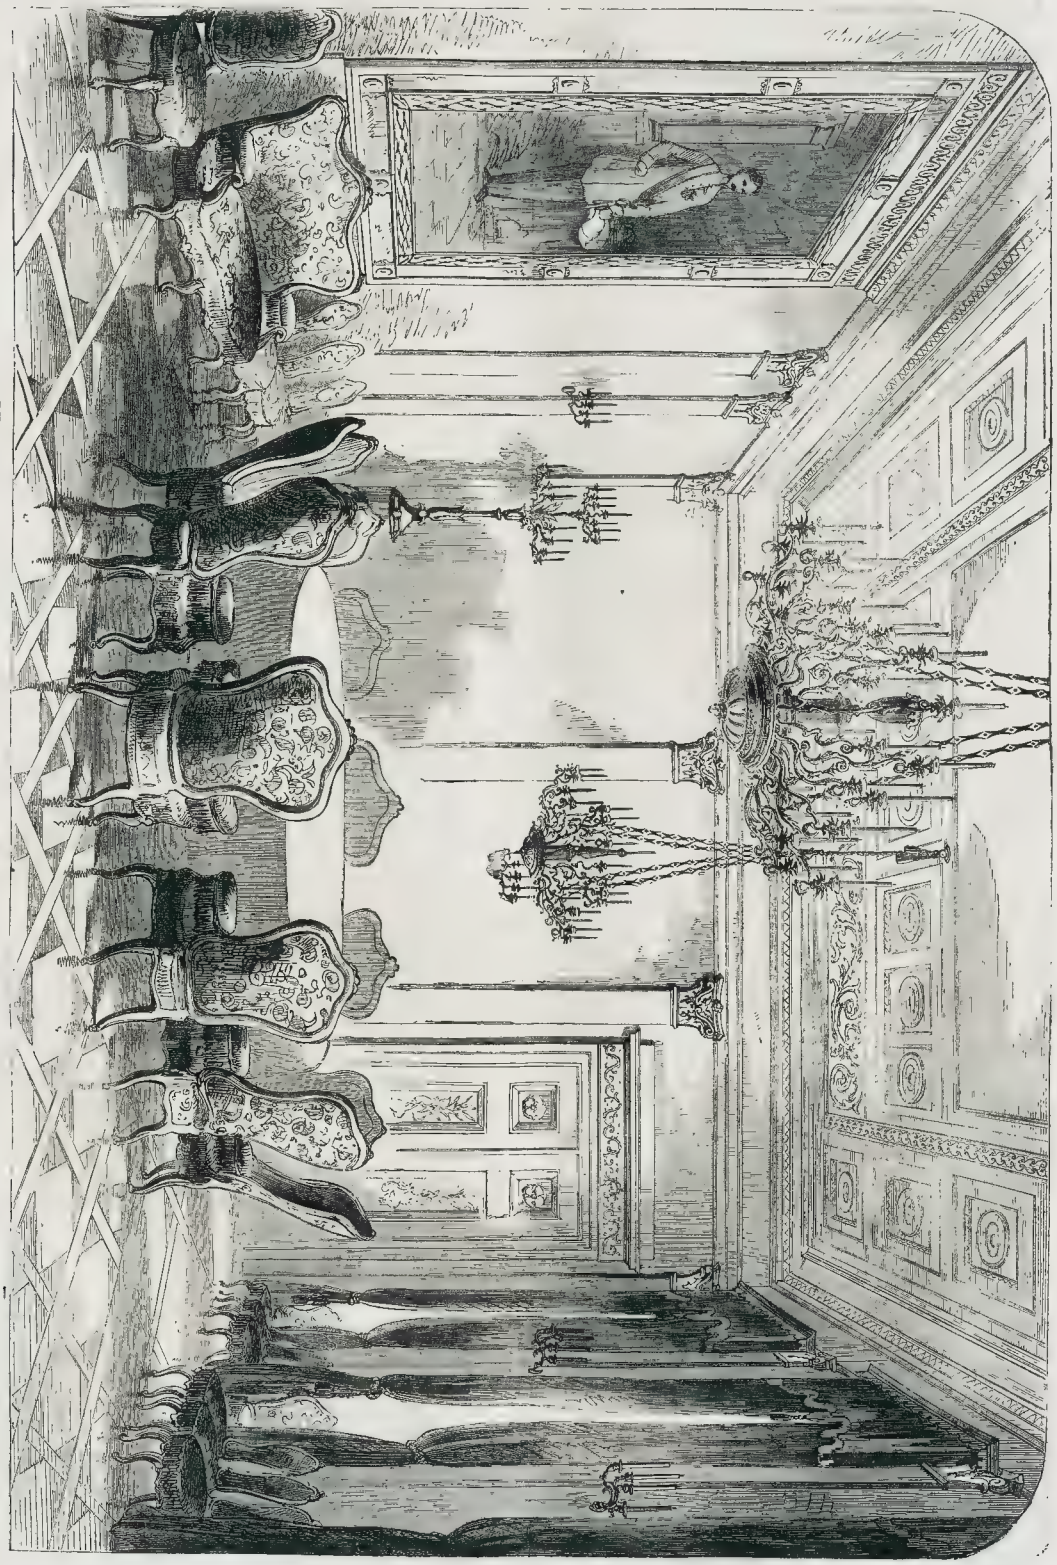
HER MAJESTY'S ROYAL LETTERS PATENT for the most powerful, widest-range pocket glass in the most powerful and brilliant TELESCOPES, Camp, Race-course, Opera, and Perspective Glasses, to know the distances, at Messrs. R. and J. SLOCOMBE'S, opticians, 20, Albemarle-street, Piccadilly, opposite the York Hotel They possess such extraordinary power that some, from 2½ to 6 inches, with an extra eye-piece will show distinctly the Georgian with his air satellites. Jupiter's moons, Saturn's ring, and the Double-stars. With Hexame Telescopes can be seen a person's countenance from three and a half to six miles distant, and an object from sixteen to twenty-five miles, for the warranted pocket glasses of larger and all sizes, with increasing power The Royal Exhibition, 1851, Jury Reports, "Very small powerful, telescopic pocket glass, in size of a walnut, by which a person can be seen and known one mile and a half distant; counting scenery and ships are clearly seen at twelve to fourteen miles." They are invaluable for shooting, deerstalking, yachting, to sportsmen, gentlemen, gamekeepers, and tourists Newly-invented spectacle lenses of the greatest transparency power. The valuable advantage derived from this invention is, that vision becoming imperfect from infirmity and strengthened and very aged persons are enabled to employ their sight at the most minute occupation can see with those lenses of a much less magnifying power—and they do not require the frequent changes to the dangerous effects of further powerful assistance

DEAFNESS.—The ORGANIC VIBRATOR an extraordinarily powerful, small, newly-invented Instrument, for deafness, entirely different from all others, to surpass anything of the kind that has been, or probably ever can be, produced. Being of the same colour as the skin, it is not perceptible It enables deaf persons to hear distinctly at church and at public assemblies The unpleasant sensation of singing noises in the ears is entirely removed, and it affords all the assistance that can possibly be desired For Albemarle-street Consult or Pamphlet, sent free

THE SIEGE OF SEBASTOPOL.—BURIAL OF THE DEAD IN FRONT OF THE MALAKOFF TOWER.—(SEE PAGE 382.)



THE CONFERENCE-ROOM, AT THE FOREIGN-OFFICE, VIENNA.—(SEE NEXT PAGE.)

THE APARTMENT IN WHICH THE VIENNA CONFERENCES ARE HELD.

PUBLIC attention is once more attracted to the important decisions which are about to be taken within the walls of this venerable building, and from whence will shortly go forth the resolutions of the Great Powers of Europe, either to continue the present war, and to extend its limits, or to conclude an arrangement which shall restore to our part of the globe the blessings of a peace which is based upon an honourable, sure, and lasting basis. The solution of this all-important alternative constitutes the grave task that is entrusted to the "Vienna Conferences," which are now being held in the very same apartment of this ancient palace where the celebrated European Congress met in solemn deliberation in 1814 and 1815, to determine on the destinies of the world in those eventful days. It was here that the late Duke of Wellington received, on the 11th of March, 1815, a despatch from the Earl of Westmoreland (then Lord Burghersh), the British Minister at Florence, which first announced the important intelligence that Napoleon Bonaparte had quitted the island of Elba—and thus broken the terms of his first exile—for the purpose of reassuming his authority in France. It was here that the memorable protocol proposed to the Congress by Prince Talleyrand was signed by the assembled representatives of the Powers on the 13th March, 1815, which terminated their arduous labours, with the view to the resumption of the contest against the great disturber of the peace of Europe in those days.

FOREIGN AND COLONIAL NEWS.

FRANCE.

(From our own Correspondent.)

PARIS, Thursday.

A REPORT has been going the rounds here—and has even met with some credence—that the Emperor, after his visit to England, would proceed to Vienna. On what grounds such a rumour was started does not appear; and what *rôle* Napoleon III. is to play during the sitting of the Conferences—in which, necessarily, he can take no part—seems still less apparent. If there be any truth in the statement of his intention of going to Vienna, the journey will doubtless take place when the closing of the Conferences will have brought about some solution of the present question.

Great preparations are making at St. Cloud for a splendid fête to be given to the Queen.

The opening of the Exposition de l'Industrie for the 1st of May seems a thing quite decided on; but as it is impossible that it can be ready for the contanuous reception of the public at that period, it is to close, after the inauguration, till the middle of the month. Meantime Paris is rapidly filling, more especially with English, who occupy nearly all the hotels on the Boulevards, and in the most frequented parts of Paris. This is the moment for those who have furnished apartments to let; so great has the rage for speculation on this point become, that *entrepreneurs* go about from house to house, belonging to private individuals, who have nothing further than such a speculation in their heads, depositing circulars, and making proposals to take their dwellings off their hands, without risk or loss to them, for the purpose of underletting them to the visitors to the Exhibition.

It appears that the great amateurs of the noble and humanising sport of bull-fighting in Madrid propose to initiate the French and other unenlightened Europeans into the joys and edification of this elevating pastime during the continuation of the Exhibition. A petition signed by many of the noblest names in Spain, and backed warmly by M. de Turgot, the French Ambassador, has been presented to the Government here, for the authorisation of the introduction; and the Duc d'Albe has, it is said, written to the Empress to request her support. Already, so secure do the noble sportsmen at Madrid feel of the success of the demand, that they have entered into treaty with Cucharès, the first toreador in Spain, as well as other stars of fainter radiance in the same horizon, to undertake the expedition, which will be composed almost entirely of the company which delights and edifies the leisure of the Spanish Court. We ought, indeed, to be proud at having the chance offered us of seeing spilled only the same blood that would have flowed before the eyes of Royalty in its native soil. We think it almost a pity that the idea of representing to the eyes of Europe, assembled on this occasion of public interest and instruction, a few scenes revived from the Inquisition, has not suggested itself to these amateurs of blood and wanton cruelty.

There is a rumour—which, however, we believe to be wholly without foundation—that the Government has authorised the Cercle de l'Exposition, established at the Hôtel d'Osmond, to permit play, but only among the foreigners who visit Paris for the Exhibition. When two years ago a similar request was made to the Emperor for a gaming house at Enghien he formally refused, adding that he would never consent to the re-establishment of play at Paris, on any pretext whatsoever. It appears little likely, therefore, that the well-known firmness of the Emperor, and his habitual adherence to any determination he has once made, should yield on this occasion.

By desire of the Emperor the city of Paris has, by means of exchange, possessed itself of the grounds of Boulogne, St. James, and Neuilly, which border the Seine, with the intention of extending to that boundary, the Bois de Boulogne. The great racing-ground of Longchamps is included in the bargain, and it is the Emperor's own hand that has traced on the plan to be presented to the Corps Législatif the lands to be exchanged on either side to complete the arrangements.

We regret to have to announce the serious illness of one of the most distinguished literary women of the day, Madame Emile de Girardin. We trust, however, that there is nothing in this malady to excite any ulterior alarm among Madame de Girardin's numerous friends and admirers, and that care and repose from her too arduous literary labours may restore her.

A few days since a chestnut-tree, planted eighty years since by Buffon, in the Jardin des Plantes, fell from old age.

We learn that Rossini, who was expected to arrive here during the course of the summer, has been attacked with a serious illness, supposed to be miliary fever, which is very prevalent, and often dangerous, in Tuscany.

M. Scrrot, author of the highly-popular piece "Que dira le Monde?" has lately completed a new work, entitled "Le Bonheur des Riches," which was to have already appeared at the Odéon, but, in consequence of some scruples of the Censure relative to the character of a certain banker in the piece, the representation has been delayed. There appears, however, no doubt but the difficulties will be raised, and the play shortly produced.

The principal theatrical news of the day here is that Cerito is studying singing, and is to *débuter* at the Opera in London, in the capacity of cantatrice. We give the report without venturing any remark on the probability of its authenticity—in support of which the rumour in question cites the examples of Mdlle. Nathalie Fitz-James, and of Carlotta Grisi, who in a piece entitled "Le Zingaro," at the Théâtre de la Renaissance, appeared with a certain success as singers.

THE AUSTRIANS IN THE PRINCIPALITIES.—I have already mentioned to you the little sympathy which the inhabitants of the Principalities entertain for the Austrians, and the dislike of the Austrians to them. The ill-feeling between the two has led to a sad affair, followed by a rising at Krajova. An Austrian officer perceived a Wallachian lady at a window; struck by her beauty, he entered the house and acted rudely towards her. The husband hastened to defend his wife, and a quarrel ensued, in which the husband was killed by the officer. When this became known, all the population took up arms. The Austrian authorities, when called on to do justice, would not consent to punish the officer, on which the Wallachians determined to do justice themselves. A veritable battle took place, and more than 300 Austrians perished. The Turkish authorities had to interfere to establish order. Since then Krajova has resembled a besieged town. The shops are closed. The Wallachians occupy the interior of the town, and the Austrians are encamped outside. A deputation has been sent to Constantinople to complain to the Sultan of the foreign occupation. How this affair will end is not yet known here, but it has caused a great sensation.—*Letter from Pera, April 3.*

THE WAR IN THE CRIMEA.

The long-threatened, often-postponed, bombardment of Sebastopol has begun at last, and any hour may now bring the news of a great victory, or a disheartening defeat. From the different despatches which have arrived through English, French, Austrian, and Russian channels, it is plain that the attack was prosecuted with vigour, and with considerable success. The fire commenced at five a.m. on the 9th of April, and continued without interruption throughout the night and the two following days. Prince Gortschakoff (whose reports have usually been more accurate than those of his predecessors) reports a loss of 833 men on the two days, which is considerable when caused exclusively by a fire against covered defences, and, although he states that the Russian batteries have replied with success, he does not dispute the extent of the damage which such a bombardment must have inflicted. The Allied forces were in a condition to open their fire from no less than 500 guns and mortars, the greater part of which far exceed in range and in weight the guns employed at any former siege. In fact, the Allies have brought to bear against Sebastopol an amount of artillery equal to at least five ordinary siege-trains in number, and superior in calibre. These enormous pieces of ordnance have hitherto been almost exclusively used in marine artillery. There is no instance of such an extent of batteries, armed in such a manner, against an intrenched town; and, if any reliance can be placed on the opinion of Sir John Burgoyne, he is known to have expressed his conviction at Vienna that it is impossible for the place to hold out against such a fire as the Allies were about to open against it.

It is impossible to say what the plan of the Allies is; but as it appears from accounts from Kamiesch, dated the 7th, that 8000 Turkish troops had arrived close to Sebastopol, and that 12,000 more were expected, under the orders of Omer Pacha, it seems probable that a general assault *is* in contemplation.

As we stated last week, the intention was to begin the bombardment on the 3rd inst.; and it is said that everything was ready for doing so. The *Moniteur de la Flotte* gives a letter from Kamiesch, in which it is said that the Allies did not deem it proper to begin the work of destruction either on Good Friday or Easter Sunday, and that the bombardment was postponed on that account. Another letter ascribes it to an expectation on the part of Lord Ragian and General Canrobert that the negotiations at Vienna would supersede the necessity for any rough work.

According to the *Presse*:—"The Allies, on the 9th, made a breach in the bastion between the centre of the Russian works and the Quarantine Fort. Admiral Bruat has anchored in Streletzka Bay, and waits for fine weather to begin his operations. It is said that three Russian batteries have been dismounted."

Official intelligence has been received in Paris up to the 12th inst. On that day the fleets were ranged in line of battle before the port of Sebastopol. The bombardment had been kept up against the Malakoff Tower, but without result, up to that date.

We have been favoured with the following private letter from the Camp from the son of Dr. Marsden, of Lincoln's-inn-fields:—

March 23, 1855.

My dear Father,—About a week ago I left Scutari, and have been now two days at Balaclava, this evening I have received orders to proceed to the Third Division of the army. I shall be attached to a regiment, most likely the 89th. The other day I went up to the Camp, and dined with a friend. We went all over the batteries; the firing continues, without intermission, day and night. When in the Green-hill battery, standing in the parapet to obtain a good view of the town, three round shot, 32-pounders, were fired at us, passed over our heads, and tore up the earth about fifty yards beyond, and went bounding over the hill. I had a capital view of all the works, both our own and also those of the enemy. Everything at the Camp is apparently as satisfactory as possible, and the men, a number of whom I questioned, are most cheerful, and enter into the spirit of the thing, heart and soul. The English and French lines extend from about two miles on the right of Balaclava to Sebastopol about ten miles in all, and the Russians are in the hills, all along this line. The general impression seems to be that as soon as 500 rounds of shot can be got up for each gun that the bombardment is to commence. If this be the case I shall come in for the Sebastopol clasp. But there is no doubt that before Sebastopol falls an immense number of lives must be lost; for the moment we open fire the whole line, from Balaclava to Sebastopol, will in probability be attacked. It is a most beautiful sight to see the firing, particularly at night; the shells look beautiful. I slept in the Camp the night before last, and the cannons were going all night. To-morrow I shall begin my tent life, and I think I shall like it very much; the rations are much better than at Scutari, and everything much better; I may also have a chance of a little operating. I slept in the tent of Captain Hill: he was on duty in the trenches. The Russians attempted three sorties; in the two first he was not by a ride, and so taken prisoner: the impression is that he was killed. On the back of this paper is a rough plan of the operations; the south shore of the harbour should be carried out to the sea much farther, but otherwise it gives a tolerable idea. I will write again soon. I am writing this in a great hurry. Trusting this will find you quite well, and with kindest regards to all my friends,

Believe me your most affectionate son,
ALEX. A. MARSDEN.

THE BALTIC FLEET.

On the 14th inst. a few of the flying squadron were at anchor off Copenhagen, and two others passed by that place on the 15th, from Elsinore, steering in a southerly direction. A couple of other vessels are mentioned as having arrived at Elsinore from the north, supposed to be some of the main fleet from the Downs. The frigates *Bargoyle* and *Inspérieuse* left Kiel harbour on the morning of the 15th. The principal part of the main fleet, under Admiral Dundas, was expected to arrive at Kiel in the course of three or four days. On the 13th there were seven or eight of the British steamers lying in the harbour of Lessoena. The British officers had been welcomed by the town authorities and the military commandant of the place in the most cordial manner possible.

The winter, which has been this year extremely severe and persevering in the north, has at last been succeeded by a sort of spring, which promises the speedy reopening of the navigation, interrupted during the last four months. It was expected that the entrance into the Baltic by the Sound and the Great Belt would no doubt be navigable about the 17th.

The *Independance Belge* states that several Russian merchantmen ventured, in the month of December last, to quit their harbours and put to sea, in the hope of being able to reach their destinations before they should be blocked up by the ice. Most of those vessels, however, were surprised by the winter in the Baltic. Some of them arrived at Malmoe, but others were completely hemmed in by the ice, in the open sea, between the Island of Gothland and Sweden. Two of those unhappy vessels actually spent the whole winter thus locked up within a few leagues of the port of Westervik, a town situated on the Swedish coast, opposite Wisby, in Gothland. It is expected that these vessels will be captured by the English cruisers the moment they can be approached, for it is impossible for them to escape.

AMERICA.

The mail steam-ship *Atlantic*, which left New York on the 4th inst., arrived at Liverpool on Wednesday.

The new postage law passed into effect on the 1st inst. All letters henceforth must be prepaid. If not, they go to the dead-letter office.

A savage riot occurred at the election in Cincinnati on the 2nd inst. between the foreigners and Americans. The ballot-boxes were destroyed at the outset; and whether the Know-Nothings or the "Sagnicht" party elected their candidates could not be ascertained. Several serious fights took place in different wards of the city during the early part of the day, but in the afternoon a terrific battle came off in the Eleventh ward. The Dutch paraded with a loaded cannon, bidding defiance to their adversaries. They were speedily attacked, their field-piece captured, and its fire turned upon its former possessors. It was reported that three foreigners had been killed. One American was so severely wounded that for a long time his life was despaired of. In the evening the Americans formed in procession, with loaded cannon, and paraded the streets; and it was feared that during the night the riot would be renewed with increased fury.

It is supposed that five hundred recruits for Great Britain have been raised in Philadelphia. On Wednesday fifteen were arrested in that city, just as they were leaving on board a steam-boat for New York. An examination into the facts of the case took place on the 31st ult. About fifty passengers left Boston on the 29th, on board a brig bound for Halifax. It is generally believed that they were recruits from New York for the British Army, but the agent of the vessel affirmed that they were engaged as railroad labourers.

Havannah dates are to the 28th ult. Ramond Pinto, chief of the conspirators, suffered death by the garotte on the 22nd. He protested his innocence to the last. Cadalzo and Pinelo, it was supposed, would be sentenced to ten years in the chain-gang in Africa. It is stated that the American Consul had notified to the Captain-General, by direction of Secretary Marcy, "that if one drop of American blood is spilled in the present crisis, the Government of the United States will not be answerable for the result." Francisco Estrampes, under sentence of death, is an American citizen; and it remains to be seen whether General Concha will commute his punishment or accept the alternative presented. Arrests continue to be made. Some fifty persons have been imprisoned on suspicion of political disaffection.

A letter from Washington, in the *Tribune*, states that the plans of the Filibusters are not affected by the recent discoveries in Cuba, nor by the severity with which General Concha is punishing their accomplices in the island. A large expedition is about to sail from New Orleans and other southern ports. Stores of arms and ammunition have been sent forward to an island near Cuba, and as soon as advices are received that these articles are safely landed the men will set out. The military organisation is represented as being complete, and many of the officers have seen service in the American Army.

THE OVERLAND MAIL.

Despatches by the Overland Mail, dated Calcutta, 10th; Madras, 14th; and Bombay, 18th March, have been received.

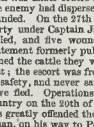
The *Bombay Times* speaks of much excitement having been caused by the opening by Government of a 6 per cent loan of two millions sterling, to be employed on public works.

We have still troubles on the Peshawur frontier, and a force of 3000 men was under orders to take the field on the 1st, when it was found that the enemy had dispersed of their own accord, and the troops were countermanded. On the 27th of February a successful foray was executed by a party under Captain James, when forty hill people were captured, three killed, and five wounded, and a hundred head of cattle secured. The statement formerly published, that a party of the 10th Cavalry had abandoned the cattle they were carrying to Fort Mackeson, proves to be incorrect; the escort was from the 14th Irregulars, who carried off their booty in safety, and never saw the marauders before whom they were said to have fled. Operations were ordered to be commenced in the Meeranzai country on the 20th of March. The proposed treaty with Dost Mahomed has greatly offended the hill tribes, who have intercepted his son, Hyder Khan, on his way to Peshawur, to meet Mr. Lawrence.

It is at length resolved that the Hooghly is to be bridged. The order from the Court of Directors to this effect has been received by the supreme Government. A bridge of the same character as the Britannia Tubular Bridge is to be constructed in England, and sent out to India to be erected opposite the Calcutta Mint, and so carrying the people directly over the river to the railway station at Howrah.

OBITUARY OF EMINENT PERSONS.

SIR HENRY THOS DE LA BECHE, C.B., F.R.S.



THIS distinguished geologist died on the 13th inst. He was born in 1796, the son of the late Thomas De la Beche, Esq., of Halse-hall, Clarendon, Jamaica, a Colonel in the Army, by Elizabeth, his wife, daughter of J. Smyth, Esq., of Downham. He claimed descent from the family of the Barons De la Beche, seated at Aldworth, Berks, temp. Edward II. At the period of his lamented decease he was Director-General of the Geological Survey of the United Kingdom, and of the Museum of Practical Geology, as well as a member of the Board of Towns Commission. As a writer on Geology, Sir Henry stood deservedly high. He married, in 1818, Letitia, daughter of Charles White, Esq., of Loughbuckland, county Down, and became a widower in 1844.

A Portrait of the late Sir Henry De la Beche, with a copious Memoir of his eminent scientific labours, appeared in the ILLUSTRATED LONDON NEWS.

WILLIAM WILLIAMS, ESQ., OF ABERPERGWM.

THIS gentleman—the earnest advocate of the cause of Wales and Welshmen—died on the 17th ult., at his seat, Aberpergwm, in the co. of Glamorgan, in the 67th year of his age. He had married, in 1837, Matilda, only daughter and sole heiress of Colonel Smith, of Castella, co. Glamorgan, by Matilda, his wife, daughter of John Bush, Esq., of Burcot, co. Oxford, and leaves four sons and two daughters. Mr. Williams was descended from a long line of ancestors who held for centuries princely rule in portions of South Wales, and he was possessed of extensive and valuable estates in the counties of Glamorgan and Brecon. He was the eldest son of the late Rees Williams, Esq., of Abergwrgan and Maesgwyn; and at an early age he went to one of the great public schools (Eton, we believe), and afterwards pursued his education at St. John's College, Cambridge. After he had finished at Cambridge, he started on a foreign tour, and remained abroad about sixteen years. During that period he associated and conversed with the most distinguished men of the age, and visited every capital and almost every city in Europe, together with a great portion of Asia and Northern Africa. Having lived for some time in Turkey, Russia, Poland, and the Crimea, he was able to entertain his friends with clear and comprehensive notions of the aggressive nature of the Russian policy, and graphic descriptions of the almost impregnable fortresses which have been raised for the protection of that empire—such as Sebastopol, Cronstadt, &c. On the 24th ult. his remains were deposited in the family vault in Aberpergwm Chapel. The funeral was private, but his numerous tenants and hundreds of the neighbours followed the mournful procession, being anxious to show the last token of respect in their power to one who lived among them, and also always advised them for the best. The beautiful service of the Church of England was impressively read in Welsh the language which the deceased in life loved so well—by the Rev. W. Griffiths, B.D., incumbent of Resolven. As a magistrate, as a landlord, and as a private gentleman, his conduct was always upright and unimpeachable.

A BASHI-BAZOUK VICTORY.—Yesterday afternoon the Bashi-bazouks showed themselves, for the first time, in the Crimea in all their glory as irregular troops; but, at the same time, in all their ferocity. After the cavalry demonstration last week, which served to mask the construction of the new works, when it became clear that the Turks had no intention to advance, the main body of the Russian cavalry, which had been brought up for the occasion, was again withdrawn, and only the usual outposts left. The first of these posts is to the right on the other side of the bridge which leads over the creek running in from Lake Sasik. The next to it, towards the left, leans on the village of Kamara. The ground slopes gradually from the above-mentioned creek. The videttes thrown out by this post occupy a ridge overlooking the village, and concealing it. It was determined to surprise this post, and push forward to the village. In order to draw off the attention, several large bodies of regular cavalry were ordered out, and, some days ago, a number of the rifle guns were sent to the right, towards the bridge. While this cavalry was displayed on the most prominent points, the Bashi-bazouks divided into three bodies, and, concealed by the undulation of the ground, went off at full speed towards the village. The Russian videttes, accustomed to former reconnaissances, which were always seen half an hour before they could reach, thought themselves in such security that they had got off their horses, and some of them even laid down. The videttes had scarcely time to mount and to retire on their reserves on the ridge above the village when the Bashi-bazouks, with one furious yell of "Yallah Illah!" were upon them; a hand-to-hand *mêlée* ensued, Cossacks and Bashi-bazouks were for a moment mixed up together, furious yelling and firing on both sides, which ended in the flight of the Cossacks towards the village. In the village they made another stand, the fusillade continued unabated; but the Cossacks were evidently demoralised, and soon after made a precipitous retreat from the village, leaving all their baggage, fur cloaks, cooking utensils, and a quantity of corn and hay behind them. The Bashi-bazouks, intoxicated by their success, were for following them up to the ridge beyond the village, whence they had halted, but already clouds of dust were seen in the distance, and shortly after nine squadrons and four guns appeared in sight. So the little drums began to beat the retreat, and the Bashi-bazouks, laden with copper dishes, cloaks, forage, &c., singing and caracolling, retired unmolested. A Bashi-bazouk cannot understand warfare without liberty to plunder. Plunder is for him a proof of victory, and one can see him often taking up the most useless things, only to have something to show. When he sees plunder before him the Bashi-bazouk becomes reckless; thus, in the affair of yesterday, while one part of them was fighting the village at close quarters with the Russians, others were dismounting from their horses, and taking up whatever they could find, regardless of consequences. Considering the numbers engaged and the short time, the losses were severe, those bringing 400 Bashi-bazouks attacked about 300 Cossacks and a squadron of regular Lancers, and the former lost two horses and one man, while the latter had two men and three horses killed, and one man severely wounded. This small affair has incredibly raised the spirit of the Turkish cavalry, which had been rather depressed by the repeated checks which they had experienced in their former reconnaissances. The entry of the Bashi-bazouks into the town was quite a triumph, Turks and Tartars hailing them with "Ay Wallahs" and "Mash Allahs," and thronging to see them. Two persons who had got hold of a cow were the principal points of attraction. Their return in the lovely spring evening, their picturesque costumes, the excitement of the population, the sound of their war drums, intermixed with the shouting and singing, formed one of the most interesting scenes imaguable.—*Letter from Eupatoria, March 29.*

THE EMPEROR'S VISIT.

(*Continued from page 339.*)

DEPARTURE OF HER MAJESTY AND THE EMPEROR AND EMPRESS OF THE FRENCH FROM WINDSOR.

On Thursday morning her Majesty the Queen, Prince Albert, and their Imperial Majesties the Emperor and Empress of the French, took their departure from Windsor Castle, about a quarter past eleven, and proceeded by the South-Western Railway to the private station of Queen Victoria at Nine Elms. The preparations for the reception of the Emperor and Empress of the French at Nine Elms were of the most heart-stirring character, the length of the Wandsworth-road being studded with countless thousands of persons. The private station needed for the special use of the Queen and Royal family was fitted up with great splendour, the raised platform being covered with crimson cloth. On either side, except the space necessary for the Imperial and Royal egress to their carriages, were raised seats surmounted by canvas and gracefully festooned with flags, in which the tricolour was particularly predominant, although associated with the Union and Standard flags of our own country. Shortly before eleven o'clock a squadron of the Life Guards, and a guard of honour, with a trumpeter in full dress, arrived at the station, and took up their position opposite the entrance gate; two companies of the Grenadier Guards, numbering 160 rank and file, arrived shortly after, and took up their position on the south-west side of the platform; the band of the Coldstream Guards were in attendance, and during the morning played numerous popular pieces of music. The companies of the Grenadier Guards, as guard of honour, were under the command of Colonel Rouse. The squadron of Life Guards under that of Captain De Ros.

The hour at which the Queen and her Imperial guests arrived was somewhat beyond the time fixed, it being twelve o'clock before their arrival at the station. A few minutes before the arrival took place the signal-flag was hoisted announcing the approach of the Royal cortège, and in a few seconds the military and civil officials were formed in order. On the arrival of the train at the platform, containing her Majesty, his Royal Highness Prince Albert, the Emperor and Empress of the French, the band of the Coldstream Guards struck up the French air of "Partant pour la Syrie," which was continued until the time of their Majesties' departure. The greatest possible enthusiasm prevailed, and both our own gracious Queen and their Imperial Majesties, on alighting from the train and entering the Royal carriages, were loudly cheered, the troops of the Grenadier Guards presenting arms. On emerging from the railway gates the immense crowd present took up the cheering in the most loyal manner, and certainly a more pleasing exhibition of enthusiasm mixed with loyalty has never been displayed. The Royal cortège then proceeded over Vauxhall-bridge, along Millbank, to Abingdon-street, at which point the enthusiasm was immense.

On either end of Vauxhall-bridge seats were raised and flags and banners displayed crowds of well-dressed persons, principally ladies, being present, and, in reply to their acclamations, the acknowledgment of their Majesties was most pleasing. Their progress through Parliament-street to the Horse Guards, and through the Park to Buckingham Palace, was of a similar character

The arrival of her Majesty and the Emperor and Empress at Buckingham Palace was one which will be recollected for many years by those present. The enthusiasm and cheering exceeded all that has been heard for many years in this country. The State band of the Life Guards were stationed in front of the Palace, and, on the arrival of the Queen and the Emperor, again struck up the air "Partant pour la Syrie," and the National Anthem. Their Majesties, on their arrival, were received by Earl Spencer, the Marquis of Breadalbane, and the Duke of Wellington.

THE IMPERIAL VISIT TO THE CITY.

Although the reception which the illustrious visitors met with on their arrival in London on Monday afternoon was of the most generous and enthusiastic character, it was far less brilliant than it would have been if the people generally had known the route their Majesties proposed to take. The opinion was general that on that day they would leave the main line of the South-Eastern Railway at the Red-hill junction, and proceed by the Reading, Guildford, and Reigate branch to Windsor, and thus altogether avoid the metropolis. It was not until the appearance of the morning papers on Monday that the public became aware that there had been any alteration in this route, and comparatively few and meagre arrangements were made for greeting them as they passed along our great thoroughfares. But on Thursday there were no drawbacks of that kind, and the citizens of London had afforded them an opportunity of showing how cordially they appreciate the visit of his Majesty and his illustrious Consort, as an evidence of the strength of an alliance between the two greatest nations of Europe, the importance of which cannot be overrated, and the beneficial results of which it is impossible too highly to estimate. From the moment their Majesties reached London until their arrival at Buckingham Palace, and again, from the time they left Buckingham Palace until they reached Guildhall, an unbroken cheer greeted them. Their Majesties graciously acknowledged this mark of respect.

PREPARATIONS FOR THE RECEPTION.

At an early hour in the morning the metropolitan police, under the command of Sir Richard Mayne and Captain Hay, and the civic force, under the direction of Mr. Daniel Whittle Harvey, took possession of the streets, and to their admirable arrangements is to be attributed the strict order which prevailed. From the South-Western Railway station at Vauxhall, where their Majesties left the line, to Buckingham Palace, flags floated from nearly every house; and the same remark applies to the Strand, Fleet-street, Cheapside, and the other thoroughfares along which they had to pass. But it was in the immediate neighbourhood of the Guildhall, and in that splendid building, that the most striking preparations were made. At the corner of King-street, facing Gresham-street, barricades were put up to protect those whose duty it was to receive their Majesties at that spot; and from St. Lawrence Church, all round the Guildhall-yard, commodious galleries were erected for the accommodation of the citizens and their friends. Just at this point an enormous pavilion was erected. This structure was 90 feet in width, of canvas, stretched over to form the roof, which extended in length just 97 feet, and was fitted up on each side by ten rows of raised seats, capable of containing 2000 persons were thus accommodated. The top of the pavilion was covered with scarlet and white bunting, and the sides were hung with scarlet and white, and appointed with Emperor and English trophies. Eight pillars on either side placed to support the top were covered with red and white bunting. From the front of this pavilion stretched an awning 20 feet wide and 140 feet long, terminating at the corner of Gresham-street, from which a canopy bulged to form the grand entrance to the Hall. This, as well as the awning, was surmounted by the flags of all nations except Russia, the city and also the French arms were emblazoned in bright colours upon the circular shields upon the trophies. A beautiful ornamental device, in cream colour, bearing the following, "Alma, Balaclava, and Inkerman," was placed in front of the upper windows, which, being surmounted by the French and City arms, had a most magnificent effect. The tops of the flag-staffs attached to the trophies had splendidly-gilt eagles and spears attached, and the light shining from behind the devices gave them the appearance of solid burnished gold. In the yard there was also erected a most elegant refreshment-room, 76 feet long and 22 feet wide, formed of red and white bunting, and differing in appearance widely from the ordinary canvas marquees, inasmuch as the bunting was employed, as thin as cambric, and, whilst it afforded full protection to those who were seated beneath, allowed the light to show up the brightness of the colours. The appointment in this compartment consisted of festoons in red, white, and blue. The Great Hall was covered with garters, with the exception of a portion set apart for his Majesty and suite to pass over, and the eastern end, where the throne stood. On each side of the entrance to the throne were eight rows of raised seats, whilst a little more to the east were six raised, and separately standing places. At the western end of the Hall was a spacious gallery, divided into three classes. In order to provide this amount of accommodation it was found necessary to raise the figures representing Gog and Magog some three or four feet, although each figure weighed about a ton. The whole of the monuments were cleaned, and not fewer than fourteen trophies 30 feet high were placed in the Hall—seven on each side. Affixed to the top of a pole was a wreath of Peace in gold and white, encircling the French Eagle, under which was a large circular piece of work bearing an admirable medallion of the Emperor; following this downwards was a splendid circle. After which was an entablature bearing the name of "Napoleon" in gold letters. Seven of these, in honour of France, were matched by an equal number representing England. At the top was a similar wreath of Peace encircling the British Lion, and underneath it a circular piece of work bearing a medallion of her Majesty the Queen A little below was an entablature bearing the name Victoria. Passing from the Hall towards the Council-chamber, on the right hand was a spacious apartment, carpeted and tastefully embellished with plants and flowers, prepared for the suite. The boudoir for her Imperial Majesty was sumptuously provided with richly-gilded furniture. The sofa and chairs had a most brilliant effect, which was relieved by the elegant lace window-curtains The chief decoration, however, of this unique apartment was the toilet, upon which was a magnificent mirror in a carved gold frame, and the whole draperied with rich lace festooned hangings over white satin. The toilet bottles and china vases were selected for their artistic beauty and superior manufacture. The lavement-stand, covered with a beautiful slab of white marble, had the usual fittings in white and gold china, with splendidly cut-glass ewer and goblets. A cheval-glass in gold frame adjoined the toilet, and the flooring of the apartment was covered with Turkey carpet.

Perhaps the most interesting feature in the whole of the fittings upon this occasion was that represented in the halls leading from the Great Hall to the Council-chamber. It consisted of a group of figures representing the family of the Emperor Napoleon. They were lent for exhibition upon this memorable occasion by Herr Wetter, and the value of them is estimated at 1,000,000 francs. Subjoined is the list :—

1. Hortensa, Queen of Holland, daughter of the Empress, and mother of the present Emperor, consort of King Louis, brother of Napoleon I., and father of the present Emperor.
2. Letitia, mother of the Emperor Napoleon I., and grandmother of the present Emperor
3. Catharina, Queen of Westphalia, daughter of the Queen of Wurtemburg, by his Consort the Princess Royal of England, cousin of her Majesty Queen Victoria, and Consort of King Jerome, the youngest brother of Napoleon I., and uncle of Napoleon III
4. Emperor Napoleon I., uncle to the present Emperor.
5. Joseph, King of Spain, eldest brother of Napoleon I., and uncle to the present Emperor.
6. Jerome, King of Westphalia, present heir presumptive, youngest brother of Napoleon I., and uncle to the present Emperor.
7. Count Wallerdorf, Marshal of King Jerome.

THE PROGRESS TO GUILDHALL

Shortly after one o'clock the Emperor and Empress, attended by a numerous suite, left Buckingham Palace in several of the Queen's carriages, to pay a visit to the Lord Mayor and Corporation of the city of London, at Guildhall. The parks and streets through which the procession passed were densely thronged with spectators, and their Imperial Majesties were everywhere received with the most enthusiastic shouts of welcome. On arriving at the entrance to the Guildhall their Imperial Majesties were received by the Lord Mayor and the Lady Mayoress, and the members of the Court of Aldermen. The Emperor and Empress, on entering the Hall, proceeded to the eastern end of the building, where a dais, overhung by an elegant canopy, had been erected for their reception of the Address. His Royal Highness the Duke of Cambridge had previously arrived; and among the distinguished personages present we remarked the Marquis of Lansdowne, the Earl of Clarendon, Viscount and Viscountess Palmerston, Sir George Grey, Viscount Canning, and many others.

PRESENTATION OF THE CITY ADDRESS.

When their Imperial Majesties had taken their seats upon the throne.

The Recorder (who was surrounded by the Lord Mayor, Aldermen, Sheriffs, and various members of the Court of Common Council) read the Address. It congratulated his Majesty upon his arrival in this country, and expressed a hope that the alliance between the two nations would be of a permanent character. A graceful compliment was paid to the Empress, which brought down thunders of applause.

The Emperor, having received the Address from the hands of the Recorder, proceeded to read his reply. He said he felt more gratitude than he could express for the kindly reception he had experienced since his arrival in this country, and towards her Majesty the Queen of England, for enabling him to pay a visit to this country under such favourable circumstances to both nations. He felt the highest pleasure in receiving expressions of respect from such a body as the Lord Mayor and Corporation of the city of London—a city which possessed all the necessary resources either for peace or war. Flattering as were the sentiments which had been expressed, he received them cordially, because he knew they were addressed not so much to himself personally as to the French nation, of which he was on this occasion the interpreter (Cheers). For himself he had never disguised the sentiments he felt towards England and the English people, and since he had been on the throne of France he had never changed those opinions which, while he was an exile, he had always avowed (Loud cheers). He believed, moreover, that those sentiments were in complete accordance with those which were held by the nation which had chosen him as its ruler. England and France were united on all the great questions of politics and of human progress which at present agitated the world from the shores of the Atlantic to the Mediterranean, from the Black Sea to the Baltic. They had at least one cause, and were determined on pursuing one end (Loud cheers). It was by no pitiful rivalries that the union of the two nations could be dissevered, and while they followed the dictates of common sense they would be sure of the future (Cheers). The Corporation of the city of London were quite right in supposing that his presence amongst them was a fresh and convincing proof, if any were wanting, that the war should be pursued with vigour—until, at all events, the Allied nations succeeded in obtaining an honourable peace. If they persevered in the war there could be no doubt of a successful result, for the soldiers and sailors of both nations were men of tried valour, and were united in determining to secure the honour of both countries. In their generous and enlightened ideas lay their great superiority. He was deeply grateful to the Corporation for the kind and affectionate expressions which had been used towards the Empress (Cheers). The cordial manner in which she had been received would never be effaced from her memory. Throughout the whole of France, of which he was the representative, he knew that there was but one feeling of affectionate gratitude for the cordiality which had been shown to himself and the Empress. They would take back with them to France a lasting sense of the kindness which had been shown to them—a kindness which would be appreciated not only by themselves, but by the whole of their fellow countrymen (Loud cheers).

Mr. John Wood and Mr. Alderman Wire, the mover and seconder of the Address from the Court of Common Council, were presented to the Emperor and Empress by the Lord Mayor.

His Lordship also presented a number of gentlemen connected with the Corporation, and the Lord Mayor of Dublin.

Immediately after the presentation the Duke of Cambridge advanced towards the Emperor and Empress, and cordially shook hands with both. His Royal Highness was loudly cheered. Their Majesties, the Cabinet Ministers, and other distinguished persons present, were then conducted to the Council-chamber, where they partook of an elegant déjeûner, and at which the freedom of the City was presented to the Emperor.

After the luncheon their Imperial Majesties were conducted through the vestibule of the Hall, and thence along the covered pavilion—the Lord Mayor, the members of the Court of Aldermen, and the Court of Common Council forming the committee of management.

Their Majesties, having entered their carriage, were greeted with immense cheers, both during their passage from the Hall and their departure.

During the return through Fleet-street, the Strand, Pall-mall East, Regent-street, Piccadilly, to Albert-gate, the same enthusiasm prevailed.

Their Imperial Majesties were escorted by a squadron of the Life Guards, as a guard of honour; H.R.H. Field Marshal the Duke of Cambridge following in one of the Royal carriages, under a similar escort.

Their Majesties proceeded to the residence of the French Embassy, Albert-gate, where the Emperor received the *corps diplomatique*, and afterwards returned to Buckingham Palace by way of Hyde-park and Constitution-hill.

In the evening her Majesty the Queen, and their Imperial Majesties the Emperor and Empress of the French, proceeded in state from Buckingham Palace to the Royal Italian Opera, to witness the performance of "Fidelio."

THE STATE VISIT TO THE ITALIAN OPERA.

This was one of the most splendid scenes ever witnessed within the walls of this theatre. The house was fitted up and decorated with unprecedented magnificence. The State box, on the grand tier, and fronting the stage, resembled that which was prepared for the Queen's visit in 1848, but was still more richly ornamented

The opera was "Fidelio," and Mdlle. Jenny Ney made her début in this country; but the performance was only a secondary object of attention. The thoughts of everybody were engrossed by the anticipated arrival of the illustrious group, which did not take place till about ten o'clock, when the first act of the piece was over. The Emperor was in the centre, having the Queen on his right hand and the Empress on his left, with Prince Albert at the side next her Imperial Majesty. As they entered, a shout, as from one voice, burst from every part of the house; the whole audience standing up and waving their hats and handkerchiefs. The orchestra played "Partant pour la Syrie," which was received with acclamations; and the Imperial pair acknowledged, by graceful salutations, the compliment to themselves and their country. "God Save the Queen" was then sung, and received with the warmest demonstrations of loyalty. The curtain then rose, and the performance proceeded.

THE ILLUMINATIONS ON THURSDAY NIGHT.

At the West-end of London the illuminations in honour of the Imperial guests were very general—some streets presenting one blaze of light. Their Imperial Majesties, on their way to the Royal Italian Opera, seemed highly pleased at the splendid reception which greeted them from one of the most enthusiastic crowds ever witnessed. In many parts, particularly opposite the Reform Club, the number of people was greater than ever before witnessed.

THE VISIT TO THE CRYSTAL PALACE.

Yesterday the Emperor and Empress of the French had another of those brilliant days, and another of those brilliant receptions, to which they have been accustomed since their arrival on the shores of England. In company with her Majesty the Queen and Prince Albert, the Emperor and Empress paid a visit to the Crystal Palace; and, although there was no attempt at display, the scene was equally as striking as any of those which have previously occurred. The route over which the Royal party was to pass having become publicly known, thousands of eager spectators lined the whole road from one palace to the other, in the hope of catching a glimpse of the Emperor and Empress, whose popularity appears to increase as the period of their visit to this country draws to a close.

As early as seven in the morning the whole line of route was alive with pedestrians, and as the morning progressed, the carriages conveying the *élite* began to appear, and soon filled the roads, presenting a scene which equalled, if indeed it did not surpass, that which was witnessed when the Queen of England opened the noble temple at Sydenham.

At eleven o'clock the Royal carriages (ten in number) emerged from the Royal Mews, and proceeded to the quadrangle of the Palace; they were all open carriages, each preceded by outriders.

At a quarter past eleven her Majesty, Prince Albert, and the Emperor and Empress of the French entered the Royal carriage, the Empress Eugenie sitting at the right of her Majesty, and the Emperor at the left of his Royal Highness Prince Albert. There were also in the Royal carriages the Princess d'Essling, the Comtesse de Montebello, the Baroness de Malaret, Count Pagerie, the French Ambassador and the Countess Walewska, Baron de Malaret, the Duke de Bassano, Counts Montebello and Ney, Colonel Fleury, and the Lords and Equerries in Waiting upon their Majesties.

On leaving Buckingham Palace the Royal cortège proceeded through the Park Mall, Horse Guards, and over Westminster-bridge; and during the entire route their Majesties were received with marked respect and enthusiasm. Her Majesty, Prince Albert, and the Emperor and Empress, on their arrival at the Crystal Palace, were received with immense cheers by thousands of persons who had been attracted to the spot. The escort accompanying her Majesty was composed of the 6th Dragoon Guards (Carabiniers), under the command of Captain Johnson.

The route the Royal cortège took was from Buckingham Palace through the Park Mall, the Horse Guards, over Westminster-bridge, the Elephant and Castle, Walworth-road, through Camberwell, Denmark-hill, and thence through Dulwich by the private road to the Palace.

THE RETURN TO FRANCE

It is generally reported that our illustrious visitors will leave this country on their return to France this day (Saturday), and that they will return by way of Dover. The French Admiral, Viscount Chabannes, came up to London on Thursday night; and yesterday (Friday) the officers of the French squadron at Dover were ordered to London, to be presented to the Queen. They are the captains of the screw corvette *D'Assas*, *Corse*, screw; *Pelikan*, screw; *Petrel*, paddle; *Bayonnaise*, &c.

Two of the English and French Royal Mail steam-packets are announced to take excursion parties at Dover to-day, to witness the embarkation of the Royal visitors, to accompany the Imperial squadron across the Channel, and, after seeing the landing in France, to return to Dover.

The Prefect of the Seine and his colleagues of the municipality of Paris are invited to a grand banquet at the Mansion-house this evening; the provincial mayors are also invited to meet Baron Haussman and friends on this occasion.

MUSIC.

The opening of the Royal Italian Opera, on Thursday, last week, was less brilliant than usual. The announcement of Rossini's "Conte Ory" did not excite much interest; the house was indifferently attended; and the performance—notwithstanding the admirable singing of Mdlle. Bosio and Gardoni—went off very coldly. This result, we must say, was creditable to the good sense and good feeling of the public; for though the music is light and pretty, yet the piece is not only contemptibly silly, but immoral and offensive. It was repeated on Saturday, and again on Tuesday; but this last repetition was rendered necessary by the indisposition of Mdlle. Bosio, which prevented the performance of "Fidelio" that evening; so that Mdlle. Jenny Ney's début in that opera was deferred till the State visit of the Queen and her Imperial guests, on Thursday.

Drury-lane Theatre, under the title of "the Royal Opera," opened on Monday, with an Italian company, who performed "La Sonnambula" extremely well, and with complete success. The new prima donna, Madame Gassier, is from Paris, where she has gained a considerable reputation. She is an *élève* of the Conservatoire, and her vocal school is decidedly French; but she is an accomplished singer, and a pleasing and interesting actress. Her husband, M. Gassier, has a good baritone voice, and his performance of *Count Rodolpho* was gentlemanlike and agreeable. Bettini (who was already known to the English public) was an excellent *Elvino*. The orchestra and chorus were effective; and the whole performance deserved the favourable reception it met with from a crowded house.

The Third Philharmonic Concert took place on Monday. The programme presented little novelty, but its contents, both instrumental and vocal, were of the highest order. The symphonies were—Mendelssohn's second in A, and Beethoven's in C minor, in our opinion the greatest orchestral work in existence. The overtures were Weber's "Euryanthe" and Cherubini's "Deux Journées." Beethoven's pianoforte concerto in B flat (one of his early works) was most admirably performed by that fine pianist, Miss Arabella Goddard; and great success in a bravura song of Mozart, and in the fine scena from Spohr's "Faust," and, Formès having been prevented by indisposition from singing, his place was efficiently supplied by Mr. Weiss, whose performance of Spohr's "Vo shenden" was admirable.

The other principal concerts of the week have been the first meeting of the Musical Union, at Willis's Rooms, on Tuesday morning; the concert of the Harmonic Union, at the Hanover-square Rooms, on Wednesday evening; and, the same evening, Mr. Hullah's performance of "Elijah," at St. Martin's Hall.

A Deserter to the Russians. Information has been circulated by the Government authorities respecting Sergeant Charles Aldridge, who, on the 21st February, deserted from the army in the Crimea, and went over to the Russians. He went away with his great-coat over his regimental uniform, taking with him also his bayonet, pouch, belts, and ammunition. He is a native of St. Margaret's, Middlesex. This is the first statement of the kind published by the authorities.

The tax on dogs is looked for with great satisfaction at Toulon, the streets of which place being overrun with worthless animals, left behind by the different regiments which have embarked for the East.

Murders in India.—Three deplorable murders have occurred in the course of the past fortnight: a Mr. David Thom, assistant in the Agra Bank at Cawnpore, once a merchant in Dundee, has, in a fit of drunkenness, literally pounded his wife to death with a brick-bat; Sergeant Doyle, at Madras, has nearly decapitated his wife through jealousy; and a native in the Bombay Presidency, in a fit of suspicion, waylaid and murdered the suspected paramour. *Bombay Times.*

Wills and Personalty.—The will of the Right Hon. Philip Henry Earl Stanhope has been proved in London personalty, £25,000, within the province of Canterbury. Lord Dunalley, £20,000. Dowager Baroness Dynevor, £10,000. Lieut.-Colonel James Richard Rotton, £35,000. Alexander Baillie, Esq., late of Naples, £140,000. Rev. Thomas Huntingford, M.A., £6000. Henry Compton, Fenchurch-street, pewterer, £30,000, within the province of Canterbury. Thomas Simson, Rotherithe, timber-dealer, £25,000

Another Respectable Shoplifter. A charge of shoplifting (very similar to that preferred against the wife of Dr. Ramsbotham) was last week brought against Mrs. Emily Roberts, a person moving in respectable society, at Hereford. She was charged with purloining ladies' neckties and handkerchiefs in the shop of a draper, and it appeared that she had got some of them into her pocket; but the magistrates, after hearing the evidence, dismissed the case. It is said that the shopkeeper has determined to prefer a bill of indictment against her at the Hereford [illegible]

VICTORIA ALBERT

NAPOLEON - EUGENIE

CALENDAR FOR THE WEEK.

Sunday, April 23.—2nd Sunday after Easter. Fielding born, 1707.
Monday, 23.—St. George. Shakespeare born, 1564.
Tuesday, 24.—Daniel Defoe died, 1731.
Wednesday, 25.—St Mark. Princess Alice born, 1843.
Thursday, 26.—Lord Somers died, 1716
Friday, 27.—Sir W. Jones died, 1794.
Saturday, 28.—Mutiny of the Bounty, 1789.

HIGH WATER AT LONDON-BRIDGE,
FOR THE WEEK ENDING APRIL 28.

Sunday.	Monday.	Tuesday.	Wednesday.	Thursday.	Friday.	Saturday.

The Foreign-office at Vienna; and several other Engravings.

Interesting Accounts from Vienna (from our own Correspondent), and all the Latest News connected with the

WAR WITH RUSSIA.

Price of the DOUBLE NUMBER, One Shilling.
Office, 198, Strand.

THE ILLUSTRATED LONDON NEWS.

LONDON, SATURDAY, APRIL 21, 1855.

The Emperor of the French has entered the English capital, received with cheers which have attended him to the threshold of our own Queen's home. Everywhere the wise Ruler of France, the energetic ally of England, has met the cordial greeting which we owed to the representative of the French nation, and to the undaunted enemy of Russia. The scenes of this past week will not easily be effaced from the memory of those who have witnessed them. Our fathers still talk of the visit of the Allied Sovereigns, early in the present century; but the more remarkable guest who now occupies all our thoughts, and the strange crisis (graver than anything that has occurred since 1815) at which he presented himself among us, will affix to the ceremonials and gratulations of April, 1855, a still more abiding interest.

What a moment it is for a friendly Sovereign to appear in the midst of us! A war, begun with imperfect knowledge of its demands—some say with imperfect ideas of its object—had stagnated in disaster and misfortune, and, during the protracted interval in which we were seeking to repair our errors and losses, a last attempt was made to spare further effusion of blood. A Congress, at which all the great nations were represented, including the original belligerents, met in the capital of a professed ally of the Western Powers, and debated terms of peace. The same week we learn that the negotiations fail, and that the storm of fire has again opened upon the enemy's stronghold. That week finds our best and most powerful friend an honoured guest in the halls of Windsor.

Looking beyond the exciting and gratifying spectacles which have been engaging the attention of England—the graceful hospitalities and the stately ceremonials of Windsor, the cordial homage of Municipalities, the brilliant public entertainments, and the spontaneous plaudits of the people—we may be permitted to express our belief that the visit of the Emperor will be found productive of good, which will endure when the present excitement is past. He comes at a moment when England is finally apprised that she must throw herself into this war in terrible earnest. She is told that the ordinary resources of finance are inadequate to sustain her in the affray, and the old mine, whence War Ministers of other days were wont to draw their gold, is once more opened. She has at length, also, learned that a powerful and skilful enemy has been underrated, and it is at a fearful price in life and treasure that she has attained to a right understanding of the relative position of herself and her foe. To the lightest-minded among us this conjuncture is one of extreme gravity. We are not discouraged, but the moments are sombre and stern. Our army has been wasted, our *prestige* imperilled, and now, with somewhat of heaviness in our hearts, we buckle anew to the conflict with a gloomy determination that it shall not be fought in vain. At this precise time there lands upon our shore and enters our city the ally whose soldiery have fought and died beside our own, who by compact is as deeply pledged as ourselves, and even more deeply than ourselves by policy, to fight the battle in the East until the West has won it, and who comes not only to renew and confirm engagements, hitherto so nobly fulfilled, but to animate our counsels and to reassure some who, it is believed, need the reassurance imparted by the presence of resolute energy. Upon the people, what such a time might have received the tidings of fresh hostilities and fresh demands with no unreasonable gravity, the visit of the Emperor has produced a beneficial and cheering effect. He comes as the ruler and representative of a neighbouring nation, equally involved with us in the strife, and equally prepared with her exertions and her sacrifices; and he comes with a guarantee that on the rugged path of duty now before us (and, as yet, but faintly gilded by the sunbeams of glory) France will tread, side by side with England, with steps as unflagging as her own. While to statesmen, if there be any such in high places, who are supposed to lack that full confidence in the justice and success of our efforts in the cause of liberty and humanity which is essential to the vigorous prosecution of the war, the Emperor of the French will have been able to impart the convictions which he has derived from his own intimate acquaintance with every feature in the struggle—convictions which it is all-important to England that all who direct or influence her counsels should entertain with a plenary faith.

Therefore, we esteem the presence of the Emperor of the French among us, at this moment, as that best of all possible omens—the one which aids in bringing about its own fulfilment. But in the plaudits which everywhere greet him, the glorious nation which he represents will hear, we trust, something more than the welcome dictated by policy, or even gratitude. The people of England feel as well as think; and it is to the people of France that they shout their greetings as the Sovereign of France passes down the long files of our populace assembled to welcome him. There is no mere momentary excitement, no mock sentiment, in the feeling which unites the two nations. Fêtes, galas; ceremonies, may adorn an alliance of Monarchs; but never made an alliance of peoples. The true, deep sentiment between the two nations is this—that they are friends from having in the hour of danger made common cause in behalf of the right and, from having fought, suffered, and conquered together. Trouble and misfortune—which either separate friends for ever, or bind them for ever—have united England and France; and, though it might be presumptuous to anticipate the dispensations of Providence, and to augur that the links that have joined us are indissoluble, it would be at once a senseless and a heartless abnegation of the best instincts of our nature did we not recognise in such a tie an assurance of no ordinary value that the friendship of the nations shall be permanent. This is felt by the British people as they cheer the French Emperor; and this they desire should be interpreted to the people of France.

In the admiring homage which all, from her sister Queen to the humblest among us, have rejoiced to offer to the beautiful Consort of the Emperor, not one cold or calculating thought has entered. To a lovely and amiable woman, wooed neither for her rank nor for dynastic considerations, but raised to the Throne because its owner saw his happiness in her exaltation, the gaze of our people turned with a peculiar interest, and the fair face and soft eyes of the Empress Eugenie will long be household words among those who came out to meet her on Monday last. Her Imperial Majesty has double claim to our people's regards—herself a daughter of the people (at least in the estimation of daughters of palaces), and one in whose veins runs British blood. The nation has given her its warmest welcome, and has seen with peculiar satisfaction the especial earnestness with which she has been welcomed at Windsor.

With unmixed gratification, therefore, we record the visit of the Emperor and Empress of France, believing not only that with the political crisis, so important to the welfare of the two greatest nations of Europe, an ameliorating element has been introduced, but that a nobler and grander union, based upon better foundations than the instinct of self-defence, has been promoted both politically and socially. To our own Sovereign, whose invitation brought such guests among us, the best thanks of the nation are due; and assuredly that Royal lady who has so often spoken and delighted to speak—with the voice of her subjects, never uttered their wishes more faithfully than when bidding Louis Napoleon and his beautiful wife to Windsor, nor fulfilled their utmost desires more gracefully than in the splendid hospitality with which Queen Victoria has received her illustrious guests and friends.

This is a week of great events. It will be ever memorable in our history for the presence of Napoleon III., the Emperor of the French, and his Empress, as welcome guests at the palace of our Queen, the granddaughter of George III. The union of two nations so long opposed to each other as the French and English seems almost like the realisation of the prophecy that "men shall beat their spears into pruning-hooks; and the lion shall lie down with the lamb." Waterloo is to be consigned to oblivion by mutual friendship; and, so far as France and England are concerned, palaces for the enshrinement of Art will supersede foundries of cannon and arsenals of murderous weapons. Thus Civilisation makes its way in the West. In the East all is different. According to the telegraph information given to the journals, the Conferences are virtually at an end. The English and French Ministers are probably on their way back to London and Paris, and the war is to be prosecuted with additional vigour. As we write, however, we hear a different statement. The Government has been informed by telegraph that the instructions which Prince Gortschakoff has received empower him to hear and discuss the propositions on the Third Point, on which, in the first instance, he said he had no instructions; and there arises a doubt whether Lord John Russell will immediately return, and a further doubt whether the Conferences will immediately end, as has been announced, in smoke.

News, however, has, at the same time, arrived that the bombardment of Sebastopol—so long delayed as to have given rise to an insinuation that Lord Raglan was sparing the town in expectation of peace, at the expense of his own soldiers—has been renewed. On the 6th the Russians made a sortie in great force, and attacked the English lines, but were repulsed with great loss. On the 9th the bombardment began, and was continued on the 10th, with an admitted loss on the part of the Russians of 833 killed and wounded. We have thus the growing amity of the two Western nations compensated by their common strife with their Northern and Eastern antagonist; and, in the same week that we record the festivities in honour of the Emperor, we must also mention the continued mourning for the sacrifices made by war.

The renewal of hostilities with vigour is of almost equal importance to the presence of the Emperor. It is coupled, too, with the statement and the probability that before the time we are writing a decisive assault has been made on Sebastopol. The present, in fact, is the critical period in that country. Later in the season the heat is as dangerous as the cold was, till April commenced, and the effectual fighting must be done at no distant day. We must, too, fight earnestly.

The road to peace is by a vigorous prosecution of war; and when a nation is compelled to enter into war it ought to bend all its energies to bring the evil to a speedy end. War is justified as a stern duty imposed on man to secure the supremacy of right over wrong; and, if it be not conducted energetically as a solemn duty, with the whole heart and strength of a nation, it becomes a great crime. To assist a criminal likely to escape from justice the whole population would turn out and leave no stone unturned and no bush unexamined till they had found him. To enter into war is like a chase after a criminal, and we cannot answer to ourselves if we do not use our utmost energies in the pursuit. We are glad, therefore, to announce that, amidst the festivities proper to the presence of the Emperor, the great object to the attainment of which his presence is most conducive, that of conquering permanent peace, is prosecuted with more vigour than ever.

Now let us say a word on the procession that lately passed our doors. The Emperor, though he was in a close carriage, and could not be seen so fully as the multitude wished, was everywhere loudly cheered. No more welcome guest ever trod our shores, and the multitude have shown that they comprehend the purpose for which he is at present amongst us. They forget all his antecedents, and greet him as the chosen chief of the great nation with which our interests are now irrevocably bound up. With France our commerce is extending; and, for the interest of both nations, it ought to be extended. The Emperor has already done more than all his predecessors to promote the trade of his people, and to give it freedom; and his exertions, his example, his teaching, and his enactments are preparing the way for a great extension of Free-trade in France. The Emperor is welcomed by the whole metropolis, including bankers and merchants, not only as the friend of our Queen, as engaged with us in prosecuting a just war, but as promoting that freedom of commercial intercourse which increases employment and promotes the happiness of all.

He will see amongst us many things to recommend freedom. Since he was here, the metropolis has been extended amazingly, and been somewhat beautified, and the people have been much more cared for. He will see altogether a fairer sight than London could show in 1848. It is less favourable, indeed, for such exhibition as we have witnessed than Paris. The long and broad line of the Boulevards, extending round the whole city, affords ample space for marching troops or conducting processions which is denied to us in our narrow streets. London is more a business city than Paris; at least business is more commonly the object in the former, and pleasure in the latter. To these peculiar pursuits each is adapted; and we have an infinitely more crowded thoroughfare from its being narrower and collecting a greater number of people. We have nothing to equal the lines of trees and houses, sparkling in the sun, which adapt Paris to be a city for processions and shows. It is, at the same time, a city of business; and, as history tells us, of stern acts and solemn duties. If we can show the Emperor no Boulevards, we show him a great multitude of peaceable, orderly, well-behaved people, who rejoice in his presence, and will enable him to carry back to France the conviction that the most free nation in Europe is at the same time the most wealthy and the most peaceable.

THE EMPEROR NAPOLEON III.

(From a Correspondent.)

During his exile in England Prince Louis Bonaparte used to read with great interest the proof sheets of M. Thiers' "History of the Consulate and Empire," which were supplied to him by Mr. Forbes Campbell, who was then preparing an English version of that work. The following remarkable passage occurs in a letter which the Prince addressed to Mr. Campbell in 1847, when returning the proof sheets vol. v. It will be seen that even at that early period the Emperor meditated the English alliance, which he has since so happily accomplished:—"Why was not I born to share in the glories of those heroic times? But on reflection it is better as it is. What a saddening spectacle to behold the two greatest and most civilised nations of the world destroying one another (*s'entregorger*)—two nations that ought, in my opinion (*selon moi*), to have been friends and allies, and rivals only in the arts of peace. Let us hope the day may yet come when I shall carry out the intentions of my uncle, by uniting the interests and policy of England and France in an indissoluble alliance. That hope cheers and encourages me. It forbids my repining at the altered fortunes of my family."

LATEST FOREIGN NEWS.

THE VIENNA CONFERENCES.

(By Submarine and British Telegraph.)

VIENNA, Thursday, April 19th.

Monday—despatches arrived from St. Petersburg. Tuesday—the Conference resumes. Lord J. Russell leaves for London to-morrow, viâ Berlin. The Allies yield. Expect a patched-up peace. Drouyn de Lhuys remains here. Bombardment of Sebastopol confirmed.

VIENNA, April 20.

The Conferences assembled yesterday; and important debates ensued. Lord John Russell's departure is postponed until Monday.

THE WAR IN THE CRIMEA.

The news from the Crimea is of two days later date, and of an authentic character. The following telegraphic message from General Canrobert of the 14th is published in the *Moniteur* of yesterday (Friday) morning:—

Under date of the 14th of April General Canrobert writes from before Sebastopol that the superiority of the artillery of the Allied armies is more and more confirmed.

Our troops on the preceding night, having twice driven the Russians from their strong positions on the left, remained masters of them; they are much nearer to the town.

Rumours prevailed in Vienna on Wednesday evening of a sanguinary engagement having taken place outside Sebastopol, in which the Russians were defeated.

The *Daily News*, under date of Eupatoria, of April 7, says:—

The Allies have demanded 20,000 men to be sent down to Sebastopol—it is imagined for the assault. The embarkation begins to-day. Omer Pacha goes to-morrow.

THE BALTIC FLEET.

A despatch from Hamburg of the 19th says that an English fleet, of twelve ships of the line and four steamer corvettes, passed the Belt on the preceding evening, in front of Nyborg.

KIEL, April 19, Two P.M.

The British fleet under Admiral Dundas, twelve liners, with the *Vulture*, *Bulldog*, and *Firefly*, have just arrived here and anchored.

NOTE. The sign + denotes above the average and the sign − below the average.

The reading of the barometer decreased from 30.54 in. at the beginning of the week to 29.81 in. by the 13th; increased to 30.33 in. by the 17th; and decreased to 29.98 in by the end of the week. The mean reading for the week, at the height of 82 feet above the level of the sea, was 30.06 inches.

The mean temperature of the week was 50·6°, being 4·8° above the average of 38 years.

The mean temperature during the week was 45·9°, being the difference between the highest reading on the 16th and the lowest on the 19th.

The mean daily range of temperature during the week was 29°. The least was 11° on the 18th, and the greatest 39° on the 17th.

The weather during the week has been unusually fine—the last four days being almost cloudless during night and day.

JAMES GLAISHER.

HEALTH OF LONDON.—Within the week ending last Saturday the births of 1718 children were registered within the metropolitan districts: of these, 912 were boys, and 806 were girls; exceeding the averages of the ten corresponding weeks of the ten preceding years by 100 and 117 respectively. The number of deaths was 1347—of whom 715 were males, and 632 were females. The average of the fifteenth week of the year from the ten preceding years, corrected for increase of population, was 1138. Hence it appears that a high rate of mortality still prevails, the excess of deaths in this week over the estimated number being 209. The number of deaths from bronchitis, still continues high, exceeding the weekly average by 69. To pneumonia 92 deaths are attributed, exceeding its average by 14. To hooping cough, 59, being a decrease on the number of the preceding weeks. To diarrhœa 13 deaths are referred; and to violence, cold, privation, and intemperance, 39, being 18 in excess of the average number.

TESTIMONIAL TO THE LATE LORD DUDLEY STUART.—A public meeting of the inhabitants of the borough of Marylebone was held on Tuesday evening at the Court-house, Marylebone-lane, for the purpose of opening a subscription for a public testimonial in commemoration of the indefatigable exertions of their late representative, Lord Dudley Stuart. Sir B. Hall, M.P., presided; and was supported by M. Kossuth, Lord Ebrington, M.P., and a number of influential gentlemen connected with the district. The attendance at the meeting was large. After Sir Benjamin Hall and Lord Ebrington had spoken, M. Kossuth addressed the meeting, amidst loud and protracted cheers. After a brilliant oration on the political relations of Hungary, Poland, and Italy, he said there was no man more conspicuous for his virtues than Lord Dudley Stuart (Cheers). Duty prompted him to say that there was, in his humble opinion, better means of carrying out this object than raising a statue or the like. He thought the best means of doing it would be to imitate his example. If all those who desired to assist in paying a tribute to Lord D Stuart had assisted him in the efforts to throw the weight of European into the scale of national justice and right, how different would have been the fate and condition of Europe at the present day. A committee was then appointed and a subscription opened.

ANTI-MAYNOOTH MOVEMENT.—A public meeting, attended by delegates from the Church Protestant Defence Society, the Evangelical Alliance, the National Club, the Protestant Alliance, the Protestant Association, the Reformation Society, and the Scottish Protestant Society, was held at the Freemasons' Tavern, on Tuesday, for the purpose of reviving the agitation against the State support of the College of Maynooth, which had subsided during the session of the Royal Commission and the preparation of its report. The chair was taken by Mr. J. O. Colquhoun. There were also present—Lord Berners, Hon. and Rev. Mr. Powys, Hon. Major Powys, Sir Culling Eardley, Bart., Admiral Vernon Harcourt, General Alexander; Rev. Dr. Hugh Stowell, Rev. Dr. Marsh, Rev. Lewis Potter, Rev. W. Curling, and about four hundred other gentlemen, clerical and lay, who formed deputations from the principal provincial towns of the United Kingdom. The proceedings having been opened by the reading of a chapter from the Revelations and solemn prayer, the Chairman explained the course which the committee of the day had taken in the management of the conference. It seemed to be the idea of some of their fellow Protestants that they sought to establish a new Protestant organisation. That was not the case. The present conference would be confined to the consideration of one simple and definite object —the repeal of the Act of 1845 which endowed the College of Maynooth. The meeting was subsequently addressed by the Rev. Dr. Cowan, Rev. M. Fox, Rev. Hugh Stowell, Rev. Dr. Bery, Rev. Mr. Meuton, and other Protestant advocates; and a series of resolutions adopted condemnatory of the present, and recommending the several constituencies of the country to vote for no candidate who would not pledge himself against its continuance

CROWDED STATE OF LUDGATE-HILL.—At a meeting of the Court of Common Council, on Saturday, Mr. Ross moved "That, in order to diminish the pressure of the traffic on Ludgate-hill, it is expedient to form a new line of street from the Old Bailey to the south east end of Farringdon-street, the site of the late Fleet Prison, and that it be referred to the Improvements Committee to cause a survey to be made of the property to be removed, to estimate the cost, and to report to this Court thereon." The site of the Fleet Prison has been purchased by the Corporation for nearly twelve years; it cost £95,000, which, together with incidental expenses connected with it, amounted to £96,882 17s. 1½d., against which there was a set off of £3,269 10s. 1d., leaving the net cost of the site £91,613. Mr. Ross, after stating the necessity that existed for increased traffic accommodation in the neighbourhood of Ludgate hill, with a view of affording which the site of the late Fleet Prison might be called into use, concluded by saying that it was the duty of the Corporation, as guardians of the trading and commercial interests of the City, to see that the nuisance occasioned by the unoccupied state should be forthwith removed.

Deputy Bedford having seconded the motion, Mr. Anderton moved, by way of amendment, "That the Improvements Committee do forthwith report upon the reference of July, 1847, as regards the appropriation of the site of the Fleet Prison." The amendment, after considerable discussion, was carried by a large majority.

ARREST OF A FRENCH REFUGEE.—Shortly before seven o'clock on Thursday evening a rumour spread through the metropolis with electrical rapidity that a man had been arrested for attempting to fire at the Emperor on his return to Buckingham Palace. A reporter from this establishment having been dispatched to make inquiries found at Gardiner's-lane station several Frenchmen, one of whom had been arrested for attempting to throw a letter into the carriage, and otherwise offering violence. He is at present in custody at the station.—*Globe.*

NATIONAL SPORTS.

WITH 300 horses in training at Newmarket alone, we can hardly expect the Spring Meeting, which is the only one fixed for next week, to be very dull, albeit the list is the reverse of inviting. Monday has an A.F. match between Kaffir and the Physales colt, who ran together last October over the Dell. In the present match, Kaffir has to give, instead of receiving, 2 lbs.; but the extra distance will be in his favour. The Coffee-room Stakes, on Tuesday, may end in a struggle between Wiasma filly and Pugnator, and the stout head of Van Tromp will probably carry Bore successfully over the Beacon and the 300 Sovs. Stakes. Paxton has gone to the Grimes, and Wednesday's business is large. After Sir Hedworth Williamson's Nutbrown Maid, Wednesday's Handicap, and Sir Benjamin Hall and Lord Ebrington had spoken, M. Kossuth addressed the meeting, amidst loud and protracted cheers. After a brilliant oration on the political relations of Hungary, Poland, and Italy, he said there was no man more conspicuous for his virtues than Lord Dudley Stuart (Cheers). Duty prompted him to say that there was, in his humble opinion, better means of carrying out this object than raising a statue or the like. He thought the best means of doing it would be to imitate his example. If all those who desired to assist in paying a tribute to Lord D Stuart had assisted him in the efforts to throw the weight of European into the scale of national justice and right, how different would have been the fate and condition of Europe at the present day. A committee was then appointed and a subscription opened.

Ten surgeons, fifteen sisters of charity, and sixty hospital assistants, have proceeded to the East to organise three Sardinian hospitals—one at Constantinople, one at Varna, and the third at Baladava.

THE distillation of whisky in the Highlands is particularly brisk at present. One still turns out from 500 to 600 gallons per week, most of which is sent to France and Australia.

BARON de Stieglitz, the Russian Court banker, has proposed to erect in the Stock Exchange a monument to the late Emperor, as a protector of commerce

LETTERS from Weimar state that the literary committee engaged in investigating the forgery and sale of autographs attributed to Goethe and Schiller have received from various parts of Germany 12,000 manuscripts, the owners of which distrust their genuineness. A young man, one of the students of the Grand Ducal Library, and formerly a shoemaker, has been arrested, and confesses that for two years he has devoted himself most assiduously to meet the public demand for autographs of the poets at a reasonable rate.

SPANISH POSTAGE.—The Queen of Spain has issued a decree directing that, except in cases of special treaty, the inland Spanish postage on all letters received from abroad shall, from the 1st of next month, be four reals (tenpence) the quarter ounce. On English letters this will have the effect of reducing the Spanish postage (which on the letter does not exceed a quarter of an ounce) to less than one-half the present amount, viz., from two shillings and a penny to tenpence.

MONETARY TRANSACTIONS OF THE WEEK.

(From our City Correspondent.)

The great event in moneyed circles this week has been the issuing of the particulars of a Government loan of £16,000,000, of which an explanation will be found in page 370

As might be expected, the MARKET for National Securities has continued dull and drooping. The fall, however, since Friday last has not been heavy. On Thursday very little business was done in Consols, indeed the attention of most parties in the City was absorbed by the visit of the Emperor of the French. The Three per Cents marked 90 to 91, both for Money and Time. The Three per Cents Reduced were 90¾ ⅞; and the New Three per Cents, 89⅞ to 90. Exchequer Bills, 5s. to 10s.; and India Bonds, 12s. to 15s. prem.

There have been large Government operations in Bullion. From Australia, about £300,000 has come in; and the arrivals from the West Indies have amounted to £164,000; from New York, £300,000. The foreign exchanges continue very favourable.

Joint-Stock Bank Shares have been but in moderate request, yet prices have continued tolerably firm. Australasia have realised 81; British North America, 64¾; Chartered of Asia, 4⅞; England, Scottish, and Australian Chartered, 17⅛; London Joint-Stock, 27⅛; New South Wales, 24; Oriental, 40; South Australia, 28; Union of Australia, 66½; Ditto, New, 3.

Most Miscellaneous Securities have changed hands slowly, and the quotations have had a downward tendency.

Although the traffic upon most lines continues good, Railway Shares have been very dull and drooping. The following are the official closing prices on Thursday:—

ORDINARY SHARES AND STOCKS.—Caledonian, 89⅞; Chester and Holyhead, 12¾; Eastern Counties, 4⅛; Edinburgh and Glasgow, 84; Ditto, Stour Valley, 89½; London and Brighton, 99; London and North-Western, 93½; Ditto, Fifths, 15¾; Midland, 69; North British, 23⅝; North-Eastern, Berwick, 71; Ditto, Edmunson, 12⅜; Scottish Midland, 64⅜, Shropshire Union, 45; South-Eastern, 69¾; Vale of Neath, 17.

PREFERENCE SHARES.—Great Western (Birmingham), 10½; Ditto, Guaranteed Stock, 72; Norfolk Five per Cents, 103½; Oxford, Worcester, and Wolverhampton, 104; Stockton and Darlington Five per Cents.

FOREIGN.—Great Luxembourg (Obligations), 2¾; Great Western of Canada Shares, 17⅛; Ditto, Bonds, 1857, 97; Scinde, 2 prem.; Zealand, 18

Mining Shares have been heavy. On Thursday English and Australian Copper Smelting Company realised 1¾; Fortuna, 1¼; New Granada, ⅞; Nouveau Monde, ⅛; Santiago de Cuba, 6⅜; United Mexicans, 7¼

Friday Evening.

The whole of the new Government Loan of £16,000,000 has been taken to-day at the Termination Annuities, at 14s. 6d. This makes the value of the Canada 89¾. The scrip has already changed hands at 1⅞ to 1⅝ premium. The usual stocks are inactive, and rather lower. The Three per Cents have marked 89¾; the Three per Cents Reduced, 88¾; and the New Threes per Cents, 89¼. In Foreign Bonds and Rs. Iway Shares very little is doing.

THE MARKETS.

CORN-EXCHANGE (Friday). During the present week the receipts of English wheat have been very moderate in all parts. Fresh up-to-day, the supply was small, and the show of samples was limited. Although the demand was somewhat firmer than on Monday, the amount of business doing was limited, at our day's currency. The imports of foreign wheat have been rather over 6000 quarters. Of malts for all descriptions called dull, but no change took place in prices. Fine barley cargoes were held at extreme rates. We had a very dull sale for barley, and fully rates were with difficulty supported. The supply was good. Malt moved off heavily, at last week's currency. In oats trade was dull; inferior oats were the turn lower. Beans, peas, and flour were dull, at previous quotations.

ARRIVALS.—English: wheat, 3170 qrs.; barley, 6110; malt, 2670; oats, 1190; flour, 1360. Irish: oats, 6070 qrs.; flour, wheat, 2000; barley, 2700; oats, 4200; flour, 160 sacks.

English.—Wheat, Essex and Kent, red, 64s. to 68s.; ditto, white, 71s. to 84s.; Norfolk and Suffolk, red, 64s. to 68s.; ditto, white, 74s. to 80s.; rye, 38s. to 40s.; grinding barley, 27s. to 29s.; distilling ditto, 29s. to 30s.; malting ditto, 29s. to 32s.; Lincoln and Norfolk malt, 60s. to 66s.; brown ditto, 62s. to 64s.; Kingston and Ware, 68s. to 70s.; Chevalier, 70s. to 72s.; Yorkshire and Lincolnshire feed oats, 24s. to 27s.; potato ditto, 27s. to 29s.; Youghal and Cork ditto, 26s. to 28s.; ditto, white, 28s. to 29s.; tick beans, 32s. to 34s.; grey peas, 34s. to 37s.; maple, 37s. to 39s.; white, 40s. to 42s.; boilers, 43s. to 45s. per quarter. Town-made flour, 60s. to 63s.; country marks, 48s. to 52s.; American, 42s. per 280 lbs. per barrel.

Seeds.—We have had a good demand for most seeds, at fully last week's currency.

Linseed, English, sowing, 68s. to 70s.; Baltic, crushing, 58s. to 62s.; Mediterranean and Odessa, 52s. to 57s.; hempseed, 42s. to 56s. per quarter. Carawayseed, 20s. to 24s. per cwt. Rapeseed, foreign, 36s. to 38s.; English, 42s. to 44s.; tares, 10s. to 12s. per bushel. English rapeseed, £33 0s. to £35 0s. per last of ten quarters. Linseed cakes, English, £12 0s. to £12 10s.; ditto, foreign, £10 10s. to £12 5s.; rape cakes, £6 0s. to £6 5s. per ton. Canary, 40s. to 52s. per quarter. Red clover seed, 52s. to 66s., white ditto, 56s. to 68s. per cwt.

Bread.—The prices of wheaten bread in the metropolis are from 9d. to 10d.; of household ditto, 8d. to 9d. per 8lb. loaf.

Imperial Weekly Average.—Wheat, 66s. 4d.; barley, 31s. 1d.; oats, 25s. 10d.; rye, 39s. 1d.; beans, 45s. 7d.; peas, 36s. 8d.

The Six Weeks' Averages.—Wheat, 67s. 9d.; barley, 30s. 6d.; oats, 25s. 3d.; rye 38s. 8d.; beans, 43s. 7d.; peas, 36s. 5.

Seven Weeks' Gross Sold last Week.—Wheat, 96,312; barley, 42,993; oats, 19,679, rye, 151; beans, 514; peas, 809 quarters.

Flour.—The public sales held this week have gone off slowly, yet very little change has taken place in prices. Privately the demand is heavy, and common sound cannot be quoted at 8s. to 8s. 3d. per sack. Up to Saturday last, duty paid flour, 23,387,272 lbs.; against 14,239,330 duto last year.

Sugar.—Our market has ruled tolerably firm, and a full average business has been transacted in raw sugars, at fully last week's currency. Foreign sugars, afloat, are in steady request, and prices of common sorts have attracted more attention. Refined goods have advanced 1s. per cwt. Brown lumps, 44s. to 46s. 6d.; and low to fine grocery, 48s. to 50s. per cwt. The total clearances to the 4th inst. were 1,853,192 cwt., against 1,178,449 duto in 1854.

Coffee.—Planters's have had a market set over to them, at an advance of from 1s. to 1s. 6d. per cwt. Good ordinary native has realised 47s. to 47s. 6d. All other coffees have sold at very full prices.

Tea.—There is no change in our market has continued limited, on former terms.

Tobacco.—The market for Irish leaf is very inactive, and old parcels are difficult to sell. Foreign leaf is selling freely at 2s. to 4s. per cwt more money. We have also to report English, at drooping currencies. Fine new Kentish, 12½. to 14½.; small ditto, 9½. to 12½. per cwt.; fresh, 16s. to 18s. per dozen lbs. The sale for bacon is rather active at from 1s. to 2s. per cwt. more money. Irish is worth 6s. to 10s. per cwt. In other kinds of provisions very little is doing.

Tallow.—The demand has improved, and P Y C on the spot has realised 50s. to 50s. 6d and 51s. 6d. per cwt. The imports, however, are seasonably large.

Spirits.—There is a fair business doing in rum, on former terms. Proof Leewards, 2s. to 2s. 1d.; and East Indies, 1s. 11d. per gallon. Brandy is in moderate request, at full prices. Malt spirit is worth 10s. 6d., proof; gin, 17 under proof, 9s. 10d.; and 22 ditto, 9s. 4d. per gallon.

Hay and Straw.—Meadow hay, £3 0s. to £5 0s.; clover ditto, £3 5s. to £5 15s.; and straw, £1 4s. to £1 16s. per load.

Wool.—The demand for all kinds of wool is extremely heavy, and prices are barely supported. Several importers have taken place this week, chiefly from our colonies.

Potatoes.—The supplies continue seasonably large, and the demand is heavy, as follows. York Regents, 100s. to 120s.; Scotch ditto, 90s. to 110s.; reds and kegs, 65s. to 80s. per ton.

Hops (Friday).—Only a limited business is doing in our market, and some few sa es have been made on former terms. The imports are only 15 bags from Hamburg. Mid and East Kent pockets, £14 0s. to £20 0s.; Weald of Kent, £13 10s. to £15 10s.; Sussex, £10 0s. to £12 10s. per cwt.

Coals (Friday).—Tanfield Moor, 18s.; Heston, 18s. 6d.; Hebburn, 18s. 3d. Eden Main 17s 3d.; Hilton, 18s. 3d.; Lambton, 18s.; Stewart's, 18s. 3d.; South Kelloe, 17s. 9d. per ton.

Smithfield (Friday).—There was a fair average supply of beasts on offer to-day's market, and the demand for meat kinds ruled steady, at Monday's advance in the quotations We had a fair demand for sheep—the show of which was moderate—at very full prices. There was a good inquiry for lambs, the value of which had an upward tendency. The primest breeds were in some instances worth 6s. 8d. to 7s. per 8lbs. The show of calves was extensive, and the veal trade was heavy, at barely stationary prices. In pigs very little was doing. Beef, from 3s. 4d. to 4s. 4d.; mutton, 3s. 6d. to 4s. 6d.; veal, 4s. to 5s.; pork, 3s. 4d. to 4s. 4d. per 8lbs. to the offal.—Coarse and inferior beasts, 3s. 4d. to 3s. 6d.; second quality ditto, 3s. 8d. to 3s. 10d.; prime large oxen, 4s. 0d. to 4s. 2d.; prime Scots, 4s. 4d. to 4s. 6d.; coarse and inferior sheep, 3s. 8d. to 3s. 8d.; second quality ditto, 3s. 10d. to 4s. 0d.; prime coarse-woolled ditto, 4s. 2d. to 4s. 4d.; prime Southdowns, 4s. 6d. to 4s. 8d.; large coarse calves, 4s. 2d. to 4s. 6d.; prime small ditto, 4s. 8d. to 5s. 0d.; large hogs, 3s. 8d. to 4s. 0d.; neat small porkers, 4s. 4d. to 4s. 6d.; lambs, 6s. 0d. to 7s. 8s. per 8lbs.; suckling calves, 2l. 2s. to 2l. 8s., and quarter old store pigs, 2l. 5s. to 3l. each. Total supply: beasts, 2621; sheep, 11,780; calves, 270; pigs, 270; lambs, 50 (per rail).

Newgate and Leadenhall (Friday).—Each kind of meat moved off steadily, at very full prices.

Per 8 lbs. by the carcase:—Inferior beef, 3s. 2s. to 3s 4d.; middling ditto, 3s. 6d. to 3s. 8d.; prime large ditto, 3s. 10d. to 4s. 2d.; ditto small ditto, 4s. 4s. to 4s. 6d.; large pork, 3s. 6d. to 3s. 8d.; inferior mutton, 3s. 2d. to 3s. 6d.; middling ditto, 3s. 8d. to 4s. 0d.; prime ditto, 4s. 2d. to 4s. 6d.; veal, 3s. 8d. to 4s. 8d.; small pork, 3s. 10s. to 4s. 4d.; lamb, 5s. 0d. to 6s. 8d.

Friday Evening.

HELPES, School Booksellers, &c., 150, Aldersgate-street.

"GOOD SCHOLARSHIP POPULARISED."
THE LIBRARY of BIBLICAL LITERATURE.
(Extract from Prospectus.)
This long-desiderated work will form a valuable Repository of Information on Geographical, Historical, Antiquarian, Biographical, Critical, Exegetical, Scientific, and Literary subjects in relation to the Bible. In each department the most recent researches and discoveries will be embodied in the Tracts; while the most wasteful matter will be excluded to prevent an unnecessary swelling of the volumes. Besides this the most reverential regard for the complete authority of the Word of God.
Each number of the Serial will be devoted to a distinct topic, and will be complete in itself. The engravings by the first artists, and the occasional illustrations from the Text, will be executed on the best principles. The selection of the subject under consideration, will be given to each Tract. In the preparation of the Tracts, the services of some of the most able and distinguished writers in the republic of letters have been secured, by whom every attempt will be made to render them entertaining as well as instructive. The literary talents and scholarship of the contributors will thus afford to the subscribers an adequate guarantee for the permanent value of the work, and its title to an honourable position on their library shelves.
As the nature of the themes which it is proposed to discuss in the Library" will preclude all approach to allusions, and as the mind in which it is determined to handle them will be entirely free from the bias of denominationalism, it is still that the work may be safely recommended to the attention and encouragement of the members of every section of the Christian Church.
Now ready, the next page, price 1s. 6d.; in cloth, 2s.,
VOL. I. of the LIBRARY, Containing—

THE ILLUSTRATED LONDON NEWS

No. 739.—VOL. XXVI.] SATURDAY, APRIL 28, 1855. [WITH TWO SUPPLEMENTS, 1s.

RUSSIAN BRIBERY AND INTRIGUE.

THE English public has never been sufficiently informed of the patient intrigues of the late Emperor Nicholas in every country in Europe where he had influence or territory to gain, or any advantage—military, diplomatic, or social—to expect. His intrigues in Austria were carried on for years before their object was suspected. Prince Metternich was perhaps the only Austrian statesman of his day who was fully aware of the duplicity, the perseverance, and the infinite resources o. Russian diplomacy. Count Stadion and Prince Schwarzenberg saw the danger at a later period. While living they did their utmost to avert it; and they left their anti-Russian policy as a legacy to their successors. It was not only by means of his agents and Ambassadors that Nicholas endeavoured to carry out his plans. He turned his own personal advantages and opportunities to the utmost account, and flattered the vulgar rich by his smiles, his presents, his crosses, and his orders; while he left to inferior agencies the task of demoralising the vulgar poor. He was gifted by nature with a commanding presence. He was "every inch a King." He looked the Imperial Potentate that he was. There was a power and a majesty about him which never failed to dazzle all who came within the charmed circle of his presence, especially when it pleased the demigod to smile upon the smaller men that "crawled under his huge legs" and did him homage. When it suited him to inspire terror as well as admiration, he never failed in his purpose, unless the object of the experiment happened to

THE RIGHT HON. LORD JOHN RUSSELL, M.P., PLENIPOTENTIARY TO VIENNA, AT THE CONFERENCE AT VIENNA, 1855.—FROM A PAINTING BY THOMAS CARRICK.—(SEE NEXT PAGE.)

be an Englishman, an American, or a Frenchman. To the Russians he was God's viceregent; and to the Germans—so well had they been tutored by their Governments—he was little less formidable and awe-inspiring than he was to his own subjects. His demeanour towards his own military and civil functionaries offered a striking contrast to that which he exhibited to the high authorities, especially to the military ones, of foreign nations. At home he was a "Jupiter tonans," armed with the thunderbolt, to betray whom was to incur certain destruction. He rarely forgave the slightest transgression. His will was the law both of the State and the Church; and he had the pretension to rule not only the bodies but the souls of his people, to be as absolute over their consciences as their lives. His caprice, while it lasted, had the effect which, in our happier country, can only be derived from an Act of Parliament. His ukases, though the one issued to-day may have been diametrically opposed to its predecessor of yesterday, were all equally binding; and if he were in the humour to be severe—which he generally was, for he hated human nature whenever he did not despise it—to obey or to disobey him was equally perilous. He suffered no contradiction from a Russian, and rarely tolerated remonstrance or advice. If he ever overlooked a fault, which is doubtful, it was in Prince Orloff. No other servant, or favourite, however great his services, was forgiven, if he had the misfortune, voluntarily or unvoluntarily, to incur his displeasure. Diebitch, Paskiewitch, Menschikoff, all served him, and disappointed him—not for lack of zeal, or capacity, or honesty, but solely for lack of fortune, and for not accomplishing the impossible; and each of them fell under the ban, and was disgraced. Cold, stern, and vindictive, he strove to rule by terror alone. He comported himself towards his people and his aristocracy as if he both hated and feared them; and as Van Amburgh might have done towards the lions and tigers of the menagerie; relying only upon the strong arm and the inflexible will to coerce them into abject submission. He avoided the least show of indulgence, lest it might lead to the suspicion of weakness, and tempt the wild beasts to turn upon and rend him. But, while this was his conduct at home, his policy abroad was very different. To Russians he showed the terrors, but to Austrians and to Germans the splendours, of his countenance. Though he treated the ex-Emperor Ferdinand of Austria as a harmless idiot, and the present King of Prussia as a dangerous pedant, he took care to heap all possible honour upon the military chiefs of both nations. He strove to ingratiate himself with Generals and Colonels, with Captains, and even with Lieutenants, in the Austrian and Prussian service. He talked to them of their families and their prospects. He kissed the foreheads of their wives when presented to him; and when he had, as Emperor, conferred this honour upon them, he kissed their hands as a gentleman, to confer honour upon himself. He took means to ascertain the amount of the private means of officers of high standing and position; and if he discovered among them any one who was both poor and ambitious he made a note of the fact, that he might turn it to profitable account on a future occasion. In some instances he is known to have paid the debts of Austrian, Prussian, and Bavarian officers; and in hundreds of cases where this could not be done, or where the perilous favour would have been proudly refused, if offered, he conferred the order of St. Vladimir, or some other equally coveted; or he sent a jewelled snuff-box or a diamond ring. But to the civilians in the service of Austria he adopted a different course. He affected to treat Austria as an entirely military Government—as a pure despotism ruled by the Kaiser, through the medium of his army. He recognised as little as possible any other authority. He snubbed Count Buol in 1851 for speaking of "the Austrian Government," stating that he recognised no Government (*Regierung*), and that he only knew the Emperor. Count Buol has possibly forgiven the rebuff, but it is not likely that he has forgotten it. Nicholas objected to moustachios, except when worn by military men. One of the existing Ministers of the Emperor Francis Joseph, whose name need not be mentioned, attempted, on the occasion of the famous meeting of the two Emperors at Olmütz, to do a graceful thing by shaving off the ornaments of his upper lip before appearing in the presence of Nicholas. The Czar, however, would not condescend to receive him, either with or without moustachios; so that the Ministerial sacrifice was made in vain. Unless the Minister be a very amiable man, it is probable that he, too, may not have forgotten this trifling circumstance: for such trifles are affronts which rankle deeply, and which human nature, unless it be extremely philosophic and well disciplined, is not likely to pardon. One result of this systematic flattery of the Austrian army, and that which Nicholas no doubt anticipated, is that among the upper ranks of the service the cause of Russia has many enthusiastic adherents. If the Austrian Court has been slow to act with the Allies, it is possible that influence of this kind has been brought to bear upon it. The fact itself is notorious. The Czar played this game in Prussia with still more brilliant success. Nor, as regards Austria, were his blandishments confined to the army. In the Austrian dominions, out of a total population of nearly 37,500,000, there are 3,699,896 of the United Greek Church, and 3,161,805 of the Non-united Greek Church. The United Greek Church is Roman Catholic except in name. It acknowledges the spiritual authority of the Pope, and does not differ from Roman Catholicism in doctrine; its only point of severance being that it uses a ritual in the vernacular of its people, and not in Latin. The Non-united—or, as it is sometimes called in Austria, the Schismatic—Greek Church is the same in doctrine as the Russian Greek Church. Its followers are chiefly to be found in Galicia, Bukovina, Dalmatia, the Military Frontier, Hungary Proper, Croatia, Slavonia, &c. They have a Patriarch of their own, who resides at Carlowitz; but it suited the purpose of Nicholas to ignore, and to cause the schismatic Greek Church of Austria to ignore, as much as possible, the existence of this Prelate. At an early period of his reign he adopted towards the priests a course of systematic bribery. Whenever a Greek church in Austria was ascertained by his spies and agents to be poor, Nicholas sent the priests the funds to build a new or to endow an old edifice. If the priests had shabby robes, Nicholas sent them money to buy rich ones. If the church had no ornaments, Nicholas sent them pictures and statues, and presents of gold and silver plate. When he had by these and other means created and strengthened a favourable impression, he sent them his portrait by cartloads for distribution among the peasantry. In the cottages even of Hungary the traveller sometimes found the portrait of the Emperor of Austria, but he almost always found that of the Emperor of Russia; represented not only as the Czar, but what was of more importance, as the head of the Greek Church. That nothing might be left undone to create or to strengthen the influence of this too liberal and too wily benefactor, the liturgical books of this population were sent to them, cheap (if not gratuitously), from Moscow, where they were printed by Imperial command. These books, as might be supposed, contained a prayer for the Emperor Nicholas, and every Sunday and Saint's day the people were taught to regard him as their friend and protector—their spiritual, if not their temporal, chief. It was not until after the revolutions of 1848 and 1849, and after it had begun to feel the tremendous weight of the unlucky obligation it incurred when it invited Russian assistance to crush the Hungarian insurrection, that the Austrian Government became fully aware of the mischief which had been thus fomented. At that period it resolved to put a stop to these underhand proceedings, and forbade the importation of Russian Prayer-books. These are but a few of the circumstances which, to borrow an American phrase, have "riled" the Austrian Government against the policy of the late Czar. The *Moniteur* has opportunely brought to light the instructions given by Alexander I. to Admiral Tchichagoff, in 1812, which show at how early a period Russia began to act the traitor towards Austria. Even within the last fortnight it has become known to the Austrian Government that Russian agents have been intriguing among the Slavonic population of her borders. When to such causes of distrust are added high reasons of European policy, as well as of self-interest, the world may well believe that Austria will dissociate herself once, and for ever, from the schemes of Russian aggrandisement which the present or any future Emperor of Russia may inherit or originate. Russia stands alone; and, if she be not effectually driven back at the present great and unparalleled opportunity. Europe will rue the day that she was either timid or merciful towards a Power whose barbarism is a solecism and an anachronism, and whose ambition is a standing peril to every civilised country.

LETTERS ON THE WAR AND THE EASTERN QUESTION.—(No. V.)

(From our Special Correspondent.)

VIENNA, April 21, 1855.

ON Monday afternoon the instructions required by Prince Gortschakoff and M. Titoff from the Czar arrived from St. Petersburg. The courier was five days on the road. On Tuesday the tenth Conference was held at the Foreign-office, under the presidency of Count Buol; and a messenger with despatches was sent off to Berlin by Prince Gortschakoff, probably to make known to the Prussian Government the contents of the important document so anxiously expected. What took place at the Conference is known to no one but to those present and the Governments which they represent. At its close Lord John Russell made arrangements for leaving Vienna on Friday (yesterday). It was his Lordship's intention to proceed to England viâ Berlin; and to remain for half a day in the Prussian capital. On Thursday another Conference (the eleventh) was held, and sat for two hours. Lord John Russell, at its close, postponed his departure from Vienna until Monday morning, the 23rd instant. To-day the twelfth Conference was held—and, at the time at which I write, is still sitting. These are all the facts that I have to communicate, with the sole exception that M. Drouyn de Lhuys does not take his departure with Lord John Russell, but remains for some days longer—how many is unknown perhaps even to M. Drouyn de Lhuys himself. Beyond these simple facts all is conjecture. It would be easy to expatiate upon and draw inferences from them, as the Viennese do—but *cui bono?* Of what use is it to say that on Tuesday the Russian Ministers refused to concede the Third Point; and that Lord John Russell resolved to leave them to their obstinacy; and that on Thursday, having reconsidered the matter, they held out the olive branch; and that, thereupon, Lord John determined to remain, and confirm them in their good resolution? But all this would be idle, and possibly erroneous, surmise; which the telegraphic wires might render of no avail—and of no interest — long before the Post-office delivered this letter in London. But there are persons who have, or are supposed to have, access to official sources of information —who, with all the mysterious vagueness of a Pythoness upon her tripod, drop hints of the actual state of the negotiations, and give you to understand that "they could, an they would" make you as wise as Count Buol, or Lord Westmoreland. But it would be as unsafe to attach any value to such inuendoes, as to buy for hard cash a breath that has been breathed, a sound that has been made, or an odour—good or bad—that has evaporated and gone off into the thin and fathomless atmosphere.

It is natural, however, that people should be uneasy amid the secrecy that is so rigidly maintained; and that Rumour should be as busy in her own way as the ten diplomatists of the Conference are in theirs. But rumour in Vienna is as changeable as the season. One day it blows pleasant spring weather, and men go out in light costume, and dream of Peace; next day it blows cold, biting, and frosty from Spitzbergen, and men wear overcoats, and think and speak of nothing but War. When the wind blows from the Peace quarter, everybody believes that Russia has yielded, or is about to yield, to the demands of the Allies on the Third Point; but when the man of little faith inquires what it really is that the Allies demand, no one can tell. When the wind blows from the War quarter, Russia is said to yield nothing, or to propose terms which it would be dishonourable on the part of the Allies to concede. Thereon arises a giant of fog and mist—huge and shapeless—who stalks into the Exchange, and sends down the Funds one-and-a-half or two per cent before people have had time to examine whether it were a real giant after all, or a monstrous unreality, having a *gobemouche* for its father and a *canard* for its mother.

Upon the whole, however, the opinion gains ground that the Austrian Government is too anxious for peace, though it hates Russia with the intentest hatred, to play as bold a part as Great Britain and France desire; and that Great Britain and France, on their side, are so anxious to secure the co-operation of Austria, that rather than break with her they will yield many points which, under other circumstances, they would not dream of conceding. For my part, I believe nothing of the kind. It is possible that we shall have a "patched-up" peace if Sebastopol be not levelled to the dust by the Allies, or by her own desperate act, to save them the trouble. Russia will make good terms for herself, and will manage to escape from the difficulties of her position without draining to the dregs her cup of Humiliation. But if Russia be let off too easily it will be the fault of Great Britain and France, and not of Austria. Austria has gone too far to withdraw from the alliance. If the Western Powers are themselves "up to the mark," if they see their duty and their interest clearly and palpably, and are firm enough to insist upon "material guarantees," and to suffer no denial, Austria will follow them whithersoever they please. But if they yield at the last moment Austria will be well contented. But, in this case, blame ought to fall on the right shoulders. A "patched-up" peace will be the fault of Great Britain and France alone. The game is in their hands. If they have not the sagacity or the courage to play it out, so much the worse for them, and so much the worse for Europe. A peace conceded out of mere dislike to war, and for the sake of present ease, will not be worth a sheet of paper. There are two great points involved—two points quite vital to the Allies as the Four Points which they are still discussing with Russia. The one point concerns their honour, the other involves the security of Europe. There are not wanting persons—in high as well as in low station—who maintain that the Western Powers have done enough for their honour in driving the Russians out of the Turkish territory; in maintaining possession of Eupatoria, Balaclava, and Kamiesch; in sweeping the fleets of the Czar from the Black Sea and from the Baltic; in reducing the naval power of Russia to a nonentity, in destroying her maritime commerce, and in gaining every battle which the Russian generals have ventured to offer, or to accept. All this is true; but English and French honour requires something more. It requires Sebastopol as the crowning point, and unless that be gained Russia will claim and be entitled to the credit of having foiled the two greatest Powers in the world. That it will make the most of such a circumstance in all her future intercourse with Europe, and with Asia, is as certain as mathematical science, and as the fact of Russian cunning and ambition. The Allies must either take, or compel Russia to destroy, her Black Sea fortress, or the war will have been fought in vain, and Alma and Inkerman will remain as inconsequential and barren victories.

On the point of European security can any one, not a Russian, maintain that a peace without material guarantees from Russia will conduce to it? Russia has taught the world that no reliance is to be placed upon her honour; and if at this moment the Allies forget the lesson, they deserve to sink into secondrate States, and to lose all right and power to influence the affairs of the world.

The people of Vienna are on the tiptoe of expectation. They are looking for a visit from Napoleon III.; and are resolved, if he come, to give him a reception as splendid as that which he has received in London. So confident are they that he will honour this city with his presence, that householders have already begun to speculate on letting their windows at high prices for the occasion. The idea of such a visit is not very consistent with that of a peaceful close of the Conferences.

LORD JOHN RUSSELL AND THE VIENNA CONFERENCES.

IF Lord John Russell's mission to Vienna has not been attended with all the good results which were desired, we think it has achieved all the success that was expected by reasonable and thinking men including, we have little doubt, the noble Lord himself. There was little to be hoped for in diplomacy from a Court which, in the piquant phraseology of our distinguished representative at those Conferences, had already "exhausted every variety of falsehood;" and the professed desire for peace was soon manifested to be merely a delusion and an expedient to gain time and advantage in the field. If the Ministers of the Western Powers had been so minded, there is little doubt but these negotiations might have been indefinitely protracted; but their own sense, and the sense of the united people whom they represented, would not tolerate such an idea. A plain proposition, extremely moderate in its nature, was proposed to the Russian Minister for the adjustment of the famous Third Point, and to this a plain answer was demanded. The answer was given, and it was one of flat refusal—a refusal which palpably revealed the fact that Russia had never seriously entertained the idea of treating with a view to peace. We have no doubt that the part taken by Lord John Russell and the French Minister will prove to have been such as fully to justify the concurrence and approbation of the two nations. In the meantime, Lord Palmerston on Monday night satisfied the natural curiosity of the country by stating the main facts of the case as it stood at the period of the abrupt termination of the Conferences. In answer to a question from Mr. Bright, the noble Premier said:

It is well known to the House that the English and French Governments, in concert with the Government of Austria, had determined that the proper development of the Third Point with respect to the treaties of 1840 and 1841, regarding the Straits of the Dardanelles and the Bosphorus, should be, among other things, that the preponderance of Russia in the Black Sea should be made to cease. That was the principle laid down by England and France, and agreed to by Austria; and that principle was in the abstract accepted by the Russian Plenipotentiary. On Thursday last, at the Conference held in Vienna, the Plenipotentiaries of England, France, Austria, and Turkey, proposed to the Russians, as a mode of making that preponderance cease—as a mode of carrying out the principle which had been in fact admitted and accepted by Russia—either that the Russian naval force in the Black Sea should henceforth be limited by treaty, or that the Black Sea should henceforth be declared neutral ground, and that war-ships of all countries should be excluded from it, and those of commerce only admitted. The Russian Plenipotentiary required forty-eight hours for the consideration of that point. That was granted. On Saturday the forty-eight hours had expired; and on that day another Conference was held, at which the Russian Plenipotentiary absolutely refused to accept of either of those alternatives. These alternatives had been pressed by the four other Plenipotentiaries unanimously. Thereupon the Conference was adjourned *sine die*. The noble Lord added that the Russian Plenipotentiary had made no counter proposals of any kind

Now that this famous Conference is over, it can hardly fail to occur to every man who knows anything of such matters, that, from the first, it was a "a mistake"—a mistake from which our enemy was the only party who, in the chapter of accidents, could possibly reap any advantage. We were early told and there was no denying it—that, in the prosecution of the war, we had not obtained any successes which would entitle us to lay hard conditions upon our adversary. We had not taken Sebastopol; and it was not to be expected that the Czar would voluntarily yield up and raze fortifications which had, during six months, successfully resisted our attacks. To this—much to the regret of a large portion of the public—our Ministers assented, and expressed their willingness to accept of other conditions for limiting the power of Russia in the East, in the interests of the European balance. Various plans were proposed—all more or less fallacious; and which in the end, as we firmly believe, would only have postponed the difficulty in hand—postponed it to come before us again at some future period, under a more formidable aspect. Amongst other propositions was one that the Western Powers should be allowed to keep up fortified positions in the Black Sea, as a check upon Sebastopol; the absurdity of which was at once apparent, resulting, as it necessarily would, in a permanent armed occupation, and *status belli*, in which the Western Powers, by reason of their distance from the field, would ever be at the disadvantage. Another proposition was to throw open the Black Sea to all nations, and remove at the same time the veto which the Porte rightfully asserts upon the passage of ships of war through the Straits of the Dardanelles and the Bosphorus. But this project was even more seriously obnoxious upon public grounds than the other, as it would at once destroy the national integrity and sovereign rights of Turkey, the defence of which had been the cause of the war. Lastly came the proposition for limiting the strength of the Russian fleet in the Black Sea, which, as we consider it would eventually have proved illusory, we are very glad the Czar has rejected. We have only to add that, in so rejecting a very modest proposal, the Court of Russia has shown that it was utterly insincere when it pretended to accept the Four Points as a basis of peace. Nothing now remains but to improve our position to the utmost by force of arms.

VISIT TO ENGLAND OF THE EMPEROR AND EMPRESS OF THE FRENCH.

(*Continued from page 416.*)

devolved on the Recorder, and the learned gentleman did full justice to the importance of his text, his manner of reading the portion addressed to the Empress being exceedingly admired for its respectful friendliness. The address was in the following words:—

TO THEIR IMPERIAL MAJESTIES NAPOLEON III. AND EUGENIE, EMPEROR AND EMPRESS OF FRANCE.

May it please your Majesties.—We, the Mayor, Aldermen, and Burgesses of Dover, approach your Majesties with feelings of the most profound gratitude deeply sensible of the honour conferred upon us in being graciously afforded the opportunity of expressing to your Majesties the hearty welcome with which we greet your arrival in the country to visit to our beloved Queen.

It is our earnest hope that this auspicious event may tend to strengthen and perpetuate the cordial union which, happily for the progress of freedom and civilisation, now exists between France and Great Britain; and that the just and necessary war, in the prosecution of which the combined fleets and armies of both nations are gallantly engaged, may, through the blessing of Divine Providence, be speedily terminated by a secure and honourable peace.

We rejoice that your Majesties have been pleased to select this ancient port for debarkation. We shall cherish a lively remembrance of the honour that has thus been added to the many distinguished which already recorded in our annals.

We devoutly pray that you, Sire, may long guide the destinies of France, and reign in the hearts of a loyal, happy, and contented people; and that you, Madam, may long live to share the throne which your virtues so highly adorn, affording solace and relief to your august Consort amid the cares inseparable from the government of a mighty nation.

Given under our corporate seal at Dover, this 16th day of April, 1855.

At the termination his Imperial Majesty advanced a step, and, without any paper, and evidently impromptu, delivered his reply in excellent English, as follows:—

Mr Mayor and Gentlemen,—I am exceedingly grateful that your Queen has allowed me to find such an occasion to pay my respects to her, and to assure you of my sentiments of esteem and sympathy for the English people. I hope our two nations will always remain united as they are now, in peace as in war. I think it will be for the welfare of the whole world, and for their own prosperity.

I am exceedingly thankful for your kind words, and the good reception you have given to me and the Empress, and I hope you will be the interpreters of our sentiments to your countrymen.

The Emperor having cordially exchanged greetings with the Mayor and principal municipal functionaries, the latter retired from the room.

At the railway platform the energy and ability of Mr. Way, the station master, had put into the most complete order the arrangements for the Imperial journey to town. The whole of the interior had been tastefully decorated with laurels and flowers, dressed with many-coloured bunting, and trophied with the Imperial and English flags. A standing gallery had been prepared, in which were closely packed the principal inhabitants of the town; and here again the Emperor and Empress had to bring their beat bows and smiles into requisition, in order to acknowledge the genuine hearty greetings of their English friends. Captain Barlow, the Company's Superintendent, was in attendance at the door of the carriage, and, by the Queen's command, Mr. Inspector Baker—a most efficient officer, on whom regularly devolves the onerous duty of attending the Royal progresses. The Emperor and Empress walked slowly along the platform, and looked with a decidedly pleased expression on the well-dressed and smiling crowd, and the various excellent arrangements which had been made for the reception. Mr. Way had the honour of taking the lead to the Imperial carriage, and Captain Barlow had the distinguished honour of handing them into the carriage. Strict injunctions had, it appears, been given that no persons but those whose names had been given in a list which had been furnished by the Imperial Equerry should travel in the special train; but, whether by favour or subterfuge, some parties contrived to get into one of the carriages, and as a consequence the rule had to be relaxed in favour of others who had an equal claim to accommodation.

Just as the train was about to start, the Emperor beckoned the Mayor to the door of the carriage, and held him for a few minutes in friendly conversation, at the same time repeating his adieus to the municipal body. At half-past two the signal for starting was given, and the train proceeded at high express speed for town. As it flew past every station crowds of people might be seen waving handkerchiefs; and at Tunbridge, where it stopped for a few moments, and the illustrious party alighted, there was an imposing demonstration. The whole platform was crowded, but the Emperor walked through, without seeming in the slightest degree incommoded; but graciously acknowledged the cheers even of the workmen, who covered the adjoining walls. Reigate, Norwood, and all the minor stations, exhibited similar scenes of enthusiasm; but the appearance of the Bricklayers' Arms Station was of an imposing character. Every accessible spot was densely crowded, the cheering was deafening, and the numerous flags, banners, and devices with mottoes and liveries gave unequalled brilliancy and effect to this first stage in his Imperial Majesty's visit to the great metropolis. Here also the platform was densely filled with distinguished company.

The Lord Mayor, the Mayor, accompanied by Mr. Sheriff Crossley, and attended by Mr. Catty, one of his Lordship's secretaries, was in attendance to receive the Emperor, and the greeting between his Imperial Majesty and our civic monarch was of the most cordial character. His Imperial Majesty shook hands in a friendly and familiar manner with his Lordship, expressed his delight at making his acquaintance, and his hope that that acquaintance might be of long duration. His Lordship then proceeded to search out his own special guest, the Prefect of the Seine; and all the notabilities, Imperial, Royal, and civic, were soon *en route* for town. The carriage containing the Emperor, Empress, and Prince Albert, started off at once without escort, except that of at least half a million of people, who densely filled the streets on both sides, and cheered the way into town. The remainder of the carriages followed, and were accompanied by the escort, and the vast crowd had a friendly cheer for every successive detachment.

The brilliant cortége proceeded at a foot pace through the great southern section of the metropolis—the home of those industrious classes who are the bone and sinew of the country. The crowds were imposing from their sheer numbers, but much more so from the fact that they were all men and women who supported themselves by the labour of their hands, and had made for them the costly sacrifice of a day's earning, in order that they might ratify, by their presence and acclamations, this crowning event of the great alliance between France and England. The streets through which they passed, if not magnificent, are, at least, spacious, and thus afforded ample accommodation for the immense masses of people who had turned out for this great holiday. All through the Kent-road, thence to the Westminster-road, Westminster-bridge, and in the route through the West-end, the crowds were still increasing, and the cheers increased in fervency as the Royal carriages passed along. Historic Whitehall made a noble picture; and at Charing-cross the unsightliness of the National Gallery and our contemptible fountains of Trafalgar-square were hidden from the visitors' view by the countless thousands who blackened the whole of the open space. We have not the taste of the French in getting up gay and brilliant decorations with a few scaffolding-poles, a bundle of green leaves, and a plentiful supply of many-coloured calicoes, but many admirable attempts were made along the route, and the display deficiency was amply compensated by the unmistakeable cordiality of the people. Every hearty shout brought a sunny smile into the ordinarily grave countenance of the Emperor, and his features indicated that the observations he frequently addressed to Prince Albert were of a grateful and complimentary character. To describe the remainder of the route to the terminus of the Great Western Railway at Paddington would merely be tedious repetition; there were the same crowds, the same cheering, and the same good-humour and good order. Mr. Brunel, the daring and talented engineer of the broad gauge, was in attendance, mounted on his favourite steam-charger, and at a given signal whirled the illustrious party off to Windsor at the pace of seventy-two miles an hour. They arrived at the Royal borough a little after seven o'clock, and, having been received by the worthy Mayor, Mr. Clode, were soon "at home" with their Royal hostess, and hid for the remainder of this exciting day from public observation.

The next day (Tuesday) was a day of deputations, receptions, and reviews. The Lord Mayor and his Lordship's worthy Sheriff had an audience, to deliver their invitation to the Guildhall, which was graciously accepted; and an influential deputation from the bankers and merchants of London was also received; and in the afternoon the Emperor politely went to the Great Park to see such a review as we were able to offer him, with our 2nd Life Guards, our Blues, and our Carabiniers. They made but a sorry appearance in point of numbers, but then the Emperor would remember that they were the same manner of men who at Balaclava clove through the dense masses of the Russian cavalry, as if it were a "sheet of pasteboard:" and his historical reading would recall to him that Alexander the Great marched victorious from Thrace to the Indus with only 25,000 chosen Macedonians. One Roman legion could at one time keep all Germany quiet; and the men of which our own army is composed are not a whit behind the old Greek or Roman warriors. It was expected that the Queen and her guests would have been present at the meet of the stag-hounds, and the investments in scarlet coats and buckskins were accordingly of appalling amount; but the Nimrods were doomed to disappointment, as the Royal party confined their morning performances to the Park and the Model Farm. The review, which was gone through with admirable precision, lasted about two hours—the Emperor was most eulogistic; and the evening closed with the Royal dinner party.

The next day's proceedings, although hidden by strict Court etiquette from vulgar eyes, was one of the most gorgeous in its character ever seen in this or any other country, as well as one of the most important in its incidents, and in the remarkable personage who was now about to receive the most distinguished order of European knighthood. We refer to the *Court Circular* for the detailed programme of the Chapter of the Order of the Garter, and content ourselves with referring to one or two incidents which make the present investiture remarkable. In the first place it was the Queen on entering the grand Presence Chamber for ordinary state and impassive Emperor was obviously struck with the peculiar splendour of the scene that awaited him. On the throne, clad in her splendid robes of state and resplendent with jewels, sat her most gracious Majesty, and near her the Empress of the French, dressed with almost equal magnificence. The Court ladies stood around in brilliant costumes, and long rows of the knights in their state robes, gave a solemn and magnificent finish to the picture. The Emperor paused for a moment and changed colour, and exhibited considerable emotion, as the august ceremonial was being performed. At the conclusion he would have kissed her Majesty's hand, but the Queen, as is the custom between Sovereigns, kissed him on both cheeks, and gave him the accolade. It may here be mentioned that her Majesty had been similarly condescending on his Imperial Majesty's arrival at the Castle. In the evening her Majesty gave a state banquet: the company comprised the Imperial visitors, nearly the whole of the English Royal Family, the Ministers and ex-Ministers, and the most distinguished members of the Emperor's cortége.

On Thursday the Emperor paid his memorable visit to the city of London; which ancient and puissant municipality fully maintained its high character for splendour and hospitality on the remarkable occasion. It is needless to say that to the scene at the Imperial visit the Corporation attached the highest importance. Great preparations could be got up in Paris, and the pageantry of the English Court followed as a necessary consequence on the invitation. But to be received of their own free will, without any suggestion or pressure, by the powerful and wealthy citizens of London, in their own ancient Guildhall, was a spontaneous ovation, of which the well-known feelings of the French bourgeoisie made the Emperor deeply appreciate the value. Besides, people at home, who are sometimes fond of laughing at our Lord Mayor and Corporation, although never refusing to accept their hospitality, have little appreciation of the estimation in which the Lord Mayor and Corporation of London are held all over the Continent. It is told of the First Napoleon that, when some one proposed to present and James Mackintosh, the Emperor asked his social rank and profession, and was answered that he was a distinguished man of letters, and a Lord Advocate. Upon which the Emperor peevishly replied, "I want none of your men of letters, or Lord Advocates—show me the Lord Mayor." We can recollect ourselves that, during the Paris fêtes of 1851, the great cry amongst the French sight-seekers was "Oh est le Grand Maire?" although it must be confessed that, when they did see him, they manifested some surprise at the rather seedy habiliments to which the inexorable *etiquette* had restricted the then exponent of civic dignity. It was finely said by a popular orator who had said many striking things, that the municipality of London was an institution older than the present English people, being a legacy of the Roman occupation, when Hengist and Horsa were not thought of in the tight little island. The saying is not less forcible than true, and few will deny that an institution which has lasted so long, must have some great intrinsic merits to produce for it such an unparalleled longevity. But however old, the entertainment of Thursday proved that with the Corporation, as with the Egyptian queen,

> Age could not stale nor time
> Wither its infinite variety.

As on the day of the arrival, the citizens kept general holiday: shops were shut, decorations abounded, and the streets were thronged with countless multitudes. The Imperial visitors passed rather smartly through the main avenues of the City, in a state carriage drawn by four of the Royal cream-colored horses, and the reception was, if possible, more flattering than it had been on the previous Monday. There was a strong military escort, and a gigantic Lifeguardsman rode at each carriage window, but it was no fear of the English public that rendered such precautions necessary. Great anxiety was, it is understood, felt at head quarters best advantage should be taken of so favourable an opportunity for some insane attempt upon the life of the Emperor. Accordingly, in addition to the strong military escort, there were no less than 500 of the French secret police amongst the crowd, besides a large number of our own detectives; in addition to which watch and ward was carefully kept on the known haunts of the "Red" fraternity. One humorous story is told of the way in which a small colony of them was taken care of during the Imperial visit to the City; and, although we cannot vouch for its accuracy, it is too good and too probable to admit of its entire suppression. It is said that one of the most active of the secret police having ascertained that a considerable number of them were to assemble on the morning of Thursday in a house in the neighbourhood of Leicester square, made a secret bargain with the landlord, the result of which was that they were all locked in, and kept in durance vile until their presence in the street had ceased to be of any consequence. Another anecdote, for which our authority is of the first excellence, shows that however smart and intelligent the secret police of Paris, there are some of our London pickpockets who can manage them. No less a personage than their director-general, while out seeing the sights of London, and accompanied by his nyrmidons, had his pocket picked of a valuable watch by a "gentleman" who kindly undertook to be his cicerone; and, although the director discovered his loss in a moment, and arrested the thief, the watch had disappeared as if by magic, and to this moment has not been discovered. The act consisted at first "beaucoup de chagrin," but has become a good joke amongst the director's friends. Beyond this little illustration of the fruits of the *entente cordiale*, there was nothing on the part of the English people calculated to give the slightest offence to our guests. The bookseller, in the neighbourhood of Temple Bar, had the good taste to exhibit a placard announcing the sale of a revolutionary *brochure* of Victor Hugo's, at the small charge of a penny; but the public evidently thought it less that the money, as there were no bidders: but, on the contrary, there was great danger of the shop being gutted, so indignant were the people at this gross breach of the rules of hospitality.

At the old Guildhall itself the stroke of the hammer was going merrily up to the moment when the fanfare of the trumpets announced the approach of the Imperial cortége. Four companies of our noble Grenadier Guards, the comrades of the heroes of the Alma lined Guildhall-yard, and completed the military appearance of the vast pavilion which had been erected for the friends of the Corporation immediately in front of the entrance. The decorations, however, both here and in the interior, have already been described in detail, and it is only necessary to add that their general appearance was much commended. It struck many of the spectators that the white colour of the walls formed a bad ground for the trophies with which they were decorated; but we bow to Mr. Bunning, and the exigency of the time. The diplomatic box was well filled with the usual variety of foreign uniforms, and the Cabinet was fairly represented on the opposite side. We did not notice the presence of many ladies of high quality; but then it must be remembered that this was a citizens' festival, and that a burgher's wife or daughter had a right of precedence over the first lady in the land. The "City" was most imposingly represented, and the grand estrade was almost blocked up by the Common Councilmen in their gowns of mazarine blue—giving it the appearance of a Flemish picture of some solemn meeting of the stout burghers of Ghent or Bruges. The band of the Oxford Blues of dismounted musicians

RECEPTION OF THE EMPEROR AND EMPRESS OF THE FRENCH, AT THE GRAND ENTRANCE, WINDSOR CASTLE.

GRAND RECEPTION OF THE EMPEROR AND EMPRESS OF THE FRENCH, BY THE LORD MAYOR AND CORPORATION, IN THE GUILDHALL.
THE RECORDER READING THE ADDRESS.

its "Potage de nids d'oiseaux Chinois," and all the other varieties of the French culinary nomenclature, would trench too muchupon our space; the French culinary nomenclature, would trench too muchupon our space; besides, what we have to do with is the Imperial visitors, and not the delicacies of the table. His Majesty ate sparingly, and drank almost nothing; but the Empress evidently enjoyed her luncheon, and took her glass of wine gracefully and with moderate freedom. The manner of the Imperial couple to each other was of the most affectionate character, and the Empress's excellent flow of spirits showed the absurdity of all the reports of her discontent with her condition. The Lord Mayor gave two toasts—the health of the Queen, and that of the Imperial visitors. The Empress drank the Queen's health standing; and, in return for her own, again rose and bowed gracefully to the company.

At the termination of the feast, and while the return procession was being formed, the Empress spent some time with the Marquis of Lansdowne, and chatted freely with him; and the Empress conferred the same honour on the Earl of Clarendon, going down to where he stood and chatting with his Lordship in *en route* from the council-chamber to the hall, his Majesty's quick eye detected the portrait of Queen Hortense upon the wall. He paused for a moment, looked at it, and said, "This is kind indeed." Immediately after this little incident the Imperial party returned to their carriages, and the general company made a vigorous onslaught on the various buffets which the hospitality of the Corporation had prepared for their refection.

In the evening her Majesty the Queen took her Imperial guests to the Opera, where great exertions had been made to render the interior fit to receive such illustrious company. The anxiety of the public to be present was evidenced by the enormous sums paid for boxes and stalls. The Lord Mayor was charged 80 guineas for his box, and as much as 50 guineas were given for a single stall. Even the stage was invaded upwards of a hundred persons paying from £3 to £5 each for the privilege of standing with the chorus during the performance of the National Anthem. The State box exhibited the fittings of the Royal visit in 1848, when "The Huguenots" was performed, and occupied the centre of the grand tier and that of the two immediately above it. The fronts of all the circles of boxes were hung with white and silver draperies, and festoons of flowers, having a light and cheerful effect which harmonised admirably with the gaily-coloured dresses of the fair occupants of the boxes. The illustrious visitors did not arrive till near ten o'clock, when the first act of the opera was over. They were attended by a numerous and brilliant cortége, composed of the distinguished ladies and gentlemen of both countries who formed the suite of the French and British Sovereigns. As the Emperor and Empress, the Queen and Prince Albert, came forward to the front of the box, a loud shout of welcome rang through the house, and was prolonged for some minutes, hats and handkerchiefs waving in every direction. At the same time the orchestra struck up "Partant pour la Syrie," while the cheers waxed louder and louder, and the Emperor and Empress acknowledged the compliment by bowing repeatedly. "God Save the Queen" followed, and was received with the warmest demonstrations of loyalty. When the Royal visitors had taken their seats and the house became quiet, the curtain rose and the performance went on. At the end of the opera there was another demonstration. After a short interval the curtain rose and exhibited the stage, covered not only with the members of the establishment, but with a crowd of persons who had paid high prices for the privilege of appearing. The two national airs were again performed, but their order was reversed, "God Save the Queen" being sung first, and "Partant pour la Syrie" played afterwards. The Royal visitors then departed. The opera was "Fidelio," and included in the cast the appearance of a *débutante*, Mdlle. Jenny Ney; but little attention could the appearance of a *débutante*, Mdlle. Jenny Ney; but little attention was paid by the audience to anything but the occupants of the Royal box. Had criticism been desirable, it would have been a feat of wonderful literary dexterity, as the critics were so admirably placed that they could neither hear, see, nor understand, and consequently were obliged to amuse themselves during their stay in the theatre by an attentive contemplation of the ceiling, to which they sat in very near proximity. After the Royal party had left, our old favourite Fanny Cerito burst upon the stage and with some of her bounding steps, and received a kind welcome and generous meed of applause. The crowds in the street on this occasion were enormous: and, the time being night, still greater precautions were taken by the police than for the visit to Guildhall.

Friday was a hard day's work for the pleasure seekers of the Court, and must have tolerably well satiated all parties concerned. The programme for this day included the visit to the Crystal Palace, and the evening concert at the Palace of Buckingham. The Royal carriages left the Palace at twenty minutes past eleven, for Sydenham, thus giving the Emperor and Empress a splendid opportunity of admiring the imposing beauty of the country between Kennington and Penge-hill. His Majesty might look in vain anywhere out of England for villas so trim, parks and gardens so well kept, where out of England for villas so trim, parks and gardens so well kept, or fields so green and meadows so close with which the whole route is studded. The Crystal Palace is itself finely situated; but, whatever its admirers may say to the contrary, there is nothing very strikingly beautiful in its appearance from the road. It looks, in truth, like what it is—an immense conservatory—the amplification of the Palm-house at Kew; while the two unsightly towers which are now nearly finished, remind one of the shot-towers at Waterloo-bridge—so dark and dismally do they contrast with the light tracery of the Palace, and those hard lines bays with which the taste of Mr. Owen Jones has relieved the monotonous vastness of the original design. The arrangements did not allow of a visit to Mr. Waterhouse Hawkins, who is always to be found in the bosom of his antediluvian family—putting leather wings to the Pterodactyles, or devising some new costume for his pet Iguanadon. We fear that the habits of this gentle creature in dress are expansive, as we generally observe him in a new coat (of paint) at each successive visit to the Crystal Palace. The Company had determined to make the most, commercially, of the interesting occasion. They could not, like Mr. Gye, sell the boxes at fabulous prices to the curious; but they hit upon a very ingenious plan for procuring a subsidy to help the next dividend. Season-tickets for the unexhausted portion of the year were advertised at a guinea each—being virtually a guinea for seeing the Queen and her Imperial guests. each—being virtually a guinea for seeing the Queen and her Imperial guests. and the crowded state of the interior indicated that many persons must have availed themselves of the offer. The company was supposed to consist of shareholders, ticket-holders, and exhibitors; and, seeing that the first are scattered all over the country, and that the last have gradually dwindled away to a very reduced number, the great bulk of the company on Friday must have been the ticket-holders both of the old and new classification. All these persons had to amuse themselves as they best could for a rather lengthy period, for the Imperial and Royal officials were escorting her Majesty and her illustrious guests round the interior of the building. It is not our purpose here to write a description of the Fine Art Courts, but to record the Royal progress through the Palace, and the incidents which occurred. The Royal carriages arrived at about half-past twelve o'clock, and, after a short pause in the Royal refreshment-rooms, a cortége was formed—the Queen and Emperor taking the lead, the Empress and Prince following, and then the representatives of the two Courts, in gay morning costume. Mr. Owen Jones and Sir Joseph Paxton were in immediate attendance on the Sovereigns, as was also Sir Charles Fox, with whom the Emperor freely and repeatedly conversed in the course of the procession. On Mr. Francis Fuller devolved the duty of escorting the ladies of the Queen and Imperial suite, that gentleman performed the very agreeable duty with his accustomed politeness and success. In the cortége were also Messrs Henderson and Cochrane, to whose united exertions the Palace owes its admirable solidity of construction; and Messrs. Farquhar, Anderson, Leech, and Luchington, the remaining members of the directoral body. The superintendents of the Exhibitors' department, Messrs. Deane and Belshaw, had the honour of conducting the illustrious party over the various courts. Of courses, with such a limited space of time to be disposed of, and so much to see, of each department, only a glance could, nothing but the most cursory glance could be afforded to each; still the Imperial visitors found time to pause for a moment before each of the more conspicuous chefs-d'œuvre, and ask questions concerning them of their escort. Mr. Owen Jones was the only member of the Egyptian family, and escorted the party through that Court, thence through the Greek and Roman Courts, and finally to the Alhambra, the great architectural wonder of the native country of the Empress Eugenie. A more than usual degree of attention was devoted to this beautiful court, so justly regarded with pride by the distinguished artist, and warm compliments were passed on its unrivalled beauties of design and construction. The only regret was that the Emperor and Empress had not time to hear Mr. Jones's explanations of those wonderful Moorish antiquities, in which he is at once so enthusiastic and profound. Mr. Fergusson was in attendance in the Assyrian Court; after a short inspection of which the cortége passed over to the dominions of Mr. Digby Wyatt, which range from the gloomy Byzantine through Gothic and Renaissance to the light and luxurious Italian period. The Empress gazed with seeming interest on the monumental effigies of the Gothic Queens, and made many inquiries about the rare specimens of the Renaissance Court. It is to be regretted, however, that the Ghiberti Gates were not pointed out; but time, luncheon, and the impatient public alike precluded the possibility of delay.

The Empress stopped for a moment in the Italian Court, on recognising a statue recently imported from Seville, and eagerly turned to Mr. Wyatt for information about this friend from Fatherland. The inspection being now completed, the Queen, Empress, Emperor, and Prince Consort, accompanied by the Ladies of the Bedchamber, and attended by Mr. Laing and Sir Joseph Paxton, proceeded to a temporary balcony which had been erected in the garden front of the Central Transept; and here a spectacle was afforded which few who were so fortunate as to witness will speedily forget, and least of all the imperial couple, who were themselves the central points of its attraction. On the terraces underneath upwards of 40,000 well-dressed people were densely crowded, who, the moment the Queen and Empress made their appearance, greeted them with fervent and long-continued cheering. Then the Emperor had his separate ovation, which was so earnest as to keep him bowing and smiling for several minutes; and last, and certainly not least in fervency, rose a cheer for Prince Albert, who, with commendable good taste, had, up to this moment, kept himself rather in the back of the balcony. Her Majesty the Queen was radiant with smiles and condescension, and, gracefully taking the Empress by the hand, led her to the front of the balcony, when, it is hardly necessary to add, the cheering was again and again renewed, with deafening vigour. It was certainly a sight rarely to be equalled in interest, these two young and graceful women—one the Queen Regnant of the mightiest empire in the world; and the other the chosen consort of that remarkable man who, having, by his personal boldness, won an Imperial crown, has ever since been winning the good opinion of mankind by the dignity and efficiency with which he wears it—standing thus, hand in hand, in front of a vast multitude, who had assembled mainly in their honour. The beauty of the prospect evidently struck the Empress and Emperor, as both gazed around with delight in their gestures. That nothing might be wanting to complete the novelty and attraction, the great central fountains, so long the subject of alternate hopes and fears on the part of the public, commenced playing, and produced a magnificent series of jets which gleamed brilliantly in the producing a magnificent series of jets which gleamed brilliantly in the sunbeams. The company who had waited on the esplanade so patiently all the morning had now their reward, since with the Royal group in the balcony, the play of the fountains, and the strains of the band, which commenced playing "Partant pour la Syrie," the splendour of the surrounding scene, and the fineness of the day, a combination of attraction was produced of which the most favoured visit of the interior could not have the slightest conception.

After a lapse of some moments the Queen and her guests retired to the Transept, and the people outside made a sudden rush to the various entrances, to avail themselves of the privilege which they had been promised when the Royal party retired to luncheon. This meal was served in that portion of the Palace which has recently been used as a picture-gallery, but which has been, by the decorative skill of Messrs. Jackson and Graham, transformed into a handsome banqueting-room, with painted ceiling, graceful violet-coloured draperies, and gold ornaments; the glass sides being covered with worked muslin hangings, lined throughout with delicate green. The vestibule has been hung with crimson cloth and costly mirrors: and all this magic change was wrought in the space of time elapsing from the previous Friday. The repast was prepared by the Queen's servants, without the slightest interference on the part of the Crystal Palace restaurant. Here may be a proper place to mention that a member of the Court communicated to Mr. Belshaw the great satisfaction of her Majesty with all the arrangements; adding that he had never seen the Queen in better spirits, or exhibiting a greater appearance of enjoyment.

The retirement of the Royal party was the signal for the entrance of the sovereign people. In they poured through all the entrances, and it required the exertions of whole armies of policemen to keep the central passage clear, and preserve the transept platform from intrusion. This erection, which was but of modest pretensions, was raised half a dozen steps on each side from the floor, and was covered with crimson cloth. In the centre was a high pole, crowned with laurel, and surmounted with a trophy of the colours of the two nations. Two green banners with the Imperial cipher completed the artificial decorations; but nature had also been called into requisition for the supply of a profusion of beautiful flowers, which gave colour and fragrance and freshness to the whole. The effect of this platform was pretty and simple, but not sufficiently strong to distract the public attention from the Royal group who were to be its temporary occupants. By an excellent arrangement of the police, the front rank of the company all through the line of promenade was found to consist of the "the thin red line" at Balaclava, there were no Cossacks who would be hardy enough to dislodge these little battalions. It was soon, however, deepened by many a group of anxious lovers, husbands, and fathers; and the first gallery was before long equally crowded. There was not, however, the slightest confusion; but every one waited patiently for the egress of the Royal party from the Banqueting Saloon. In their appearance the clergymen were numerous, and gradually increased in volume as they approached the Transept, round which, of course, the greatest numbers of the company had congregated. The Queen ascended the platform, accompanied by the Empress Eugenie, and both Sovereigns took their seats, followed by the Emperor and Prince Albert, the former sitting on the Queen's right hand, the latter on the Empress's left. The whole party, however, soon again rose in acknowledgment of the salutations of the company, the Crystal Palace band struck up the French national air, and the second of the magnificent tableaux we have formed, which might be said to be the great features of the day's proceedings.

The appearance of the great Central Transept on the opening day will be recalled by the public, but the effect of this day's pageant was considered by those who had been both to be far surpassing its predecessor. It was at once the climax and the conclusion of the day's proceedings, as the Royal party slowly retired immediately after the lines were broken, and the vast company scattered themselves over the building, some to look at the objects of art, but the greater portion in search of creature comforts, of which the Messrs. Staples, to whom the commissariat is entrusted, had provided a plentiful supply.

When the Royal and Imperial party finally emerged from the Crystal Palace, they found all the pleasant hedge-rows lined with people, who greeted them with such a cheer as Englishmen only know how to give; and the Royal carriages having drawn up at the entrance, they bade their adieus to the authorities and started off at a rapid rate for town. In the evening her Majesty gave a concert at Buckingham Palace, at which the whole of the two Courts, all the foreign ministers, and about five hundred of the *élite* of the nobility were present. Mr. Laing, the Chairman of the Crystal Palace Company, had the honour of an invitation. The Court Journal describes in an ecstasy of admiration the dresses and jewels of the Queen and Empress, the decorations of the rooms, and the radiant glow of the gold and silver plate. Choice exotics filled every niche, and the great musical celebrities of the day performed a selection of the choicest musical morceaux. Although it was Budget night in Parliament, the collective wisdom forgot taxation and the war, broke up early, and donning their Court suits and girding on their rapiers, which are formidable only to the tailors or ornaments to the palace to air their best Court bows and expand in the presence of royalty. The Emperor wore his newly-acquired garter, and the brilliant star of the order glittered on his breast. With the concerts terminated the sixth day's proceedings.

On Saturday morning the "Chant du Départ" was sounded, and the French Sovereigns and Court took a reluctant leave of their illustrious hosts An imposing cortége once more entered the Bricklayers' Arms station, of which the escort of the Royal Horse Guards Blue formed by no means the least imposing feature. The journey down to Dover was as nearly as possible a repetition of the journey up to town as regarded the railway arrangements. The Directors attended and travelled down to Dover with the Imperial party; and Captain Barlow and Mr. Way delivered them safely on the platform. The Mayor of Dover was in attendance, and received, to his great delight, a present from the Emperor's own hand, of a magnificent gold snuff-box, with the Emperor's cipher jewelled on blue enamel. At Dover, the indefatigable landlord of the Lord Warden Hotel (Mr. Hake) had made arrangements for receiving the Emperor and Court; but they passed rapidly on to the Admiralty-pier, which had (under the active superintendence of Captain Herrick) been prepared for their reception. The Militia were again in attendance; and the townsfolk mustered in force to bid Monsieur et Madame Bon Voyage. A number of the workmen—not, we understood, those belonging to the pier—had perched themselves on the roofs of houses immediately overlooking the platform and thus enjoyed a view of the Emperor and Empress that several of the peers might envy. Their not over-clean faces and rough pea-jackets did not add much to the general picturesqueness of effect, nor was there anything peculiarly poetic in the great hunks of bread and cheese with which they continuously fortified themselves against the anti-sanitary influences of the sea breeze. Admiral de Chabannes, who came down before the arrival of the special train, to see that everything was in proper order for the embarkation of the Emperor, was perfectly horrified at the aspect of this rough looking group, and applied frantically to the police for their removal. The latter appealed to the men in moleskin in moving language, to their nationality, to their hospitality, to their love of the picturesque. But they were snugly ensconced aloft, far beyond the reach of the dreaded bâton, had a day's provision in their wallets, and were "deaf to the voice of the charmer." A council of war was held below between the French Admiral and the English constables, and it was at last determined that, seeing that the dislodgement of the enemy would be a work of considerable delay and difficulty, and that the Emperor was momentarily expected, the rough-looking group should be allowed quietly to retain their conspicuous position. The subjects of all this discussion had, in the meantime, continued placidly to munch their bread and cheese, disturbed only by an occasional flitting aspiration for beer, and were the objects of wistful admiration to the Royal Bucks Militia, who had been shivering in the spray from an early hour in the morning. For the voyage an arrangement had been made, which must be taken as a high compliment to the efficiency of our mercantile marine. The Emperor, it appeared, not satisfied with the performance of the *Pelican* on the voyage to England, directed Admiral Chabannes to put himself in communication with Mr. Churchward, the active Manager of the Postal Steam-packet company, and the latter immediately placed at the Imperial service the fine new steamers, *Empress* and *Queen*—the chefs-d'œuvre of Mr. Mare, the eminent ship-builder of Blackwall. These vessels had formed part of the Imperial squadron in the voyage to England, when the Emperor was enabled to judge of their performances; and his Imperial Majesty, who bids fair to be as good a judge of a ship as he is of a horse, was more than satisfied with the arrangement of his Admiral. The special train with its illustrious freight arrived at Dover shortly after twelve o'clock, and the Imperial party was soon on the platform making their adieus. The Emperor warmly shook hands with the Prince and the Duke of Cambridge, and the latter had severally the honour of kissing the hand of *l'Impératrice*, who was also most gracious in her adieus to the ladies of the English Court. The steamer was alongside blowing off her steam in a most independent manner, as if impatient of delay, and our cross-looking friends on the pile of stones, enjoyed the whole scene with evident complacency. They did not forget their politeness, however, but gave the Empress a hearty cheer as she gracefully stepped on board the steamer. The ebbing tide at this time would not allow of an imposing squadron, French and English. There were: English, the *Black Eagle*, *Orion* (90), *Pylades* (21), *Ocean* (16), and some smaller vessels-of-war. Of the French, there were the fine screw corvettes, *D'Assas* and *Corse*, *Pelican*, *Pétrel*, and *Dayenne*, all of which, being a fighting ship, is expended a considerable quantity of complimentary gunpowder in honour of the Imperial *voyageurs*. The white foam of the ground-swell gave indications that a heavy sea might be expected in crossing the Channel. But *voyageurs*—the ship was good, the crew were skilful, and the chief passengers had been born under a lucky planet. The Imperial ensign fluttered at the main, and near it, in peaceful rivalry, the brave old Union Jack. The directors of the company, Messrs. Churchward and De Clepsedal, were in charge, and the good ship moved off from the shore with every prospect of a prosperous voyage. The Prince and the Duke returned to the hotel, and partook of luncheon, and they started for town, having first expressed their unqualified approbation of all the hotel arrangements of the Lord Warden. In the meantime the *Empress* was ploughing the main, followed closely by her consort, the *Queen*, which was with difficulty restrained from closer rivalry. Her gallant English captain, Moore, gloomily restrained her speed, and the chief engineer heaved many a sigh as he occasionally let off the steam, which he would much rather have employed in getting a revolution or two more out of the paddle-wheels. Early in the voyage a clumsy-looking boat with a white funnel crossed the bows of the Imperial vessel, politely blowing her smoke into the eyes of the Emperor and Empress, but the latter were soon beyond the reach of this pattern of English politeness, and the offender was obliged to give up the attempt to keep within annoyance reach of the mail steamer. The Emperor and Empress remained on deck the whole voyage, and stood the voyage well, while the British Ambassador and the French Chamberlain coddled one another in the agonies of sea-sickness on couches below. During the voyage Messrs Churchward and De Clepsecel were presented, and the Emperor conversed with them freely, paying many compliments on the performance of their noble vessel. By the Emperor's command the vessels lingered as they left the English shore; and the cheers from the shore could for a long time be heard wafting to him, in sounds becoming every moment fainter and fainter, the last sweet music of farewell.

The voyage to Boulogne was performed in less than two hours, and on arriving at that port the comparatively quiet appearance of the landing-place presented a singular contrast to the animation which had recently been exhibited in Dover. The crowd was, however, considerable, and the reception of the Emperor was, after the French manner, favourable and hearty. There were a good many cries of "Vive l'Empereur," and one or two of "Bon retour," all of which his Majesty acknowledged with much calmness and courtesy. Marshal Magnan, the General of the district, was present in attendance, and the Imperial party soon drove off to the Marine Hotel, certainly one of the finest hotels in France, and which had been specially engaged for the Emperor's accommodation. Here we should have taken leave of the Emperor; but on learning that his Majesty had promised Lord Alfred Paget a military parade on the following day, we waited for a spectacle for which we are fain to confess an almost French predilection. The vicinity of the Army of the North gave very facility, and in order that the sight might, without inconvenience, witness it, it was appointed to take place on the sands in front of the Marine Hotel. It was certainly a magnificent sight, and the locality chosen permitted of its being seen to the best advantage by the thousands assembled. The sands in front of the hotel are beautifully smooth and level, forming a splendid parade ground; while the sea foaming and surging beyond served the purpose of a splendid frame to the picture. The troops in coming to the ground, had to round a bluff headland that bounded the view in the direction of the camp at Honvault, so that every regiment, as it came up, could be distinguished by those who were versed and that was every French man, woman, and child present in military matters. On they came, seemingly as innumerable as the host of Xerxes, but unexampled, and regularly took their places on the ground marked out for their reception. A polite French officer, among the spectators, obligingly informed us that the force to be reviewed consisted of seventeen battalions of the line, four regiments of Chasseurs de Vincennes, four companies de Genie, one regiment of Hussars, and four squadrons of Dragoons, in all about 32,000 men—a number which, if reviewed in Hyde-park, would attract all England as spectators. They looked truly a most formidable force, and were calculated to give the English spectators a profound appreciation of the huge physical power of our ally.

While they were being marshalled on the strand, Captain Smithett and Messrs. Churchward and Jenkings were sent for, the first to receive the Cross of the Legion of Honour, the others splendid jewelled breatpins as testimonials of the Emperor's appreciation of their exertions for his comfort; and afterwards the Emperor and Empress proceeded to church in Capécure, accompanied by the Count and Lord Alfred Paget. Two or three little accidents distinguished this part of the day's proceedings, which tend to show the popularity of the Emperor and Empress, both with the English and their own subjects. Amongst the former we noticed a stalwart gentleman from the Emerald Isle, escorting a graceful and lively little Englishwoman, who quite astonished the French by the energy with which she pushed her way to the front of the line, in order to get a good view of the Empress. Her gigantic cavalier alternately coaxed and bullied with his national ferocity and good-humour, and at last they stood erect, and defiant of gensdarmes, close to the *portes cochère* of the hotel, awaiting the return of the Imperial party. As the Emperor descended from the carriage, our Irish friend roared out, in a voice of thunder, "God bless the Emperor!" and his fair companion exclaimed with equal energy, although not quite so much vocal power, "God bless the Empress!" The French people around started back in amazement, as a shell from Le Corse had fallen suddenly amongst them; but the Emperor and Empress, to whom an English cheer is by this time not quite such a novelty, smilingly turned round and severally bowed and curtseyed to their loyal subjects. Our little English lady, nothing daunted, performed an emulative curtsey; the gentleman made his best Tipperary bow; and the Emperor and Empress passed laughingly into the hotel. The other incidents brought out the charitable feelings of the Sovereigns in a way which gave great satisfaction to the pious poissardes of Boulogne. As the Empress walked along the front of the hotel she recognised a poor and aged woman amongst the crowd. Her Majesty immediately let go the arm of her husband, and running over to the poor woman, poured a bountiful alms into her hand amid the sincere cheers of the bystanders. A similar appeal was subsequently made to the Emperor by a poor fellow in a blouse, who suddenly dropped on his knees, and poured forth a voluble tale of distress. The Emperor went over and spoke kindly to him, then calling his valet Leon to him, the latter gave the poor man a gold piece, and, by the Emperor's directions, took down the petitioner's name and address. This act and the manner secured for the Emperor a cheer

quite as fervent as that which had previously been accorded to the Empress. By this time the preparations for the review had been completed; and the Emperor, having mounted his beautiful chestnut charger, descended, accompanied by Lord Alfred Paget and a brilliant staff, to the sands. His Majesty passed slowly along the ranks, exchanging salutes as he rode past, and distributing the decorations which had been awarded to the Army of the North. This ceremony occupied a considerable time, but was scarcely intelligible to the crowd who lined the distant road. One individual, who had been favoured with a pass by Colonel Fleury, narrowly escaped decapitation from an infuriate gendarme, who, from unfortunately unable to read the rather crooked writing of the Colonel, revenged his educational deficiencies on the person who had so awkwardly brought them to light. It is needless to add that the demonstration was quite sufficient to cause the precipitate retirement of the too curious stranger.

The ceremony having terminated, the Emperor returned to the esplanade in front of the hotel, and stopping his horse immediately under the decorated balcony on which stood the Empress and her ladies, remained like an equestrian statue, while the whole army marched slowly past in regiments. As each regiment came up the Eagle was lowered, the Emperor raised his hat, and immediately resumed his statuesque attitude, while his noble horse showed his perfect training by emulating his rider's impassibility. His Imperial Majesty remained fixed in his conspicuous position until the last drumboy of the immense army had passed; and then rode to the railway station, accompanied by the Empress, in a carriage and four; and in a very few minutes the Imperial couple were on their road to Paris. Thus terminated the last act of the Imperial Visit to England—an act of the highest political importance; and with respect to which this unpretending *résumé* will, it is to be hoped, form at least reliable materials for future and more ambitious historians.

NAVAL AND MILITARY INTELLIGENCE.

THE *Horatio*, late 24 guns, now two monster guns, is being rapidly equipped by the artificers at Portsmouth. The minimum weight of her shot is to be 3 cwt., the maximum 10 cwt. elongated shot, passing through a rifle-cut barrel; the minimum charge of powder is to be 30 lbs., the maximum unlimited, according to circumstances.

NEW CONTRACT FOR RIFLES, SMALL-ARMS, &c. Government has entered into a new and extensive contract for Minié rifles, plain bore muskets, rifled cavalry carbines, and revolvers. The number of rifles and muskets is stated to be 70,000, and 5000 revolvers. The supply will be at the rate of 5000 per week at the least, until the number is completed. A great portion of the contract for rifles, and the whole of the revolvers, have been taken by an eminent American firm, and the remainder by the manufacturers of Liége (Belgium). Birmingham, and London.

THE firm of Losh, Wilson, and Bell, whose works are at Walker, on the Tyne, have received an order from the Turkish Government to manufacture 35,000 shells and some mortars of the largest calibre. Previously to being forwarded to Turkey, the shells will have to pass an examination at Woolwich, where they will be filled with their combustible material and made ready for use. The firm are manufacturing 500 shells a day, and a large quantity awaits shipment.

IN addition to the the reinforcements to embark from England, the following battalions and regiments will immediately proceed to the seat of war, viz., the 13th Light Infantry, 54th Foot, 68th ditto, and 92nd ditto, from Gibraltar; 72nd Light Infantry, from Malta; 2nd Battalion First Royal Scots, from the Ionian Islands; 21st Foot, from ditto; 48th Foot, from ditto; 1st Battalion 71st Highland Light Infantry, from ditto; and 82nd, from ditto. The above-mentioned regiments will each be augmented to 1200 bayonets from their respective depôt companies in England.

OFFICIAL instructions have been received at Southampton to fit up the General Screw Company's steamer *Indiana*, for conveying cavalry to the Crimea.

A NUMBER of the men belonging to the Denbighshire Royal Rifles have claimed their bounty and discharge; but, in consequence of an address from Major Wynn, which was read to them in Welsh, inviting them to re-enlist, with an offer of an additional bounty of £1, the majority returned to the regiment, and their conduct has been unexceptionable.

NEARLY 150 Poles and Finns who for some time have been in the barrack at Millbay, Plymouth, with the other prisoners taken at Bomarsund last year, having volunteered for service against the Russians, have been temporarily removed on board the *Royal William* ordinary guard-ship at Devonport. This was a necessary precaution from the hostile feelings evinced by their Russian comrades on hearing they had offered to serve against Russia.

THE FIRST BALTIC CAPTURE OF 1855.—MEMEL, April 19.—The *Myran*, *Kenewick*, from Lubeck, with a cargo of coals, was captured off Libau, April 17, by her Majesty's steamer *Desperate*, and has been brought to this port.

SIR J. LOGAN, Medical Inspector of Hospitals and Fleets, and at present at the Royal Hospital, Greenwich, is appointed to succeed Sir William Burnett, as Director-General of the Medical Department of the Navy in consequence of which Sir John Richardson, Medical Inspector of the Royal Naval Hospital at Haslar, has sent in his resignation, he being the senior medical officer of the service, and not liking to serve under a junior—Sir John Richardson's name stands very low on the list.

HER Majesty's new steam-yacht *Victoria and Albert*, Captain the Hon. Joseph Denman, is ordered to be equipped for the Queen's reception and service by the 1st of July. In the interim the old *Victoria and Albert* (now *Scourge*) is to receive stores, and be prepared for service in the event of a sea-going yacht being required for use by the Queen before the new one is ready.

THE following detachments of cavalry are under orders to proceed to the Crimea early in May, viz.:—4th Dragoon Guards (Princess Charlotte of Wales), 1 subaltern, 1 sergeant, 30 privates, and 173 troop horses, from the cavalry depôt at Newbridge, to embark at Kingstown; 4th (Queen's Own) Light Dragoons, 1 officer, 2 sergeants, 30 privates, and 200 troop horses, from Brighton, to embark at Southampton; 10th (Prince of Wales's) Royal Hussars, 1 officer, 2 sergeants, and 50 privates, with 30 troop horses, from the cavalry depôt, Maidstone, to embark at Southampton; 12th Royal Lancers, 1 officer, 2 sergeants, and 40 privates, with 60 troop horses, from the cavalry depôt, Maidstone, to embark at Southampton; 17th Lancers, 4 officers, 4 sergeants, and 100 privates, with 130 troop horses, from Brighton, to embark at Southampton: the first division, consisting of 1 Major, 3 Captains, 4 subalterns, 12 sergeants, and 240 mounted men, of the 13th Royal Hussars, from Exeter, will embark on board the *Kent* and *Chalmers* transports at Plymouth; the second division will embark shortly afterwards, and the head-quarters of the regiment, comprising the staff, will follow. It being expected that the draught for the 13th Lancers will reach the Crimea before the regiment arrives from India, the detachment will do duty with the 17th Lancers in the interim.

THE *Great Tasmania*, a large new clipper ship, built by Mr Donald M'Kay, of Boston, and chartered by Messrs. James Baines and Co. with the intention of adding her to their "Black Ball" line of Australian packets, is being fitted, in the Sandon Dock, Liverpool, as a hospital ship, and will be ready to take her departure for her destination in a few days. In a few days she had been transformed from an ordinary emigrant ship to a floating hospital for the reception of sick and wounded soldiers. On the two decks there is permanent accommodation for upwards of 500 invalids, which can be extended to 1000, or more, by slinging hammocks from the beams. The *Great Tasmania* will take out a detachment of the Rifle Brigade, and a number of horses for the cavalry regiments now saddled and efficiently sheltered boxes for which have been erected on the main deck. The greatest novelty in the matter lies in the fact, that Messrs. Baines and Co. contract with Government to feed the troops both on the outward and homeward passages for so much per day. Under the terms of their agreement, they have already placed on board stores of 1000 tons of stores and water in anticipation of the vessel being ready for sea in a few days.

A CORRESPONDENT relates that, when the Emperor's train stopped at Tunbridge, a beautiful little girl, about four years old, was carried to the door of the carriage in which the Empress was seated, and presented her with a bouquet of flowers, which seemed to give her Majesty the highest gratification, as, upon one of the flowers dropping off, she was observed most carefully to wrap it in paper.

THE IMPERIAL VISIT TO THE CRYSTAL PALACE.—When the Queen and the PRINCE, and their illustrious visitors, the Emperor and Empress of the French, took their seats on the dais, in the centre of the Crystal Palace, to hear the band play "Partant pour la Syrie," a photographer was busily at work in the gallery close by, and, by the help of his magic art, secured a most charming picture of the imposing scene. Mr. Delamotte was successful in obtaining an instantaneous picture of her Majesty and the Court at the inauguration ceremony last May; and we think he has been equally happy in the point of view he took last week. The present photograph is published by Messrs. Negretti and Zambra, of Hatton-garden.

RUSSIANS, LOOK OUT!—When the arrival of the first four English vessels was signalled to Elsinore by the commander of the *Cronborg*, a general hail of "Hallo! hallo! Lugnas" (look out) was addressed by the skippers in the roads to the few Russian craft that were warily threading their way through the drifting ice.

NAPOLEON III., EMPEROR OF THE FRENCH.

ONE of the most remarkable phases of the history of the human mind is the change that has taken place in the opinion of mankind as to the true character of the present Emperor of the French. We have not on record a welcome so enthusiastic and universal given to any Sovereign by the people of this country. Yet, but a very few years ago he was regarded with, to say the least, aversion, by those who now receive him with acclamation. The explanation of this change is very simple. The English people are devoted to the constitutional and representative system of government; and they denounced Louis Napoleon because he destroyed an imitation of it in France. But they have since seen what use he has made of the power he gained so arbitrarily. They see, also, that the French themselves are living under his rule with something more than contentment; and they, therefore, greet the Emperor in his character of chosen representative of the people over whom he rules.

The life of the Emperor of the French has all the characteristics of a romance. Born the presumptive heir to a throne the greatest and most imposing of modern times, he had scarcely passed the earliest stage of childhood, when the sudden downfal of his family forced him, with his parents, into exile, and what seemed an eternal proscription. Tenderly nurtured in his infancy, and sedulously trained in his adolescence, by a mother who never lost, amidst the most discouraging reverses, the hope that fortune would change, and that the star of the Bonsparties would regain the ascendant, the young Prince, on reaching the age of manhood, had mastered the knowledge and accomplishments proper to his station and possible destiny, with the facility and grasp which seem natural to his race. Then came the consuming passion for action, for fame. Plunged for a time in the vortex of Italian revolutions, the young Prince was only saved from the fate of unsuccessful insurrectionists by the courage of his mother, who, braving prescription, hurried him through France to England, and from thence back to their tranquil home on the Lake of Constance. Already, at the age of two-and-twenty, this young man had fought, and had alarmed the jealousy of the Orleans Government. The name of Bonaparte had once more surged up to the surface of European affairs; had been the watchword of Italian freedom, and the *mot d'ordre* of French enmity. Scarcely had the young Prince returned to Switzerland, when he was invited to place himself at the head of the Polish Insurrection, with the crown of Poland, reconquered, as his reward; and, hardly had he closed his eyes to this glittering prospect, when he felt himself bound (for similar reasons in both cases) to decline declaring himself a candidate for the throne of Portugal. Flattering proofs, these, to the young Bonaparte, now the representative of the imperial pretensions of his family, that the world was not oblivious of the genius and the great deeds of its founder. What powerful stimulants to a career of enterprise and action! But enterprise was for the present limited to preparation by study, and the production of the results of thinking; and action had no wider field than the little federal army of the Cantons, in which the young Prince, after being made an honorary citizen of Thuringia, had received the grade of Captain of Artillery. The attempt at Strasbourg, purposely regarded as the act of a madman, is proved by subsequent events only to have been a miscalculation in point of time; it opened a new scene in the life of this Prince, already chequered with so many romantic incidents. Conveyed, a State prisoner, to the shores of America, he cannot resist his growing faith in his destiny, and returns to Europe to renew his assault on the Monarchy of July by the descent on Boulogne—another act of "folly" for which nearly eight millions of Frenchmen have since given him absolution—and to meet his reward in six years of close imprisonment in a State fortress. A doom, this, merited if he was dangerous, too severe if he was a madman, but destined to be the turning point of his fortunes. Here, in the silence and retirement of a prison, he meditated deeply on his own past, and on the future of his family and country; and the ostensible, but not the sole result of his thinking was a series of works which commanded the respect of most men, the admiration of many, and laid deep in the hearts of the French people the roots of a personal regard. Refused by Louis Philippe permission to visit on parole the death-bed of his father, he escapes from prison, but too late to close his parent's eyes; and finds his way once more to England, aggrandised by an impolitic prosecution and an illogical punishment.

Are there not here the incidents of a romance, even if the active life of the Prince had stopped at this point? But much was yet to later in the development coin of political knowledge? No. The world at large knew of the young Prince only, this that he had made two ridiculous and unsuccessful attempts to rouse the French nation in his favour. He was looked upon as a mad-headed youth, and although his published works placed him among the most remarkable and original thinkers of his time, the public persisted in believing that he was as destitute of talent as he appeared to be of prudence. It was a time when heroic and chivalrous characters were looked on with something worse than contempt. Success was the test of worth, and money, or its influence, was the only proof of success. Napoleon had neither success nor money; and, in England more especially, he fell below zero.

Strange that the interest of this acted romance suddenly became the most striking and intense at the very moment when it seemed to close in empire. The Revolution of February, 1848, broke down the material barriers to the ambition of Prince Louis Napoleon. Soon the true state of public feeling in France became known, when he was elected President of the Republic, by a totality of votes of which his illustrious uncle even had scarcely dared to dream. The instincts of the people had responded to his call, but there was yet much to be done ere he could assert himself as he really was. There came the long struggle, sustained with such admirable patience and moderation, with the impracticable Assembly, and the effort to render useful its more impracticable Constitution. Then the final game between the President and the dynastic partisans—a strife of life for life, of liberty for liberty. Then the *coup d'état* with all its accompaniments of horror; the absolution so speedily pronounced by the assembled French nation; and finally the Empire, and all those triumphs, diplomatic and military, which are still passing before our eyes.

The people of England are now the sincere admirers and fast friends of the Emperor of the French, whose existence as the escaped prisoner of Ham, and at best in a very doubtful sense even a Prince at all, they scarcely condescended to notice when among them as the cold guilty of that unpardonable crime, want of ready money. Do they know what is said of them elsewhere? That they are ever the worshippers of success; and that their homage to Louis Napoleon the Emperor has no less sordid motive. The English people are assuredly libelled by this imputation. They recognised in the President of the Republic, and later in the Emperor of the French, a spirit clear and sagacious, a political probity unparalleled, a firm will, and a moderate temper: they saw that, the more he developed himself, the grander grew the proportions of his character; that a largeness of soul, and a mind emancipated from the pettiness of tradition and routine, fitted him to embody in himself the greatness, the glory, and the individualism of the French nation. The success it was that enabled them to see; but it was not only the success that they saw, they admired the qualities which success had enabled their possessor to develop.

Yet our countrymen are not quite blameless in this regard. Such men as Napoleon III. do not spring forth fashioned and perfected in a day. You cannot make a man great by electing him Emperor. The materials must have been there; and such a spirit must have alimented on many great and stern things ere attaining its present growth and strength. It was not a difficult matter to know the real worth of a man who had been so much before the world. It was at least a duty, if the task of inquiry was too great, not to lend credence to the tales of professional emissaries of the bourgeois Royalty, or the nascent Republic—each equally interested in degrading and calumniating him who possessed the talisman that was to defeat both. Of the millions who now laud the Emperor of the French, how many know his real antecedents—what was thought, said, written, and done, by Charles Louis Napoleon Bonaparte, the exile, the proscribed, the ridiculed insurrectionist, the escaped prisoner of State?

Thinking the occasion of the Imperial visit a favourable one for the purpose, we present our readers with an honest and impartial study of the life, thoughts, and actions of this Prince—as far removed from the undiscriminating praise and simulated fetishism of contemporary French flatterers, as from the passionate, shortsighted, and in many instances even the sordid, judgment of some Englishmen, who did as much injustice to themselves as to the object of their censure by their hasty and uncompromising condemnation.

(To be Continued.)

THE PARIS UNIVERSAL EXHIBITION

(From our Special Correspondent.)

PARIS, Thursday.

VERY shortly after this letter is published the doors of the Palais de l'Industrie will be thrown open, by the command of the Emperor, attended by a brilliant Court—also, it is confidently believed here, by the Queen of England, and the Emperor and Empress of Austria. Still the incomplete state of the interior both of the Palace and the long Machinery Gallery, appears to contradict the reiterated assertion of the *Moniteur*. The progress is slow—very slow, when the time that now remains for preparations is considered. A little raised space in the Central Hall—only deal boards as yet—marks the spot where the Emperor's chair will be placed. The *pharc* is once more in course of erection, and already its copper roof glistens in the sun; so Gerome's paintings will find conspicuous place in the building. The Astronomer Royal is also very busy with his Circle, in the eastern part of the Great Hall. In the British ground-floor space the exhibitors and the committee are very active, and on the whole in a forward state. Minton and Co. have placed some very fine tiles—one group being a facsimile of some laid by this firm at Cleveden, for the Duchess of Sutherland. In the British Gallery the stalls are nearly all completed; and the exhibitors only wait the clearance of the rubbish to arrange their goods upon them. Mr. Wyatt's stalls for his Indian collection are also in a forward state. Some unfortunate breakages have occurred as, for instance, that of an altar-piece in Caen stone, forwarded by a London exhibitor; but these accidents are, I suppose, inseparable from the transport of so many cases.

Up to this time the English exhibitors appear to know nothing of the French Catalogue arrangements. No applications have been made from the Official Catalogue authorities to the British exhibitors for descriptions of their contributions. It is believed, however, that the Official Catalogue will be little more than a list of the names of all exhibitors. Among the British contributions, one that will astonish the French is Scarle's boat, which now lies in the Central Hall, not very securely cased in boards.

Passing from the British to the other sections, we find them generally very far behindhand. Belgium and Austria are, after England, perhaps the most active. The former Power is in a very advanced state in the Southern Gallery—having some of its contributions already displayed. Among these are some excellent photographs from D'Hoy, of Ghent. Peeping over the gallery from this point we remark the striped packing-cases of Baden still lying undisturbed in the little South-Western Court. Spain and Portugal are advancing with their counters in the Western and North-Western Galleries; but the Eastern Gallery is still almost deserted. In the North-Western Gallery Staircase two more painted windows have already been placed. They produce a pleasing effect. I should not forget to mention, however, while referring to painted glass, the fine specimens of Birmingham manufacture, taken from Westminster-hall, and now placed in the South-Eastern Gallery Staircase of the Palace. The French ground-floor space, and the American space, are the least advanced. Only deal board counters, here and there chalked with the names of the objects destined some time between this and October next to be displayed upon them, are to be seen. The French Booksellers' Court, in the north-eastern corner of the Great Hall, is an exception. But, at every point, we are assured that the French can do wonders of effect, in a few hours. All those rough deal counters will be covered and loaded as by enchantment. Skilfully-disposed drapery will cover ugly spots; the artist-workmen of Paris will produce the most marvellous results of their power.
